**Gododdin and *Y Gododdin*** The Gododdin, a North British people made famous by a substantial medieval Welsh poem (*Y Gododdin*) about their forces' annihilation, which makes Edinburgh their stronghold. They are conventionally identified with the *Otadini* of Ptolemy's 2nd-century 'map' of Britain, whose territory apparently lay in present-day north-east England. Neither the poem nor its poet can be assigned secure dates, and the reliability of its evidence about the inferred 6th-century setting is doubtful. JEF

ed. A. Woolf, *Beyond the Gododdin: Dark Age Scotland in Medieval Wales* (2013).

**'God of battles'** A traditional Roman \*pagan could state confidently that the secret of Roman military success was the favour of the gods, sustained by meticulous performance of rites which centuries of repetition had proved were effective (\*Symmachus, *Relatio*, III, 9). A Christian \*bishop could respond that it was Roman soldiers who won battles, not gods (\*Ambrose, *ep.* 18, 30). \*Augustine concurred that it was the strength of Romans which had given them their Empire (*City of God*, V, 12–15), as God did not bestow favours in the mechanistic manner assumed by pagans.

Other Christians were keener to see the hand of divine providence directly rewarding those who adopted Christianity. \*Constantine I repeatedly ascribed his success to the fact that he was carrying out God's plan (\*letters in \*Eusebius, *VCon* II, 26–9; IV, 9); \*Constantine's Vision of the Cross famously promised victory. \*Clovis resolved to seek \*baptism after \*prayer to Christ secured him victory over the \*Alamanni in 496 (\*Gregory of \*Tours, *HF* II, 31). \*Oswald secured victory at Hefenfelth in 633 and the kingdom of Northumbria after a vision of S. \*Columba and the erection of a \*Cross (\*Adomnán, *VColumba*, 8–9; \*Bede, *HE* III, 2). Similarly, Allah helped the Muslims at the first battle they fought at \*Badr (\*Qur'an, 3: 124). Peace came through victory. OPN

**Godomar** \*Burgundian King, 524–34. Son of \*Gundobad, he succeeded his brother \*Sigismund, whose \*death he avenged by killing the \*Frankish King \*Chlodomer in battle at \*Vézeronce. He and his kingdom were overthrown by Chlodomer's brothers, \*Childebert I and \*Chlothar I. RVD

*PLRE* II, Godomarus 2.

M. Heinzelmann, 'Gallische Prosopographie', *Francia* 10 (1982), 618.

**Gogo** (d. 581) Trusted counsellor of the \*Austrian King \*Sigibert I, whose bride, the \*Visigothic Princess \*Brunhild, he escorted from \*Spain to \*Metz. He was

subsequently tutor (*nutricius*) of the young \*Childebert II. Three \*letters survive in the collection \**Epistulae Austrasicae* written in his own name, demonstrating his mastery of epistolary etiquette and style; a fourth is composed by Gogo as mouthpiece of the king. He also wrote poetry, none of which survives. \*Venantius Fortunatus speaks warmly of Gogo's generosity to \*exiles like himself, and of the confidence Sigibert placed in him. MJR

**Goiswinth** Long-lived, politically active \*Visigothic queen, wife of \*Athanagild (king 551/5–68) and mother to \*Brunhild and \*Galswintha. She remarried \*Leovigild (king 568–86) and became stepmother to \*Reccared (king 586–601) and \*Hermenigild (\*Venantius Fortunatus, *Carmen*, VI, 5, 28–9; \*John of Biclar, 569; \*Gregory of \*Tours, *HF* IV, 38; V, 38; IX, 1). A \*Homoean ('Arian'), she supported the \*persecution of Catholics in 579/80, trying to force \*Ingund, Frankish princess and wife of Hermenigild, to convert (*HF* V, 38). Initially favouring the rebellion of Hermenigild (579–84) against Leovigild (John of Biclar, 579), she was reconciled with Reccared in 586 (*HF* IX, 1), but was revealed as a false convert and conspirator against him in 589, and died, possibly by \*suicide, that year (John of Biclar, 589). GDB

**Golan** See GAULANITIS.

**gold** (Lat. *aurum*, Gk. χρυσός) Gold-\*mining is well attested in the Later Roman Empire. Inscribed gold ingots discovered in Romania and produced at \*Sirmium, \*Niš (Naissus), and \*Thessalonica reflect continued gold extraction in the \*Balkans (*AE* 1976: 590 AD [AD 379]; *InscrDacRom* 3/4: 320–2 [late 4th cent.]). This is partly corroborated by evidence for gold smelting at Kraku Lu Jordan (mod. Serbia) from the 4th century and textual attestations for gold-mining in \*Thrace (*CTh* X, 19, 7 of AD 370/3; and \*Ammianus, XXXI, 6, 5–6). Gold was extracted in \*Anatolia in the \*Diocesis \*Pontica and the Diocesis \*Asiana (*CTh* X, 19, 12), in \*Armenia and at Pharangium in the Caucasus (\*Socrates, VII, 18; \*John Malalas, XVIII, 54; \*Procopius, *Persian*, I, 15, 18; I, 15, 27; I, 22, 3; I, 22, 18). It was also mined at the 5th-/6th-century mining settlement of Bir Umm Fawakhir in the eastern \*Egyptian Desert, where opencast trenches, tunnels, tools, and rotary stone grinders document intensive exploitation.

There is limited evidence for continued gold-mining in Western Europe after the fall of \*Rome: \*Athalaric intensified gold-mining in 6th-century Bruttium (\*Cassiodorus, *Variae*, 9, 3); coins indicate mining activities in \*Visigothic \*Spain; under the \*Franks gold was mined in the Massif Central and Loire Valley. \*Arabic sources and archaeological finds emphasize the production of gold on the \*Arabian Peninsula in the Early Islamic period.

A significant amount of the gold produced and imported was used in the monetary system and coined out as \**solidi*. In the Late Roman Empire these were rendered to the troops as pay or \*donatives and they were the unit of measure in which taxes were collected. The production and distribution of these coins, ingots, \*regalia, and ornaments were the responsibility of the \*Comes Sacrarum Largitionum. The use of gold for \*dress, brooches, \*belts, and so forth was almost exclusive to the \*emperor and the imperial \*court (*CTh* X, 21, 1; *CJust* XI, 9, 2). Churches were embellished with gold objects, \*votive \*crosses, and \*mosaics (e.g. \*Eusebius, *VCon* 3, 40; 4, 58). Late Roman Egypt provides evidence for goldsmiths and their activities (e.g. P.Oxy 3120f., 3765, 3791, 3933; *Sammelbuch*, 13882f.).

Despite laws prohibiting its export (*CTh* IX, 23, 1; *CJust* IV, 63, 2), gold ingots, medallions, coins, table wares, etc. from the Later Roman Empire ended up in central and northern Europe as booty, pay, \*tribute, or \*gifts (e.g. \*Gregory of \*Tours, *Historia Francorum*, VI, 2). There, deities were depicted in gold (cf. \*bracteates); gold \*rings were found in 5th-century high-status male burials. Gold \*coinage was introduced under the \*Sasanians, and \*Arab sources describe Persian \*carpets of \*silk with gold embroidery, thrones, and \*crowns made of gold (al-\*Tabarī, *Histories*, 5 [tr. C. E. Bosworth], 237 and 385). Gold was used to gild Persian \*silver plates. AMH

**gold glass** (*fondi d'oro*) Term applied to roundels with grozed edges (8–11 cm [3–4.5 inches] in diameter), originally belonging to the bases of dishes, which were set in plaster surrounding *loculi* in the \*catacombs of \*Rome mostly during the 4th century. They are attested also in other parts of the Empire (the \*Balkans, and the Rhine and Moselle valleys). \*Gold leaf was cut

out and applied to the upper surface of a base disc of \*glass before this disc was affixed to the bottom of the dish. About 500 specimens survive, variously decorated with pagan deities, secular subjects, male and female \*portraits, portraits of couples or \*families, biblical subjects, Christ and the saints, and Jewish subjects. The images are often accompanied by \*inscriptions offering good wishes and giving names. The vessels were produced in workshops, together with smaller medallions manufactured following the same techniques and applied to bowls, to be given as presents on important occasions such as weddings and religious \*festivals. It has been speculated that vessels with gold-glass bases were used at funerary meals, before the *loculus* was closed up, and that the base of the vessel was mortared into the wall in order to identify by name or by religion individual graves. **gold in coinage** The Roman Empire minted \*gold throughout Late Antiquity. Starting with \*Diocletian the principal gold coin had a weight of 1/60 Roman pounds. \*Constantine I in 310 reduced this ratio to 1/72 and it remained unchanged until the 10th century. Modern usage employs the term \**solidus* only for coins of the latter weight, but the term was in use already in the Tetrarchic \*Prices Edict. Other standards such as the half-*solidus* or *semis* were used only for medallions and festive minting.

A submultiple was introduced, probably in 384 by \*Magnus Maximus—the \**tremissis* (later also *triens*), equivalent to one-third *solidus* and thus to 1/216 pounds. In the 6th century \*lightweight *solidi* were minted. Gold coins, which generally had a very high fine content (over 90 per cent), circulated always on the basis of their intrinsic value; they did not have a fixed exchange ratio to divisional coins and were evaluated according to the fluctuating price of gold. **Golinduch** (d. 13 July 591) Persian Christian saint, converted from \*Zoroastrianism by Roman prisoners of war and baptized as Mary after her husband's death. She was imprisoned and tortured, but was released miraculously and crossed the \*frontier into Roman

territory, where she was acclaimed as a 'living \*martyr' (\*Evagrius, *HE* VI, 20) and met both Domitian, \*Bishop of \*Melitene and emissary of the \*Emperor \*Maurice, and the exiled \*Khosrow II, whose restoration she is said to have prophesied (\*John of Nikiu, 96, 14 and \*Theophylact Simocatta, V, 12).

A lost *Life* by Stephen, Bishop of \*Hierapolis, is probably the basis of the surviving \*Georgian *Life* and of a panegyric *Life* by \*Eustratius (*BHG* 700-1, *CPG* 7521), a native of Melitene and biographer of Eutychius, \*Patriarch of \*Constantinople. OPN

**Gommern** Richly outfitted man's grave in Saxony Anhalt, Germany, of about AD 300. It contained a set of special personal ornaments, including a \*gold neck-ring, two gold \*fibulae, and \*silver spurs, several weapons, and also an elaborate set of feasting vessels, including silver vessels imported from the Roman world, as well as a tripod and a couch. A Roman gold \*coin was also in the burial. Unique is the silver-rimmed shield, with an ornate boss transformed by a local silversmith from a decorated silver bowl of Roman origin. PSW  
M. Becker, *Das Fürstengrab von Gommern*, 2 vols. (2010).

**Gondeshapur** \*Sasanian \*city in \*Khuzestan, 10 km (6 miles) south of Dezful, refounded by \*Shapur I after his second capture of \*Antioch on the Orontes in 260. Called in Shapur I's \*inscription, the \**Res Gestae Divi Saporis* (*ŠKZ* 46), 'Better (is the) Antioch of Shapur' (MP \*Weh-Andiög-Šābuhr), the city was also known simply as the military camp (*gund*), after the Parthian military installation that preceded it. According to \*Arabic sources (al-\*Mas'ūdī, \*Hamza al-Isfahani) the refounded city was a Sasanian royal winter residence until midway through \*Shapur II's reign (309-79).

The site, now destroyed by agricultural activity, measured c. 3 × 2 km (1.8 × 1.2 miles) and exhibited a clear Hippodamian grid plan from the air even in the mid-20th century. \*Bar 'Ebroyo (Bar Hebraeus) says that Shapur I installed his Roman wife, a daughter of the Emperor \*Aurelian, there, as well as Greek physicians who founded a medical academy. \*Mani met his death there in 276. The city, known in \*Syriac sources as Beth Lapat, became the capital of the ecclesiastical province of Beth Khuzaye in 410. At a church \*council held at Beth Lapat in 484, the \*Church of the East adopted the Christology of \*Nestorius and disavowed

clerical celibacy. In the upheaval following the \*Arab conquest, the \*bishop issued an ecclesiastical \*coinage.

**Good Shepherd** Representations of a man carrying a \*sheep on his shoulders have a long tradition in Graeco-Roman imagery from the 6th century BC onwards. This neutral motif was adopted in Christian funerary contexts from the late 3rd century onwards, and remained popular in Christian art, as for instance in one of the \*Cleveland Marbles. The shepherd is often considered to represent Christ (John 10:11-17; Luke 15:4-7), as in the early 5th-century lunette of the \*Galla Placidia Mausoleum at \*Ravenna, and is a familiar figure in Christian thought, as in the \*pastoral scene evoked as the culmination of \*Augustine and Monica's Vision at \*Ostia (*Confessions*, IX, 10, 24). **Gorgan (Gurgan)** Province of the \*Persian Empire, located south-east of the Caspian Sea, between Mazandaran and \*Khorasan, largely coterminous with ancient Hyrcania. \*Tabari reports its conquest by \*Ardashir I and the region figured prominently in the \*Sasanian wars with the Kushans, \*Hephthalites, \*Kidārites, and \*Chionites. The Gorgan \*Wall, thought to have been built by \*Peroz I (459-84), ran for over 195 km (121 miles) from Gomishan near the Caspian eastwards across Gorgan. Punctuated by forts, it was meant to secure northern Iran from Hephthalite attacks. DTP

**Gorgan, Wall of** See WALLS, DEFENSIVE, PERSIAN.

**Gortyn** (Gortys, \*Crete) Extensively excavated \*city, and capital of the \*province of Crete from the 4th century, seriously damaged by \*earthquakes in 365, 618/21, 666/70, and 718.

The Roman gymnasium, with associated stadium, \*baths, and public lavatories, was augmented by a civil \*basilica after 365, at which time the contiguous

\*temple of the \*imperial cult was also apparently remodelled. The basilica was rebuilt under \*Heraclius, but in the late 7th century \*houses and oil-\*presses occupied the area till the late 8th century. The Roman \*aqueduct was out of use by the 5th century.

Philip, \*Bishop of Gortyn in the late 2nd century, received a \*letter from Dionysius of \*Corinth (\*Eusebius, *HE* IV, 25). Eight Early Christian churches are known from Gortyn and its bishop was \*metropolitan of Crete.

South of the city, at Mitropoli, was an unusual \*triconch church, probably a \*martyrium of 5th-century origin. West of the theatre, in archaeological Sector M, was a five-aisled basilica, probably the cathedral; its 4th/6th-century phase was rebuilt in 620/1 with polychrome \*mosaic floors after seismic damage, and destroyed in the late 7th-century earthquake.

A defensive wall at least 1.8 m (6 feet) thick around the Acropolis dates from the 7th century, and the first \*Arab raid on the island occurred in 671. PA; OPN

R. J. Sweetman, *The Mosaics of Roman Crete: Art, Archaeology and Social Change* (2013), 198–200, 221–5, 295–8.

**Gothic War** See BYZANTINE INVASION AND OCCUPATION OF ITALY.

**Goths** A Germanic \*tribe whose name means 'the people', first attested immediately south of the Baltic Sea in the first two centuries AD. At that point the Goths were reportedly a subgroup of the broader \*Vandalic confederation, and were ruled by unusually powerful kings. By the later 3rd and 4th centuries the label was attached to populations by then established much further south and east, immediately north of the Black Sea. By then (if not before), the Goths had ceased to be a unified political entity; separate confederations of Gothic subgroups such as the \*Tervingi and \*Greuthungi are explicitly documented, and several more existed besides.

The rise of \*Hunnic power fragmented the Goths still further. Several different Gothic groups made their way onto Roman soil. The largest, in 376, was formed of separate groups of Tervingi and Greuthungi; a further group in 405/6 was under the leadership of \*Radagausius. Others followed; the Thracian Goths from the 420s onwards, and then, as the Hunnic Empire collapsed, the Pannonian Goths in 473, led by the \*Amali dynasty.

A process of political rearrangement then occurred as these groups (and other recruits besides) looked first to survive in the face of Roman imperial power and then to profit from its collapse. From this emerged two new, unprecedentedly large Gothic confederations, the \*Visigoths and \*Ostrogoths, responsible in the later 5th century for important \*successor states to the Western

Roman Empire. At the same time, other, smaller Gothic groups continued to live north of the Black Sea in the \*Crimea and beside the Sea of Azov. PHe  
Wolfram, *Goths*.

Heather and Matthews, *Goths in the Fourth Century*.

**Gourdon Treasure** A \*gold \*hoard unearthed in 1845 near Gourdon (Saône-et-Loire, France). It included a chalice and rectangular paten, the latter decorated in \*cloisonné style (both now in the Cabinet des Médailles, Paris). The most recent of the associated gold coins (now dispersed) was apparently from around 524, so the hoard may have been buried when the \*Franks attacked \*Burgundy in that year. EJ  
*RGZ* s.v. Gourdon, XII (1998), 486 (H. Steuer).

**Gourgenes (Guaranés)** (571–84) \*Erismtavari of \*Iberia. He led Georgian armies in a successful anti-Persian rebellion initiated by the \*Armenians in c.570. Gourgenes is associated with the restoration of political autonomy and creation of the office of Erismtavari in Iberia. NA

C. Toumanoff, 'Iberia on the Eve of the Bagratid Rule', *Le Muséon* 65 (1952).

**gout (podagra)** Long identified as a disease of the indulgent wealthy, gout was probably widespread in Late Antiquity. It is often mentioned in literature and in \*miracle collections (such as \*Sophronius' *Miracles* of Ss. \*Cyrus and John). The disease is commonly discussed by such medical authors as Caelius \*Aurelianus (*On Chronic Diseases*, V, 38–48); the treatment was drastic (based on a severe diet, purges, and sometimes cauterization) and often ineffective. Cures were also sought from healing shrines. A specific treatise devoted to gout circulated in \*Latin under the name of \*Alexander of \*Tralles—in fact, it is an excerpt of the main Latin tradition of Alexander, which was widely diffused in the Latin West. This text is the first to mention the autumn crocus (source of colchicine) as a purgative for gout sufferers. CP

D. Gourevitch, *Le Triangle hippocratique dans le monde gréco-romain* (1984).

P. Hassmann, *Zur Medizingeschichte und Sozialpathologie der Gicht* (med. diss. Düsseldorf, 1969).

**governor, provincial** Roman official sent to govern a \*province for a term averaging from one to three years. A governorship was obtained either by going through an established set of public offices, or appointment by the \*emperor or \*Praefectus Praetorio. In the Later Roman Empire, a governorship was commonly undertaken early in a man's career; in earlier times, governorships were mostly held towards the end of a public career.

By the early 5th century, according to the *\*Notitia Dignitatum*, there were 116 governors entitled *\*Praeses*, *\*Corrector*, *\*Consularis*, or *\*Proconsul*. A proconsul ranked as *spectabilis*, other governors had the *\*title clarissimus*. Governors were diverse in rank and title, so should not be considered a uniform group.

Structural changes to provincial *\*administration* in Late Antiquity caused changes to the function and position of governors. With minor exceptions (*\*Mauretania Caesariensis*), the military authority of earlier governors was transferred to the *\*Dux*, a military official, who exercised military command over the territory of several provinces at a time. Governors thus became purely civil officials with administrative and financial duties, even though officially considered part of the *\*militia*. Much of a governor's work was judicial—governors were often referred to loosely as *judex*. Furthermore, the grouping of provinces into *\*dioeceses* under the *\*Tetrarchy* made governors subject to the *\*Vicarius* of the *\*dioeceses* (in *\*Oriens*, the *\*Comes Orientis*), though the three governors with the title of Proconsul, of *\*Africa*, *\*Asia*, and *\*Achaëa*, outranked a Vicarius in formal precedence. With the development of regional prefectures under *\*Constantine I*, both governors and Vicarii answered to the *\*Praefectus Praetorio*. DSI Jones, *LRE* 373–410.

Brown, *Power and Persuasion*.

*Antiquité Tardive* 6 (1998): *Les gouverneurs de province dans l'antiquité tardive*, in particular C. Roueché, 'The Functions of the Governor in Late Antiquity: Some Observations', *AntTard* 6 (1998), 31–6.

D. Slootjes, *The Governor and his Subjects in the Later Roman Empire* (2006).

**governors' residences** *\*Governors* were appointed to *\*provinces* for relatively limited periods of a year or two. An official residence was therefore a necessity. These were public property (*CTh* XV, 1, 8 = *CJust* VIII, 11, 4 of 362), and might be used by lesser officials if the governor was not in residence (*CTh* VII, 8, 6 of 400), but it was the responsibility of the governor to maintain the residence (*CTh* I, 22, 4 of 383 and *CTh* XV, 1, 35 of 396).

At *\*Gortyn*, the metropolis of *\*Crete*, the Roman governor's residence, standing at the crossroads at the centre of the city, continued to be used into the 7th century and was rebuilt several times, in particular in 381–3 following the *\*earthquake* of 365. An *\*inscription* of June 382 from the building records the gratitude of the provincial *\*conventus* for *\*grain* and money donated for the public benefit by the *\*emperors* (*InscrCret* IV, 285; *LSA* 771), the *\*Consularis* Asclepiodotus erected a gallery of statues of emperors and *\*senators* (*LSA* 856–8 and 860–1), and by the entrance further inscriptions were set up 'at the portal of Justice'

(*InscrCret* IV, 325 of 412/41; cf. IV, 313 of 382/3, and IV, 323 of 300/65).

At Caesarea of *\*Palestine*, Roman governors used the Promontory Palace, the former Palace of Herod, into the 6th century; a new hot room was supplied for its *\*baths* under the *\*Tetrarchy* and the most recent coins recovered date from 527/38. In the later 6th and 7th century, governors occupied a residence on the site of the former house of the imperial procurator, where there are fine 6th-century *\*mosaics*, though this was not the grandest of the houses in this smart area of the city. The residence was used by the Persian *\*Marzban* following the *\*Persian* invasion of the early 7th century, but by 650, following the *\*Arab* invasion, it was the site of *\*gardens*, rich in organic material.

The design of these residences is similar to that of many other large *\*houses* of the Later Roman Empire, in particular in having at their heart a large apsed audience hall preceded by a courtyard. This similarity has led to other large houses, such as the so-called 'House of the *\*Dux*' at *\*Apollonia* in Libya, the supposed governor's residence at *\*Ephesus*, and the supposed governor's or *\*bishop's* palace at *\*Aphrodisias* being identified as official residences purely because their layout is similar. As early as the 1st century *\*Vitruvius* had said that men of rank need a *\*basilica* at home 'to be compared in magnificence to public edifices' for conducting councils, private trials, and arbitrations (VI, 5, 2); in the 5th century *\*Olympiodorus* observed that private houses at *\*Rome* were the size of a medium-sized city (fr. 41); and the *\*acclamation* of the *\*Theodosian Code* by the *\*Senate* took place in a senatorial *\*house*. The function of such buildings as the 'Palais de la Trouille' at *\*Arles* or the grand 4th-century hall of S. Pierre-aux-Nonnains at *\*Metz*, turned into a church in the 7th century, is therefore problematic.

**Grado** Island *\*city* off the coast of north-east *\*Italy*, founded by the Romans as a port for its neighbour *\*Aquileia*. The core of the city was a fortified military encampment (*castrum*), probably built in the 4th century AD and greatly expanded in the 5th century, the walls of which are still visible. Grado was a place of refuge for Nicetas, *\*Bishop* of Aquileia, who fled there

briefly during the destruction of the city by the armies of \*Attila in 452. After Paul, Bishop of Aquileia (557–69), fled to Grado in 568 to escape the invading \*Lombards, the city became the official seat of the Bishop of Aquileia (\*Paul the Deacon, *History of the Lombards*, II, 10). Its bishops sided with \*Rome against \*Constantinople and \*Ravenna in the \*Three Chapters Controversy until their reconciliation in 606. Aquileia eventually formed an independent patriarchate under Lombard control, to compete with the patriarchate in Grado, which was controlled by the church of \*Ravenna.

The first extant Christian buildings in the city were constructed within the *castrum* in the 4th century, including the initial phase of the Church of S. Maria delle Grazie. In the late 4th and 5th century, the inhabitants renovated S. Maria delle Grazie, subdividing the single nave into three naves, and built a \*basilica with an associated \*baptistry at the Piazza della Vittoria (Piazza della Corte). Also in the 5th century, a small funerary chapel (later S. Eufemia) was built in which a converted Jew named Peter (Petrus) was buried (*CIL* I, 643a); this building was replaced by a larger basilica with an octagonal baptistry after 452.

The city experienced an architectural boom after 568. Bishop Elias (571–86) expanded the 5th-century basilica and reconsecrated it as the cathedral of S. Eufemia in 579. This church had three annexes, including a small \*triconch chapel, possibly a \*martyrium, and an apsidal room, possibly the funerary chapel of Elias. The civilian, military, and clerical notables of the city decorated the church with a series of floor \*mosaics, which featured \*inscriptions in \*Latin and \*Greek commemorating the names of the donors. Elias inscribed his own name in the main dedicatory inscription in the central nave (*CIL* V, 149). Elias or his successor also oversaw the renovations of the other churches of the city, including S. Maria della Grazie, which was redecorated with floor mosaics, \*opus sectile paving, \*stucco, and a \*marble chancel barrier. SVL

**graffiti and dipinti** Texts and images inscribed (*graffiti*) or painted (*dipinti*) on surfaces not originally intended for their display. They were not exclusively illicit or crudely executed. The formulae 'pray for' (Lat. *petite pro*) and 'Lord help' (Gr. κύριε βοήθει) are common in Christian \*prayers. These frequently invoke saints at their \*pilgrimage shrines; a \*cross and accompanying prayer to S. John the Evangelist is inscribed at his basilica in \*Ephesus. \*Apotropaic signs and \*inscriptions protected the home by warding off harm and attracting fortune; \*curses are also common.

Their ubiquity suggests that basic reading \*literacy extended beyond elites; abecedarian *graffiti* indicate the practice of \*writing. Their subjects provide varied insights into society and everyday life. *Graffiti* 'seating assignments' in the \*Aphrodisias stadium and theatre indicate the composition and arrangement of the audience. *Dipinti* \*acclamations on the Golden Gate of \*Constantinople (*CIL* III, 7405) name specific \*infantry units, providing a record of their movements. A *graffito* at \*Dura Europus depicts a charging \*clibanarius and details the armour of \*horse and rider. *Graffiti* inscriptions in the porticoes of \*Athens and Aphrodisias identify individual merchant stalls. **grafio** See COMES, POST-ROMAN.

**grain dole** See FOOD SUPPLY; CONSTANTINOPLE FOOD SUPPLY OF; ROME, FOOD SUPPLY OF.

**grain fleet** The state ensured the provision of \*grain for the inhabitants of \*Rome and \*Constantinople. The Roman system was in place as early as the 1st century BC while that of \*Constantinople was put in place by \*Constantine I, when he founded the \*city and gradually absorbed the majority of the grain surplus of \*Egypt, while Rome survived on grain from \*Africa and \*Sicily. The Egyptian grain was dispatched to Constantinople in a fleet of 1,200 to 1,800 \*ships which made up to three trips a year, between April and October. Each voyage lasted about 25 days and followed so far as possible a coastal route, along \*Palestine and \*Anatolia. Some large Aegean islands served as intermediate ports, and had \*barns and granaries for stocking grain on its way to the capital; \*Justinian I built such a depot on \*Tenedos (\*Procopius, *Aed.* V, 1, 7–16).

## grain production

Grain was transported by the *\*navicularii*, private merchants under state contract. The enterprise was subsidized by providing shippers with fiscal exemptions and privileges: timber to build their ships was, at times, procured by the state, *navicularii* were exempt from duties on other commodities that they transported, and any accidental damages did not burden the shippers. **grain production** The bulk of the calories (up to 70 per cent) consumed in Late Antiquity came from grain. Cereal grains were easily grown and their yields could be stored for relatively long periods, thereby contributing to the maintenance of sedentary populations, while surplus grain could be transported and stored for use in *\*cities*. The production, transport, and trade of cereals were fundamental to the ancient economy and critical to the maintenance of Late Antique societies. *\*Egypt* and North *\*Africa* were the primary grain-producing areas of the Mediterranean world, while southern *\*Mesopotamia* was the breadbasket of the *\*Persian Empire*.

Medical writers such as *\*Oribasius* (*Medical Collections*, 1, 10), following Galen, classified grains in sympathetic–antithetic terms (e.g. whether they were hot or cold, wet or dry) and assigned medical usage accordingly. The character of grain often matched the consumer, e.g. refined wheat for Roman tastes, coarse barley or millet for barbarians. Grain was thus an important sign of cultural allegiance.

Varieties of wheat (*Triticum spp.*), especially *\*bread wheat* (*Triticum aestivum*), were the most commonly planted crops and the dominant food staples throughout the Roman and Sasanian Empires. Wheat was prized for the quality of grain it produced as it makes finer and more palatable bread than barley. Roman farmers grew wheat, even when barley, which is often more robust, drought-, and cold-tolerant, was more easily cropped. Barley (*Hordeum vulgare* L.) was always a close second to wheat in the diet and in the acreage of land devoted to it, but it predominated in poor soils and in many highland regions of Rome and Persia. Barley was mainly consumed as groats and poor-quality, 'dirty' breads or cakes. Barley was the grain most commonly fed to animals; humans who ate it were deemed less civilized as it was associated with poverty and the wild state of those who deliberately adopted an *\*ascetic life*. Both wheat and barley were collected in taxation to feed officials, soldiers, imperial livestock, and—in many Roman cities—the urban *\*poor*. Barley groats and *\*beer* were especially important products among

Germanic peoples in the *\*barbarian \*Migration Period*, though wheat continued to be preferred in *\*Anglo-Saxon England*.

In areas with about 250 mm (10 inches) or more of annual rainfall, wheat and barley could be dry-farmed. In semi-arid and arid environments, such as Egypt and *\*Syria*, *\*irrigation* was needed to grow cereals. In Persia upwards of half of all grains benefited from *\*irrigation*, using *\*qanats* and other sophisticated technology. Vast Sasanian projects such as the Šadorvan dam near *\*Susa* led to locally higher yields but proved unsustainable due to soil salinity, and by the *\*Umayyad* and *\*Abbasid* eras many former wheat lands were cropped with barley. The challenge of controlling weeds and pests and maintaining high fertility levels was considerable, so that yields were low by modern standards; the *\*Nessana \*Papyri* (P.Ness. 82) indicate a return of about 8 measures of grain for each measure sown.

Other grains, such as various varieties of millet (mostly members of the subfamily *Panicoideae*), oats (*Avena sativa*), and rice (*Secale cereale*), were of secondary importance in the wider economy but were often regional staples. Cereal cultivation changed gradually in many areas, with the expansion of newer crops such as rice and sorghum in the Mediterranean. In some regions of northern Europe, rye displaced barley as the dominant cereal grain, in part due to its superb cold tolerance. MD

**grammar, Greek** Attempts at a scholarly analysis of Greek grammar started in *\*Greece* with the Sophists (notably Chrysippus) in the 5th century BC. Important, if at times fanciful, reflections are found in Plato's dialogues (notably the *Cratylus*), appraising language as an epistemological tool. Aristotle, *On Interpretation*, discusses language and logic. More crucially, works by the Stoics anticipated themes of modern (Saussurean) linguistics.

In the Hellenistic period, sophisticated works of long-lasting impact were produced, especially by Alexandrian grammarians (identifying, among others, the regularity of grammar, by the principle of *analogia*). The *Technē Grammatikē* traditionally attributed to Dionysius Thrax (170–90 BC, although the text is thought to date largely from the 3rd cent. AD), a work largely dedicated to morphology, was widely used and influential in Late Antiquity, as well as in Byzantium and beyond, achieving virtually canonical status. Syntax started to be dealt with extensively by a later towering figure of the Alexandrian circles, Apollonius Dyscolus (2nd cent. AD), whose son Herodian was also a distinguished grammarian. Linguistic scholarship in Rome is

also thought to have been a Greek import, introduced by Crates of Mallus (2nd cent. BC). In the Roman Empire, grammarians were primarily teachers and tentatively archaizers; late grammarians of note, with an increasing prescriptive bent, were Theodosius of \*Alexandria (4th–5th cent. AD) and his commentator Choeroboscus (6th or 7th cent. AD). PB

Kaster, *Guardians*.

**grammar, Latin** The Romans came to study their own language under the impulse of Hellenistic \*philosophers, especially the Stoics. Interest in grammatical matters at \*Rome is first attested in the works of Lucilius and Accius (2nd cent. BC), but Varro's linguistic thought, most fully accessible in the surviving books of *De Lingua Latina*, is the earliest we can reconstruct in any detail. No complete grammatical work survives from the 1st century AD, but Quintilian gives a detailed sketch (*Institutions*, 1, 4–8) and portions of the influential handbook (*Ars*) of Remmius Palaemon (mid-1st century) are quoted by later authors. From the 2nd century there survive tracts on orthography by Velius Longus and Terentius Scaurus and possibly an abbreviated version of Scaurus' *Ars*: if genuine, this is the earliest \*Latin grammatical handbook to survive in anything like its original form, a distinction that otherwise goes to the *Ars* of Sacerdos (probably late 3rd cent.). In the 4th to 6th centuries the grammatical tradition continued along the lines laid down by scholars of the early Empire: refinements in doctrine were offered here and there, but the main conceptual categories remained intact. Specially noteworthy texts from Late Antiquity include \*Dositheus' bilingual *Ars*, designed to teach Latin to speakers of \*Greek; the two versions of Aelius \*Donatus' *Ars* (*minor* and *maior*), which gave Europe its most influential linguistic guide down to the 12th century; the dense compilations of Charisius and Diomedes, who gathered substantial excerpts from earlier treatises and arranged them in 'mosaics' of grammatical lore; and the eighteen-book *Institutio* of \*Priscian, the most impressive work of linguistic analysis to survive intact from Latin Antiquity. Kaster, *Guardians*.

**grammaticus** \*Latin term (from Gk. γραμματικός = 'literate/educated', hence 'scholar of literature') denoting the professional teacher of language and literature, especially poetry. 'Grammarian' is a convenient, not an adequate, translation. After their initial appearance at \*Rome (late 2nd–early 1st cent. BC), Latin *grammatici* came to serve as instructors of upper-class boys at the first stage of formal education, responsible for teaching correct Latin by way of the grammatical handbook (*ars grammatica*), for giving line-by-line explication of poetic texts, and (often) for providing preliminary exercises in composition, before their pupils advanced to the *rhetor*. Commonly slaves and freedmen in the earliest period (Suetonius, *De Grammaticis*, 5–24), *grammatici* in Late Antiquity more often belonged to the respectable classes (\**honestiores*), like the children they taught. RAK

Kaster, *Guardians*.

S. F. Bonner, *Education in Ancient Rome* (1977), ch. 5, 14–17.

**gratia** In the Later Roman Empire *gratia* acquired the specific meaning of 'especial favour', particularly favour exercised by officials, judges, or other powerful persons. Such favour might result from the promise or performance of a reciprocal favour, perhaps nothing more sinister than the writing of a \*letter of recommendation, and was therefore embedded in the \*patronage system. In the \**Theodosian Code* it is often stigmatized (e.g. I, 16, 3; I, 28, 2; II, 1, 6; VI, 33, 1), though not always (VI, 4, 22, 6–7; VI, 24, 3). Augustine valued it as the way individuals might be rescued from the horror of a judicial process (*ep.* 153 to Macedonius, \*Vicarius Africae, 413/14), following the same train of thought by which he thought of *gratia* theologically as characteristic of God's mercy and grace. **Gratian** (359–83) \*Emperor 367–83. Flavius Gratianus was born in \*Sirmium in 359 to Marina Severa and the Emperor \*Valentinian I. \*Ammianus Marcellinus characterizes him as eloquent and restrained, and later bellicose (XXXI, 10, 18–19), though he is not generally viewed as a military man. He served as \*consul in 366 (Ammianus, XXVI, 9, 1; Bagnall et al., *CLRE* 266–7), and also received the title Nobilissimus Puer (cf. *AE* 1955, 52). He was only 8 years old when his father miraculously recovered from an illness and, in a bid to establish him as heir, made him \*Augustus in

August 367. The rhetorician \*Ausonius became his personal teacher, a tutorship which Ausonius reflected on in a poem and some \*epigrams. This influenced Gratian towards favouring Gallic aristocrats, especially the family of Ausonius. In 374, he married Constantia, the daughter of \*Constantius II.

When Valentinian died in \*Brigetio on 17 November 375, Gratian was sole Augustus in the West, though one of Valentinian's generals attempted to put forward the young \*Valentinian II. When \*Valens, brother and co-emperor of Valentinian I, asked for troops to help against the \*Goths in \*Thrace, Gratian set out for the East. However, Valens engaged the Goths hastily before Gratian's western troops arrived, and, on 9 August 378, lost the Battle of \*Adrianople and was killed. \*Theodosius I was called to the East and replaced Valens as Augustus there.

In 381, Gratian moved his principal residence from \*Trier to \*Milan and increasingly allied himself with \*Ambrose, \*Bishop of Milan. His Nicene orthodoxy became more obviously expressed. He removed the \*Altar of Victory from the \*Senate House at \*Rome and confiscated \*pagan cult endowments, though the story told by \*Zosimus (IV, 36) that he rejected the traditional robe belonging to the office of \*Pontifex Maximus is severely problematic—not least because there was no robe specific to the office of Pontifex Maximus.

The Empress Constantia died probably early in 383 and Gratian married Laeta, daughter of the \*Consularis of \*Syria. After the military commander \*Magnus Maximus revolted in \*Britain and created a rival \*court in the West, Gratian travelled to engage the \*usurper. His army mutinied and joined Maximus. Gratian was ultimately murdered at \*Lyons on 25 August 383.

**grave-diggers** At \*Rome, the *fossore*s interred the \*dead in the \*catacombs. In the East, a mix of clerical, para-clerical, and lay grave-diggers participated in the funerary trade, often termed collectively *copiatae*, *decani*, or *lecticarii*. Many came from civic workshops and some received tax incentives in exchange for their services.

**Great Church** See CONSTANTINOPLE, CHURCHES AND MONASTERIES AT; HOLY WISDOM, CHURCH OF THE.

**Greece** Modern Greece did not constitute an administrative unity in Late Antiquity. It covers the area occupied by all or parts of the \*Verona List \*provinces of Rhodope (\*Dioecesis \*Thraciae), of \*Insulae (Dioecesis \*Asiana), and of \*Macedonia, \*Thessalia, \*Epirus Vetus, Epirus Nova, \*Achaëa, and \*Crete (\*Dioecesis Moesia—by 380 in the \*Dioecesis \*Macedoniae). These provinces are therefore listed as under the \*Praefectus Praetorio of \*Illyricum in the \**Notitia Dignitatum* (or. III), except for Rhodope and Insulae which came under the Praefectus Praetorio of \*Oriens. The same provinces are listed by \*Hierocles in the 6th century, together with their \*cities. The \*Theme of \*Hellas was created between 687 and 695. Although the Theme of \*Thrace (not to be confused with the \*Thraakesion Theme) was formed c.680, it was initially controlled by the \*Comes of the \*Opsikion Theme.

### Communications and settlement

The principal land route passing from west to east through northern Greece was the \*Via Egnatia, running from the Adriatic coast to \*Constantinople by way of \*Thessalonica and \*Philippi. Thessalonica acquired a \*circus and an imperial \*palace under the \*Tetrarchy and was subsequently the residence of the \*Praefectus Praetorio of Illyricum. Its \*harbour gave inhabitants of Roman territory from as far north as the Danube \*frontier access to the Mediterranean, and the number and splendour of such surviving churches as the Acheiropoietos \*Basilica

and Hosios \*David indicate its prosperity and importance in Late Antiquity, prosperity which made it, from the late 6th century onwards, the object of sieges by \*Slavs and \*Avars. Philippi also boasted grand buildings, in particular its Basilica A on the Acropolis and the monumental Basilica B (with very grand public conveniences) in the lower part of the city.

The principal north–south \*road in Greece ran from Thessalonica through \*Larisa, the principal city of \*Thessalia, and \*Boeotia to \*Corinth, \*Athens, and the Peloponnese. An east–west road branched off at Larisa through the mountains of central Greece to \*Nicolopolis in Epirus, and it was here, probably in 397, that the men of Thessaly slaughtered 3,000 of \*Alaric's invading \*Visigoths (\*Socrates, VII, 10) who had passed through \*Thermopylae as if on 'a plain flat enough for horses' (\*Eunapius, *History*, fr. 64, 2 Blockley = 65 Müller *FHG* cf. \*Zosimus, V, 7). A defensive \*wall built at Thermopylae in the early 5th century was intended to block the southerly progress of future invaders.

The vigour of seaborne \*trade in the 4th and 5th centuries is illustrated by the urban expansion and ambitious church building of such ports as Nicolopolis on the west coast, Lechaion on the Corinthian Gulf, \*Kenchriae on the Saronic Gulf, and Thebai Phthioides (\*Nea Anchialos) on the east coast. Although it was at \*Corinth that the \*Proconsul of Achaëa resided, the intellectual life of \*Athens gave that city and its \*schools a reputation for learning equalled only by \*Alexandria.

The prosperity of Greece between c.300 and c.600 AD was not confined to cities, but extended in various ways into the countryside. Archaeological survey in Boeotia has indicated the planting of numerous new settlements in Late Antiquity. Similar rural reinvigoration seems to have occurred in Late Antique Attica, though the evidence is much harder to assemble. In Laconia, the city of \*Sparta survived, but extensive survey suggests only sparse settlement in the surrounding countryside. Survey at Akra Sophia near Corinth has detected a luxurious Roman seaside \*villa and associated settlements of the 4th to 7th centuries.

Fresh prosperity has been most apparent in a large-scale survey of the southern Argolid. Here a decline in population from the Hellenistic period onwards was decisively reversed in Late Antiquity with the creation of a landscape of small settlements and dispersed \*villages. Steeper marginal land was brought into production and coastal sites were left unfortified; the presence of \*presses and five coastal \*pottery kilns, some of which made \*amphorae, suggests that \*olives were an important product. This prosperity ceased around 600 and the area seems to have been very thinly populated from the 7th into the 9th century.

## Events

The stability of Late Roman Greece was interrupted by episodes of destruction when the Danube \*frontier gave way under barbarian pressure. In 267/8 the \*Heruli invaded Greece, captured Athens (Zosimus, I, 39, 1), and carried on \*naval warfare against the coasts of Thessaly (I, 43). The Athenian historian \*Dexippus was involved in leading resistance to them. The walls of \*Eleusis were strengthened and Athens acquired its so-called 'post-Herulian' wall, while even Sparta, famed since Antiquity for its lack of walls, acquired a protective *enceinte*. After the death of the \*Emperor \*Theodosius I in 395, \*Alaric the \*Visigoth broke loose and ravaged Greece and Epirus for two years, despite two expeditions under \*Stilicho which attempted to stop him. By contrast the \*Vandal capture of Nicolopolis in 474 was a limited attempt to gain leverage in negotiations with a diplomatic mission sent to \*Carthage from \*Constantinople. In 517 the Getae laid waste to Thessaly and Epirus Vetus (\*Marcellinus Comes, *s.a.* 517). The \*Hun invasion of 540 plundered Thessaly and, when checked at the Thermopylae Wall, found a way round, as the Persians had in 480 BC, with devastating results for the Peloponnese (\*Procopius, *Persian*, II, 4, 10).

\*Slavs were threatening Thessalonica as early as 550 (Procopius, *Gothic*, VII, 11, 3), and in 586 and 597 they and the \*Avars mounted sieges, though the city was saved, so its citizens believed, through the protection of their \*patron, S. \*Demetrius. \*John of \*Ephesus complains that already in the 580s the 'accursed Slavs' were occupying Roman territory 'as if it belonged to them' and after the siege of 597 they began to settle definitively around Thessalonica. It was these Slavic neighbours who launched a massive attack on Thessalonica on 25 July 677. At the same time Slavs settled further south. The Slavs known as the Belegizites, living in Boeotia, provided \*grain for Thessalonica during the 677 siege. The confusing testimony of the so-called \**Chronicle of Monemvasia* records that Avars drove the people of \*Patras to move to Rhegium in \*Calabria, the people of Laconia to establish themselves in \*Sicily, the Cornithians to settle on the isle of Aegina, and the people of \*Argos to go to the island of \*Orovi—though archaeology suggests that Argos continued to thrive into the 680s.

## Culture and religion

Literary associations made the history of Greece familiar to every educated Roman. The centrality of \*rhetoric to the education system drew teachers and students to Athens, and the study of \*philosophy, revived in the late 4th century, continued there until the closure of the Athenian \*Academy in 529. The \*Neoplatonism of Athenian philosophers was allied with the practice of

the science of \*theurgy and resisted any alignment with Christianity, although a Christian writer such as Pseudo-\*Dionysius the Areopagite was able to adapt the categories evolved in the metaphysics of \*Proclus for Christian use. The robust \*paganism of the philosophers contributed to the survival of traditional temples such as the Parthenon, which was not turned into a church until the late 5th century.

Other urban centres such as Thessalonica, Corinth, Philippi, and Nicopolis acquired elaborate church buildings from the late 4th century onwards. Traditional celebrations such as the \*Olympic Games and the Pythian Games came to an end around the same time. Some famous pagan shrines acquired churches—around AD 400 at \*Epidauros and in the mid-5th century at \*Olympia and also in the 5th century at \*Brauron, where the Temple of Artemis had stood empty since the 3rd century BC. However, not many rural churches are known, and it seems that \*monasteries did not develop until relatively late in southern Greece. PA; OPN *TIB* 1 *Hellas und Thessalia* (Denkschr. Wien 215; 1976). *CAH* XIV (2000), 'The Balkans and Greece 420–602', 701–30 (L.M. Whitby).

**Greece, churches in** Despite their people in many cases hearing the Christian message from S. Paul

himself, the \*cities of Greece continued to be dominated by pagan \*temples through the 4th century. Numerous churches were constructed in the 5th century. Their layout and decoration were an idiosyncratic mix of influences from the eastern Mediterranean, mainly from \*Constantinople, and north \*Italy, especially \*Ravenna and \*Milan.

Most churches built in Greece between the end of the 4th century and the 6th century took the common form of a simple \*basilica, sharing features with churches on the west coast of \*Anatolia. But they also demonstrate some particularly Greek features: intercolumnnations closed by parapets, a semicircular rather than a polygonal \*apse, colonnades surmounted by arches resting on impost blocks, an esonarthex separated from the nave by a triple arch, and small rooms attached to the narthex which functioned as a \*diaconicon. Examples have been found at \*Brauron, \*Delphi, \*Dodona, \*Nea Anchialos (Thebai Phthiotides), \*Nicopolis of \*Epirus, Voskorkhoria in Thessaly, and \*Olympia. Masonry typical of the Greek mainland consisted of mortared rubble interspersed with \*brick bands. No distinction can be observed between parish and cemetery churches.

Three of the earliest churches are more elaborate than those which follow the standard simple pattern. They are the church at \*Epidauros of c.400, the 5th-century Illissos Basilica just outside the walls of \*Athens, and the quatrefoil construction in the centre of Athens, which is closely paralleled by the Church of S. Lawrence in \*Milan. In the second half of the 5th century important \*cities developed more exotic styles of architecture and built larger churches with galleries, such as the basilica at Sparta or the Lechaion Basilica in the Corinthia. The great cities of northern Greece boasted monumental churches of metropolitan pretensions such as Basilicas A and B at \*Philippi and the Acheiropoietos Basilica and the Church of S. \*Demetrius at Thessalonica as well as small but elaborately decorated structures, such as the church of the Latomos Monastery at Thessalonica associated with Hosios \*David. **Greek Anthology** A repository of Greek \*epigram from the Hellenistic Age to the 10th century. Books 1–15, known as the *Palatine Anthology* (*Anth. Pal.*), reproduce the contents of a 10th-century manuscript: Palatinus Graecus, 23 and Paris Suppl. gr. 384. Book 16, known as the *Planudean Anthology* or *Appendix* (*Anth. Plan.*), is a modern appendix comprising epigrams not found in *Anth. Pal.*, but preserved in Marcianus Graecus 481 (1301) and its apographs. These two witnesses are supplemented by the *Syllogae Minores*.

Our extant Byzantine collections derive from an earlier one, now lost but compiled c.900 by Constantine Cephalas, who combined and rearranged several ancient anthologies. His sources are also now lost, but they can be identified and reconstructed with varying degrees of confidence.

Cephalas had access to at least two Late Antique anthologies. One was *'Agathias' Cycle* (perhaps 567/8), containing epigrams by Agathias himself and some of his contemporaries, esp. *\*Julian the Egyptian*, *\*Leontius Scholasticus*, *\*Macedonius Consul*, and *\*Paul the Silentiary* (for minor contributors see Cameron and Cameron; McCail). The other source for Late Antique material is more difficult to identify. Some have posited a sylloge comprising the c.150 epigrams by *\*Palladas* (4th cent.) as well as some other *miscellanea*. There is evidence, however, that Cephalas used a more substantial 4th-century anthology containing, in addition to Palladas, excerpts from Hellenistic and early imperial epigrammatists.

Cephalas anthologized rather little from authors who were certainly active between Palladas and Agathias' *Cycle*. These include occasional epigrams ascribed to *\*Christodorus*, *\*Claudian*, *\*Cyrus of \*Panopolis*, *Damascius*, *\*Julian (\*emperor)*, *\*Libanius*, *\*Marinus of \*Neapolis*, *Nilus Scholasticus*, *\*Philostorgius*, *\*Proclus*, *\*Synesius*, and *\*Theon of \*Alexandria*. However, many anonymous epigrams in his anthology, now in Books 9 and 16, were copies of genuine *\*inscriptions* from the 4th to 6th centuries; these include poems commemorating buildings, political figures, and charioteers.

*Anth. Pal.* contains many Late Antique epigrams that were not in Cephalas' anthology. Book 1 has a few ascribed to some of the poets listed above, *\*Gregory of \*Nazianzus*, *\*Menander \*Protector*, and *\*Sophronius of \*Jerusalem*, as well as several anonymous Late Antique inscriptions. Chief among the latter is a long epigram on the Church of S. *\*Polyeuctus* in *\*Constantinople* (1, 10). Book 2 contains *\*ecphrastic* epigrams by Christodorus on the *\*Baths of Zeuxippus*. The epigrams of Book 3 concerned with the city of *\*Cyzicus* are perhaps from the 6th century. Book 8 is reserved for Gregory of Nazianzus.

Despite the difficulties it presents to scholars, the *Greek Anthology* is a valuable source for the history and literature of Late Antiquity. KWW

**Greek fire** Incendiary weapon, probably based on natural petroleum, developed for Byzantium c.672 by *\*Callinicus of \*Heliopolis*, carried on specialized *\*dromon* *\*ships* and prepared by heating under pressure. It was projected through siphons or nozzles and could burn on water. Though highly effective, it had limited range and required favourable weather conditions. Greek fire was still used in the 12th century. It is illustrated in the Madrid manuscript of Scylitzes (Codex Scylitzes Matritensis Vit. 26–2; Bild-Nr. 77, f 34 v. b) and the siphon operators in Vaticanus Graecus 1605, fol. 36. RKL

Pryor and Jeffreys, *Age of the Dromon*.

**Greek language** Indo-European language spoken in *\*Greece* since the early 2nd millennium BC. By the Classical period, Greek was also used across the Aegean, as far east as *\*Cyprus*, and in Greek colonies on the fringes of *\*Italy*, *\*Africa*, and *\*Anatolia*. In the Hellenistic era it spread through Persia as far as *\*India*, and later constituted the main language of the Byzantine Empire.

#### Ancient Greek

Greek is the longest attested among Indo-European languages, and has the least interrupted documentation. It is discernibly related to *\*Armenian*, Italic (including *\*Latin*), Germanic, Slavic, and Indo-Iranian (Sanskrit and Persian). The oldest extant form of Greek, Mycenaean (13th to 11th cent. BC), is in a syllabary; since the 8th century BC (the time of the Homeric texts), Greek has been written in a distinctive alphabet.

From the earliest records, Greek shows dialectal divisions, although dialects remained mutually intelligible. By the Classical period, the main dialect groups were: Attic (the variety used in *\*Athens*), Ionic (Asia Minor), Aeolic (Thessaly, Boeotia, Lesbos), Doric (Peloponnese and *\*Crete*), Arcado-Cypriot, and North-West Greek. However, the genre, not the origin of the writer, dictated the choice of dialect in literary writing.

The Attic Greek of the 5th–4th century BC, because of its extensive and outstanding literature and its increasing use in prose outside Attica, is commonly

termed 'Classical Greek', while 'Ancient Greek' covers the whole span from Mycenaean to Hellenistic Greek. The presence of Athenian colonists in many other regions, and the growing cultural, political, and military ascendancy of Athens in the Classical period, gradually gave Attic a privileged position. Attic, however, came to incorporate elements from Ionic, since much of the territory ruled by Athens was Ionic-speaking, and Ionic had long developed a literary form.

In the late 4th century BC, Macedonia took over Greece but embraced its culture and prestigious language (the language of Macedonia was previously different from Ancient Greek as we know it—although unrelated to the Slavic language nowadays often called by the same name). The conquests by Alexander the Great spread Greek extensively: Greek became the language of the many newly founded Greek \*cities, despite their multi-ethnic populations. The Greek of this period was a variety based on Attic-Ionic and yet different, usually termed Koiné (lit. 'common'); it was common in that it came to be used, with local variations, for almost all purposes, by Greek speakers (native or not) from the Ionian Sea to the borders of India. It was the standard medium for writing and a necessity for social advancement. Koiné Greek rarely displaced other languages entirely, although it largely supplanted the other dialects in Greece. It is attested in both literary forms (e.g. in Polybius, Plutarch) and, more fully, in informal \*inscriptions and \*papyri. To this day, Koiné is widely studied on its own because it was in a variety of Koiné that the New Testament was written and the Old Testament was translated (with additional elements from Hebrew and \*Aramaic, owing to the Hebrew of the Bible or the background of some of the authors).

However, a forceful revival of Classical Attic began at the end of the 1st century AD. The notion became established that Attic Greek had constituted perfection, and that what had come afterwards was a deterioration that needed to be opposed. This view continued to affect most Greek writing until the late 20th century.

### *Greek in Late Antiquity*

When the multifarious lands that had been ruled by Alexander and his successors came to be governed by the Roman Empire during the 2nd and 1st centuries BC, Greek gained rather than lost prestige among Romans. Amongst the (Western) Romans, knowledge of Greek declined steeply only after the 5th century. The Eastern side of the Roman Empire was essentially Greek-speaking; Latin constituted the main source of loanwords—e.g. *hospitium* > Gr. *hospítion* (Modern Greek *spíti* 'house')—but the overall influence of Latin on Greek remained limited.

Greek changed more slowly than Latin. In Late Antiquity, Greek remained, as at the beginning of its history, a language based on a rich system of inflections (variable endings on words), and remains so even today. Nevertheless, it can be inferred that several profound and widespread changes occurred in Greek between the Classical period and Late Antiquity.

Furthermore, in the East Roman world (and even after the fall of \*Constantinople) there was sustained inter-ethnic contact and \*bilingualism, which resulted in the development of shared features among the languages of the wider \*Balkans, in Greek and, to a variable extent, Bulgarian, Romanian/Aroumanian, Serbian, Albanian, Turkish, and Romyany.

However, the educated classes (to which many extant Greek authors belonged) in their writing shunned the spoken Greek of their time. The written language in the Late Antique period displays a range of archaizing styles, mostly reproducing strict Attic or literary Koiné, less commonly using an approximation to contemporary speech with added features from the formal language.

As a result, although we have texts from all periods of the history of Greek, the Greek of Late Antiquity is not fully documented. While untutored spoken Greek became increasingly different from Classical Greek, the written language mostly imitated Attic and styles of Koiné. Exceptions before the 11th century were few and somewhat partial, in that they did not accept all features of contemporary Greek. Such texts include the Chronicle of \*John Malalas (6th cent.), or the *De Administrando Imperio* by \*Constantine Porphyrogenitus (10th cent.). From the 12th century, compositions arguably close to vernacular Greek (mostly poetry, based on oral traditions) became more common, but their vocabulary and morphology present a remarkable multiplicity of forms, and we cannot tell whether the older forms they contain were still used in speech. Classical orthography was generally retained, despite significant shifts in pronunciation.

### *Greek grammar*

Between the Classical and the Late Antique periods, *spoken* Greek underwent profound changes. Some had started very early, especially in Ionic Greek.

Long /e/ (spelt ei) moved towards the sound /i/; by the 1st century BC, /ai/ became /æ/; by the Roman imperial age, diphthongs consisting of long vowels +/i/ lost the /i/, while vowel length distinction faded, and the pitch accent of Ancient Greek became a stress accent. The open sound of the letter η eventually merged with /i/, and the second element in the diphthongs /au/ and /eu/ came to be pronounced as /v/ or /f/. Aspirated plosives and, by the 4th century AD, voiced plosives became fricatives: /p<sup>h</sup>/ > /f/; /t<sup>h</sup>/ > /θ/;

/k<sup>h</sup>/ > /x/; /b/ > /v/; /d/ > /ð/; /g/ > /ɣ/. Initial /h/ faded, and initial unstressed vowels were frequently elided.

The old conjugation of *-mi* verbs was increasingly replaced by the *-ō* type; the perfect and the aorist tense merged, the former being discarded; the optative mood, the future tense, the dual number, and the dative case became obsolete; the second aorist tense forms were replaced with those of the first; the morphologically distinct middle voice of verbs also fell into disuse. Many nouns with unusual declensions were replaced entirely or declined according to more common declensions. The infinitive mostly gave way to finite constructions, and the largely free word order was replaced by Verb-Subject-Object or Subject-Verb-Object. New words, including many adopted from Latin, appeared.

**Greek Magical Papyri** Modern name for a very heterogeneous group of mostly pagan texts employed to attain a range of instrumental ends by appeal to syncretistic but basically \*Egyptian theological and ritual knowledge. Three main groups may be distinguished:

1. edited collections of prescriptions ('formularies'), the most important deriving from a cache buried c.350 AD near Karnak-Luxor/\*Thebes. The longest text in this cache, with 98 prescriptions, is in Demotic, partly translated back from \*Greek;
2. copies of individual prescriptions for exchange among practitioners;
3. 'activated' texts, mainly phylacteries and binding \*curses, on precious-metal foil, \*papyrus, lead, and other materials.

Examples of group 3 are also found outside Egypt from the 2nd century AD. There is little overlap between the surviving formulary prescriptions and the 'activated' texts, implying the existence of large numbers of production-centres and mainly local circulation. The procedures (Gk. *praxeis*), originally in Egyptian, derive mainly from \*temple \*libraries; in the Roman period they were adapted into Greek to meet demand from the inhabitants of the Greek-speaking *metropoleis*. The latest pagan texts date from the 6th century; Christian monks adapted the expertise by incorporating biblical material, thus ensuring its appropriation into \*Coptic and Byzantine \*'magic'.

**Greens** See FACTIONS.

**Gregentius, Life of S.** A fictional *Life* included in the dossier of texts relating to S. Gregentius, a 6th-century saint from Lyplianes (mod. Ljubljana, Slovenia). According to the *Life*, Gregentius travelled extensively in the Mediterranean before undertaking missionary activities in \*southern \*Arabia, where he became Archbishop of Taphar. Although the internal chronology is uncertain, the *Life* assigns Gregentius' mission to Arabia to the reign of \*Justin I (518–27). Best described as a 'hagiographical romance' (Sansterre, *Moines*, 1, 133), this complex text comprises two parts. The first (chs. 1 to 8) deals with Gregentius' early life in the \*Balkans and his travels to \*Sicily, \*Italy, and \*Egypt. The second (ch. 9) recounts his time in Arabia with more precise chronological and topographical detail. The *Life* was probably produced in \*Constantinople in the 10th century, though some have assigned it to 9th-century \*Rome. The discrepancy between the vague chronology of the first part and the greater detail of the second can be attributed to the author's use of sources of varying quality.

Honoré, *Emperors and Lawyers*, 112–15.

**Gregory I, the Great** \*Bishop of \*Rome 590–604. One of the most influential of all popes, and the most prolific Late Antique papal author; styling himself *Servus Servorum Dei*, he embodied the ideal of leadership as service.

### Life

Related to two of his predecessors, Felix III (r. 483–92) and \*Agapetus (r. 535–6), Gregory belonged to a prominent Roman \*aristocratic family. He held high office in the \*city, probably as \*Praefectus Urbi Romae (c. 573), but adopted a monastic way of life after the death of his father, Gordianus. He converted the family property on the Caelian Hill into the \*monastery of S. Andrew, where he himself resided, and founded six other well-endowed monasteries on family \*estates in \*Sicily. He was made a \*deacon, probably by Pope Benedict I (575–9), and was sent to \*Constantinople at the start of the pontificate of \*Pelagius I (579–90) as Apocrisiarius, or papal envoy to the imperial \*court. There he made influential friends, including the future \*Emperor \*Maurice (582–602) and \*Leander, Bishop of \*Seville. He successfully challenged the \*Patriarch Eutychius over his views on physical resurrection. On returning to Rome in 586, he advised \*Pelagius II on theological questions, attempting to heal the breach with the churches in \*Hiria which had broken with Rome over the \*Three Chapters Controversy, and was elected to succeed him when the pope died of \*plague in February 590. He relieved starvation in the city caused by the \*epidemic, which persisted into 591, purchasing \*grain supplies, and then reorganized the administration of the church estates in southern \*Italy, \*Africa, and \*Provence. Another pressing problem was the threat of \*Lombard expansion. The imperial \*exarch, resident in \*Ravenna, failed to act and Gregory had to appoint his own officers to defend \*Naples and Nepi. In summer 592 Ariulf, the new \*Dux of \*Spoleto, besieged Rome, and was bought off by Gregory with church funds. The following year Gregory negotiated a truce with the Lombard King \*Agilulf, who cut the only line of communication between Rome and Ravenna by capturing \*Perugia. In 595 Gregory threatened to negotiate a full peace treaty with Agilulf if the exarch continued to procrastinate, resulting in an angry exchange of

\*letters with the Emperor Maurice. In 596 he sent S. \*Augustine (of \*Canterbury), the prior of his monastery on the Caelian Hill, with 40 monks to evangelize the \*Anglo-Saxon kingdom of Kent, probably at the request of its King \*Ethelbert. The mission, established in Canterbury, extended its work to the kingdoms of the East Saxons and the Northumbrians, and was reinforced by a second party of monks sent by Gregory in 601. He continued to guide its new bishops and the convert kings through a series of letters, many of which were later copied for \*Bede (*HE* I, 23–4 and 27–32). In 598 a peace treaty with the Lombards was finally negotiated, with imperial approval, and was instituted the following year, when, however, the plague returned. Gregory's health began to decline in 598, and he was confined to bed for most of his last years, while war with the Lombards resumed between 601 and 603. He died in March 604. His life was written by a monk of \*Whitby and by \*Paul the Deacon, and is summarized by Bede (*HE* II, 1) and in the \**Liber Pontificalis* (66).

### Writings

Gregory's most substantial work, his *Moralia* on the Book of Job, dedicated to \*Leander of Seville, began as a series of exegetical \*sermons to the monks who had accompanied him to Constantinople in 579. He completed the written version in 595. Most of his other compositions belong to the opening years of his reign, his *Pastoral Rule* being the earliest. This was a rule or guide for *rectores*, or those entrusted with pastoral authority in the Church. It became one of his most influential works, especially in the Carolingian period, when it was treated as a manual for bishops. While the *Moralia* was Gregory's only exercise in commenting on an entire book of the \*Bible, he delivered exegetical homilies on extracts from others; notably the Gospels (590/1) and the Book of Ezekiel (593). There are two such homilies on the Song of Songs, perhaps intended to be part of a longer collection, but the Commentary on the First Book of Kings, long thought to be by Gregory, has recently been proved to be an Italian work of the 12th century. Gregory's exegetical writing drew heavily on the works of his predecessors, notably \*Augustine and \*Jerome, but he developed his own approach to commenting on biblical texts, expounding in turn the historical or literal, \*allegorical, and spiritual significance of each passage he discussed. His best-known and most widely disseminated work, the *Dialogues* (593), is his only non-exegetical composition and consists of stories of the lives and miraculous deeds of a series of largely Italian \*holy men, delivered in the form of a conversation between Gregory himself and a \*deacon named Peter. The second book is notable for its extensive account of the life of S. \*Benedict, and is the fullest source for this subject. As pope, Gregory was

responsible for the production of numerous letters, some administrative or diplomatic, and some pastoral, entered into annually structured \*papyrus rolls, all of which have perished. However, 850 of his letters have survived thanks to copies made in the 8th century. JM

**Gregory II** \*Bishop of \*Rome, 715–31. The first pope to come from an Italian background in the 8th century, Gregory's pontificate marks a point at which the papacy both negotiated a tricky peace with \*Liutprand, King of the \*Lombards (712–44), and also opposed the \*iconoclast policies of the \*Emperor \*Leo III (717–41). Gregory sponsored S. \*Boniface's (Wynfrith) (680–754) missionary activities in Germanic lands. His life is summarized in \**Liber Pontificalis*, 91. CTH

PBE, Gregorios 72.

**Gregory III** \*Bishop of \*Rome, 731–41. During Gregory's reign, papal independence from the \*Emperor \*Leo III in \*Constantinople proceeded to crystallize. Gregory opposed Leo's \*iconoclast policies vigorously. At the same time Gregory was unable to prevent hegemonic control of \*Italy by the \*Lombard King \*Liutprand; Gregory's appeals to the \*Frank \*Charles Martel fell on deaf ears. His life is summarized in \**Liber Pontificalis*, 92. CTH

PBE, Gregorios 7.

**Gregory of Antioch** \*Patriarch of \*Antioch (570–93). A former monk and zealous Chalcedonian, Gregory played an active role in military affairs in the East, defusing an \*army mutiny in 589 and enjoying close relations with the \*Emperor \*Maurice. GBG A. D. Lee 'Episcopal Power and Perils in the Late-Sixth Century: The Case of Gregory of Antioch', in J. Drinkwater and B. Salway, eds., *Wolf Liebeschuetz Reflected* (BICS supplement 91, 2007), 99–106.

**Gregory of Langres** (450/1–539/40) \*Bishop of Langres 507/8–39/40, and previously \*Comes of \*Autun for 40 years. His great-grandson \*Gregory of \*Tours wrote his *Vita* (*Lives of the Fathers*, 7: BHL 3665), which presents him as an active bishop and \*miracle worker. His preferred residence was Dijon, where he was buried. EJ

PCBE IV/1, Gregorius 1.

**Gregory of Nazianzus (Gregory Nazianzen)** (c.329–c.390) \*Bishop of \*Constantinople (379–81) and one of the 'Cappadocian Fathers', titled 'the Theologian' by the \*Council of \*Chalcedon for the sublimity of his five Theological Orations (*Orations* 27–31) delivered in Constantinople in 380.

#### Life

Born into a landholding family near Arianus/Tiberene in south-west \*Cappadocia, Gregory was the heir of fervent Christian domestic piety and a local \*aristocracy. His father, Gregory the Elder, was a prominent \*city councillor (*curialis*) of Nazianzus. His devout mother, Nonna, won over her husband from the sect of the \*Hypsistarii to Christianity in 325. Around 328 the elder Gregory was elected \*Bishop of Nazianzus, 13 km (8 miles) north of the family \*estate. Three children were born to Nonna and Gregory: Gorgonia, Gregory, and Caesarius. Gregory has left eulogies of his mother and two siblings.

Gregory received the highest Hellenic education, first in the provincial capital, \*Caesarea of Cappadocia, around 345, and eventually in \*Athens, where he remained for almost a decade in the 350s and cultivated

a friendship with his fellow student and Cappadocian \*Basil of Caesarea. He meanwhile studied in \*Caesarea of \*Palestine and in \*Alexandria. Returning home in 357 he was torn between the desire to retire with Basil to the ascetic life and a sense of duty to his father. He spent much of 358–9 in a retreat by the River Iris, composing along with Basil an anthology of \*Origen (*Philocalia*) and aiding him in the *Moralia*.

Of a more diffident and vulnerable personality than Basil, Gregory often wavered between unwillingly yielding to others' wishes and then reacting with flight, a strange mixture of compliance and resistance. Thus he fled to stay with Basil in Pontus after his father ordained him a \*priest in 362 against his wishes, and then again, ten years later, he so resented Basil's ordaining him a bishop of the insignificant \*Sasima (a ploy against Anthimus of \*Tyana) that he ignored the place and became estranged from Basil. In 370 he had resolutely resisted all blandishments to attend Basil's election as \*Metropolitan of Caesarea, though his own father had made the journey in old age. From 372 Gregory assisted his father at Nazianzus, and, after his death in 374, administered the \*diocese for a year. Thereupon he retired to a \*monastery in \*Seleucia ad Calycadnum of \*Isauria, where he prayed and studied issues in Trinitarian theology.

During the late 360s Gregory had helped Basil advance the theology of the \*Council of \*Nicaea in Caesarea, and through the 370s he maintained contacts with the neo-Nicene circle. Several \*letters to \*Eusebius of \*Samosata survive, whom he addresses as 'Abraham-like father'. We know that Gregory and \*Gregory of \*Nyssa exchanged many letters over the years, of which only a token number survives. His Christological letters (*ep.* 101–2, 202) were of such importance for their arguments against the doctrines promoted by \*Apollinarius of \*Laodicea that they circulated in a separate manuscript tradition and became patristic proof-texts in the 5th century. Gregory foreshadowed the decisions later reached at the Council of \*Chalcedon, insisting on the full divinity of the incarnate Logos, and a full humanity in all its operations, especially a fully human soul. As to the unity of the person of Christ, Gregory believed that an acknowledgement of \*Mary's title as \*Theotokos was the touchstone of accurate and saving faith.

Gregory's monastic peace in the mid-370s was soon disturbed again, and this time he rose magnificently to the challenge, occupying a place at the hub of ecclesiastical affairs from 379 to 381. After the death of the \*Emperor \*Valens in 378, the remnant Nicene flock in Constantinople sent him a pressing invitation to come to their help. Gregory served as the preacher for the small Nicene congregation there, and in 381, with the \*acclamation of bishops and the approval of the staunchly Nicene emperor, \*Theodosius I, he was

consecrated Bishop of Constantinople. The Council of \*Constantinople convening in May 381 at first ratified Gregory's position. However, the Egyptian and Macedonian contingent arrived late to the Council and objected, alleging canonical irregularity since Gregory had already been consecrated to another see (namely Sasima). Appalled at the political chicanery, Gregory promptly resigned. His farewell address is preserved as *Oration* 42. Gregory returned to Cappadocia and administered Nazianzus until 384. He then retired to his small estate at Arianus, where he spent his few remaining years in \*prayer and literary activity. He died c.390.

### Writings

Gregory's orations are his most important works, showing him to be an extraordinary communicator of ideas. The majority of his 44 extant discourses were originally preached at services and \*festivals. During his time in Constantinople he preached a body of Five Theological Orations (*Orations* 27–31) which revived the Nicene cause in the imperial capital and gained him lasting renown. On the doctrine of the Trinity Gregory lavished the fruits of years of prayer, and all the resources of his rhetorical skill. He elucidated the 'relations of origin' in the Trinity as definitive of the three *hypostases* (persons) of God, and on this basis he advanced a doctrine of the Holy Spirit in *Oration* 31, which focused on the notion that the Spirit 'proceeds' from the Father, as distinct from the Son who is 'begotten'. He went beyond Basil's formulae by speaking of the Spirit as 'consubstantial' with the Father. His doctrine of salvation championed the notion of *theosis*, the view that the Son became human so that humans could become divine.

Other important orations represent different genres. They include his apologetic \*sermon following his reluctant ordination as priest (*Oration* 2), two \*invectives against the Emperor \*Julian the Apostate (*Orations* 4 and 5), and several eulogies for members of his family. An extraordinary ethical treatise, *Oration* 14, *On the Love of the Poor*, calls for generosity toward the \*poor and also identifies the destitute poor with the divine nature and body of Christ. *Oration* 43, Gregory's \*funeral oration for Basil, is often considered the best such composition since Demosthenes. It was first preached as a eulogy at Basil's \*tomb and later edited and expanded as a masterful biography.

Gregory also wrote more than 17,000 verses, infusing Greek poetry with Christian content. In his final retirement he worked through the dilemmas of his life and his sensitive personality in the medium of poetry, notably *On his Own Life* and *On his Own Affairs*. His autobiographical poems are his greatest achievements in verse, but he also composed many \*epitaphs and hundreds of \*epigrams that form Book VIII of the

*\*Greek Anthology*. His orations and poems provided a platform for intense personal reflections as well as some of his harshest criticism of the ecclesiastical establishment. These works reached beyond the pulpit and the local context. In fact, Gregory's works became the acme of poetic and rhetorical style in the Byzantine centuries. They not only attracted scholia and commentaries but were soon translated into \*Latin, \*Syriac, \*Armenian, and later into Slavic languages.

His correspondence reached a wide audience as well. Gregory was apparently the first Greek Christian writer to make a collection of his own letters, of which nearly 250 survive. He included letters to Basil emphasizing their close, albeit complex, relationship and signalling his resonance with his friend's spiritual ideals. His letters are notable for their brevity, concision, wit, and charm. In his letter to Nicobulus (*ep.* 51) Gregory offered advice on letter writing, emphasizing grace and style as well as comprehensibility. The letter collection was published as a schoolbook, and Gregory's subsequent fame is due in part to the use of his writings in the Byzantine curriculum. He was one of the most studied and commented upon of all Greek authors and the most frequently cited after the \*Bible in Byzantine ecclesiastical literature.

**Gregory of Nyssa** (331/340–c.395) Theologian and \*Bishop of \*Nyssa of \*Cappadocia (372–6 and 378–c.395). Gregory, his elder brother \*Basil (329/30–79), Bishop of \*Caesarea of Cappadocia, and \*Gregory of \*Nazianzus (329–90) are known as the Cappadocian Fathers. They formulated the neo-Nicene Orthodoxy that prevailed against the \*Eunomians at the First \*Council of \*Constantinople in 381, formally ending the \*Arian' Controversy. Gregory also wrote influential works in monastic and mystical theology.

#### Life

Gregory and Basil came from a Christian \*family who had served as \*city councillors in \*Neocaesarea of \*Pontus. Their paternal grandparents spent the Great \*Persecution as refugees in the wooded fastnesses of the Pontic Alps (Gregory of Nazianzus, *Oration*, 43). Their grandmother passed on the teaching she had heard from \*Origen's pupil, S \*Gregory the Wonderworker (\*Basil, *epp.* 204, 6; 223, 3), of whom Gregory of Nyssa was to write a *Life* (*BHG* 715). The family had a shrine

of the \*Forty Martyrs on one of their \*estates and it was here that Gregory buried his parents (Gregory of Nyssa, *2nd Homily on the Forty Martyrs*, 8–9; *VMacr* 34).

Unlike Basil, whom their parents sent to \*Athens to be trained in \*rhetoric, Gregory received no formal schooling. His only education came from his elder sister, \*Macrina the Younger, who, after the death of their father, turned the family estate in \*Pontus into a monastic community. Largely self-taught, Gregory acquired advanced knowledge of \*philosophy and rhetoric and planned to teach rhetoric like his father. In 371, however, Basil, seeking to strengthen the pro-Nicene presence in Cappadocia, consecrated Gregory to the see of Nyssa. After Basil's death in 379, Gregory joined with Gregory of Nazianzus to lead the pro-Nicene cause. Gregory's standing among pro-Nicenes was confirmed when the \*Emperor \*Theodosius I appointed him to deliver the \*funeral oration for Meletius of \*Antioch, who died while presiding over the Council of Constantinople in 381.

### *Theological controversies*

The Council of \*Nicaea in 325 had sought to resolve disputes about the relationship of the Father and His only-begotten Son. It affirmed the divinity of God the Son by declaring that the Son was of the same being or essence (*ὁμοούσιος*) and coeternal with the Father. This language was problematic because it failed to express the distinction between Father and Son implicit in the \*Bible and because it compromised the uniqueness of the Father. One faction of anti-Nicenes, the Heterousians led by Aetius (c.300–370) and his disciple \*Eunomius of \*Cyzicus (c.325–c.395), sought to defend the uniqueness of the Father by arguing that the divine essence (i.e. that which makes the Father unique) was that he was 'unbegotten' (*ἀγέννητος*). Because the Son was begotten by the unbegotten Father, the Son was not of the same essence as the Father. In his *Contra Eunomium* (of 380–3), Gregory of Nyssa countered that because God is infinite the divine nature cannot be comprehended by a finite human intellect, nor could God's essence be reduced to a single attribute or concept such as simplicity, infinity, or immutability. All of these are attributes of the Divine, but none is itself the divine Essence. Therefore, Gregory argued, Eunomius could not claim the Father and the Son are of different essences. This did not mean, however, that God was unknowable and human discourse about God vain. The divine attributes that were the proper object of *theologia* could be known, Gregory argued, not through philosophy and syllogistic reasoning, but through the divine activities (*ἐνέργεια*) manifest in God's overall plan of Creation and Restoration (*οἰκονομία*) recorded in scripture. The Son's consubstantial unity with the Father could be proved from a right understanding of

this divine economy. The end of God's redemptive plan was divinization or deification (*θεώσις*), i.e. participation in the divine Nature through fellowship with Christ. This process could go forward only if the Son possessed the divinizing power proper to the divine Nature. Unless the Son and the Spirit shared the Father's nature, human beings could not participate in the divine Nature through them. Gregory therefore preserved the unity of the Father, the Son, and the Spirit as affirmed at Nicaea but made clear the distinction between the three Persons that had been unclear in the formula of 325. In the divine economy, Father, Son, and Spirit work in a 'unity of operations', meaning that all three persons act together simultaneously to accomplish the redemption of humanity. Salvation originates in the Father's will, it is actualized by the Son, and is perfected by the Spirit. In this unity, however, each Person of the Trinity is a distinct 'mode of God's Being'. The Father is unbegotten, the Son begotten, and the Spirit proceeds from the Father through the Son.

### *Virtue and mysticism*

Gregory's earliest work, *De Virginitate*, followed by *De Hominis Opificio* and *De Anima et Resurrectione*, provided a theological explanation for the \*asceticism practised in Macrina's and Basil's \*monasteries. The monastic goal was the perfection of divinization, i.e. growing in likeness to God through participating in the divine virtues. Ascetic renunciation of sex, family relations, and luxuries and the adoption of a life of \*prayer and contemplation freed the soul's desire (*ἐπιθυμία*) from its corrupt attachment to transitory goods, thus reorienting love toward the eternal goods of God. Gregory's theory of Christian perfection in virtue, described by J. Daniélou as 'epectasy', differs from an Aristotelian understanding of perfection as full actualization of potentiality which brings an end of all movement. Gregory's *Life of Moses* describes perfection as a never-ending progress in imitating the infinite virtues of an infinitely good God.

**Gregory of Tours** (c.539–594) \*Bishop of \*Tours (573–94). He was born Georgius Florentius, to Florentius, a \*senator of the \*Auvergne (brother to Bishop \*Gallus of \*Clermont), and Armentaria, the granddaughter of Bishop \*Gregory of Langres, who was also closely related to the bishops Tetricus of Langres, \*Nictetus of \*Lyons, and Eufronius of \*Tours. Gregory's extensive writings provide some information about his life. As a young man he moved to Lyons, and became \*deacon there. Tetricus and Nictetus, either of whom Gregory might have hoped to succeed, both died in the early 570s and were replaced by opponents; but Gregory was appointed Bishop of Tours by King \*Sigibert I in 573. Gregory claimed that he was related to all but five of his predecessors in the see. Nevertheless, Gregory's appointment caused problems in Tours, probably because Sigibert had ignored the local candidate.

Gregory also faced political difficulties because of the geographical situation of his \*metropolitan \*diocese. In 573 Tours was in Sigibert's territory, although Gregory was the superior of several bishops whose sees were in \*Chilperic's territory. When Sigibert was assassinated in 575, Tours itself fell to Chilperic. Gregory had various problems with Chilperic, particularly when several of the king's opponents took sanctuary at the Church of S. \*Martin in Tours. Gregory was also harassed by \*Leudast, the \*Comes of Tours, who sided with disaffected local clergy. Gregory was accused of claiming that Queen \*Fredegund was having a love affair with \*Bertram, Bishop of \*Bordeaux. It emerged during his trial at Berny-Rivière that there was a conspiracy to replace Gregory as bishop. Despite Gregory's opposition to Chilperic, the king was friendly to him, perhaps because he had helped in the political shift at the \*court of the young \*Childebert II, Sigibert's son, who moved his alliance from one royal uncle to another, abandoning \*Guntram for Chilperic. When Chilperic himself was assassinated in 584, Childebert II became Gregory's king again, although the dominant political figure was now Guntram, the only adult \*Merovingian

king, who temporarily seized the strategically important territory of Tours for himself.

When Childebert came of age in 585, he was strong enough to get rid of a number of those who had dominated his regency when he was a minor, including Bishop \*Egidius of \*Reims. It is uncertain how close Gregory was to the plots of Egidius, who had consecrated him in 573, but he was keen to denounce him in the *Histories*. The only political problem that remained for Gregory to deal with thereafter was the revolt of the nuns of the \*Monastery of the Holy Cross, which had been founded by Queen \*Radegund in neighbouring \*Poitiers.

Gregory was active in building churches and supporting the cults of various saints, including Ss. \*Julian of Brioude and Nicetius of Lyons, but above all that of S. Martin. His last personal appearance in his own writings is dated to 593 (*Miracles of S. Martin*, IV, 45) when he met Childebert after Guntram's death. He is traditionally thought to have died on 17 November 594.

There was a later \*Latin *Life* of Gregory (*BHL* 3682), but more reliable as a source of information are his own writings, which form the most significant and substantial body of evidence for the history of 6th-century \*Gaul. Gregory was a masterful and colourful storyteller, and all his works, historical and hagiographical, demonstrate how God and his saints operate in this world. He lists his works at the beginning of the *Glory of the Confessors* (Preface) and at the end of the *Histories* (*HF* X, 31), where he says that he wrote ten books of *Histories*, seven books of *Miracula* (one on S. Julian, four on S. Martin, the *Glory of the Martyrs*, and the *Glory of the Confessors*), *The Offices of the Church*, and the *Life of the Fathers*, a more biographical account of twenty holy people (including one woman), several of whom were his relatives. His *Miracles of S. Julian* was likewise a work of personal piety, S. Julian's shrine at Brioude in the Auvergne being a favourite \*pilgrimage site for his family.

The *Histories*, or *Ten Books of Histories*, is more generally known as *The History of the Franks* (*HF*). This is the title it acquired after a 7th-century editor produced an abridged version, which left out much of the ecclesiastical material and turned it into much more of a political history of the Frankish kingdom. There are many manuscripts of this abridged version, which did retain those parts of the *History* that secular readers of Gregory have been interested in. Gregory's own intention was much broader than this, however. He starts with the Creation, and then focuses in on Gaul, introducing the \*Franks in Book II. He treats \*Clovis in some detail, but thereafter deals with events only sketchily until Book IV, which starts to chronicle the events of his own lifetime. Subsequent books get more and more detailed. Book X, for example, deals with a mere eighteen months. His basic aim was to show evil

people the awful fates that await them (in this world and the next), and the rewards which attend those who are faithful to God. There are very few good people who are not clerics; but by no means all clerics, as Gregory presents them, merit the Kingdom of Heaven. EJ

**Gregory Thaumaturgus** See GREGORY THE WONDERWORKER.

**Gregory the Exarch (Flavius Gregorius)** \*Exarch of \*Africa 645; \*usurper 646–7. First securely attested as Exarch of Africa in 645, when he oversaw a debate between \*Maximus the Confessor and the deposed \*Monothelete patriarch, Pyrrhus of \*Constantinople, Gregory may have held the post as early as 641, and may perhaps have served previously as \*Praefectus Praetorio of Africa. Possibly a relative of the \*Emperor \*Heraclius, Gregory nonetheless revolted against \*Constans II in 646/7 and was declared \*Augustus by troops in Africa. The rebellion has been variously understood as a regional self-help movement, prompted by the collapse of the Roman Empire in the East and the \*Arab conquest of \*Egypt, as the product of \*court intrigue, as local separatism, and as an anti-Monothelete

uprising. In 647, Gregory marshalled his forces and those of allied \*Berber tribes at \*Sufetula (mod. Sbeitla), to resist a Muslim incursion, but was killed in battle against an army led by 'Abd Allah b. Sa'd, the governor of \*Egypt. SSF

### **Gregory the Illuminator, Collected Homilies of S.**

There exist 23 homilies that have been attributed to S. \*Gregory the Illuminator and compiled in a work entitled *Yatsaxapatum* (*Stromateis*). The collection has also been ascribed to \*Mashtots'. The attribution to both is questioned by modern scholarship. The homilies touch on a variety of doctrinal and practical issues including the nature of the Trinity, divine providence, moral conduct, repentance, giving thanks, the teaching of the \*martyrs, and a counsel for \*ascetics. Although the *History* attributed to \*Agat'angelos mentions that Gregory delivered discourses on a multitude of topics (§886), the earliest citations from the work occur in the 7th-century *florilegium* entitled the \**Seal of Faith* (*Knik' Harwatoy*, 18–22). ### **Gregory the Illuminator, S. (Grigor Lusaworits')**

(d. c.328) 'Apostle of the Armenians'. Gregory converted \*Trdat I (Tiridates), King of \*Armenia, to Christianity, and Trdat proclaimed Christianity as the state religion c.305/14.

The story of S. Gregory (Grigor) 'presents the most complex textual tradition in all Armenian literature, encompassing not only a series of translations, sometimes multiple, into a variety of languages, but also at least three main recensions that developed over the course of 200 years' (Cowe, 303). The most significant of these is the hagiographic *History of the Armenians* by \*Agat'angelos (Agathangelos), written in the 5th century.

Agat'angelos relates how the Parthian Armenian nobleman Grigor, brought up in \*Cappadocia as a Christian, served King Trdat, who had been educated

in \*Rome. Refusing to worship \*Zoroastrian deities even after \*torture, Gregory miraculously survives some fifteen years in a pit of oblivion. Trdat desires the Christian \*virgin Rhipsime (Hrip'sime) but she refuses his advances and is martyred along with her companions. The king then falls ill and changes into a wild boar. Warned in a \*dream, his sister Khosrovidukht (Xosroviduxt) frees Gregory, who heals the king in Christ's name. He then gives an exposition of the faith. In a vision he is shown where to build \*martyria for the martyred virgins, and a cathedral church—the mother see of \*Edjmiatsin (Etchmiadzin). The king is cured, \*pagan shrines and \*temples are eradicated. Gregory is consecrated \*bishop in \*Caesarea of \*Cappadocia, builds the first churches, and baptizes the king and his people. Gregory's sons (and successors) \*Aristakes and Vrt'anes come to Armenia. Gregory evangelizes Armenia, then visits \*Constantine the Great in Rome together with King Trdat and Aristakes. Grigor withdraws to the province of Daranahik.

The *Epic Histories* (\**Buzandaran Patmut'iwnk'* III, 2, 14) also place the grave of S. Gregory in T'ordan in the province of Daranahik. No writings can be reliably ascribed to him. The \*family of S. Gregory led the Armenian Church until 439.

Agat'angelos's account obfuscates the fact that earlier evangelization of Armenia had taken place from \*Edessa. This transpires from the *Epic Histories*, which mentions \*Ashtishat (Aštišat) in the province of Taron as the place where the first church was built. Furthermore, the designation 'See of Thaddeus' reflects the story that S. Thaddeus the Apostle had already brought Christianity to Armenia in the 1st century. The legend of S. Gregory's conception on the grave of S. Thaddeus combines the two strands of Armenia's evangelization and together they assert the claim that the Armenian Church is autocephalous. S. Gregory is the subject of various Armenian panegyrics and works of art, and he is hailed as a representative of the universal Church in several Byzantine overtures towards the Armenian Church during times of tension in ecclesiastical politics. **Gregory the Illuminator, Teaching of S.** A catechism attributed to \*Gregory, who converted the \*Armenian King \*Trdat to Christianity early in the 4th century. \*Agat'angelos, in his *History of the Armenians*, reports that, after the conversion of the king, Gregory instructed the royal court over the course of 65 days. The extant Armenian recension of the *History* contains the supposed text of the first day's sermon. This text, referred to in the later Armenian tradition as the *Teaching*, is omitted in the \*Greek and \*Arabic translations dependent on this recension, and is either abbreviated or otherwise modified in manuscripts dependent upon a lost Armenian recension. Study of the *Teaching* has revealed numerous parallels with patristic authors, especially \*Cyril of Jerusalem and \*Ephrem. The only verbatim parallels from an earlier text are with the *De Fide* of \*Hippolytus, extant only in \*Georgian. Most likely, the *Teaching* was redacted even after the rest of the *History* reached its present form in the 5th century.

**Gregory the Wonderworker (Gregory Thaumaturgus)** (c.213–c.270) \*Bishop of Neocaesarea (mod. Niksar) in \*Cappadocia, pupil of \*Origen, and writer. Born into a \*pagan family at Neocaesarea, he studied \*rhetoric and \*law before meeting Origen in \*Caesarea of \*Palestine and spending five years studying with him. Whether baptized at Caesarea or before, he was consecrated Bishop of Neocaesarea in the 240s, and proselytized successfully in that \*city and beyond during a tumultuous period which included the Decian \*Persecution and the \*Gothic invasion of the 250s, and he participated in at least one of the synods of \*Antioch in the 260s. After his death his fame as a founding bishop of Cappadocia, preacher, and \*miracle worker spread, partly through the enthusiastic hagiographies written by \*Gregory of \*Nyssa (*BHG* 715 a–c; *CPL* 3184) and others, and it was at some point in this afterlife that he came to be known by the epithet 'Wonderworker'. A number of the works attributed to him are probably genuine, such as the *Metaphrase on Ecclesiastes*, the *Address of Thanksgiving* to Origen, a lively account of Origen's methods as a teacher, and the \*letter to an unnamed bishop advising him how to deal with Christians who had in various ways been compromised

during the Gothic invasion. A number of works are of debatable authenticity, such as his *Creed*, and works addressed to Tatian and Philagrius. His writings appear to have addressed the moral life more thoroughly than matters of doctrine.

**Greuthungi** Three groups of Gothic Greuthungi crossed into the Roman Empire: under Alatheus and Saphrax (AD 376), Farnobius (377), and Odotheus (386). Ammianus uses the name Greuthungi in contradistinction to \*Tervingi, placing the latter east of the River Dniester (XXXI, 3–5; cf. XXVII, 5, 6). All three were perhaps united prior to the arrival of the \*Huns, but this is not certain (see OSTROGOTHs).

**Grimoald** (c.610–671) \*Lombard King 662/3–71. Son of the \*Dux of \*Friuli Gisulf II, Grimoald had ruled the Duchy of \*Benevento (648?–662) prior to the civil war which saw Grimoald remove the deceased King Aripert's young sons Godepert and \*Perctarit (the latter, however, returning as king in 671). With his son Romuald installed in Benevento, and Grimoald taking Aripert's daughter in marriage, the new king (praised by \*Paul the Deacon for his valour as well as his bald head and fine beard) successfully countered the threat of \*Constans II's Byzantine troops from \*Sicily along with efforts from the \*exarchate, uprisings by Duces in \*Spoleto and Friuli (against whom Grimoald called in the \*Avars), and \*Frankish incursions. Paul the Deacon notes Grimoald's settlement of federate \*Bulgars in the depopulated northern Benevento territory; related burials have been excavated at Vicenne (Molise). Nine laws of 668 are attributed to Grimoald. NJC

**gromatici** See SURVEYORS.

**Gubaz (Gobazes) I** (fl. c.450–468) King of \*Lazica who gave way to his son c.456 under Roman pressure. In winter 455–6 he negotiated with \*Leo I at \*Constantinople, where his amiable character overcame distrust of his Persian habits (\*Priscus, fr. 34). He met \*Daniel the \*Stylite and wrote to him from Lazica (*VDanStyl* 51). MO

PRLE II, Gobazes.

**Gubaz II** King of \*Lazica (r. 541–55), whose defection to the Persians brought about the Lazic War. After returning to Roman alliance, in 554, he complained to \*Justinian I about the general \*Bessas. The following year, generals \*Martinus, Rusticus, and Buzes suspected Gubaz of treason with Persia, invited him to discuss attacking the Persians at Onoguris, and murdered him (\*Agathias, III, 5, 6–III, 8, 3). MO

PLRE III, Gubazes.

Braund, *Georgia*, 308.

**Gudme** Area on south-east Funen Island in Denmark, with settlements, \*cemeteries, and \*hoards of precious metals dating mainly from AD 200 to 600 (the Late Roman and \*Migration Period) and also up to AD 1200. Gudme is an inland area of the island located beside a small lake, 5 km (c.3 miles) from the coast of the Greater Belt. Gudme is related to the

contemporary coastal trading port of \*Lundeborg. The sites at Gudme and Lundeborg have been known since the 1830s, became well known in the initial period of metal-detector use in the 1980s, and were surveyed and excavated mainly between 1984 and 1991.

Gudme consisted of a magnate's farm surrounded by nearly 50 smaller farms with both \*longhouses of the ordinary type and smaller \*houses. Neighbouring burial grounds include the Møllegårdsmarken cemetery. Numerous \*gold, \*silver, and \*bronze treasures have been found in fields and bogs, along with substantial finds of skilfully made local craft production and many Roman and \*Frankish imports. The long chronological sequence elucidates \*settlement patterns and the development of houses and farmsteads in the Gudme area. The settlements were found on hilltops, with cemeteries close to them. The caches of treasure, both those deposited for ritual purposes and those hidden for storage, have been found in the surrounding wetlands.

The place name Gudme (Gud-hem, 'God's home') is sacral, associated with Goðheimr ('home of the gods'). The name, together with the substantial treasures, suggests that Gudme was an important political and religious centre beginning in Late Antiquity. Gudme was an emporium that prefigures the later Carolingian and Viking urban centres and prestigious \*villages in southern Scandinavia. KJe

**Guidi Chronicle** See CHRONICLE OF KHUZESTAN.

**guilds (collegia)** Organization of artisans in a \*city or \*village. Its members were called *collegiati*. Guilds could be privately organized or regulated by the state.

The 10th-century *Book of the Eparch* indicates that by that date some professions of importance to the state were organized into public guilds and at certain times had the monopoly over those professions in cities (e.g. 9, 6; 11, 8; 12, 4). Membership of such guilds controlled by the state was often hereditary, with legal restrictions that prevented members from leaving. \*City authorities could impose obligations on guilds, such as extinguishing fires, mentioned by the 5th-century \**Notitia Urbis Constantinopolitanae* (2, 5) and in

the 6th century by \*John Lydus (*Mag.* 1, 50). The imposition of public burdens, or *munera* on *collegiati*, sometimes led craftsmen to leave their home towns (*NovMaj* 8, 3; *CTh* XII, 19, 1; XIV, 27, 2). Egyptian evidence shows some guilds being held responsible for paying members' taxes (P.Oxy. I, 53; I, 85).

Membership of private guilds was not necessary to operate within a profession or trade, but since the state did not act to regulate trades outside those for which it organized guilds, private guilds could prevent fraud and provide mutual assistance (e.g. *\*Digest*, VI, 1, 39; *CJust* VIII, 12, 8). \*Contracts between state officials and guilds show that, even in the absence of state control, the state as customer could impose severe regulations (Grégoire, *Recueil*, 322).

Almost anyone, even a slave, could be a member of a guild. Membership usually depended on having a minimum amount of capital, successfully opening a workshop, or bringing a guarantee of proficiency from one's master. Hired labourers were, however, normally denied admission, and it was not possible to be a member of more than one guild. JUB

M. Heinzelmann, 'Gallische Prosopographie', *Francia* 10 (1982), 619–20.

R. Kaiser, *Die Burgunder* (2004).

**Gundovald** (d. 585) \*Merovingian pretender rejected by \*Chlothar I, his supposed father. He was taken up by \*Childebert I, then \*Charibert I, but \*Sigibert I exiled

him to \*Cologne. He escaped via \*Italy to \*Constantinople, but returned to \*Gaul with Byzantine financial backing in 582 at the behest of disaffected magnates. The plot was swiftly abandoned, but Gundovald's claim was revived on \*Chilperic's death. Powerful figures such as \*Mummolus supported him, but \*Guntram refused negotiations and neutralized the pretender's hopes of assistance from \*Childebert II. Gundovald was cornered at \*S. Bertrand-de-Comminges, betrayed, and killed. The objectives and evolution of the conspiracy remain contentious; \*Gregory of \*Tours, almost our only source for Gundovald, and a likely sympathizer, is careful to shroud it in a fog of rumour. STL

*PCBE* IV/1, Gundovaldus.

W. Goffart, 'The Frankish Pretender Gundovald, 582–585', *Francia* 39 (2012), 1–28.

**Gunthamund** \*King of the \*Vandals in \*Africa, AD 484–96. He succeeded his uncle \*Huneric according to the Vandal law of succession by agnatic seniority. Numismatic evidence and the dating of the \*Albertini Tablets to his reign have led some to propose that Gunthamund instituted major economic restructuring. AHM

*PLRE* II, Gunthamundus.

Merrills and Miles, *Vandals*, 58–9, 161–2, 173–5, 196.

**Guntharis** Officer in \*Africa 540–4, and \*Magister Militum (vacans) in 545. Broke into open rebellion in 546, took \*Carthage, and assassinated \*Areobindus (\*Procopius, *Vandalic*, IV, 25, 1–26.33). Guntharis was himself murdered a little over a month later by the Armenian \*Artabanes, and imperial control over the city was restored (Procopius, *Vandalic*, IV, 28, 1–30). AHM

*PLRE* III, Guntharis 2.

**Guntram** Frankish King (561–92). The son of \*Chlothar I, he inherited a share of the kingdom which included much of \*Burgundy and south-east \*Gaul. His chief residences were at \*Orléans and \*Chalon-sur-Saône. After \*Charibert's death in 567, he came into repeated conflict with his surviving brothers \*Sigibert and \*Chilperic. In 577, after the deaths of his two sons, he adopted Sigibert's son \*Childebert II as his heir, and renewed this arrangement after Chilperic's assassination in 584 left him as the last \*Merovingian king of his generation. He defeated the pretender \*Gundovald, and sought to dominate his nephews Childebert and the infant \*Chlothar II. His lingering disputes with Childebert were partly resolved by the Treaty of \*Andelot (587). He was better known as a peacemaker than as a war-leader. \*Gregory of Tours

(*HF* IX, 21) startlingly says that Guntram worked \*miracles of healing, a very rare claim in this period for a layman who had not died as a \*martyr. EJ  
PLRE IIIA, Guntchramnus.

**Guntram Boso** (d. 587) Frankish \*Dux, 575–7, 582–3. Guntram Boso nominally served \*Sigibert I and his son \*Childebert II, but is presented by \*Gregory of \*Tours as an arch-schemer, greedy and double-dealing, who intrigued with and against Merovech and \*Gundovald, and was finally executed in 587 by Child-  
bert II and \*Guntram (*HF* IX, 10). RVD  
PLRE IIIA, Guntchramnus Boso.

**Gurgan** See GORGAN.

**Guthlac, S.** (c.674–714) \*Anglo-Saxon anchorite and saint. Guthlac was born a noble in Mercia and spent his early mature years fighting on the Welsh border. In 698, dissatisfied with the secular life, he took religious orders at Repton. Two years later he sought a solitary life in the Crowland fens, living the life of a famed hermit there until his death in 714. The 8th-century *Vita by Felix* (BHL 3723) is the primary source of information about Guthlac; saint and biographer both owed much to the desert tradition exemplified by the *Life* of S. \*Antony the Great. Felix's text was translated into Old English prose, and two Old English poems treat the saint's life and death: Guthlac A and Guthlac B, in 'the Exeter Book' compilation of Old English poetry (Exeter, Cathedral Library, ms. 3501). APS  
ODNB s.n. Guthlac (Mayr-Harting).

**gynaecium** A network of *gynaecea*, state \*textile \*fabricae, was established in the \*provinces (probably under the \*Tetrarchy) to provide the \*army with standard items of woollen military \*dress; *gynaecea* in the \*Res Privata supplied \*silk and other high-grade garments to the \*court. They are listed in the \*Notitia Dignitatum. The work was normally put out to domestic weavers, but there may also have been central workshops. Christians during the Great \*Persecution were condemned to work in the *gynaecea* (\*Eusebius, *VCon* II, 34; cf. \*Lactantius, *Mort.* 21, 4). JPW  
Jones, *LRE* 836–7.

J. P. Wild, 'The *Gynaecea*', in R. Goodburn and P. Bartholomew, eds., *Aspects of the Notitia Dignitatum* (1976), 51–8.

**gynaecology** The workings of women's bodies, and women's diseases, especially as related to their reproductive function, continued to be a medical concern in Late Antiquity. The topic was addressed in dedicated treatises, or distinct parts of texts, as well as in a more integrated manner, in both \*Greek and \*Latin; though patterns diverge between East and West.

\*Africa and northern \*Italy were the centres for Late Antique medical writing in Latin. Africa produced both the female-focused third book of Theodorus \*Priscianus' *Euporista*, for example, and at least one (if not both) of the Latin versions of Soranus' *Gynaecology*, between the 4th and 6th centuries. Italy may be where the key Hippocratic works *Diseases of Women I and II* were translated into Latin around the same time. Parts of this material also circulated separately, and were variously reworked in a series of pseudonymous or anonymous Latin tracts of gynaecological content, spreading widely across the early medieval West.

In the Greek East neither Soranus' works nor Hippocratic gynaecology fared so well, as a more integrative approach, based on the works of \*Galen, was dominant. Extracts from Soranus do feature in the encyclopedic tradition, most prominently in the final, sixteenth book of \*Aëtius of \*Amida's 6th-century medical compilation, which is entirely dedicated to gynaecology, which is not the usual pattern in Greek medical texts. Whether or not Soranus' *Diseases of Women* was ever on the syllabus of the medical \*school of 6th-/7th-century \*Alexandria is unclear. Some more embedded Hippocratic gynaecology was indeed included, as it was placed last on the most extensive list of Hippocratic readings recommended by one teacher, \*Stephanus (*In Hippocratis Prognosticum Commentaria*, I, praefatio). There is no hint of commentary, nor of early translation into \*Syriac or \*Arabic. REF

M. H. Green, 'Medieval Gynaecological Literature: A Handlist', in her *Women's Healthcare in the Medieval West* (2000), 1–36.

**gynaecoonitis** Inner part of a house where the *materfamilias* sat spinning (\*Vitruvius, VI, 7, 2). The word is used by \*Procopius of the women's *stoa* of the Church of the \*Holy Wisdom in \*Constantinople (*Aed.* I, 1, 54–8); the \*empress worshipped in the gallery (\*Evagrius, *HE* IV, 31). Men and women in Christian congregations were separate during worship (e.g. \*Didascalia Apostolorum, XII, ii, 57; \*Augustine, *City of God*, II, 28). OPN  
Bingham, *Antiquities*, VIII, 5, 6–7 (1875) II, 294–5.

# H

**Haarhausen** Settlement site in \*Thuringia where three 3rd-century kilns incorporating provincial Roman kiln technology have been excavated. Both Roman-style \*pottery and pottery of local tradition were fired in these kilns. The site, 200 km (120 miles) east of the Roman \*frontier, demonstrates the transfer of technology from the Roman world into Germanic Europe. It is not known whether the kilns were constructed by local people who had learned techniques in the Roman provinces, or by potters brought across the frontier, voluntarily or not. PSW

S. Dušek et al., *Römische Handwerker im germanischen Thüringen. Ergebnisse der Ausgrabungen in Haarhausen, Kreis Arnstadt*, 2 vols. (1992).

**Hababa** Beautiful slave and singer (\**gayna*) from \*Medina who apparently exercised great influence over the \*Umayyad \*Caliph \*Yazid II (720–4), who was buried next to her. OPN

*EI* 2 vol. 3 (1971) s.n. Hababa, col. 2 (Ch. Pelliat).

**habit, monastic** (Gk. *schema*) According to \*Basil of \*Caesarea, the monastic habit, just like a soldier's uniform, served to distinguish the monk and helped him maintain the behaviour proper to his profession. The simplicity of a monk's clothes expressed the monk's single-minded espousal of poverty, modesty, and humility, while at the same time they protected his body from cold. A single change of clothes, provided by the \*monastery, was adequate for a monk's needs, while the \*belt was necessary to permit unimpeded movement (*Regulae Fusius Tractatae*, 22–3).

Evidence suggests that Late Antique monastic habits in the regions where coenobitic monasticism flourished, namely \*Egypt, \*Syria, and \*Palestine, were not uniform in design but varied both in their make-up, materials, and colour, and also as far as the use of more than a single change of clothes was concerned. We are better informed on the monastic habit of Egypt, which appears to have been more elaborate. It could include a tunic, either sleeveless or with sleeves, a belt, a kind of

apron made of goatskin (*melote*), a set of straps tied around the body (later called the *schema*), a small cape, a hood, shoes, and a walking staff. With the exception of the *melote* and the straps, variations of the remaining items are also encountered in other monastic traditions. Medieval Byzantine monastic dress was derived from the monastic habit of Late Antique Egypt. MGP

**hadith (plur. *ahadith*)** Narrated report consisting of a chain of transmitters (\**isnad*) and textual account (*matn*), usually relating a statement, action, or anecdote involving the Prophet \*Muhammad. The word hadith is also used to refer to the entire corpus of such materials, and, also, the scholarly discipline of collecting and evaluating such materials. Although the gathering and narrating of such reports probably goes back to the first generations of the Muslim community (as a continuation of the pre-existing Arabian oral narrative tradition), the study of hadith became an established discipline around the turn of the 3rd century AH/9th century AD. Around this time, partly as a reaction to the politically ascendant rationalist theologians known as Mu'tazila, a group of scholars known as 'the people of hadith' (*ashab al-hadith*) were formed. Among such scholars, the jurist al-Shafi'i and his circle were influential in forming an approach to Islamic \*law which rejected local juristic traditions in favour of legal opinions based mainly on prophetic hadiths. At the same time Ahmad b. Hanbal led a traditionalist reaction against the Mu'tazilites' attempt to reject or explain away hadiths (mainly of an anthropomorphic nature) that did not fit with their theological positions. Without rejecting the hadith corpus in its entirety, many Mu'tazilites were critical of some of the key principles within the methodology of hadith studies such as the idea of the widely transmitted (*mutawatir*) hadith, or

questioned the probity of hadith transmitters who did not share their theological views.

The collection of hadith was also pursued by \*Shi'i scholarship, although such scholarship only seriously considered hadiths that were narrated by Shi'i imams or narrators who were associated with Shi'ism. Although only two of the major Sunni schools of law (the Shafi'i and Hanbali schools) committed themselves mainly to the approach of al-Shafi'i and his circle, other schools of law increasingly felt the need to justify their positions by providing additional hadith evidence for their legal positions. Ibn Hanbal and a number of other scholars such as al-Bukhari and Muslim compiled a number of hadith collections, which became, over the centuries, part of a canonical Sunni written corpus of hadith. Although the oral transmission of hadith continued to occur, by the 5th century AH / 11th century AD most studies of hadith revolved around this textual canon, leading to a drastic growth in the number of hadith commentaries representing different interests and schools of thought. Scholars such as al-Khatib al-Baghdadi (d. 1071) and al-Shahrastani (d. 1245) also wrote on the more theoretical foundations of hadith scholarship, and the importance of hadith scholarship reached a peak during the later medieval period, when foundations were instituted specifically for the pursuit of hadith study. Ritual recitations of hadith collections were not only attended by scholars and students, but also by members of the general public keen on acquiring the blessing (*baraka*) of being present at such events.

**Hadramawt** Large region of southern \*Arabia made up mostly of hilly land between the Empty Quarter and the Indian Ocean, sometimes said to include Mahra (extreme eastern Yemen) and Zafar (south-west \*Oman). Hadramawt had mixed ethnic and linguistic populations. It was an important source of \*incense and was the base of the pre-Islamic \*Kinda.

PAW

R. Hoyland, *Arabia and the Arabs* (2001).

**Hadrian** (630/7–709/10) \*African abbot of a \*monastery near \*Naples, when Pope \*Vitalian offered him the archbishopric of \*Canterbury on the death of Wighard (then archbishop-elect) in 667 (\*Bede, *HE* IV, 1). Hadrian declined, but suggested \*Theodore of \*Tarsus, and followed him to England, arriving in 670. They established a famous \*school, where Hadrian taught for 39 years (*HE* V, 20); \*Aldhelm was educated there.

HHF

*ODNB s.n.* Hadrian (Lapidge).

*PBE*, Hadrianos, 9.

**Hadrian's Wall** The Roman barrier wall across northern England. Extensive restoration to the curtain wall commenced in the early 3rd century, and it is this \*wall which largely survives today. Widespread repairs and rebuilding are attested at forts throughout the \*frontier zone from Septimius Severus until Gordian. There is no evidence for large-scale incursions across the frontier, such as are attested for continental Europe, in the mid-3rd century, and little to support theories of invasion and consequent destruction in 296.

The last known building \*inscriptions from the Wall date to the \*Tetrarchy (*RIB* 1912, 1613). Excavations have shown that in many of the Wall forts there was extensive reconstruction of barracks and other major buildings from the second half of the 3rd century onwards. At about the same time all the civil settlements (*vici*) outside the forts seem to have been abandoned, perhaps indicating greater insecurity. North of the Wall the outpost forts were abandoned by the mid-4th century. The gates and defences of many of the forts underwent restoration and rebuilding throughout the 4th century and it is clear that garrisons remained active and are listed in the \**Notitia Dignitatum*. The most recent coins found date to 402 and direct control ended soon after. Many of the forts were not abandoned and some like Birdoswald formed the centres for local warbands, but the Wall itself ceased to have any military or political function.

**hagiography** See SAINTS' LIVES.

**Hagioi Apostoloi** See CONSTANTINOPLE, CHURCHES AND MONASTERIES AT; HOLY APOSTLES, CHURCH OF THE.

**hair, Merovingian** The carefully combed long hair of the \*Merovingian kings (*reges criniti*) was a distinctive and renowned feature of their royal family, ascribed symbolic significance in the Christian (not Germanic) tradition. MDi M. Diesenberger, 'Hair, Sacrality and Symbolic Capital in the Frankish Kingdoms', in R. Corradini et al., eds., *The Construction of Communities in the Early Middle Ages* (2003), 173–227.

**hair, baldness, and beards** Late Antique writers such as \*Lactantius esteemed hair as part of God's handiwork (*De Opificio Dei*, 4) and advocated that it be arranged decorously 'in accordance with Nature', however that was conceived for a man or a woman. S. Paul insisted on long hair for women (1 Cor. 11:15), a view that was repeated at the Synod of Gangra in 340 (canon 17). Men with long hair were seen as posing a seductive danger to women, so short hair and clean-shaven faces prevailed. Exceptions were made for soldiers on campaign and for teachers and \*philosophers, whose unkempt appearance was evidence of their preoccupation with higher matters. The \*Emperor \*Julian's long hair and philosopher's beard drew disapproval which he countered wittily in his *Misopogon*. \*Procopius (c.500–c.565) likewise sneered at members of the Blue \*faction who wore mullets and beards in the \*Hun fashion (*Anecdota*, 7, 9).

Women's hair was dressed, though not so elaborately, and not in such identifiable fashions as their

1st- and 2nd-century predecessors. The custom was to comb the hair over the ears from a central parting, braiding it from the level of the nape of the neck. The braids were then drawn up the line of the parting, ending in a topknot or wound around the head in a sort of wreath. In some imperial \*portraiture, the ensemble is wrapped in cloth and dressed with ornaments. Such styles apparently satisfied the modesty demanded, for example, by the \*Quinisext Council of 691–2 (canon 96).

Baldness, despite having been maligned in ancient times by Dio Chrysostom (AD c.40–c.114) in his *Encomium on Hair*, was praised by \*Synesius (c.373–c.414) as being a natural sign of wisdom and maturity (*De Calvo*). Monks submitted to partial baldness through the tonsure. The Roman tonsure was a circle of hair removed from the crown of the head. In \*Anglo-Saxon Northumbria the Synod of \*Whitby of 664 determined that it should supplant the Celtic tonsure, the shaving of the front half of the monk's head. JEH

**Hajiabad** Monumental structure of the 4th century AD c.60 km (35 miles) south of \*Darabgerd, \*Fars. Excavated in the 1970s and 1980s by M. Azarnoush, the mud-brick complex is important for its rich \*stucco \*sculpture and fragmentary wall painting. A sanctuary room ('Unit 114'), whose niches and classicizing ornament recall features at \*Bishapur, was decorated with sculptures of nobles, kings, and the goddess \*Anahid. Hajiabad has been dated to the reign of \*Shapur II (309–79) based on affinities between the king's numismatic portraits and the stucco portraits from the site. The complex was never finished or used. Its primary function as a sanctuary or villa is still under debate.

**Hama Treasure** Group of 24 items of Christian liturgical \*silver separated from the rest of the \*Kaper Koraon Treasure by an antiquities dealer, and presented in 1910 as a single find from the cathedral of Hama (ancient \*Epiphania of \*Syria). Most of the pieces, which include inscribed chalices, patens, \*crosses, \*lampstands, and spoons, were sold to Henry Walters of Baltimore in 1929. MH

Mango, *Silver from Early Byzantium*.

**Hamouli Codices** About 60 \*Coptic codices found by accident in 1910 among the ruins of the \*monastery of the Archangel Michael, near the modern village of Hamouli in the \*Fayyum. They are the remains of the monastic \*library and constitute the largest collection of \*Coptic \*books ever found together. The large variety of texts include biblical texts, liturgical works, homiletic and hagiographical texts, written in Sahidic and Fayyumic Coptic. The colophons in some of the manuscripts suggest the collection dates from the 9th and early 10th centuries. Most of the codices (P.MorganLib.) are now kept in the Pierpont Morgan Library in New York.

AFVD

P.MorganLib. catalogued in L. Depuydt, *Catalogue of Coptic Manuscripts in the Pierpont Morgan Library*, 2 vols. (CIM 4, 5; Orient. ser. 1, 2; 1993).

**Hamwic** (England) Large urban settlement on the west bank of the River Itchen, downstream from the Roman settlement of Clausentum and across the river from the medieval city of Southampton. Known as Hamwic in contemporary texts and from mint marks, it was founded c. AD 700 and largely depopulated by the end of the 9th century due to Viking raids (documented in 842). A c.45 ha (c.111 acres) area was divided by rectilinear gridded streets, which were regularly resurfaced. Dense housing lined the \*streets with latrine and rubbish pits to the rear. Industries included the working of bone, antler, \*pottery, \*textiles, \*leather, and wood. Extensive evidence of trading connections with the Low Countries, northern Germany, and northern France are revealed by imported \*pottery, quernstones, coins, and other materials. ARE

**hand gestures** Hand gestures are both natural forms of expression, and cultural conventions. Teachers of \*rhetoric recommended specific gestures to reinforce different communications (Quintillian, *Inst.* XI, 3, 84–104). Such gestures were often linked to public \*ceremony and by extension to religious imagery.

So, by portraying a Roman orator with an upraised hand, with one or two fingers extended, an image could convey, not only that the speaker understood rhetorical devices, but also that he had authority to speak. The imperial *adlocutio*, or address to the troops, carried both these meanings. The same gesture came to be used to show Christ speaking and teaching, but also as a sign of his divine authority to perform \*miracles, or to convey a blessing. This developed into the *benedictio Latina*, the raised right hand of Christian priestly blessing.

At times, artists used the hand on its own, issuing from the Burning Bush (as at the \*Dura Europus \*synagogue) or from a cloud (as in the scene of Moses receiving the Law in the Via Latina \*Catacomb) to stand for the *dexter Dei*, the right hand of God the Father, either speaking or exercising his authority.

Before a distinctive repertoire of biblical narratives developed, one pervasive image in Christianity was a gesture that may have grown out of images of \*acclamation in imperial art, the *orans* or praying gesture. In early church practice and imagery the customary posture for prayer was to stand with both hands raised and palms open. At the \*Sasanian \*court, the raised hand of the subject was not so much an acclamation as a sign of submission and respect, and was accompanied by the covering of one's face.

Another imperial and Christian image was that of the arm around the shoulder, which signified protection, and can be found both in the porphyry group of the \*Tetrarchy, now in Venice, and in the \*icon of Christ and Apa Menas from \*Bawit, now in the Louvre. A third conventional gesture with a plausibly natural origin was the *dextrarum iunctio* (Gk. *dexiosis*),

or joining of right hands. This is an organic expression of agreement between parties, but as the Romans considered the right hand sacred to Fides, the \*personification of fidelity, it also became formalized as the primary symbol of Roman and Early Christian \*marriage. It spread from the temporal to the supernatural world to express divine alliances, such as that between Mithras and the \*Sun.

**Hanifa (Hanifa b. Lujaym)** Arabian \*tribe related to the \*Bakr b. Wa'il. The Hanifa lived in Yamāma (east of \*Najd) before \*Islam, and had a settlement at al-Hajr from which they conducted \*trade and political relations with \*Persians and \*Lakhimids, providing security for caravans between \*Mesopotamia and \*Arabia. They are famous in Arabic lore for constructing an idol out of dates and flour which they ate during a famine; some pre-Islamic Hanifa were also Christian. They converted to Islam in 630 (\*Tabari IX, 95–7), possibly seeking new trading opportunities following the crisis of the \*Sasanian dynasty in 628. After \*Muhammad's death in 632, most of the Hanifa joined the 'false prophet' \*Musaylima al-Kadhdhab; \*Khalid b. al-Walid's Muslim army defeated them at the Battle of al-Yamāma, one of the most important campaigns of the \*Ridda Wars (Tabari X, 105–33). Following the \*Arab conquests, some Hanifa settled in Iraq and \*Syria.

Potter, *Empire at Bay*, 459–61.

**haras** Arabic for 'guard', used of the bodyguard of the \*caliph. \*Mu'awiya (r. 661–80) is often said to have been the first caliph to appoint a *Sahib al-Haras* ('commander of the bodyguard'). AM

D. W. Biddle, *The Development of the Bureaucracy of the Islamic Empire during the Late Umayyad and Early Abbasid Period* (Ph.D. thesis, University of Texas at Austin, 1972).

**harbours** On the Mediterranean, Black Sea, and Atlantic coasts, and along such rivers as the Danube, Romans had long used natural harbours, supplemented with artificially constructed seawalls and moles made of rubble and hydraulic concrete, as at \*Caesarea Maritima in \*Palestine and later at \*Constantinople. Roman architects also experimented with solutions to the problem of harbours silting up (as at Portus on the coast of \*Italy). Such ports might have a commercial function or a military use (as at \*Brigetio on the Danube) or both. They might be supplied with such aids to \*navigation as \*lighthouses (as at \*Corunna and famously at \*Alexandria) or adorned with monumental architecture (as at Richborough in Kent, Rutupiae on the \*Saxon Shore). Private and ecclesiastical enterprise also made provision for harbours.

Major harbours of Antiquity were still used during Late Antiquity, and new structures were also developed. The Harbour of Eleutherios, one of Constantinople's commercial harbours, built during the reign of \*Theodosius I (379–95), was used until the 11th century. Silted-up remains of this harbour have been discovered at Yenikapı, on the Marmara coast of Istanbul, and are being excavated with remarkable results. JC; AG

**al-Harith b. 'Amr b. Hujr al-Maqsar** (d. AD 528) The most renowned of the kings of the \*Kinda, al-Harith played a major role in the Roman and Persian \*frontier politics at the turn of the 6th century. After launching attacks against the Roman Empire, al-Harith was offered an appointment as a \*phylarch in \*Palestine, but soon fell out of favour with the regional ruler. Upon his death the 'Kingdom of Kinda' fractured irrevocably. RHos

ET 2 vol. 4 (1978) s.v. Kinda, 118–20 (Shahid).

R. Hoyland, *Arabia and the Arabs: From the Bronze Age to the Coming of Islam* (2001).

**al-Harith b. Jabala** (d. AD 569) Perhaps the most famous of all the \*Ghassanid rulers, al-Harith b. Jabala was elevated to the rank of supreme \*phylarch among the Ghassanids, and honoured with the titles of *gloriosissimus* (the highest rank available to senatorial \*aristocracy in 6th-century Byzantium) and *basileus* (king) of the Arabs by \*Justinian I. Although a \*Miaphysite in religious orientation, he nevertheless served the Romans well, and distinguished himself in combat despite losing against the Persian-sponsored \*Lakhimids at the Battle of \*Callinicum (AD 531) (\*Procopius *Persian* I, 18, 35) and in the Assyrian campaign (AD 541) under \*Belisarius. (Procopius *Persian* II, 19, 11–46). At Yawm Halimah, near \*Qinnasrin, al-Harith soundly defeated the Lakhimid ruler al-\*Mundhir (Procopius *Persian* II, 28, 12–14), which influenced the dynasty's ultimate removal a few years later by the Persians. RHos

ET 2 vol. 3 (1971) s.v. al-Hārith b. Djabala, 222 (Shahid).

**al-Harith of Najran** See ARETHAS.

**harness** \*Leather tack such as reins, bits and bridles, and other equipment was used in Late Antiquity to guide \*horses, mules, donkeys, \*camels, and oxen, when ridden or when used in traction for pulling chariots, carts, wagons, or \*ploughs. An experimental study by Lefebvre des Noëttes (1924; 1931) misled scholars for decades into the erroneous belief that Roman and Late Antique harnessing systems were primitive and limited because they constricted the air supply of animals used in cartage. The basic components of both riding harness and traction harness included bits inserted in the animal's mouth and attached to the bridle and reins through which direction and control could be exercised. The riding \*saddle underwent developments in the 5th century.

Roman traction harnesses may be broadly divided into those with a dorsal yoke and those with a neck

yoke. The dorsal yoke consists of an arched metal or wooden fitting that functions as a harness saddle; it is placed on the animal's back, just behind the withers, and attached to the body by a surcingle and a chest strap. The dorsal yoke could be used by a single animal, or to pair animals in tandem (Spruytte, 100). In the neck yoke, an arched metal element was placed atop the neck, forward of the shoulders, and attached via straps on the underside of the neck (Raepsaet 1982, 256). Ancient traction harness systems permitted the use of multiple animals in tandem. A law of 356/7 (*CTh* VIII, 5, 8) regulated wagons of the *\*Cursus Publicus*; a *\*reda* carrying its maximum load of 1,000 Roman pounds (about 450 kg) required eight mules to draw it in summer and ten in winter.

H. Kennedy, *The Prophet and the Age of the Caliphates* (2004).  
C. Robinson, *Abd al-Malik* (2005).

**Harran** Graeco-Roman Carrhae, in the *\*province* of *\*Osroene*, and a Roman *colonia* from the time of

Septimius Severus onwards. One of the great *\*cities* of northern *\*Mesopotamia*, important from Assyrian to Islamic times. Mongol destruction and later geopolitical change attendant on the Ottoman ascendancy caused its prominence as an intersection on trade routes to diminish (*harran*: 'road, journey'), but in Antiquity the *\*Silk Road* passed through, and it saw Roman–Persian encounters from the time of Crassus (53 BC) through those of Caracalla (who died nearby in 217) and *\*Valerian* (AD 253–60) to that of *\*Khosrow II*.

Abraham and his household are said to have lived in Harran (Gen. 11:31). *\*Egeria* reports that in 384 a few clergy were the only Christians permanently resident in the city; she met the *\*bishop*, who took her to visit a nearby church built on the site of Abraham's house, where she witnessed the *\*festival* of the *\*martyr* S. Helpidius celebrated there every April by monks living in the surrounding desert (20).

The city was famous for the persistence of indigenous *\*paganism* well into the Abbasid period. The *\*Emperor \*Julian* during his advance into the *\*Persian Empire* in 363 visited Harran in order to honour the city's *\*temples* (*\*Ammianus*, XXIII, 3, 21); the citizens were so grieved on hearing news of Julian's death that they stoned the messenger to death (*\*Zosimus*, III, 34, 2). In the 5th century, *\*Theodoret* (*Religious History*, XVII, 5) described an *\*ascetic bishop* who overcame the city's persistent paganism, but *\*Procopius* records that in 540 *\*Khosrow I* refused to accept *\*tribute* money from Harran because its residents were adherents of the old religion (*Persian*, II, 13, 7). *\*Michael the Elder* (X, 24) describes an anti-pagan persecution in 580 that seems to have had little effect. By the early 7th century, 'Harranian' had become something of a byword for pagan. A *\*Syriac* work written around 600 uses testimonia from authors like Plato and Sophocles to try to convert 'the uncircumcised Harranians'.

Harran remained a prominent regional centre of traditional religion up to and beyond the *\*Arab conquest*. In 639, for example, the pagans of *\*Edessa* 47 km (29 miles) to the north apparently sought guidance from their more numerous co-religionists in Harran. As late as the 10th century, the Arab scholar al-*\*Mas'udi* visited Harran and commented upon its religious peculiarities. Harran remained a centre for philosophical and medical scholarship in the Syriac language and Harranian teachers played an important early part in the Abbasid *\*translation movement*. The prominence of Harranian scholars and the remarkable persistence of traditional religion in Harran has caused speculation that Harran may have become the new home of the *\*Neoplatonic \*school* of *\*Athens* following the return of *\*Damascius*, *\*Simplicius*, and their associates from the Persian Empire after the *\*Everlasting Peace* of 532, but recent investigation has shown that this theory is implausible.

Visible remains of the city's past date mostly to the Islamic period. The complete ground plan of the Great \*Mosque, originally built by \*Marwan II (744–50) on the site of earlier religious structures, was uncovered by Turkish excavations in the 1980s; several features of the site are in a good state of preservation, notably the \*Umayyad \*minaret, intact up to 26 m (over 85 feet). A number of building phases have been identified in the citadel, in the south-east of the city, the latest of these a Mamluk restoration of c.1315, according to Rice. The Islamic city was enclosed by walls, c.4 km (c.2.5 miles) in circumference. Eight gates have been identified, the south-western Aleppo Gate being the best preserved. This entrance, and a section of the walls to the south, was restored in 2013 by the Şanlıurfa Museum and Harran University. A monograph on recent archaeological research and restoration work is a desideratum.

**Hashim, Banu** A clan of the \*Quraysh tribe, whose eponym is Hashim b. 'Abd Manaf, great-grandfather of the Prophet \*Muhammad. \*'Ali b. Abi Talib (r. 656–61) and the other \*Shi'i imams were members of the Banu Hashim, as were the \*'Abbasid \*caliphs (r. 750–1258). In contrast, \*'Uthman b. 'Affan (r. 644–56) and the Syrian \*Umayyads (r. 661–750) were members of another branch of Quraysh, the Banu 'Abd Shams. This helps to explain why members of the Banu Hashim are frequently depicted as paragons of virtue in 'Abbasid-era works on 'virtues' (*manaqib* or *fada'il*), e.g. the works of al-\*Baladhuri (*Ansab al-Asbaf*) and

al-Maqrizi (*Book of Contention and Strife*), and are often contrasted against the vices (*mathalib*) of the Banu 'Abd Shams. The superior merits of the Banu Hashim are variously explained as resulting from divine blessing, natural propensity, and experiential acquisition. AJD

**hazarbad** Persian military title meaning 'commander of a thousand' and chiefly attested through \*inscriptions. The exact functions and duties of the *hazarbad* are unknown. It might have originally been a military title referring to the commander of the royal guard (OP \*hazārapati-). The functions of great commander and chief minister have also been suggested. AZ *EncIran* V/4 (2011) s.n. Chiliarch, 423–4 (P. Gignoux).

**headman, village** (Lat. *seniores, vici magister*; also Gk. *protokometes, meizon, presbyter, komarchos, kephalotes*, Demotic and \*Coptic \**lashane, lesonis*) From the 2nd century onwards Egyptians who had the duty (liturgy) of collecting taxes in \*villages sometimes transferred their responsibilities to groups of elders. In the 3th–4th century these elders evolved into komarchs (Gk. village-rulers), first attested in 247/8. Their responsibilities included mediation between villagers and communication with imperial representatives.

Remarkably, the \**Farmer's Law*, while giving considerable details about the duties of farmers towards one another, about corporal punishment, theft of \*fruit, and powerful \*dogs, makes no mention of a village headman.

**hearpe** See LYRE.

**Hebdomon** (Gk. 'seventh') Western coastal suburb of \*Constantinople (mod. Bakırköy) at the seventh milestone from Constantinople's main square on the \*Via Egnatia leading westwards through the Golden Gate. As well as two churches, dedicated to S. John the Evangelist (used in \*Gainas's revolt of 400) and \*S. John Prodromos (founded after 391), by the end of the 4th century it possessed a \*harbour with a mole rebuilt in 552, a forum, \*cistern, \*circus, and two imperial residences, the Magnaura and the Iucundianae (Secundianae). There was also an extensive military parade ground (the Campus and Castellum of the Theodosiani) where, in 364, \*Valens was proclaimed \*emperor. From then on, emperors were customarily acclaimed at Hebdomon on their \*accession. JPH

**Hegesippus Latinus** Author credited with writing a late 4th-century \*Latin adaptation of Josephus' *Jewish War*, often referred to as *De Excidio Urbis Hierosolymitanæ* (*On the Ruin of the City of Jerusalem*). The author of the *De Excidio* freely incorporates material from other sources, particularly the *Jewish Antiquities*, but also other Roman historians. The work consists of five books, the first four corresponding with Books 1–4 of Josephus' *Jewish War*, and the fifth book of the *De Excidio* with Josephus' Books 5–7. The author uses the historical source material to render an account conducive to Christian apologetic. The portions taken directly from Josephus often expand the narrative and even place hypothetical speeches into the mouths of the protagonists. Early medieval historians falsely attributed the work to Hegesippus, most likely a corruption of Iosippus (the Latinized spelling of Josephus), and perhaps also due to the fact that the now lost *Memoirs* of Hegesippus likewise consisted of five books. Some contemporary scholars associate the work with \*Ambrose of \*Milan, but the lack of evidence has led most to view it as anonymous. AJM

**Heikhalot literature** Corpus of Jewish mystical, magical, and liturgical writings in Hebrew and Aramaic, produced in the primary centres of Late Antique Jewish literary culture in \*Palestine and \*Mesopotamia between the 5th and 9th centuries. The term 'heikhalot' refers to the heavenly palaces or temples through which the visionary ascends to see God and participate in the angelic liturgy. While Heikhalot compositions systematically attribute their teachings to the founders of rabbinic Judaism (e.g. R. Ishmael and R. Akiva), on whose authority they draw, these attributions are quite obviously pseudepigraphic, reflecting the gradual rabbinization of Jewish literary culture after the 5th century rather than a continuous tradition of mystical practice beginning with the earliest rabbinic sages or even before.

The form of religious praxis found in Heikhalot literature is often labelled 'Merkavah mysticism' because it builds upon the prophet Ezekiel's vision of God seated on his chariot-throne (the *merkavah* of Ezekiel 1:10). But the themes of heavenly ascent and visionary experience are only one facet of Heikhalot literature, which accords equal importance to rituals for invoking angelic intermediaries to assist the practitioner in mastering and

retaining scholastic (Torah) knowledge. Heikhalot compositions often also incorporate other subgenres, such as: instructions for the recitation of the gigantic dimensions and secret names of the limbs of God's body (*Shi'ur Qomah*); chains of liturgical hymns (frequently culminating in the *Qedushah* of Isaiah 6:3) to be performed by the angelic host, sometimes in unison with the Jewish community on Earth; and physiognomic, cosmological, martyrological, and apocalyptic traditions, often refashioned for the literature's dominant magico-ritual framework.

No scholarly consensus exists concerning the relationship between Heikhalot literature and various associated textual corpora, in particular early Jewish and Christian apocalyptic literature, classical rabbinic literature, and Jewish liturgical poetry (*\*piyyut*). Rather than offering a uniform account of the religious function and social location of this heterogeneous literature, scholars increasingly attend to the shifting configuration of religious aims and ideological interests expressed in specific Heikhalot compositions during the protracted process of their composition, redaction, and transmission.

**Helena, Empress** Flavia Iulia Helena (248/9–c.328) was possibly born in Drepanum, in Bithyna, later renamed \*Helenopolis. She was of low social origin (\*Ambrose, *On the Death of Theodosius*, 42); \*Philostorgius claims that in her youth she was a prostitute (*HE* II, 16). Out of her concubinage or \*marriage with \*Constantius I was born \*Constantine I c.272/3. When Constantine became \*emperor in 306 she probably joined his \*court in \*Trier. After 312 she resided in \*Rome in the Sessorian \*Palace. She bore the title *Nobilissima Femina* and from 324, when Constantine conquered the eastern half of the Empire, she bore the title \*Augusta. In 327/8 she travelled through the eastern \*provinces including \*Palestine. \*Eusebius (*VCon* III, 42–6) presents her journey as a \*pilgrimage and credits her with the founding of churches; her journey to the East may have had political as well as religious motives. Her presence in \*Jerusalem gave occasion in the second half of the 4th century to the legend that Helena discovered the Relic of the True \*Cross. After her journey, Helena died at the age of almost 80 (Eusebius, *VCon* III, 46–7). She was buried at the newly built \*basilica of Ss. Marcellino and Pietro by the Via

Labicana in \*Rome (*\*Liber Pontificalis*, 34, 26). Part of the Sessorian Palace was transformed into the Church of S. Croce in Gerusalemme. HJWD

H. A. Pohlsander, *Helena: Empress and Saint* (1996).

**Helenopolis** (mod. Hersek) City located where the Gulf of \*Nicomedia enters the Sea of \*Marmara. Originally Drepanum of \*Bithynia, renamed by \*Constantine I after his mother \*Helena on account of its association with the \*priest \*Lucian of \*Antioch, martyred at Nicomedia in 312, whose relics were buried in a \*martyrium at Drepanum, having allegedly been carried there by a dolphin (\*Philostorgius, *HE* II, 12, \*Jerome, *Chron.* 231h Helm).

\*Palladius, author of the *Lausiac History*, was \*bishop here. \*Justinian I provided public buildings, \*baths, and an \*aqueduct when he reformed communications along the \*Pilgrims' Road between \*Constantinople and the eastern \*frontier (\*Procopius, *Aed.* V, 2, *Anecd.* 30, 8).

JPH; OPN

Janin, *GrandsCentres*, 97–8.

C. Mango, 'The Empress Helena, Helenopolis, Pylae', *TM* 12 (1994), 143–58.

Barnes, *Constantine*, 37–8.

**Helenopontus** The province of Pontus, capital \*Amaseia, created in the second quarter of the 3rd century, became Diospontus in the \*dioecesis \*Pontica by 314. It was renamed Helenopontus after the death of \*Constantine I's mother \*Helena in 328 and was governed by a Praeses. In 535/6 it was joined with Pontus Polemoniacus and retained the name Helenopontus, but was now governed by a Moderator (*NovJust* 28). SM Mitchell, *Anatolia*, II, 159.

**Heliodorus** Author of the *Aethiopica*, the latest and the most sophisticated of the Greek novels, also known in Antiquity by the names of its hero and heroine, Theagenes and Charicleia. Almost nothing is known of the author or his life beyond what he tells us at the end of his novel, where he identifies himself as a Phoenician from \*Emesa, son of Theodosius. Some scholars place him in the 3rd century, while others, on the basis of similarities between an episode in the novel and the siege of \*Nisibis in 350, place him in the second half of

the 4th century. \*Socrates (V, 22) identifies the author of the *Aethiopica* as \*Bishop Heliodorus of Tricca in \*Thessaly; however, there are no clear internal indications of the date of composition or the religious affiliation of the author and this identification is generally doubted.

Like the other Greek novels, the *Aethiopica* follows the adventures of a couple in love, in this case a Greek man and a fair-skinned \*Ethiopian woman. Set in the classical period, it is a work of stunning narrative complexity, partly modelled on \*Homer's *Odyssey*. It opens *in mediis rebus*, with the gaps in the story being supplied by internal narrators. Heliodorus' classicizing style is as complex as his narrative, with long periodic sentences and lively dialogue. The *Aethiopica* differs from other surviving Greek novels in its geographical range, which takes the lovers from Greece to Ethiopia, and in the linear journey undertaken by the hero as he progresses southwards from Thessaly to Ethiopia. The preoccupation with questions of cultural identity and the prominent role given to non-Greek characters could reflect the cultural fluidity of the imperial period in general; two elements, however, are compatible with Christian thought: the emphasis on the \*virginity of the male hero and the ending of bloody \*sacrifice.

**Heliodorus of Altinum** (bp. c.381–c.407) Member of a proto-monastic group in \*Aquila before becoming \*Bishop of Altinum in the Veneto (\*Jerome, *ep.* 14). He was at the \*Council of Aquileia. Jerome dedicated numerous \*translations to him, and wrote him a \*consolation (*ep.* 60) on the death of his brother. RJM ed. (with ET and comm.) J. H. D. Scourfield, *Jerome: Consoling Heliodorus: A Commentary on Jerome Letter 60* (1992). C. Corsato, 'Cromazio ed Eliodoro tra Girolamo e Rufino', in S. Piussi, ed., *Cromazio di Aquileia* (2008), 280–5.

**Heliopolis** (mod. Baalbek, Lebanon) \*City in the Bekaa Valley, said to have been built by Solomon (1 Kings 9:18; 2 Chron. 8:6). It was apparently incorporated into the territory of the *colonia* of \*Beirut (Berytus) in the Early Roman period and settled by legionary veterans. As at Berytus, many public \*inscriptions in the Early Empire were in \*Latin. Heliopolis began issuing civic coins so had certainly acquired civic status as a *colonia* under Septimius Severus (AD 193–211), who may have granted it independence from Berytus.

Heliopolis was a famous centre of \*paganism in Late Antiquity, a city, says \*Theodoret, 'where all the demons are worshipped' (*HE* IV, 22). Attempts to eradicate its

cults began with \*Constantine I, who prohibited its temple prostitution, arranged poor relief, and built a Christian \*basilica in the courtyard of the great \*Temple of Jupiter (\*Eusebius, *VCon* III, 58). Under the Emperor \*Julian (AD 361–3) the pagan population, in revenge, \*Sozomen claims (V, 10), for Constantine's acts, turned on its Christians, stripped the consecrated \*virgins naked, disembowelled them, and fed their bodies to \*swine.

\*John Malalas claims that \*Theodosius I destroyed the 'large and famous temple known as Trilithon' and made it a church (XIII, 37; *ChronPasch* ad ann. AD 379). \*Zacharias Rhetor describes how in 525 the great temple was struck by lightning and burnt (VIII, 4c). \*Dionysius of Tel-Mahre describes the great dismay of the pagan population, but misplaces the event in 555 (III, ad Ann. Gr. 866). As late as 579, an imperial commissioner was sent to clamp down on pagans at Heliopolis who were said to be threatening the Christians of Heliopolis 'who were few and poor' (\*John of Ephesus, *HE*, part III, 3, 27). After the \*Arab conquest in the 7th century it became an important regional administrative centre and the site of a mint. The walls were destroyed by the \*Umayyad \*Caliph \*Marwan in 745 (\*Theophanes, AM 6237).

The city was dominated by its vast pagan \*temples and courtyard complexes, constructed between the 1st century BC and the 3rd century AD. The largest was dedicated to Jupiter Heliopolitanus. The god's pre-Roman name is unknown, perhaps indicating how much legionary veterans and their descendants influenced the cult. The colossal scale of the Jupiter sanctuary (which was never completed) meant that it could not easily be destroyed; and the Christian basilica was constructed within the main courtyard rather than utilizing the gigantic temple at the rear of the complex. Other major temples include the so-called Temple of Bacchus (dedicated to an unknown cult or cults) standing adjacent to the Jupiter complex, and a temple (probably dedicated to Mercury) on a hill overlooking the city.

Brubaker and Haldon, *Iconoclast: History*, 732–3.

**Hellespontus** \*Province of \*Dioecesis \*Asiana, cut out of the former province of \*Asia by the time of the \*Verona List. At the \*Council of \*Nicaea, however, the \*bishops of the \*cities of Hellespontus were still listed as of Asia. In 396 \*Arcadius, in response to representations from the governor's \*officium, moved Hellespontus from the jurisdiction of the \*Vicarius of Asiana to that of the \*Proconsul Asiae (*CTh* I, 12, 5 of 396). In the \**Notitia Dignitatum* the \*governor has the title \*Consularis. It bordered the Aegean Sea, the Dardanelles, the Propontis/Sea of \*Marmara, and the provinces of \*Bithynia, \*Phrygia, \*Lydia, and \*Asia. \*Cyzicus was its metropolis. PhN

*RAC* Bd. 25 Lief. 194/201 (2012) s.n. Mysia (Hellespontus), 389–403 (P. Niewöhner).

**Henana** Native of Hadyab (\*Adiabene) and Director of the School of \*Nisibis from c.571. He is praised by \*Barhadbeshabba (*Cause of the Foundation of Schools*) as a devoted and inspiring teacher; but the same author admits his tenure was controversial, and in his time, c.595, there was an exodus of 300 students from the School. \*Babai (the Great) attacked Henana as an \*Origenist who believed in fatalism and in the spherical resurrection body, as well as in the Christology, unorthodox in the Persian Church, of one *qnoma* ('one hypostasis'). It is hard to know what substance these accusations had. Henana certainly did set himself against the position of \*Theodore of \*Mopsuestia as the authoritative biblical exegete in the School and the \*Church of the East, although he probably did not go so far as to practise the allegorical method. His extensive commentaries were condemned at councils of bishops in 585 and 596, and are now all lost. JFC

**Henoticon of Zeno** \*Letter of July 483, by the \*Emperor \*Zeno addressed to the \*bishops, clergy, monks, and laymen of \*Alexandria, \*Egypt, \*Libya,

and Pentapolis. Divided into three sections, the epistle affirmed the Nicene-Constantinopolitan \*creed as the only true testimony of faith, condemned \*Nestorius and \*Eutyches and accepted the twelve anathemas of \*Cyril of Alexandria, and adopted a doctrine regarding the nature of Christ favoured by \*Miaphysites. The \*Council of \*Chalcedon was ignored rather than condemned. Formulated by \*Acacius, \*Patriarch of \*Constantinople, the *Henoticon* was designed to reconcile pro-Chalcedonian Constantinople with anti-Chalcedonian Alexandria. However, while many Chalcedonians adopted it, hoping to establish unity, \*Rome did not accept it, being unwilling to accept a document which overruled the Chalcedonian definition of faith which had been imposed by imperial \*edict. Felix III in Rome excommunicated Acacius and Peter Mongus (Patriarch of Alexandria), and Acacius anathematized Felix. This began the \*Acacian schism which lasted for 35 years. The *Henoticon* remained in force during the reign of \*Anastasius I but was annulled by \*Justin I (519). Versions of the *Henoticon* were preserved by various authors, including \*Evagrius (*HE* III.14). FKH

**Hephthalites (White Huns, Abdelai, Hayatila, Hua)** Inner Asian 'Hunnish' group (or rather dynasty), perhaps of Turkic origin, whose name appears first in 456; by 467 they had displaced the \*Chionite Huns, led by the \*Kidarite dynasty, in \*Tukharistan (\*Bactria). Chinese sources (*Han-shu*, 119–23; *Zhou-shu*, 11–12) refer to their origins from the Yuezhi (Yüeh-chih), called Tocharoi by the Greeks. \*Zacharias Rhetor (XII, k, ix) and \*Theophylact Simocatta (VII, 7, 8) appear to equate them with the Abdelai. The Hephthalites, also known as White Huns, eventually established an empire that stretched north–south from the \*Jaxartes to the Indian Ocean and east–west from the \*Tarim basin to eastern Iran.

Despite their having helped him overthrow his brother \*Bahram V in 457, the \*Sasanian Shah \*Peroz I subsequently waged three military campaigns against the Hephthalites between 467 and 484, when he was killed in battle against them; the Hephthalite ruler at this time was Khošnavaz (Akhšonvar). The Hephthalite defeat of the Persians enabled the former to expand into Persian territory and exact annual \*tribute from the \*Persian Empire. When Peroz's son \*Qobad I (previously a Hephthalite hostage for several years) was

deposed and imprisoned (496), he fled to the Hephthalites and the latter helped him regain his throne in 498/9 (\*Joshua the Stylite, 9–11; \*Lazar P'arpets'i, 154–6/213–15; \*Procopius, *Persian*, I, 3–7; \*Agathias, IV, 27, 3–28, 4; Theophylact Simocatta, IV, 6, 10; \*Theophanes, AM 5968–9; \*Chronicle of Seert, V, 15–16/107–8; XII, 32–3/124–5; XIV, 35–6/127–8; \*Tabari, V, 109–20 and 136 tr. Bosworth). Qobad had Hephthalites in his army when he broke through the Roman \*frontier under \*Anastasius I (Procopius, *Persian*, I, 7, 5–11).

Procopius (*Persian*, I, 3, 3) distinguishes Hephthalites from other Huns, particularly their 'white' appearance and non-nomadic lifestyle; important towns included Badghis, \*Balkh, and \*Tirmidh, but the sources give conflicting information on Hephthalite urbanization. Although it was not their native language, the Hephthalites used \*Bactrian as the language of administration. The Buddhist pilgrim Song Yun described them as 'unbelievers' in 519 (\*Faxian, 184–6), but \*Buddhism thrived in Tukharistan under them and the \*Bamiyan Buddhas dated from Hephthalite times. The Hephthalites even requested and received a Christian \*bishop (c.550) from Mar \*Aba I, the \*Catholicus of the \*Church of the East (Braun, *Ausgewählte*, 217–18). Notably, Chinese sources mention Hephthalite polyandry, symbolized by female horned headdresses. \*Cosmas Indicopleustes had heard that the King of the White Huns had 2,000 war \*elephants (370); the \*Strategicon of \*Maurice (53) discusses their military practice.

Hephthalite rule quickly extended to Gandhara (460s), \*Turfan (479), \*Sogdiana (509), and northern \*India, the latter under kings Toramana and Mihirakula (c.490–540). The Hephthalites were defeated between 556 and 561 by the resurgent Persian Empire under \*Khosrow I Anoshirvan, in cooperation with the Türks (\*Menander Protector, fr. 6, 1; 10, 1; Theophylact Simocatta, VII, 7, 8); the Hephthalite noble Katulph seemingly played a role in their downfall (Menander Protector, fr. 4, 3). Dividing Hephthalite territory along the \*Oxus, the Sasanians claimed Tukharistan, the Türks Sogdiana. Despite their loss of power, smaller Hephthalite kingdoms such as that mentioned by \*Sebeos (28, 102–3; cf. \*Movses Kaghankatvatsi, I, 27) continued until the \*Arab conquest (on which al-\*Baladhuri, *Futūh al-Buldān*, II, 160), especially in the Hindu Kush. An important figure in the resistance to Arab rule was the Hephthalite ruler Tarkhan \*Nezak who died in 710; the last Hephthalite embassy to China was in 748. Reflecting dynastic changes in Hephthalite territory, various sources sometimes call them either 'Kushans' or 'Turks'. They were remembered long afterwards in the Persian epic poem the *Shahnameh* of Ferdowsi (VII, 163–9, 173–82, 197–9, 328–63).

**Heraclea Lyncestis** (mod. Bitola, FYROM) Hellenistic, Roman, and Late Antique \*city, in \*Macedonia Prima, where the \*Via Egnatia crosses the \*road running north-east to \*Stobi and \*Serdica. Heraclea had a \*bishop by 343; in later centuries its bishops twice represented the Archbishop of \*Thessalonica at church \*councils. According to \*Malchus (fr. 18), \*Theoderic the \*Ostrogoth sacked the city in 479. Excavated buildings include a \*bath, a portico, a theatre (heavily restored), a fortification wall, three 5th–6th-century Christian \*basilicas inside the city, an *extra muros* \*cemetery basilica, and an episcopal residence sometimes identified as a \*monastery. The Small Basilica (A) included a large \*baptistery in an early phase; it may later have become part of the complex of spaces associated with the Large Basilica (C), which included a small 6th-century baptistery at its south-east corner. Basilica E came to light in 2008, west of the theatre. \*Opus sectile and \*mosaic paved many of the church floors; an outstanding mosaic in the \*narthex of the Large Basilica shows \*animals and trees within a border of panels filled with \*fish and water \*birds. A fountain dedicated in 561 indicates that building activity continued in the city during the third quarter of the 6th century.

**Heracleaea of Thrace** (mod. Marmaraereğli, Turkey) \*City on the north shore of the Sea of \*Marmara, originally named Perinthus. Located at the important strategic junction of the \*Via Egnatia and the main trans-\*Balkan highway, the \*Via Militaris, it flourished during the Roman period as the metropolis of the imperial \*province of \*Thracia. Renamed after Hercules, the tutelary deity of the \*Emperor \*Maximian, in the provincial reforms of the \*Tetrarchy the city became the metropolis of the province of \*Europa. A mint was opened under \*Diocletian and issued copper coinage (from 364 with the mint mark SMH) until its closure by \*Leo I. A \*palace was noted at the time of \*Justinian I (\*Procopius, *Aed.* IV, 9, 14–16); it is not known how early it can be dated.

Although the city lost administrative significance with the foundation of \*Constantinople, it was not until 380 that the metropolitan see was transferred from Heracleaea to the new imperial capital. A prominent hill overlooked the \*harbour, and was the focus for the earlier Greek colony, reminiscent of the situation of the acropolis of ancient Byzantium. On the hillside was a large theatre and at the foot of the later wall are the excavated traces of a \*hippodrome, the setting for the planned races between the \*Avar \*Khagan and \*Heraclius in 623 and the 'Avar Surprise' (\*Nicephorus the Patriarch, 10). The lower city received new defences in the early 5th century and the acropolis walls and \*aqueduct were restored under Justinian I.

**Heracleopolis** (Coptic Ahnas, mod. Ihnasya el-Medina) \*City in Middle \*Egypt (\*province of \*Arcadia), on the right bank of the Bahr Yusuf (the canal that brings water from the \*Nile to the \*Fayyum), old capital of the 20th Upper Egyptian \*nome, important since Pharaonic times. Divided into quarters (some characterized by Christian names), Heracleopolis was a lively economic centre with large \*estates in the surrounding countryside belonging to aristocratic \*families (for instance, the \*Apion \*family) and to the Church.

Heracleopolis had a \*bishop at the time of the \*Council of \*Nicaea until at least the 15th century; some followed the \*Meletian Schism. \*Stephen of Ahnas was a vigorous adherent of the \*Miaphysite Christology prevalent in Egypt. Three major churches are recorded in \*papyri. \*Monasteries (esp. of Meletian monks) and ascetic communities were present, especially in the area south of the city (e.g. the 4th-cent. Hathor monastery, probably under the jurisdiction of Heracleopolis).

There was a necropolis to the west of Heracleopolis with tombs from the Pharaonic to Roman periods, and an originally pagan necropolis within the city was also used by Christians from the middle 4th century. The Ahnas sculptures, fragments of architectural \*sculpture from small buildings of the 4th–6th centuries, showing both \*foliage and mythological figures, have been important to scholarly understanding of Late Antique \*art in Egypt. Numerous papyri in \*Greek, \*Coptic, and \*Arabic have been found in the area. MCDP

**Heraclian** In 408 Heraclian murdered \*Stilicho at \*Ravenna with his own hands and was promptly rewarded with command of the \*armies of \*Africa, where he treated harshly refugees fleeing from \*Alaric in \*Italy. He opposed the \*usurper Priscus \*Attalus, but in 413 himself rebelled and sailed a large \*fleet to Italy. He was defeated at Utriculum, fled back to \*Carthage, and was soon afterwards murdered. OPN  
PLRE II, Heraclianus 3.

**Heraclius I** (c.575–641) \*Emperor 610–41. Heraclius' reign was a watershed in Roman history, as although he successfully counter-attacked against the Persians he failed to stem the \*Arab conquest.

#### *Rise to power*

Heraclius was the son of the general \*Heraclius who, as \*Exarch of \*Africa, rebelled against the 'tyrant' \*Phocas in 608. The rebels cloaked their revolt under the veneer of senatorial legitimacy, issuing \*coinage showing Heraclius father and son dressed as \*consuls. Heraclius' cousin \*Nicetas was dispatched overland to capture \*Egypt, and, once it was secured, Heraclius sailed to \*Constantinople in 610. He landed on 3 October; by 5 October Phocas had been abandoned by his supporters

and handed over to Heraclius, who had him executed and his dismembered body paraded around the city. On the same day, Heraclius was crowned by the \*Patriarch Sergius and married his first wife \*Eudocia, who bore him a daughter, \*Ephiphania, and a son, the future \*Constantine III. Eudocia died in 612, obliging Heraclius to crown the infant Epiphania \*Augusta. In c.622 Heraclius controversially married his niece \*Martina, with whom he had many children including the future Emperor \*Heraclonas. However, the marriage generated scandal and tensions within the imperial house, which would seriously complicate the succession.

### *The Persian War*

At Heraclius' accession the Empire was in a parlous state and his rebellion had only worsened the immediate situation. The \*Avars and \*Slavs were pressing on the \*Balkans, while the Persians had overwhelmed Roman defences in \*Armenia and \*Mesopotamia. Counter-attacks having failed, in 614 \*Jerusalem fell to the Persians and the Relic of the True \*Cross was taken to \*Ctesiphon, striking a heavy blow to Roman prestige and morale. By 616, Persian troops advanced as far as the \*Bosporus, and in 619 Egypt surrendered.

In 622, Heraclius began his counter-attack, taking personal command of the \*army and thereby breaking centuries of precedent. Bankrolling his campaigns by melting down church plate, Heraclius restored army morale through drilling, appeals to Christian devotion, and a series of minor victories. In 623, Heraclius attempted to negotiate a treaty with the Avars in person, thereby freeing Roman resources for the Persian war, but the Avars ambushed and almost captured him. Despite this, the Romans bought a temporary truce for 200,000 \*solidi. On 25 March 624, Heraclius left Constantinople, and would remain with the army for the next four years, maintaining contact with the capital through a series of bulletins, while \*court publicity, such as the poems of \*George of Pisidia, maintained morale. Heraclius headed towards Armenia, where the local Christian notables could succour his forces and from where he could strike at the heart of the \*Persian Empire. \*Dvin was sacked, and learning that the Shah \*Khosrow II was encamped at Ganzak (possibly Shiz/\*Takht-e Soleyman), Heraclius advanced, forcing the shah into a humiliating flight and allowing Heraclius to burn the nearby \*fire temple in revenge for Jerusalem. In spring 625, Khosrow dispatched three armies against Heraclius which by rapid manoeuvres Heraclius defeated.

However, in 626 a Persian army advanced to \*Chalcedon, opposite Constantinople, while at the same time an Avar-Slav force besieged the capital. Heraclius decided to remain in the field, leaving the defence of the city to the Patriarch Sergius, who carried an \*icon of

the Virgin \*Mary around the walls to lift morale and invoke Constantinople's heavenly defenders. In the end, the Avar assaults were rebuffed, and the Persians forced to retreat, giving a huge psychological boost to the Romans.

The pivotal campaign occurred in 627–8, when Heraclius marched into \*Iberia to link up with a massive Turkish invasion that threw Persia into terrified confusion. Meeting the Turkish leader at \*Tbilisi and swearing an alliance, Heraclius turned south accompanied by a Turkish contingent and marched into Persian \*Mesopotamia. On 12 December 627 Heraclius routed a Persian army at \*Nineveh, and proceeded to ravage the economic heartland of the Persian Empire. These tactics prompted a coup that overthrew Khosrow and the Persians offered terms for peace.

### *Apogee and the Arab invasions*

Persia quickly fell into a succession crisis and Heraclius was able to negotiate a return to pre-war borders. The apogee of his reign occurred in 630 when he was able to restore the True Cross to Jerusalem. This quasi-miraculous victory was broadcast across multiple media, from coins to George of Pisidia's poems. A vividly Christian and biblical ideology was trumpeted, with Heraclius being compared to King David, while in a law of 629 Heraclius drastically simplified and Christianized the imperial titulature. In these years of victory, Heraclius sought to re-establish Roman administration and provincial loyalties weakened by Persian occupation. However, it is now clear that Heraclius did not greatly alter the established administrative structures, and did not introduce the \*Theme system formerly credited to him by G. A. Ostrogorsky.

Heraclius also attempted to heal doctrinal divisions within the Church concerning the Nature of Christ by supporting the Patriarch Sergius' compromise formulation known as Monoenergism, which maintained that Christ's two Natures were united in a single energy. However, objections, particularly from \*Sophronius, Patriarch of Jerusalem, generated a fresh formulation, that of \*Monotheletism, that Christ had two Natures but a single will. Heraclius endorsed Monotheletism in the \**Ecthesis* of 638.

Events overtook Heraclius' efforts at imperial restoration, for from 634 a new threat appeared in the form of the Arab \*armies of \*Islam. Striking the weakened Empire on its vulnerable desert flank, the \*Arabs quickly overran \*Syria and \*Palestine, taking Jerusalem (634/5) and defeating the Roman army at the Battle of the \*Yarmuk in 636. Heraclius could do little to stem the tide, and at his death in early 641 Egypt was poised to fall to the invaders. Further, Heraclius' marriage to Martina created a succession conflict in 641 that

distracted Constantinople and paralysed Roman opposition to the Arab conquest. Eventually, Heraclius' grandson \*Constans II would emerge as sole emperor, but neither he nor his successors would manage to replicate Heraclius' feats against the Persians by defeating the Arabs.

### Artistic achievements

Many artistic works were made following Heraclius' Persian triumph. Churches across the Empire were restored, including the shrines at Jerusalem, while the exposed \*Blachernae shrine and palace at Constantinople was surrounded by a wall whose gates possibly depicted apt images of \*Victory and the Virgin Mary. Multiple \*silver vessels were created, including the famous David Plates of the \*Cyprus Treasures. These narrate scenes from David's life depicted in a classical style normally associated with court ideology, linking Heraclius to David as the archetype of God-chosen ruler and hero. Heraclius' \*coinage is complicated by the opening and closing of various temporary mints in response to military requirements, including during his rebellion against Phocas. His sons appear prominently on coinage from 612 onwards. MTGH; RRD

### Heraclius II See HERACLONAS.

**Heraclius the Elder** A general on the Eastern \*frontier in 586–8, he defeated the Persians at \*Sisauronon near \*Nisibis in 589. After service in \*Armenia, he was \*Exarch of \*Africa under \*Phocas, and, having secured \*Egypt, in 610 sent his son, the future \*Emperor \*Heraclius, to \*Constantinople to overthrow Phocas. MTGH

PLRE III, Heraclius 3.

Kaegi, *Heraclius*, 20–52.

**Heraclonas (Heraclonas, Heraclius II)** (c.626–641) \*Emperor 641. The son of \*Heraclius I by \*Martina, Heraclonas was proclaimed \*Caesar in 630. In 638 he was promoted to \*Augustus, jointly with his

father and elder half-brother \*Constantine III. Heraclius I and Constantine III died in 641, leaving Heraclonas as sole emperor, although Martina is depicted as exercising real power. Opposition headed by the general \*Valentinus forced first the appointment of Constantine III's son \*Constans II as co-emperor, and then the deposition, mutilation, and \*exile of Heraclonas and Martina to Rhodes. MTGH

Haldon, *Seventh Century*, 51–2.

Kaegi, *Heraclius*, 265–6.

**Herat (Harat, Aria, Harev)** \*City in the Persian province of \*Khorasan. Mentioned in Old Persian texts and \*inscriptions, as well as by Strabo (XI, 10) and \*Ptolemy (VI, 17), Herat was part of the Achaemenid Empire and is possibly identifiable with Alexandria in Aria. Herat was subsequently ruled by the Parthians and \*Sasanians, under whom it was an important regional centre. Due to its location on east–west trade routes, the city was an important trading centre renowned for its \*grain and its textiles, as well as a strategic military base for the Persians to keep the \*Hephthalites and other \*tribes from \*Central Asia from invading Sasanian territory. At the time of the \*Arab invasion, most inhabitants of Herat were \*Zoroastrians, with a significant Christian minority. The city probably submitted to the Arabs during the initial Muslim conquest of Khorasan in 652 (al-\*Baladhuri, *Futūh al-Buldān*, II, 163; al-\*Muqaddasi, 270–2). MLD

**herbed** Middle \*Persian form of \*Avestan *aēθrapaiti-*, a teaching priest, responsible for the transmission of sacred knowledge to students or disciples (*hāwist*) in \*Zoroastrianism. Our primary written source for pedagogical instruction and Zoroastrian \*education and schools is the *Herbedestan* ('Priestly School'), an Avestan–Pahlavi bilingual text. Failures to memorize or recite correctly on the part of disciples were ultimately the responsibility of the teacher in question (*Herbedestan*, 14, 5). The length of study with a teacher was typically defined as a year (*Herbedestan*, 12, 1). YSDV

EncIran XII/3 (2003) s.v. *hērbēdestān*, 227–8 (F. M. Kotwal). ed. F. M. Kotwal and Ph. G. Kreyenborek with J. R. Russell (with ET), *The Hērbēdestān and Nērangestān*, 4 vols., *Herbedestan* = vol. 1 (1992).

**herbedestan** See EDUCATION AND SCHOOLS, ZOROASTRIAN.

**hereditary occupations** From the reign of \*Constantine I onwards some individuals providing services deemed to be of public benefit were tied to their occupations on a hereditary basis. Such obligations might cover political office, such as membership of \*city councils, or trades or professions, usually organized into state-controlled \*guilds, such as bakers at \*Rome (XIV, 3) and shipowners (*CTh* XIII, 5). Some dependent farmers, *coloni adscripticii*, were bound to the land they worked, as were their children (e.g. \*Augustine, *ep.* 24\*, 1\*).

It is not certain how far regulations concerning hereditary occupation were enforced. Some members of guilds left their \*cities, while opportunities existed to free oneself of such obligations, e.g. by promotion to senatorial rank, though the state tried to regulate those possibilities. The severity of punishments legally instituted for abandonment of such hereditary duties may suggest state concerns over potentially widespread non-compliance.

JUB  
Jones, *LRE* 699–700 (bakers), 827 (*navicularii*), 1049–53.

**heresy, Christian** A stress on the danger of false teaching, diverging from the norm inherited from the Apostles, became intense in the churches of the 2nd century in reaction to the varieties of teaching that are nowadays called \*Gnosticism (though the ancient use of this term was more restricted) and in reaction to Montanism. Heretical groups, said \*Lactantius, could be recognized by being named after a place or a teacher other than Christ (*Inst.* IV, 30, 10).

Already in the pre-Nicene period there was an extensive anti-heretical literature that attempted to survey the whole field. Late antique works that listed and described the heresies in similar fashion include those by \*Epiphanius of \*Salamis (*fl.* 400), \*Augustine, \*Theodoret, and \*John of \*Damascus (*fl.* 730). In the last of these works \*Islam itself is treated as a Christian heresy (*Liber de haeresibus*, 100), since it could not be described as a form of \*paganism.

Heresy was defined as what was contrary to 'orthodoxy'. Till the 5th century, proof of what constituted orthodoxy relied primarily on scriptural evidence, summed up in brief and variable formulas known as the 'rule of faith'. The condemnation of the \*Arian heresy at the \*Council of \*Nicaea (325) led to two generations of rival formulation, until the First Council of \*Constantinople (381) confirmed the Nicene \*Creed

as the prime expression of Christian doctrine. In the 5th century the decrees of the First Council of \*Ephesus (431) and of the Council of \*Chalcedon (451) were added to those of Nicaea. The appeal to the consensus of the 'approved fathers', meaning primarily the pro-Nicene champions of the period from 325 to 450, became a standard anti-heretical ploy only gradually: present but subordinate at the Council of Ephesus, it was developed by both pro- and anti-Chalcedonians in the second half of the 5th century, particularly through the production of *florilegia* of excerpts from the fathers. Meanwhile, orthodoxy was defined as the changeless teaching of the Nicene fathers; novelty was treated as in itself evidence of heresy. Alternatively, heretics could be accused of reviving a previous heresy; so \*Nestorius was accused of reviving the errors of Paul of Samosata (*fl.* 260), while his opponent \*Cyril of \*Alexandria was accused of reviving the errors of \*Apollinaris of \*Laodicea.

Though Tertullian (*c.* AD 200) had considered a heretic to be no longer a Christian (*De Praescriptione Haereticorum*, 16, 2), Augustine insisted that heresy did not destroy the effect of \*baptism. Civil penalties were applied irregularly, and principally to heresiarchs but not their followers; \*Priscillian's condemnation for heresy followed by his execution by the \*usurper \*Magnus Maximus in 385 for sorcery caused revulsion. \*Nestorius, after his condemnation in 431, was at first allowed to retire to his \*monastery, and sent into \*exile (effectively \*prison) in \*Egypt only in 436. Canon 7 of the Council of Ephesus (431) decreed deposition for clergy and excommunication for laymen who continued to support Nestorius, and later councils imposed similar penalties, but they were rarely enforced. Anti-heretical rhetoric was shrill, but the bark was worse than the bite. Moreover, charges of heresy were not indiscriminate. Even though for most of the period after 451 most emperors (and after 517 all emperors) upheld the definition of the Nature of Christ promulgated at the Council of \*Chalcedon, they did not treat its rejection as itself heretical, but until the \*Arab conquest they continued to seek a compromise that would reconcile to the imperial Church (known as \*Melkites) the non-Chalcedonians of \*Syria and \*Egypt (known to modern scholars as \*Miaphysites).

The notion of heresy eventually took on political importance because of a belief that emperors won divine favour by condemning heresy and lost it by supporting heresy; this was at least as important as the fear of heresy as a cause of social divisions. In the 7th century Pope \*Martin I and \*Maximus the Confessor gave support to attempts by \*usurpers (the \*exarchs \*Gregory of \*Africa and \*Olympius of \*Italy) to seize control from \*Constans II (641–68), whom they accused of \*Monothetism, in the hope that this would win divine assistance for the Empire against Islam.

**heresy, Islamic** In the period before 750, \*Islam was in its formative stages, its major expressions such as \*Sunnism and \*Shi'ism were still emerging, and there was no established orthodoxy. The power to define acceptable religious behaviour and belief and to punish transgressors was in the hands of the \*caliphs, who claimed the right to exercise both religious and political authority over Muslims. Their judgements and attitudes were subject to change, and their opponents contested their legitimacy and claims to authority.

In this situation, political and religious opposition went hand in hand: the caliphs often accused rebels of engaging in acts of disobedience (*ma'siya*) against God and His rightful vicegerent, while rebels accused the \*Umayyads of oppression and injustice (*zulm*, *baghy*), both religiously charged terms. A variety of words could be understood loosely to indicate heresy. *Kufr* (unbelief) was imputed by the rulers to many. Some accused of it are associated with theological views deemed as deviant (such as upholding free will or insistence that God does not have attributes separable from His essence), while others (the *ghulat*) engaged in religious and political activity (sometimes including claims to prophecy) judged, retrospectively, as 'extremist'. *Ilhad* (denial of faith, blasphemy) is another charge sometimes levelled.

Around 750, accusations of *zandaqa* become more common. Originally referring to a follower of \*Manichaeism, *zindiq* became a portmanteau term for anyone the caliphs wished to dispose of as a freethinker or atheist.

**heresy, Jewish** 'Heresy' as the opposite of 'orthodoxy' fits uneasily in \*Judaism. \*Talmudic literature contains at least six terms signifying 'heretic', 'apostate', or 'denier of religion' (*min*—a prominent word also translatable as 'sectarian'—*mumar*, *meshummad*, *kofer*, *apirkos*, and *poshe'a yisra'el*); the Mishnah and \*Tosefta relate detailed theoretical grounds for categorizing and excluding *min* (here meaning dissenting Jews) from a 'portion in the world to come'; yet interpreting the rabbinical literature is difficult. In the Hellenistic and Late Antique periods, Jews lacked a single sovereign religious

authority, and even before the destruction of the Second Temple, an array of different sects practised Judaism in distinct ways (Josephus mentions Sadducees, Pharisees, and Essenes: *Bellum Judaicum*, II, 8, 2); these parties were more intent on distinguishing themselves from other Jewish sects than on finding common ground to articulate their distinctiveness from non-Jews. The absence of a drive towards orthodoxy renders 'Jewish heresy' a somewhat obscure conceptual category in Antiquity: terms such as *min* were used idiosyncratically (the etymology of the word is also unknown), and while individual communities could declare members *minim* and exclude them from communal activities, it is proposed that such individuals could integrate into different Jewish communities (Green). 'Heresy' is most meaningful, therefore, on highly localized levels.

Buechler proposed that the growing prominence of Christianity in the 2nd–3rd centuries prompted Jewish groups to employ *min* to describe Pauline Christians (Sperber, 2–3; Kalmin). Christianity and, later, \*Islam probably helped rabbinical writers conceptualize a sense of 'Jewishness', but this did not spawn more precise heresiography in Judaism. The shift in the meaning of *min* from Jewish sectarian to Christian entailed that the *min*/heretic was transported outside of the Jewish community, and the whole notion of *minut*/heresy, as Boyarin argues (44–5), became external to 'Jewishness' by the outset of the geonic period. Jewish religious identity became increasingly situated in genealogy, leaving scant conceptual space to divide \*Jews into heresies. Rabbinical writing would employ notions of 'heresy' to explore the theoretical boundaries of their own group of 'textualists' (Green); these writings laid the groundwork for much later articulations of Jewish orthodoxy. **Hermenefred** (d. c.531) \*Thuringian King; husband of Amalaberga, a niece of \*Ostrogothic King \*Theoderic. He murdered his brother Berthar (father of S. \*Radegund), and allied with the Frankish King \*Theuderic I to defeat and kill his brother Baderic. However, he and his kingdom were overthrown by Theuderic and \*Chlothar I c.531. RVD

PLRE II, Herminifridus.

**Hermenigild** (d. 585) The eldest son of the \*Visigothic King \*Leovigild, who entrusted him with authority over southern \*Spain. He revolted against his

father in 580 and was defeated in 584. He died in \*exile. Hermenigild was converted from \*Homoean ('Arian') to Catholic Christianity during the rebellion, and there is some controversy over the part played by this shift of loyalty; \*Gregory the Great considered him a \*martyr fighting Arian tyranny, but the timing of Hermenigild's conversion which occurred after the revolt had already started calls his religious motivation into question. **Hermes Trismegistus in Late Antiquity** A rather diverse group of \*Greek texts has been known since the Renaissance as the *Corpus Hermeticum*. In most of them the Graeco-Egyptian deity Thoth-Hermes, lord of wisdom, instructs one of the deities Tat and Ammon in the upward path to knowledge of God in the form of \*dialogues. They were composed between the late 2nd and early 5th century AD. The core group of eighteen tracts is known from two 14th-century manuscripts; 40 extracts from these and other texts are preserved by \*John Stobaeus. A \*Coptic translation of part of another text, the *Teleios Logos* (Lat. *Asclepius*), containing an apocalypse and a final judgement, was found among the \*Nag Hammadi texts (cod. VI, 8, of AD 350–70). Mainly cited by Christian writers (Tertullian, \*Lactantius, \*Cyril of \*Alexandria, Stobaeus), they combine Egyptian religious themes with a Platonic anthropology and soft \*Gnostic cosmology. RLG

**Hermogenes** (d. 535/6) Formerly \*assessor to \*Vitalian, he became \*Magister Officiorum (529–33, 535), \*consularis, and \*patricius (535). He and \*Rufinus negotiated the \*Everlasting Peace of 532 with the Persians. PNB

PLRE III, Hermogenes 1.

## Hermogenes and the Hermogenean corpus in Late Antiquity

Hermogenes, the most influential rhetorical theorist of Late Antiquity, is generally identified with Hermogenes of \*Tarsus (c.160–c.230), known from \*Philostratus' maliciously barbed portrait of a \*sophist whose precocious talent for \*declamation deserted him in adulthood (*Vitae Sophistarum*, 577–8). Later biographical traditions are speculative and unreliable.

Two authentic works survive, building on transformative 2nd-century innovations in the theory of argument and stylistic theory. *On Issues* (*Peri staseōn*) defines a default strategy for each of thirteen kinds of forensic or deliberative dispute by specifying the heads of argument appropriate to the nature of the dispute (questions of fact, definition, evaluation, etc.). By the end of the 3rd century it had displaced rivals as the standard teaching text, and became the subject of many commentaries. Early commentators, including \*Menander Rhetor, felt free to disagree with Hermogenes, sometimes forcefully. From the 5th century onwards his text began to be treated as authoritative.

*On Types of Style* (*Peri ideōn*) analyses the means by which a range of stylistic effects can be achieved. In this case, the exceptional sophistication of Hermogenes' system may have inhibited pedagogical use. No commentary is attested before \*Syrianus in the 5th century. By the 6th century, Hermogenes' increasingly canonical status had led to three other texts being falsely attributed to him. Of these, *On Invention* (a work on the parts of a speech, sometimes cited as under the name of \*Apsines) and *On Method* were combined with the two authentic works and \*Aphthonius' *Progymnasmata* to form a comprehensive rhetorical corpus. The corpus did not include Ps.-Hermogenes *Progymnasmata*, which was transmitted separately. MFH

*CoptEnc* 1 s.n. Armant cols. 233a–234a (R. Stewart and P. Grossmann).

Timm, *Das christlich-koptische Ägypten in arabischer Zeit*, 152–82.

**Heroninus Archive** A set of some 450 published documents written in *\*Greek* on *\*papyrus* which illustrate the nature and management of the large private *\*estate* of Aurelius Appianus in the Fayyum area (*\*Nome* of *\*Arsinoe*) of *\*Egypt* in the mid-3rd century AD. Its core consists of *\*letters* to Heroninus, manager from 249 to 268 of Appianus' holdings at *\*Theadelphia*, and some accounts and other texts. Appianus was a prominent citizen of *\*Alexandria* who owned property in several nomes (regions). His Arsinoite estate was run by local civic notables under a general manager called Alypius, himself a former imperial procurator. It comprised arable land, vineyards, and other properties, grouped into *\*village-based* units called *phrontides* (concerns), each run by a manager (*phrontistes*). Appianus also rented out *\*sheep*, *\*houses*, and utilities. The estate invested in cow-driven waterwheels and other *\*irrigation* works. It had a centrally managed corps of donkeys, oxen, and *\*camels*, for farm work and for transporting crops and supplies, which unified the estate as an economic enterprise. Long-term workers

received subsistence, a monthly cash wage, and sometimes accommodation and payment of their tax dues; casual *\*wage-labourers* were also employed. The economy of the estate was monetized, and used multifarious *\*credit* arrangements, including individual accounts for its employees. The *phrontistai* had to prepare standardized monthly accounts for submission to the owner, which represent one of the most sophisticated accounting systems known from the ancient world. DWR  
D. W. Rathbone, *Economic Rationalism and Rural Society in Third-Century A.D. Egypt: The Heroninos Archive and the Appianus Estate* (1991).

**Hero of Alexandria in Late Antiquity** Hero was a Greek mechanical engineer and scientist of the mid-1st century AD, whose treatises on technical matters drew on and largely superseded the work of *\*Ctesibius* and *\*Philo* of Byzantium. His description of a wind-powered pump, primitive steam turbine, and similar experimental devices may have inspired the production of certain medieval automata. Later discussion of hydraulic and military *\*engineering* reflects broad familiarity with Hero's *Belopoeica*, *Poliocetica*, and *Pneumatica*, which are known in *\*Latin* and *\*Arabic* versions. MLR

ed. W. Schmidt, L. L. M. Nix, H. Schöne, Hermann J. L. Heiberg, 5 vols. in 6 (1899–1914).

A. G. Drachmann, *Ktesibios, Philon and Heron: A Study in Ancient Pneumatics* (1948).

**Hertford** Site of a church *\*council*, convened by *\*Theodore* of *\*Tarsus*, Archbishop of *\*Canterbury*, in 672/3. The canons, recorded by *\*Bede* (*HE* IV, 5), focus on clerical responsibilities, dating *\*Easter*, and agreement to hold synods twice or at least once a year, on 1 August at the (unidentified) site of Cloveshoe.

HFF

C. Cubitt, *Anglo-Saxon Church Councils, c.650–c.850* (1995).  
*Canons*, ed. Haddan and Stubbs, *Councils*, III, 118–22.

**Heruli** Germanic tribe with possible origins in Scandinavia (*\*Jordanes*, *Getica*, 23 and 117–19). The Heruli became a serious concern to the Roman administration in 267–8 when, along with other 'Scythians', they attacked *\*Greece* and other parts of the *\*Balkans* (as described by *\*Dexippus*). In the early 5th century, the *\*Huns* subdued them, but in 454/5 they formed an independent *regnum* on the River Morava. In 476, some Heruli fought on the side of *\*Odoacer* against the *\*Emperor* *\*Romulus Augustus* (*Jordanes*, *Getica*, 242).

Despite their military success, the Heruli did not form a strong polity. By the 6th century, some Heruli had become imperial *\*foederati* in *\*Dalmatia* while others supposedly headed for Thule in 'the Far

North'. \*Procopius describes them as polytheist tribal people who praised physical strength and practised human \*sacrifice (*Gothic*, VI, 14). Some, who fought in the Roman \*army in the \*Byzantine invasion of \*Africa, were \*Homoean ('\*Arian') Christians (*Van-dalic*, IV, 14, 12). Some fought on the eastern \*frontier against the \*Persian Empire, for instance at the Battle of \*Anglon (*Persian*, II, 25, 20); others were Roman allies, not always reliable, during the \*Byzantine invasion of Italy (\*Agathias, II, 9). The rebellion of Sindual, one of the Heruli descended from the allies of Odoacer, was quelled by \*Narses in 565 (*Liber Pontificalis*, 63; \*Paul the Deacon, *HL* II, 3) and after the arrival of the \*Lombards in Italy the Heruli disappear from the sources.

**Hesychius Illustis (Hesychius of Miletus)** (6th cent.) Lawyer and author, born c.505 and possibly \*pagan, from a wealthy family at \*Miletus. At \*Constantinople he became a lawyer at the court of the \*Praefectus Praetorio of the East which instigated his \*title of honour 'illustis'. \*Inscriptions at Miletus commemorate his later benefaction to the \*city. He wrote three known works.

First, a summary of Roman and Miscellaneous History (*Chronike Historia*) traversing 1,190 years from ancient Assyria to AD 518 in six parts itemized by \*Photius (69), who considered it 'clear concise and pleasant' and adhering to truth but was puzzled as to why Hesychius would support the \*Emperor \*Anastasius I. The six parts are (1) from Belos, King of the Assyrians, to the Trojan War, (2) from the fall of Troy to the founding of Rome, (3) the kings of Rome, (4) the Roman Republic down to Caesar, (5) the Roman Empire down to the foundation of \*Constantinople, and (6) from \*Constantine I to the death of the Emperor Anastasius in 518.

Secondly, he wrote an entirely lost contemporary history from the accession of \*Justin I in 518 until the early years of \*Justinian I, a work interrupted by the death of Hesychius' adult son John.

Thirdly, he composed a *Table of Eminent Writers* (*Onomatologos*), which was an alphabetical compilation of short biographies of famous literary figures including contemporaries such as \*Agathias, \*Peter the Patrician. \*John Lydus, and \*Procopius. It was used by the \*Suda, but whether directly or from an already abbreviated version is unresolved. What survives of Hesychius is an extract from *Chronike Historia* on the original foundation of Constantinople. Another fragment on the

chronology of Christ's birth (published in Dindorf's edition of \*John Malalas, pages lii–liii) is falsely attributed to him.

**Hesychius the lexicographer** (5th or 6th cent.) Grammarian from \*Alexandria, compiler of a \*Greek lexicon of unusual words and phrases based mainly on the lost work of Diogenianus who was the first, according to Hesychius' introductory \*letter to a certain Eulogius, to have brought together material from different genres, both literary and non-literary, thus making this information available to readers working without the help of a teacher. Hesychius' own contribution was to add material from other lexica and to give the original source of the words defined. These quotations were omitted in the only surviving manuscript. The result is nevertheless, a unique source of information, particularly about classical proper names and dialect forms, and how these were interpreted in Late Antiquity. RW PLRE II, Hesychius 15.

E. Dickey, *Ancient Greek Scholarship* (2007), 88–90.

**Hetan II** (d. after 717) \*Dux of \*Thuringia. Hetan was the last of a ducal dynasty which was condemned for the murder of S. \*Kilian. Hetan supported S. \*Willibrord and probably also \*Charles Martel, but was later accused of tyranny in the *Life of S. \*Boniface*. JTP

H. Mordek, 'Die Hedenen als politische Kraft im austrasischen Frankenreich', in Jarnut et al., *Karl Martell*, 345–66. Fouracre, *Charles Martel*, 110–15.

**Hewald the White and Hewald the Black** (d. c.695) Two \*Anglo-Saxon missionaries from Northumbria, distinguished by their hair colour, who died as \*martyrs in Saxony. They were buried in \*Cologne by \*Pippin II (\*Bede, *HE* V, 10). JTP

**hexaemeron** (Gk. six days) The period of six days in which God created the world according to the account in Genesis 1:1–31. From the very beginning of Christianity, this section of the \*Bible aroused interest among Christian exegetes who tried to explain the nature and development of God's act of creation. In their analysis, they were influenced not only by Christian tradition

and doctrine, but also by secular philosophy and \*cosmology, in particular by Plato's *Timaeus*. In chronological order, the most important extant writings on the *Hexaemeron* are those by Theophilus of \*Antioch in the late 2nd century (*Ad Autolyicum*, book II), \*Basil of \*Caesarea (*Hexaemeron*—before 370), \*Ambrose (*Hexaemeron*—c.386–90) and \*Augustine (*De Genesi Adversus Manichaeos*—c.389, and *De Genesi ad Litteram Libri 12*—c.401–415). Even though these authors propose different theories on the development of creation and the temporal division of the six days in which it happened, they all agree on the crucial point that God created the world out of nothing, that is, made the material itself of his own creation, a conviction also expounded by \*Lactantius (*Inst.* II, 5–12).

\*Cyril of \*Jerusalem (*Catecheses* 3, 5 of c.348–50) connects the idea of God's creation of water as the basic matter of the world to catechetical practice. He instructed new converts to see in their \*baptism in water the action of a complete regeneration through the basic matter of creation.

**hexagram** \*Silver denomination coin introduced by the \*Emperor \*Heraclius in 615, weighing c.6.84 g (0.2 ounces). The *hexagram*, so called because it weighed six *grammata*, was struck in part using silver requisitioned from churches during the long and costly 6th–7th-century wars against the \*Persian Empire. The *hexagram* had ceased to be struck by the 680s. RRD  
Grierson, *Byzantine Coinage*.

**Hexapla and Syro-Hexapla** A manuscript synopsis of the \*Greek Old Testament in six parallel columns prepared by \*Origen in \*Caesarea of \*Palestine (c.235–45) primarily for exegetical and apologetic purposes. The columns reproduced the Hebrew text, a \*Greek transliteration of the Hebrew, the versions of \*Aquila and \*Symmachus (both 2nd cent. AD), the Septuagint, and the version of \*Theodotion (1st cent. AD). For some books (e.g. \*Psalms) Origen added other versions, referred to by their respective columns (Quinta, Sexta, and Septima). The Septuagint column included text-critical sigla indicating additions and omissions found in the Hebrew and the other Greek versions. The multi-volume Hexapla remained in Caesarea and was consulted by \*Eusebius and \*Jerome. It may never have been copied in its entirety and only fragments survive.

However, the Hexaplaric Septuagint column was copied separately. A copy of the Hexaplaric Septuagint including the text-critical sigla and readings from other versions was used as the basis of an influential literal \*Syriac \*translation prepared in 615–17 near \*Alexandria by \*Paul of \*Tella. This translation, known as the Syro-Hexapla, survives almost completely in 7th- and 8th-century manuscripts.

**Hexham** Northumbrian \*monastery and \*bishop's see on the south bank of the Tyne, c.4.5 km (2.8 miles) west of Roman Corbridge, England. Established by S. \*Wilfrid c.672 on land granted by Æthelthryth, virgin queen of Ecgrith of Northumbria, the complex comprised several churches. The remains of two structures are axially aligned within the later medieval abbey: a small apsidal building lies immediately east of an elaborate crypt with western antechamber and three entrance passages, probably part of Wilfrid's Church of S. Andrew (\*Stephen of Ripon, *Vita Wilfridi*, 22). The crypt incorporates reused masonry from nearby Roman monuments.

P. Bidwell, 'A Survey of the Anglo-Saxon Crypt at Hexham and its Reused Roman Stonework', *ArchAel* 5th ser. 39 (2010), 53–145.

**Hieracas of Leontopolis** Learned Christian ascetic teacher in \*Egypt from the late 3rd to 4th century AD. Known chiefly through the *Panarion* of \*Epiphanius (67), Hieracas, a calligrapher by trade, was bilingual and well versed in various forms of literature, including the Old and New Testaments. A practised exegete, he composed several (now lost) works. His teachings focused on ascetic perfection, which led to his denial of the Resurrection of the Body and the rejection of \*marriage. He developed within the \*city itself an ascetic circle of men and women who embraced his

## Hierapolis of Phrygia

separatist celibate calling. Their practices included the cohabitation of unattached male and female members (*subintroductae*).

**Hierapolis of Phrygia** (mod. Pamukkale, western Turkey) \*City of \*Phrygia Prima, later known as Phrygia Salutaris, 12 km (7.5 miles) north of \*Laodicea ad Lycum, and famous for its warm springs. A serious \*earthquake in the 4th century did much damage to the elaborate buildings of the classical city. The fortifications built under \*Theodosius I determined the boundaries of the Late Antique city, and they excluded the large Roman agora, where workshops and kilns were established. Inside the new city walls, the new buildings respected the original layout of the *insulae*. They included \*houses, a \*bath, a three-aisled cathedral, and several other churches.

S. Philip is said (\*Eusebius, *HE* III, 31, confounding the Apostle and the \*deacon of Acts 21:8–9) to have ended his days living with his daughters at Hierapolis. In the 5th century an elaborate \*martyrium in the form of a domed \*octagon was dedicated to him on the heights of the eastern necropolis overlooking the city; it was flanked by a square with a fountain. A sumptuous \*basilica of the 4th/5th century with \*mosaic floors, standing about 36 m (40 yards) from the octagonal building has been found to have at its heart a Roman tomb of the 1st century AD scrawled with \*crosses; baths flanked the tomb and a well-worn \*marble staircase led to a platform over it, suggesting that it was a place of \*pilgrimage. A bread-stamp now in Richmond, Virginia, appears to depict both churches and a pilgrim labelled with the name of S. Philip. The complex was reached from the city by a processional way which passed over a bridge; \*votive offerings bearing crosses and images of the saint have been found at the octagonal bathhouse which flanked the foot of the monumental staircase leading up to the shrine.

In the mid-7th century a serious earthquake halted the development of the city, and it became a settlement of scattered hamlets. By 1190 it was ruined and abandoned.

**Hierapolis of Syria** (\*Syriac Mabbug; mod. Membij, Syria) Chief \*city of the \*province of \*Euphratensis from the 4th century onwards, on the main road from \*Antioch to the Euphrates, about 40 km (25 miles) east of \*Batnae. The name derives from the pagan cult of Atargatis, the Dea Syria. Almost nothing is now visible of the ancient city, though \*Egeria in the spring of 384 found it a place 'of great plenty' (18, 1).

The position was strategic. In the 2nd and 3rd centuries, legions mustered at Hierapolis before advancing down the Euphrates. \*Shapur I captured it in 252 (\**Res Gestae Divi Saporis*, 13). \*Constantius II based himself there in the summer of 343 (*CTh* XII, 1, 35 = VII, 22, 4 and XV, 8, 1). \*Julian passed through during his advance into the \*Persian Empire (Julian, 401BD; \*Ammianus, XXIII, 2, 6; \*Zosimus, III, 12, 1–2). \*Valens used Hierapolis as a campaigning base (*CTh* I, 29, 5; VII, 13, 6; XVI, 2, 19 all of 370; XIV, 13, 1 of 373; X, 16, 3; VII, 6, 3; and *CJust* XII, 1, 11 all of 377; Zosimus, IV, 13, 2). Alexander, Bishop of Hierapolis, supported \*Nestorius at the \*Council of \*Ephesus and died in \*exile in \*Egypt.

Hierapolis was important in the \*Persian–Roman wars of the 6th century; the citizens were rewarded with a tax remission in 505/6 for helping supplies and troops enter \*Osroene from Euphratesia and \*Syria Prima (\*Joshua the Stylite, 78). The \*Emperor \*Anastasius I also funded the construction of a new \*aqueduct (\*Procopius of Gaza, *Panegyric*, 18).

The city was the birthplace of \*Philoxenus, the extreme \*Miaphysite bishop who, with \*Severus of \*Antioch, persuaded Anastasius to adopt an increasingly Miaphysite stance. Despite \*Justinian I fortifying Hierapolis as a base, the inhabitants bought off \*Khosrow I with 2,000 lb of \*silver during the invasion of 540 (*Persian*, II, 6; *Aed.* II, 9, 12–17).

The scholar \*Thomas of Harkel was \*Syriac Orthodox Bishop of Hierapolis in the late 6th century. In 631, the Emperor \*Heraclius participated in a church \*council there that aimed to reconcile Chalcedonians and Miaphysites. Seven years later, Hierapolis fell under Muslim control. \*Agapius, \*Melkite Bishop of Hierapolis in the 10th century, was the author of a chronicle.

G. Goossens, *Hierapolis de Syrie: essai de monographie historique* (1943).

**Hieria** (mod. Fenerbahçe, Asiatic Turkey) Suburb of \*Chalcedon (not to be confused with \*Hieron at the Black Sea end of the \*Bosporus), and site of a church, \*palace, and \*harbour constructed by \*Justinian I (\*Procopius, *Aed.* I, 11, 16–20), favoured as a residence by \*Theodora, and later as a summer resort by \*Heraclius, one of whose sons was here cured of elephantiasis

by S. \*Theodore of \*Sykeon (*VTheodSyk* 97). The Iconoclast Council of 754 met at Hieria. JCr  
Janin, *CPByz* 148–9, 206, 239, 498–9.  
Janin, *Grandscentres*, 35–6.

**Hierocles** Lawyer who wrote, in response to a request from a friend called Bassus, probably in the 4th century, an amateur and rhetorical treatise on \*veterinary medicine in \*Greek, intended to amuse. Fragments survive in the \**Hippiatrica*. MD  
PLRE I, Hierocles 2.  
McCabe, *Horse Medicine*.

**Hierocles** Otherwise unknown author of the *Synecdemus*, a list of the 64 \*provinces and their \*cities in the Eastern Roman Empire, along with titles of their \*governors, arranged in roughly geographical order. The latest city mentioned was founded early in \*Justinian I's reign (528), but gaps in information from the four previous reigns suggest that it may be an updated version of a document of 460. The title ('Fellow-Traveller') implies that it might be a shortened version of a once fuller travel account. The *Synecdemus* survived by being incorporated into the *Descriptio Orbis Romani* of \*George of \*Cyprus (late 6th cent.?) and appended to *De Thematis* by \*Constantine VII Porphyrogenitus (10th cent.). It was mistaken during the Middle Ages for an episcopal *Notitia*, to which it is sometimes attached, but the list is secular, including many places which were not bishoprics. Twelve manuscripts survive, the oldest of which is 12th century. The epithet 'Grammaticus' appears to be a confusion with another Hierocles. EE  
PLRE III, Hierocles.  
ed. E. Honigsmann, *Le Synecdémus d'Hieroclès* (1939), with maps.  
*New Pauly: Antiquity*, vol. 6, 308 s.n. Hierocles 8.  
Jones, *Cities*, Appendix III and *passim*.

**Hierocles, Sossianus** (early 4th cent.) 'Author of and advocate for carrying out \*persecution' (\*Lactantius, *Mort.* 16, 4). Hierocles had a distinguished career in the imperial \*administration. He was promoted from \*Praeses of \*Augusta Libanensis (293/300) to be \*Vicarius of a \*dioecesis, and then stepped down to be \*Praeses of \*Bithynia, residing at \*Nicomedia (c.302–3). He was later \*Praefectus Augustalis in \*Egypt (310–11) where he is attested by \*Eusebius of \*Caesarea (*Martyrs of Palestine*, 5, 2–3, Long Recension) as condemning Christian virgins to work in brothels, causing him to be assaulted by the Christian \*philosopher Aedesius, whom he promptly had tortured and thrown into the sea.

Hierocles published a pair of treatises, *Word of the Lover of Truth*, addressed not against but 'benignly' to the Christians. Though lost, their contents are known

from Christian refutations by \*Lactantius (*Institutes*, V, 2–3) and Eusebius, *Contra Hieroclem*; Eusebius of Caesarea's authorship of the latter has been strongly contested. Much of Hierocles' argument, so Eusebius claims, has already been refuted in \*Origen's *Contra Celsum*. Eusebius and Lactantius both concentrate on responding to Hierocles' comparison of \*Jesus with the 1st-century \*miracle worker \*Apollonius of \*Tyana.

**Hierotheus, Book of** A mystical treatise written in \*Syriac in the early 6th century; attributed to the holy Hierotheus, the alleged teacher of \*Dionysius the Pseudo-Areopagite. Modern interpreters distinguish two redactional layers in the book. Since the west Syriac tradition attributes the book to \*Stephen bar Sudhaili, he may be the author of the first redaction. The vocabulary of the second layer follows that of Sergius of Resh'aina's translation of the Dionysian Corpus and thus depends on the latter. Drawing on \*Origen and \*Evagrius, the book expresses a radical doctrine according to which all beings come from a primordial essence and are destined to be reabsorbed into it in an act of

commingling. For this to be achieved, the individual mind must go through the life-stages of Christ and follow his descent to Hell and ascension into Heaven. The book was commented upon by Theodosius, \*Patriarch of \*Antioch (sed. 887–96), and Gregory \*Bar Ebroyo (1225/6–86). IP

**hija'** \*Arabic \*invective. It may vary in length from a short poetic curse to a long satire and may form part of a larger composition (e.g. \**qasida*). Some rulers employed \*poets not just to write their \*praise, but also to have their foes ridiculed through *hija'*. Literary duels consisting of invectives, e.g. the 40-year poetic exchange between al-\*Farazdaq and \*Jarir, were highly regarded. KMK

EI 2 vol. 3 (1971) s.v. 'Hidjā', 352–5 (Pellat).

S. Jayyusi, 'Umayyad Poetry', in A. Beeston, T. M. Johnstone, R. B. Serjeant, and G. R. Smith, eds., *Arabic Literature to the End of the Umayyad Period* (1983).

**Hijaz** Mountainous and desert region of north-west \*Arabia containing many oases, including \*Mecca and \*Medina, the birthplaces of \*Islam. From the 8th century BC, sophisticated urban trading kingdoms ruled northern Hijaz (al-Ghabban, 211–307); the Romans annexed part of the region in AD 106, but made little settlement, and after the 3rd century, control of northern Hijaz passed to Arabian semi-nomadic groups with connections to and sometimes alliances with the Eastern Roman Empire. Hijazi history in the three centuries before \*Muhammad is obscure: Crone proposed that it lost almost all \*trade contact with the Mediterranean; urban settlement was limited, though some trade probably persisted (Heck). The sudden rise of \*Islam from the seemingly 'empty Hijaz' (Montgomery) is much debated in modern scholarship. PAW

EI 2 vol. 3 (1971) s.v. Ḥidjāz (Z. H. Zaidi).

**hijra** In later Islamic tradition, usually \*Muhammad's emigration from \*Mecca to Yathrib (\*Medina) in 622. This flight is said to have been prompted by

Muhammad's vulnerability at Mecca following the death of his uncle and protector, Abu Talib. The first day of the lunar year in which the hijra occurred marks the beginning of the Islamic calendar (\*Era of the Hijra), introduced seventeen years after the event by \*Umar b. al-Khattab. The Meccans who migrated with Muhammad to Medina are referred to as the 'Emigrants' (\**Muhajirun*) and their Medinan hosts as the 'Helpers' (\**Ansar*).

During the \*Arab conquests of the 7th and early 8th centuries, migration to and settlement in the garrison towns (*amsar*) in the conquered territories could also be referred to as hijra. The garrisons could also be called 'houses of emigration' (*dur al-hijra*) and the migrants referred to themselves as 'emigrants' (*muhajirun*); transcriptions of this term are also found in \*Greek and \*Syriac texts of the 7th century as the name for the Arabian conquerors.

The emigration to Yathrib is sometimes referred to as the second hijra, as some companions had already left Mecca for \*Ethiopia seven years earlier. KMK; AM P. Crone, 'The First-Century Concept of Hīḡra', *Arabica* 41 (1994), 352–87.

**Hilary of Arles** (401–49) \*Bishop of \*Arles from 430. Born in north-east \*Gaul of a \*senatorial family, he spent several years in the \*monastery of \*Lérins, founded by his kinsman \*Honoratus, where he supervised the education of the sons of \*Eucherius. When S. Honoratus became Bishop of Arles (427), S. Hilary, now a \*priest, remained in Lérins, and Eucherius, now Bishop of \*Lyons, dedicated his *De Laude Heremi* to him (Hilary, *Epistula ad Eucherium*).

After the death of Honoratus (430), Hilary succeeded him as Bishop of Arles. Probably in 431, he composed a \*sermon in honour of his predecessor, which survives (BHL 3975). To enforce the claims of the see of Arles to primacy over the \*provinces of \*Viennensis and \*Narbonensis, he organized a series of \*councils (Riez, 439; Orange, 441; Vaison, 442). He also intervened several times outside his \*diocese but was accused of overreaching his authority and in 445 at \*Rome \*Leo I deprived Hilary of his \*metropolitan jurisdiction (PL 54, 629–38).

Hilary was in contact with several other bishops, including \*Germanus of \*Auxerre and Eucherius of Lyons, who sent him several books (*Formulae Spirituales Intelligentiae, Instructiones*, CSEL 31). He had a literary reputation and wrote several works. After his death, he was buried in the Alyscamps at Arles; his verse \*epitaph celebrates his holiness (Le Blant, *Inscriptions*, 516). His *Life* was written by the priest \*Honoratus of \*Marseilles (BHL 3882). MHei PCBE IV/1, Hilarius 3.

**Hilary of Poitiers** (fl. 330) \*Bishop, exegete, and polemical writer. Born around the beginning of the 4th century, Hilary was elected Bishop of \*Poitiers c.350. After attending the \*Council of Béziers (356) he was exiled to \*Phrygia by the \*Emperor \*Constantius II, either because of his support of the \*usurper \*Silvanus or because of his opposition to \*Arianism. While in the East Hilary became familiar with the biblical exegesis of \*Origen and with the perspective of the Homoiousian party, i.e. those bishops who opposed Arius but who were reluctant to adopt the Homoiousian formula of the Council of \*Nicaea because of its suspected Sabellian overtones. He became convinced that the Western adherence to Nicaea could be reconciled with the Eastern Homoiousian view and he worked for compromise. After returning to the West in 361, Hilary became a leader of the anti-Arian forces, attempting unsuccessfully with \*Eusebius of Vercelli to unseat the \*Homoean \*Auxentius, Bishop of \*Milan. He died in 367, according to \*Jerome (*Chron.* ad ann.).

Hilary wrote much polemic, as well as several biblical commentaries. During his exile he produced twelve books *On the Trinity* (*De Trinitate*) and *On the Synods* (*De Synodis*), which reviewed the decisions of the Eastern councils held between 341 and 357. He also issued several sets of writings, sometimes called 'historical' works, that contain documentation on the 'Arian' controversy: *Liber I ad Constantium*, *Liber II ad Constantium*, *Liber contra Constantium*, *Contra Arianos vel Auxentium Mediolaniensem Liber*, and the *Fragmenta Historica*.

As an exegete Hilary was strongly influenced by the \*allegorical \*Bible interpretations of Origen. He composed commentaries on the \*Psalms, of which just

## Hilderic

over 50 survive. He also produced the earliest complete commentary on the Gospel of Matthew to have survived. Hilary's *Tractatus Mysteriorum* is a brief discussion of key figures from the Old Testament, all seen as 'types' of Christ and the Church. Hilary also composed some of the earliest Latin \*hymns, of which three have been partially preserved. DGH

**Hilderic** \*King of the \*Vandals in \*Africa AD 523–30. Hilderic had been promoted to succeed his father \*Huneric as king in AD 484, but was bypassed according to the Vandal law of succession by agnatic seniority (\*Victor of Vita, III, 19). Consequently he was at least 51 when he became king. Hilderic celebrated his descent from the Theodosian house through his mother \*Eudocia, and enjoyed close relations with \*Justinian I's court in \*Constantinople (\*Procopius, *Gothic*, III, 9, 4–5). He was overthrown in a coup by Prince \*Gelimer in AD 530. AHM

**Hillel II** Jewish patriarch (Hebr. *nasi*) active in \*Tiberias in the middle of the 4th century. A \*letter written by the \*emperor \*Julian to the Jewish community in 362 claims that the emperor asked 'my brother Iulus your most venerable \*patriarch' to refrain from collecting a tax gathered by the patriarch's emissaries. Medieval Jewish authors ascribed to Hillel II the ratification for posterity of a fixed calendar, thereby no longer requiring lunar observations to determine months or the ad hoc proclamation of Jewish leap years based on climatic conditions. Some recent scholars doubt this attribution, citing divergences from a fixed calendar that continued for centuries. Hillel II is also mentioned by \*Epiphanius (*Adversus Haereses* 30) who, quoting \*Josephus \*Comes, a Jewish convert to Christianity, relates that the patriarch was secretly baptized on his deathbed. **hillforts** Hilltop settlements fortified around the perimeter with a wall of earth or stone, often with timber support, are known from all prehistoric and historical periods from the Neolithic period into early modern times. During the 4th and 5th centuries, hillforts were in use in many parts of upland Europe.

A series of some 50 hillforts in southern Germany is among the most thoroughly investigated. Of these the \*Runder Berg is the best studied. Investigations at other sites show that there was a great deal of variation in the character of hillforts. Some, such as the Zähringer Burgberg, have proved to have served a function similar to that of the Runder Berg—as the residence of an elite group and the site for manufacture of objects for elite consumption. Others, such as the Geisskopf near Offenburg, are different. That hillfort has yielded no evidence that it served as a residence of the \*aristocracy, but is thought to have been a military camp used by Germanic soldiers. The objects recovered are almost exclusively military in nature—\*arms and armour, \*tools, attachments for men's \*dress, and parts of Late Roman-style military \*belts. \*Pottery is rare, and ornaments ordinarily associated with women in this period are absent. **Himerius** (d. after 383) Greek orator and teacher of \*rhetoric from Prusa in \*Bithynia where, according to the \**Suda*, his father taught rhetoric. Himerius spent most of his adult life in \*Athens, first as a student and then as a teacher of rhetoric. \*Gregory of \*Nazianzus and \*Basil of \*Caesarea were among his pupils there (\*Socrates, IV, 26; \*Sozomen, IV, 17). His wife was from a prominent Athenian family who claimed descent from Plutarch (*Oration* 7, 4), and Himerius himself became an Areopagite. According to his contemporary \*Eunapius (*Lives of the Philosophers*, 494), Himerius left Athens to join the \*Emperor \*Julian at the beginning of his reign, returning to Athens after the death of his rival the rhetorician \*Proaeresius, at which point he may have obtained the official \*chair of rhetoric. He was known to \*Libanius who wrote a \*letter (*ep.* 469) on his behalf.

\*Photius knew of over 70 speeches by Himerius but few have survived complete; extracts of some are given in Byzantine sources, principally Photius' *Bibliotheca*, while others are preserved in a severely damaged manuscript. The surviving corpus represents the principal types of Late Antique speech, being composed either in connection with his teaching, or to mark key moments in the life of the speaker and his circle, or for public events. Himerius' declamations based on historical and fictional themes were composed for his students or for performance at public contests against other sophists. Other speeches addressed to his students respond to conflicts and crises within his school. His epideictic speeches, pronounced in Athens, \*Constantinople, \*Corinth, and other \*cities, include a monody composed on the death of his son Rufinus (*Oration* 8), which survives complete, and addresses to imperial officials such as the \*Vicarius Musonius, himself a former teacher of rhetoric at Athens (*Oration* 39) and Scylacius, \*Proconsul of \*Achaia (*Oration* 25). Among these officials were some of Himerius' former pupils. Unusually, some of these speeches have been transmitted along with their theoretical introductions, explaining how the orator conceived of his task. Himerius' style in his epideictic orations is poetic, rich in metaphor and imagery (allusions to the visual arts are frequent). He often quotes from or refers to the archaic lyric poets, including Sappho and Pindar. RW

**Himlingøje** \*Cemetery of the Late Roman period (2nd and 3rd cents. AD), in Stevns in Zealand, one of

the richest such sites in Denmark. The site has been excavated frequently between 1828 and 1985. Approximately 40 inhumation mound graves and cremations in flat ground have been registered. Some of the graves are without grave-goods, while others contain considerable treasures. Those buried include both men and women of all ages. The graves of the rich contain objects of local production, as well as Roman imports—\*gold and \*silver ornaments, \*bronze and gold cups and plates, and assemblages of \*glass. This wealth demonstrates the existence of a prominent \*aristocracy with contacts with the Continent. The absence of \*weapon deposits and military equipment is remarkable. KJe

**Himyar (Sabaic Hmyrm, Lat. Himyarites, Homeritae)** Geographic area in southern \*Arabia stretching over the southern highlands of the Yemen, and name of a tribal confederacy ruling over the area, which can be traced back to the 1st century BC (Sabaic \*inscription RES 2687), when the tribe seceded from the kingdom of Qatabān. It was ruled by the dhū Raydān lineage from the capital city \*Zafār (Pliny, *Natural History*, VI, 26, 104; *Periplus of the Erythraean Sea*, 22) and soon appeared as a competing kingdom to that of Saba'. The history of the kingdom may be reconstructed from epigraphic evidence and Christian authors, including the \*Syriac Book of the \**Himyarites*.

By the late 3rd century AD, Himyar had annexed the rival kingdoms Saba' and \*Hadramawt and started to stretch its dominion over the \*Hijāz and the \*Najd (\*Procopius, *Persian*, I, 19, 14), subjugating the main tribes in Central Arabia (Ma'add, Mudar). In the 4th century, Himyarite kings embraced and probably imposed a monotheistic creed influenced by Judaism. In this period Jewish elements may be seen in the inscriptions, including the use of divine titles, the word 'Amen', and the name Yosef for a king.

In the early 6th century, Himyarite kings were subjected to the Aksumite Negus. When converted Christian communities supported by \*Aksum came into conflict with the ruler \*Yūsuf As'ar (Dhu Nuwas), an Ethiopian military intervention ensued (\*Cosmas Indicopleustes, II, 140–1). By c.535, the Himyarite crown fell to Abraha, the Negus' officer. In about AD 575, Himyar was conquered by the Persians under \*Khosrow I and it faded away. JS

**Hippiatrica** A \*Greek encyclopedia of \*veterinary medicine as it applies to \*horses, compiled in the 5th/6th century by an unknown editor, and given its final shape in the 10th century. The sources of the text, sometimes translated between \*Latin and Greek, include works by seven authors, many of them practising veterinarians. They are: \*Anatolius of \*Beirut (probably 4th cent.), whose general agricultural handbook included an important veterinary section; Eumelus (late 3rd/early 4th cent., possibly from Thebes in \*Greece); \*Apsyrtus, a practising veterinarian of the 3rd/early 4th century whose work forms the foundation of the *Hippiatrica*; \*Pelagonius (late 4th cent.); \*Theomnestus (early 4th cent.); \*Hierocles (4th/5th cent.), and Hippocrates (often confused with the homonymous physician) of unknown date. Several of the source texts survive more fully in \*Syriac and \*Arabic translations, as yet not fully studied.

The *Hippiatrica* survives in 22 manuscripts. It was a reference work, organized by ailment and author, and comprises the most important veterinary work of Late Antiquity, valuable for insights on veterinary medicine and its practitioners, language, and disease. Common ailments whose symptoms and treatments are discussed include glanders, lameness, cough, and colic. Also included are details of the daily care and maintenance of horses rarely found elsewhere, such as feeding, stable management, and breeding. MD

ed. E. Oder and K. Hoppe, *Corpus Hippiatricorum Graecorum* (1924–7).

McCabe, *Horse Medicine*, with considerable discussion of the text.

**hippodrome** See CIRCUS.

**Hippolytus** (fl. 200) Prolific Greek \*biblical commentator whose identity, provenance, and corpus have come under considerable scrutiny. \*Eusebius of \*Caesarea calls him *proestos* (*HE* VI, 20, 22, 46). \*Jerome designates him *episcopus* (*Vir. Ill.* 61). Neither knows his church. \*Prudentius celebrated a Roman \*martyr called Hippolytus (*Peristephanon*, 11). \*Theodoret listed Hippolytus the author as eastern (*Eranistes*, 1, 88).

As a commentator he influenced \*Origen and subsequent patristic writers. He produced seminal interpretations of canonical texts, some of which are preserved entirely, others in part, including *On the Blessings of Isaac, Jacob, and Moses, David and Goliath, On the Song of Songs, Proverbs, Daniel*, and *On Antichrist*. Additional fragments survive. Throughout he sought the 'mystical' (figurative) meaning and supported a delayed Parousia (Second Coming of Christ). He composed material concerned with \*Easter and wrote against \*heresies although his hand in the *Elenchus* is disputed.

Proposed locales have ranged as widely as \*Palestine, \*Rome, \*Anatolia, \*Egypt, and \*Arabia. P. Nautin, M. Simonetti, and J. A. Cerrato favour eastern origins. A. Brent maintains a Roman provenance, accompanied by a thoroughgoing literary reassessment. V. Loi suggested two Hippolyti. Scholars attached his name to the *Apostolic Tradition* a century ago, claiming that it had a Roman context; critics find these connections tenuous.

Advanced research has yielded revised views of the 16th-century 'Hippolytus statue' and Roman shrine artefacts. M. Guarducci demonstrated that the original statue was female. The core of the authentic corpus of Hippolytus' writing is commentary on the \*Bible with texts and titles of other genres in contested orbits around this core. JAC

### Hippo Regius (mod. Annaba formerly Bône, Algeria)

Important port \*city with vast *territorium* in the Roman \*province of \*Zeugitana but the ecclesiastical province of \*Numidia. At least five churches are known from \*Augustine's writings. Only one, dating to the pre-\*Vandal period and with an associated \*baptistry located in the '*insula chrétienne*', has been excavated. \*Epitaphs bearing \*Germanic names have been found in the church (*AE* 1953, 107; *AE* 1951, 267); the site was used throughout Late Antiquity. There is little evidence of public building in Late Antiquity but the market was reconstructed in 364/7 (*AE* 1982, 943). Augustine's polemic suggests that spectacles were still taking place in the early 5th century. Some houses had late 3rd- to 4th-century \*mosaics. There were \*city walls before the fourteen-month Vandal siege of 430–1. \*Possidius claimed that Hippo was burned by the Vandals (*Vita Augustini*, 28), but there is no archaeological evidence for this and Augustine's library survived. In 436–9 Hippo was \*Geiseric's residence. GMS

**al-Hira** \*Arab settlement, now in ruins, near Najaf in southern Iraq on the fringe of the Arabian Desert. Al-Hira flourished between the 4th and 7th centuries AD. Its foundation date is unknown: Muslim historians believed it was the first Arab \*city in Iraq, some dating it to the Neo-Babylonian Nebuchadnezzar; alternative traditions suggest an origin in the Parthian or \*Sasanian periods (Bosworth, 597).

Al-Hira's name, meaning 'the walled place' or 'the settlement' in \*Syriac and \*Arabic, implies its status as a focus of interaction between Arabian \*nomads and settled \*Mesopotamia. By the \*Sasanian period it had become the capital of the \*Lakhimids, clients of the Sasanians who patrolled the Empire's Arabian Desert \*frontier. The Lakhimids were semi-nomadic and often resided in \*palaces further into the Arabian Desert such as al-\*Khawarnaq and Sidir; hence al-Hira's population was predominantly Christian Mesopotamian Aramaeans committed to the \*Church of the East. The city was the seat of a \*bishop; Bishop Hosea attended the church \*Council of \*Seleucia-Ctesiphon in 410. Al-Hira also attracted settlement of Arabian nomads from various \*tribes, some of whom became Christians and became known as 'Ibadis' (\*Ibadites). The famed pre-Islamic Christian Arabic \*poet 'Adi b. Zayd was one such Ibadite, though it is unclear how much Arabic liturgical writing, if any, was produced in al-Hira before \*Islam.

The close \*Lakhimid–Sasanian relationship transformed al-Hira into a significant cultural and political centre, but in 602 the Sasanian Shahanshah \*Khosrow II Aparwez deposed the Lakhimid al-\*Nu'man b. Mundhir, the Lakhimids collapsed, and al-Hira's fortunes waned. As a conduit between \*Arabia and Mesopotamia, it was one of the first Iraqi cities to surrender to the advancing Muslim armies in 633 during the \*Arab conquest. The Muslims established a new city nearby, al-\*Kufa, which completely supplanted al-Hira, and it was never again substantially developed.

Al-Hira has been only cursorily excavated: the 1931 English expedition revealed much \*stucco work bearing Christian iconography. Okada's exploration of monastic sites near al-Hira further reveals the material culture of pre-Islamic Mesopotamian Christianity. PAW *EI* 2 vol. 3 (1971) *s.n.* al-Hira (A. F. L. Beeston, I. Shahid). C. E. Bosworth, 'Iran and the Arabs before Islam', *CambHistIran* III/1, 593–612.

**Hisham b. 'Abd al-Malik** (691–743) \*Umayyad \*caliph (r. 724–43). Hisham was the fourth of \*'Abd al-Malik's sons to become \*caliph. He is remembered as a builder and administrator. His building works include the market at Baysan (\*Scythopolis)—wrongly dated to the 6th century, until the discovery of a dated \*mosaic \*inscription (see Khamis, listed in bibliography)—and numerous desert 'palaces' (including \*Khirbat al-Mafjar, \*Qasr al-Hayr al-Gharbi, and Qasr al-Hayr al-Sharqi). In the latter role, he expanded the state's bureaucratic reach: \*papyrological evidence from \*Egypt during Hisham's reign shows that a detailed land survey was carried out there, as part of an overhaul of the province's \*tax system. His reign also saw a serious revolt among the \*Berbers in the west (740–4). NC

**Hisn Maslama** Islamic sources refer to a town of this name founded by the general and \*Umayyad prince \*Maslama b. 'Abd al-Malik, who was governor of the \*Jazira region of \*Syria from 708/9. The fact that he was known to have owned several large estates in the area has led to speculation that Hisn Maslama is actually the archaeological site known as Madinat al-Far. This is located approximately 70 km (43 miles) north of \*Raqqa near the River Balikh in northern Syria on the Balikh road. The attribution is supported because it was a route that would have been known to Maslama due to his frequent campaigns against the Byzantine army in \*Anatolia.

Because he was respected for his pious behaviour and campaigns against the Byzantines, sources claim that Maslama's descendants were allowed to remain at Hisn Maslama after the fall of the Umayyads. This supports the view that Madinat al-Far is the site in question, as evidence of both Umayyad and \*Abbasid occupation has been found there. EL

**hispanica tardía** Fine ware produced in northern \*Spain, 3rd to 5th centuries. Unlike the fine-ware industries of \*Baetica, *terra sigillata* (t.s.) *hispanica* continued over the 3rd and 4th–5th centuries (t.s.h. *tardía*) in various workshops, both rural (La Rioja Valley; Upper Duero) and urban (e.g. Clunia). Mould-made bowls with interlocking 'cartwheel' decoration and open dishes with stamped patterns (copying metalware) are characteristic. Red, then grey vessels were the norm (cf. contemporary Gallic t.s. *paléochrétienne grise*). The ware primarily served its inland market, the region's aristocratic \*villas, as well as \*cities (e.g. Zaragoza). PR

P. Reynolds, *Hispania and the Roman Mediterranean, AD 100–700* (2010), 56–67.

**Hispellum** (mod. Spello, \*Italy) \*City in the Umbrian part of \*Tuscia et Umbria, along the Via Flaminia and known as Colonia Julia Hispellum since its colonization under Augustus.

After the creation of the \*province of Tuscia et Umbria (attested in the \*Verona List) the city requested imperial permission to construct a \*temple to the Gens

Flavia, to hold theatrical shows and \*gladiatorial games previously held at Volsinii in \*Tuscia, and to rename the city in honour of Constantine's family. In 337, a \*rescript of the \*Caesar \*Constans I (*CIL* XI, 5265 = *ILS* 705) granted the building of the temple, provided it never be 'polluted by the deceits of superstition', and permitted the shows to be held at Volsinii in alternate years. The name of the *colonia* was changed to Flavia Constans.

Modern Spello preserves the Roman \*street grid and an important Roman sanctuary where the inscription bearing the rescript was found. MMA; OPN

**Hisperica Famina** \*Latin literary pieces written in \*Ireland in the 7th century, the *Hisperica Famina* (Lat. 'Western Sayings') survive in one complete recension (A), two fragments (B, D), and a glossary pointing to another recension (C). The works are characterized by (1) bizarre vocabulary, (2) end-stopped lines containing single or double hyperbaton, and (3) synonymy. Although poetically conceived, the lines employ neither quantitative nor rhythmical metre. Three poems, the *Lorica of Laidcend*, *Rubisca*, and *Adelphus Adelpha Meter*, draw heavily on the vocabulary of the *Hisperica Famina*, but their rhythmical structure differentiates them from the *Hisperica Famina* proper. 'Hisperic' vocabulary comprises neologisms based on \*Greek, Hebrew, and Celtic languages, archaisms, and words used in unusual senses. Main sources are \*Isidore, \*Gildas, and undetermined glossaries.

Each version is a collection of classroom essays on everyday topics and natural objects, reminiscent of \*Priscian's *Praeexercitamina*. The versions adhere to a common set of themes, but treatment varies from version to version. Version A contains an introduction describing a contest between two \*schools, a list of grammatical faults, and the routine of the school day; then come descriptions of sky, sea, fire, field, wind, the dress and equipment of the scholars, a writing \*tablet, a chapel, a \*prayer, and an attack by \*brigands. The Christian authors seemingly imagined themselves in an ancient Roman school: bands of students engage in rhetorical contests, competing for mastery of 'Ausonian diction'. Mythological names (*Titan*, *Tithys*, *Olympus*) figure prominently. MWH

ed. (with ET and comm.) M. W. Herren (A version 1974, Poems 1987).

ed. F. J. H. Jenkinson (all versions, 1908).

**Historia Acephala** An anonymous Alexandrian work preserved in translation in a \*Latin manuscript of c.700 in \*Verona and given its title by the editor Scipione Maffei in 1738. The extant text provides a concise account of the episcopate of \*Athanasius of \*Alexandria (\*bishop 328–73), covering from 346 until his death. Although the work has passed through a number of revisions, the original was probably composed for the 40th anniversary of Athanasius' election in 368 and drew extensively on the church archives of Alexandria. The *Historia Acephala* is notable for exceptional chronological accuracy and is a crucial source for reconstructing Athanasius' controversial career. DMG

**Historia Augusta** A series of imperial biographies in the mould of Suetonius covering the \*emperors from Hadrian to \*Carus, \*Carinus, and \*Numerian, with a lacuna covering Philip the Arab to \*Valerian (fragmentary), bearing the names of six different authors who claim to be writing around the very end of the 3rd century or beginning of the 4th. These attributions were accepted until 1889 when H. Dessau demonstrated that the whole was the work of a single author at the end of the 4th century. For almost 90 years this conclusion was resisted or reformulated by scholars, but single authorship is today accepted by all. Though some have argued for an early 5th-century date, general consensus places composition in the late 4th century, perhaps the early 380s.

The author would seem to have begun by writing serious \*biography, using a number of different sources, particularly Marius Maximus and an unknown biographer referred to as *Ignotus*. But by the time he reached the reign of Caracalla and the first part of the reign of Elagabalus he had grown bored of copying and reworking, and so gradually gave full rein to his penchant for invention and humour and went back and added the earlier, so-called 'secondary' lives of \*usurpers and minor emperors, which are mostly fiction since he lacked any substantial sources. He then continued using Herodian, \*Dexippus, \*Eunapius, and the \*Kaisersgeschichte as his sources, enlivening them with fake documents and \*letters, the names and works of fake historians, fabricated events and persons (including usurpers), and slyly humorous comments and puns, many of which make fun of the practice of writing history. As a result, the early 'primary' lives to Caracalla are generally reliable, but the secondary and later lives are generally not. The problem for the modern historian is sorting fact from fiction, which can exist side by side.

We know that the *HA* was employed as a legitimate source once in the early 6th century (by Q. Aurelius Memmius \*Symmachus), but it then disappeared until the 9th century, when it reappeared in the form of excerpts in *florilegia* and in the oldest surviving manuscript (Vatican Library, Palatinus 899), which remains the best witness to the text among a large number of later and derivative manuscripts (many from the 14th and 15th cents.) in two main traditions. ### ***Historia Langobardorum Codicis Gothani***

A short and anonymous history of eleven *capitula* that deals with the \*Lombards from their mythical origins up to the rule of \*Rothari (636–52). Subsequent Lombard kings are merely listed. The work continues, however, beyond the Frankish conquest of Lombard \*Italy concluding with \*Pippin's expedition against the Muslims of \*Corsica (806). CTH

ed. G. Waitz, MGH SS rer. Lang (1878), 5–11.

### ***Historia Monachorum in Aegypto (History of the Monks in Egypt)***

(c.400) A travel book recounting a \*pilgrimage by seven monks from \*Palestine who visited Egyptian monks and \*monasteries from September 394 to January 395. The work uses a geographical outline, tracing their journey from south to north. Like \*Palladius' *Lausiac History*, it strings together anecdotes about remarkable hermits, healers, and holy men, notably \*John of \*Lycopolis (d. 394/5). It also accents their aptitude for \*miracles, noting the continuity between the 'signs and wonders' of the New Testament and those of the monks of \*Egypt. The text offers valuable eyewitness accounts of the monastic settlements of \*Nitria and \*Kellia. The author of the Greek original is unknown, but he seems to have been connected with \*Rufinus of \*Aquila's monastery on the Mount of Olives. Rufinus translated the work into \*Latin with modifications and added extra material based on his own experiences. JWH

### ***Historia Tripartita***

Title of an ecclesiastical history compiled by \*Cassiodorus c.565 at his \*monastery of \*Vivarium near Squillace in southern \*Italy. Deploying and combining the \*Latin translation by his *confrère* \*Epiphanius Scholasticus of the *Church Histories* of \*Socrates, \*Sozomen, and \*Theodoret (including that already prepared by \*Theodore Lector), he also added a preface. Cassiodorus' *History* covered the period from \*Constantine I to 439. The precise division of authorial labour and credit between Cassiodorus and Epiphanius is disputed. The *History* was set out in twelve books and was generally copied together with the *Church History* of \*Rufinus of \*Aquila. It became one of the most frequently consulted and widespread texts of medieval Europe (157 extant manuscripts). BC

ed. W. Jakob (with R. Hanslik), *Historia Ecclesiastica Tripartita* (CSEL 71, 1952).

R. Hanslik, 'Epiphanius Scholasticus oder Cassiodor? Zur Historia Ecclesiastica Tripartita', *Philologus* 115 (1971), 107–13.

### **historiography, Armenian**

The Armenian historiographical tradition, which would become one of the richest genres of medieval \*Armenian literature, began soon after the creation of a unique alphabet for the Armenian language c. AD 406 by Mesrop \*Mash-tots'. This was ordered by the \*catholicus of the Armenian Church and the \*Arshakuni King, ostensibly to aid in the Christianization of \*Armenia. The \*translations and original compositions that followed can be said, then, to be Christian. Most of the authors who composed histories acknowledged the legends and historical events of pre-Christian Armenia, including its \*Zoroastrian past, and incorporated them into narratives shaped by their new Christian faith with its *Weltanschauung* that took account of interpretation of the \*Bible and consideration of \*chronography. Armenian histories are important testimonies to the growth of the churches in the West and in the East in all their variety and to Armenia's relations with each.

In addition to their all-pervasive religious conditioning, many of these historians reflect a clear bias in favour of a particular noble house (*tun*). The \**Buzandaran Patmut'iwnk'*, for instance, favours the \*Mamikoneans; the *History of the Armenians* by \*Movses Khorenatsi'

favours the \*Bagratuni clan. They are therefore valuable for reconstructing the political history of Armenia as well as for examining its social structure.

Armenia's geopolitical position also conditions these histories. Constantly surrounded by great powers which influenced Armenian affairs, the historians of Armenia had to concern themselves with the politics and histories of neighbouring empires and peoples. *The History of Armenia* by \*Agat'angelos, for example, when used with care, is invaluable for the study of the fall of Arsacid Parthia and the rise of the \*Sasanian Persians; the histories of \*Lazar P'arpets'i and \*Sebeos contribute much to the study of Byzantine–Sasanian relations; and \*Levond, when carefully used, is indispensable for the study of the rise of \*Islam and the \*Arab conquest of Armenia.

The dates of publication of these Armenian histories of Late Antiquity have been subjects of scholarly dispute. The order in which histories are listed in later medieval authors varies widely, and modern scholarship has pushed the dates of composition of many of them later, often by centuries. Nevertheless, this seldom completely negates their usefulness in various areas of study. LA Thomson, *BCAL* 89–231.

T. M. van Lint in Foot and Robinson, *OHHW* ch. 9.

**historiography, Greek and Latin** Continuity and innovation mark Late Antique historiography, as well as some apparent ends. Whilst conditioned by social changes, these developments took different forms in individual (sub)genres and various languages. Three main genres can be distinguished: classicizing historiography, ecclesiastical historiography, and chronicles.

#### *Classicizing historiography*

Continuing the classical tradition, historians remained attracted by great individuals, such as the \*emperors \*Constantine I (\*Praxagoras of \*Athens, Bearchius of Cappadocian \*Caesarea) and \*Julian (\*Oribasius, \*Magnus of Carrhae), and great events, such as the rise of the \*Isaurian dynasty in the 5th century (\*Candidus the Isaurian, \*Capito) and the wars of the 6th century (\*Procopius, \*Agathias, \*Menander Protector, \*Theophylact Simocatta), whilst also continuing to write local histories.

Three phenomena mark the genre in this period. First, there were *breuiaria*, such as the 4th-century works of \*Festus, Aurelius \*Victor and \*Eutropius, the \**Epitome de Caesaribus*, and the lost \**Kaisergeschichte of Enmann*. Far from being evidence of declining \*education, these summaries of Roman history were ambitious works, intended for readers trained in \*rhetoric.

Second, from the 5th century onwards, \*Greek historiography became more self-consciously classicizing by taking Thucydides and Herodotus as models; this

was achieved through \*mimesis of their styles and by purging the vocabulary of non-classical elements, in particular of overtly Christian terminology. Although classicizing history could serve anti-Christian polemic (\*Eunapius, \*Zosimus) and occasionally Christian apologetic (\*Orosius, in \*Latin), classicism became a formal rather than an ideological choice.

Third, a persistent antiquarianism marks Latin historiography from the 4th century onwards (e.g. the *Origo Gentis Romanae*, probably by Q. Aurelius \*Symmachus the Younger). This becomes pronounced in Greek historiography from the 6th century onwards (\*John Lydus, \*Hesychius of \*Miletus). Greek classicizing history remained vigorous until the early 7th century, when Theophylact Simocatta drifted away from the more rigorous classicism of the age of \*Justinian I. Latin classicizing history did not survive long after \*Ammianus Marcellinus. \*Sulpicius Alexander and \*Frigeridus (end 4th/early 5th cent.) are customarily considered the last classicizing historians in Latin, but some later classicizing historians are attested, such as Symmachus the Younger. Christianity and the \*Barbarian Migrations transformed Latin historiography. \*Cassiodorus composed the first ethnic history of the \*Goths, followed by \*Jordanes, and then by \*Gregory of \*Tours and \*Isidore of \*Seville. In the 6th century, \*Gildas' lament over the demise of \*Britain is a prophetic appeal for repentance.

#### *Ecclesiastical historiography*

Ecclesiastical history is mainly a Late Antique and Eastern genre. Strongly present in Greek from \*Eusebius of Palestinian \*Caesarea onwards (\*Philostorgius, \*Socrates, \*Sozomen, \*Theodoret, \*Theodore Lector, \*Zacharias Rhetor), the Byzantines did not write in this genre any more after \*Evagrius Scholasticus and an epitome of ecclesiastical histories in the 7th century (with the exception of the antiquarian attempt by \*Nicephorus Callistus Xanthopolus in the 14th cent.). Closely tied in with the defence of church integrity, the genre became popular in \*Syriac and has also left traces in \*Coptic and \*Arabic. In the West, the genre received its principal impulses from the East: \*Rufinus translated Eusebius' *Church History* into Latin and continued it, and Cassiodorus commissioned the \**Historia Tripartita*, a Latin epitome of Socrates, Sozomen, and Theodoret. The title of \*Bede's *Historia Ecclesiastica Gentis Anglorum* shows how the genre became adapted to a new, medieval world of nations. Ecclesiastical history saw itself as a twin of the genre of classicizing history; that is to say, it used the same methods but focused on a different subject. It did, however, display some formal differences, such as its claim to write in a simpler language, the practice of quoting entire documents, and the absence of fictive speeches—even if not all

church historians conform to that model (e.g. Sozomen and the anonymous author known as \*Gelasius of \*Cyzicus). The genre was very diverse, ranging from histories with a wide geographical and chronological scope, local histories (e.g. of \*Alexandria), and histories that focus on a single \*council of the Church or \*heresy (\*Liberatus). Closely related but not identical to church histories are histories of \*persecutions (Eusebius of Caesarea's memoir on the *Martyrs of Palestine* and his lost account of ancient \*martyrdoms, Victor de Vita on the \*Vandal persecutions), accounts of monks (*Historia Monachorum in Aegypto*; \*Palladius *Lausiac History*), and \*saints' lives. Church historians tended to assume that it is the Church that is the primary engine of history, an idea that occurs most explicitly in works that are strongly apologetic (Eusebius of Caesarea).

### Chronicles

Chronicles figure prominently in Late Antique historiography. As a term, it covers a wide variety of texts, including such secular compilations as \*consularia (lists of \*consuls) and *fasti*. It is, however, usually associated with Christianity. Julius Africanus drew on pre-existing classical chronicles to construct a chronicle that formed an apologetic argument for the antiquity of Judaeo-Christian religion, a project that was picked up by Eusebius of Caesarea, after intervening \*pagan criticism from \*Porphyry of \*Tyre. Eusebius' *Chronici Canones* were too complex to survive, but later generations of chroniclers took his work as a starting point, either to translate, continue, or rework (in Latin, successively \*Jerome, \*Hydatius, \*Prosper Tiro; in Greek Annianus, Panodorus; and others in Syriac and \*Armenian). Especially in the Syriac and Greek tradition, the numerous continuations and reworkings spin a web that is impossible to disentangle but the results of which are incorporated in the extensive medieval chronicles (\*Theophanes, \*Theodorus Syncellus, \*Michael the Elder, and the Syriac \*Chronicle of 1234). Often chronicles circulated anonymously and were continuously updated, possibly by state officials but most likely by private individuals. From the 6th century onwards they developed into extensive works of history rather than lists of brief entries, as is exemplified in \*John Malalas.

### Social context

Late Antique historiography was shaped by the educational system and the institutional framework (imperial and ecclesiastical). The interest in certain genres, such as *breviaria*, can be understood by the need to have concise overviews of Roman history for rhetorical education. Stylistic choices, in particular in so-called classicizing history, betray a renewed emphasis on classical models in education. \*Rhetoricians often composed histories (\*Ausonius, Symmachus, Prohaeresius). \*City chronicles

are thought by some scholars to have been popular, but more general histories were often generated at the imperial \*court, and reflect views held there (\*Olympiodorus, Procopius). In particular, \*Constantinople develops into a significant centre for historiographical activity in Greek, Latin, Syriac, and possibly Armenian (\*Jordanes, \*Victor Tonnennensis, \*Marcellinus Comes, \*John of \*Ephesus in the 6th cent.). The Church, being as yet less centralized, generated more varied geographical perspectives: ecclesiastical histories often defend the tradition of one particular \*patriarchal see.

Mutations in education and institutions spurred the fundamental changes which the genre underwent. Classicizing history was transformed but remained much more stable in the East than in the more radically changing West, where the Christianization of genres is more rapid and obvious. Ecclesiastical historiography tended to fragment, reflecting various schisms and heresies. Towards the end of Late Antiquity, historiography seems characterized by the merging of genres: there is not much difference between the last book of Evagrius Scholasticus, a church historian, and the secular work of \*Theophylact Simocatta. The *Chronike Historia* of \*John of Antioch is a world history that pays lip service to the chronicle tradition. \*Bede's *Historia Ecclesiastica Gentis Anglorum* is a national history that takes the form of a church history. This blurring of genres suggests that the social divisions that they reflected had ceased to have significance.

**historiography, Islamic** The two terms used most commonly to describe Islamic historical writing are *akhbar* and *ta'rikh*. *Akhbar* are 'reports', discrete anecdotal units ranging from brief statements to lengthy narratives, conventionally attributed to eyewitnesses, and often accompanied by *\*isnads* (transmitter chains: 'X heard from Y, who heard Z say ...'). *Ta'rikh* means both 'dating' and 'historical writing', and is associated with continuous chronological narratives. However, there was no simple progression from oral to written history in *\*Islam*, or from tales of individual heroic ancestors to a bigger picture: many apparent *akhbar* were later literary creations, not eyewitness reports, while chronological *ta'rikhs* like *\*Tabari's* universal chronicle combine personalized anecdotes with an annalistic recitation of history since Creation.

Islamic historical writing has received considerable modern scholarly attention, particularly since 1960s and 1970s revisionism questioned the authenticity of the literary material. This challenge has itself been revised by recent research, but the fact remains that all surviving examples of Islamic historiography post-date 750, being produced in a cultural milieu significantly altered from that of the earliest Muslims. Furthermore, early Islamic historians were engaged in arguing about the past, not simply recording it; as a scholarly discipline, history was tied to *tafsir* (*\*Qur'anic* exegesis) and related interest in *sira* (biography of the Prophet *\*Muhammad*) as a means to understand the *Qur'an*. Narratives and *akhbar* alike could thus be subject to revision and recasting by later author-compilers, as new priorities arose and new interpretations of the past developed. Medieval Islamic historiography was a living, dynamic tradition, and this should be borne in mind when reading it for information on the 7th century. NC

**historiography, Persian** No continuous histories in Middle *\*Persian* comparable to those in *\*Syriac* and *\*Armenian* survive from the *\*Sasanian* period. The *\*Ayadgar-i Zarērān* is a poem dealing with the very distant past, and the *\*Karnamag-e Ardashir-e Pabagan* (*The Book of Deeds of Ardashir son of Pabag*), though it is concerned with *\*Ardashir I* the first Sasanian King of Kings, is a romance which belongs in the realm of legend. These epics tell engaging stories, but they are not factual.

It is clear that *\*Procopius* had access to Persian sources (e.g. *Persian*, I, 6, 9), though he seems to have drawn little from them apart from anecdotes, such as the colourful story of the *\*pearl* (*Persian*, I, 4, 17–31). His continuator *\*Agathias*, on the other hand, obtained material from the royal archives of the *\*Persian Empire*, passed to him and translated by *\*Sergius the Interpreter*, a trusted figure at both the Roman and the Persian *\*court*. The contents of his two digressions on Persian religion (II, 23–7) and on Persian history (IV, 24–30, 5) are likely to be related to what is known from historians of the Islamic period of a lost history entitled the *\*Xwaday Namag* (*Khvadaynamag*, *Book of Lords*).

The *Xwaday Namag* was a history of *\*Eranshahr* (the realm of the *Iranians*), composed in Middle Persian during the reign of *\*Khosrow I* in the 6th century AD. The history, which is no longer extant, appears to have outlined the story of *Iranians* from the Creation to the last Sasanian ruler and the *\*Arab* conquest. The text was later translated into *\*Arabic* by Ibn Muqafa' (d. AD 756/9) during the *\*Abbasid* *\*caliphate*. This work was the basis of the great Persian epic the *Shahnameh* (*Book of Kings*) of Ferdowsi (Firdausi).

So far as it can be reconstructed, the first section of the text described the rule of mythical kings and culture-heroes such as Gayomarth (first man and first king in the *\*Zoroastrian* tradition), followed by Jamshid the great King of Iran who introduced many of the arts and also the Persian New Year (*\*Nōg rōz*) celebration. Because of his hubris Jamshid lost his 'glory' (*farrah*, *\*xwarrah*) and Zahhak, a foreign king, came to the throne and caused death and destruction in Iran. King Fereyduin then appears from obscurity and, with the help of a blacksmith named Kaveh, dethrones Zahhak. During Fereyduin's rule, the world is divided between his three sons, Iraj, Tur, and Salm. Iraj was given Iran, Tur received Turan, and Salm Rome.

Iraj was murdered by his two brothers and their realms came into collision. The section of the text which follows drew on the epic tradition. The wars between the Iranians and the Turanians, along with the appearance of the great Iranian hero Rustam, is the principal topic of the second section of Iranian history. The third section depicts historical figures, beginning with Dara (Darius) and the coming of \*Alexander the Great, followed by a brief interlude on the Arsacids. Most of the historical section concerns the rule of the Sasanians themselves. The book ends with the death of \*Yazdegerd III, the last Sasanian ruler, and the Muslim conquest of Eranshahr.

**historiography, Syriac** A vigorous branch of Late Antique Christian history-writing flourished in \*Syriac almost continuously between the 6th and the 13th centuries. The very early translation into Syriac of \*Eusebius of \*Caesarea's *Ecclesiastical History* and his *Chronicle* (now lost in its original \*Greek form) no doubt played a part in the development of Syriac history-writing.

Those who wrote histories were learned monks and abbots, \*bishops (e.g. \*John of \*Ephesus, Ignatius of \*Melitene, Dionysius Bar Salibi, \*Bar 'Ebroyo), and even \*patriarchs of the \*Syriac Orthodox Church (\*Dionysius of Tel Mahre, \*Michael the Elder), keen to record the history of the Church.

Most west Syriac histories take the form of \*chronicles, in particular universal chronicles, starting with the Creation until the author's time. The historical material is organized by date according to the Seleucid \*Era of the Greeks (starting in 312/311 BC), sometimes supplemented by other dating systems, depending on their sources. The vast majority of these texts were produced by \*Miaphysite authors, although three or four \*Melkite and \*Maronite chronicles are known. From the 8th century onwards, civil and ecclesiastical events were recorded in two separate books or columns.

In the East (in the \*Persian Empire and then in former \*Sasanian territory), we find mostly histories of the Church (\*Barhadbeshabba Arbaya), starting with Christ. Local histories, such as the *History of \*Karka d-bet Slok* (mod. \*Kirkuk, Iraq) or the *\*Chronicle of Arbela* (mod. Irbil), or the histories of major \*monasteries (Bet Abe, Monastery of Sabrisho), of schools (*History of the School of \*Nisibis*), and of monks (*The Book of Superiors* by Isho'denah of Basra) are organized according to succession of the \*Catholicus of the

\*Church of the East, of bishops, of heads of schools and of \*monasteries. They rely heavily upon the numerous hagiographic and biographical texts produced in the Church and give little space to political and civil history. Almost no dates are provided in these texts.

For ancient history, Syriac historiography drew from the \*Bible, Greek sources, apocryphal texts and \*saints' lives. For nearly contemporary events, the authors relied upon testimonies, \*letters and \*archives, and their own experience. They also used the historical material of Greek and Islamic fellow historians. Syriac chronicles were translated into \*Arabic and thus influenced both Christian Arabic and Islamic histories.

**History of the Britons (*Historia Brittonum*)** A history written in Wales in the early 9th century. This text survives in many manuscripts which exhibit significant variation. The Harley recension appears to be the best witness but itself dates from about 1100. The author may have originated in the Wye Valley. He is named as Nemnius (Welsh *Nyfnwys*, inaccurately popularized as 'Nennius'), though this ascription is not found in the Harley recension. The narrative covers the period from the Creation to AD 685 and it owes a

strong debt to \*Bede, though whether the author had a full text of Bede's *Historia Ecclesiastica* is debatable. Discussions of the British sources of the work and the extent to which it is a compilation or a creative narrative continue.

### **History of the Patriarchs of the Coptic Church of Alexandria**

Official history of the (\*Miaphysite) Coptic church arranged as biographies of the \*patriarchs, and composed over several generations by different authors. It starts with S. Mark the Evangelist in the 1st century and continues into the 13th century with further short entries up to the early 20th century. The treatment is uneven, with some biographers focusing on the patriarch's life and character, while others give a full political, economic, and social history of the time. Originally written in \*Coptic, the contributions were in \*Arabic from the 11th century onwards when the original text was also translated into Arabic. This translation was made by the Alexandrian \*deacon Mawhūb b. Mansūr b. Mufarrij (d. c. 1100), who collected the biographies up to his time, had them translated, and made his own contributions in Arabic. Attributions in the later 'Vulgate' reworked versions to the well-known Coptic theologian Severus b. al-Muqaffa' (d. AD 987) are to be considered later additions.

**Histria** (mod. Istria, Romania) \*City of \*Scythia Minor on a lagoon of the Pontic coast. It was sacked

by the \*Goths in 238 and in the late 3rd century. In Late Antiquity, the lower city and its defences were given up and fortification was confined to the ancient acropolis. Excavation has revealed \*baths, 4th-century public buildings (interpreted as civil \*basilicas, but probably storehouses), extensive residential quarters and workshops of the late 5th and 6th centuries, four churches, including the sumptuous episcopal basilica of the late 5th or 6th century, and large 6th-century \*houses. \*Brickstamps and \*Procopius confirm repairs under \*Anastasius I and \*Justinian I. Histria was destroyed and abandoned in the 7th century. The city should not be confused with the \*province of \*Venetia et Histria at the head of the Adriatic.

**hoarding food** \*Grain was the staple element of the Late Roman diet and its production and distribution were subject to considerable fluctuation. Such irregularities were caused by both climatic and human factors. Bad harvests and late supply (e.g. \*Ammianus XIX, 10 and \*Symmachus, *Relationes*, 3, 15 and 18, 2 on \*Rome in AD 359 and 384) did not produce serious troubles among the population, unless they were repeated from year to year, or combined with other misfortunes, such as plague, \*epidemic disease, or prolonged war (e.g. \*Joshua the Stylite, 26, 39, 43, 45, 46 on \*Edessa in AD 499–502).

In the short run, however, grain-supply shortage, though connected to marked seasonality in grain prices, might be aggravated by the practice of hoarding large grain stocks for the political and economic advantage of individuals (e.g. \*Philostratus, *VApTy* I, 15). Such speculators reduced the market supply to raise the retail price, delaying sales at the end of the season, when the stocks were low and the people threatened by food shortages, for instance at \*Antioch in AD 362–3 (\*Julian, *Misopogon*, 369). \*Ambrose (*De Officiis*, III, 6, 39–44) criticized the casuistical self-justification of landowners who claimed they were emulating the prudence of Joseph by storing up grain; their motive was greed rather than public benefit. In very rare instances storage benefited grain consumers. In 591 \*Gregory the Great purchased the harvest in advance at a fixed price

hoards, coin

(500 pounds of \*gold) in order to distribute it during a future famine he foresaw (*ep.* 1, 70). PT

**hoards, coin** Two or more coins found in a context indicating intentional deposition together. Low- and high-value \*coinage was hoarded throughout Late Antiquity for safekeeping. Deposition could be the result of \*disorder, such as war or \*famine, or the routine storage of savings. Such hoards survive when circumstances prevented the owners from recovering their property. Alternatively, coins hoarded in ritual contexts, such as grave-goods, were never intended to be recovered.

Hoards may contain coins collected over time, circulating locally at the time of burial, or paid directly from minting authorities without entering general circulation. All three categories yield data concerning coin sequences, dating, and distribution and may testify to socio-economic change such as migration, social upheaval, or \*tribute payments.

Late Antique coin hoards provide evidence of \*trade and \*diplomacy, especially beyond the borders of the two most significant money-issuing powers, the Roman and \*Persian empires. Payments of coined metals were negotiated by allies and adversaries of the imperial governments. Coins travelled great distances along trade routes to \*China, \*India, and Scandinavia, often ending up in hoards combining coins and bullion.

**Holy Land** For \*Jews \*Palestine (the 'Land of Israel'), with its centre at \*Jerusalem and the Temple, was the physical land of their inheritance, from which they had scattered and to which they would return. The concept was biblical (e.g. Deuteronomy 30:1–3; Ezekiel 45:48), and the words 'Holy Land' occur both in Hebrew (Zechariah 2:10–12) and in Jewish texts written in \*Greek (2 Maccabees 1:1–10, Philo, *De Specialibus Legibus*, 202). In Late Antiquity Jewish aspirations still focused on the physical 'Holy Land' and on Jerusalem, where Jews expected the Temple to be rebuilt.

In the 2nd century Justin Martyr (*Dialogue*, 119) and Irenaeus of Lyons (*Against Heresies*, V, 32–3) stated that what God had promised to Abraham was now expanded to become the heritage of Christians. In the 3rd century \*Origen wrote of a celestial Jerusalem and a Christian Holy Land in heaven (*Contra Celsum*, VII, 28). \*Jerome disagreed with Jews in his day (c.400), who he claimed interpreted biblical prophecies about the restoration of Jerusalem in a physical instead of a spiritual sense (*Commentary on Isaiah*, 65, 21).

From the 4th century onwards \*pilgrimage to holy places (*loca sancta*) in Palestine created a physical Christian Holy Land. \*Eusebius of \*Caesarea (*HE* VI, 11.2), perhaps anachronistically, represented as the first known pilgrim Alexander of \*Cappadocia, who arrived in Jerusalem c.220 'to pray and gain knowledge of the places', but it would appear that such visitors were not numerous. According to J. E. Taylor, most Christian holy places were first recognized in the 4th century. Eusebius' *Onomasticon* (*On the Place-Names of Holy Writ*) makes no allusion to any of \*Constantine I's building projects, but that does not necessarily mean it was written before they were started.

There was a fresh impetus following the conquest of the East by Constantine I in 324, fuelled by his building of churches in Palestine, and the journey of his mother \*Helena to Jerusalem in 326/7. Constantine ordered the destruction of the pagan \*temples built at Jerusalem under Hadrian, which resulted in the discovery of the site of Christ's Crucifixion and Resurrection on which the Holy Sepulchre or Anastasis (Martyrium) was then built (Eusebius, *VCon* III, 25–40). Helena was responsible for founding churches at the site of Christ's birth at \*Bethlehem and on the Mount of Olives, at the cave where He gave his last teaching and ascended into Heaven (*VCon* III, 41–3). The \*Relic of the True \*Cross is not mentioned until the mid-4th century and the tale of its discovery by Helena is first recorded in \*Ambrose's funeral sermon for \*Theodosius I in 395. Constantine's mother-in-law \*Eutropia was also active

in founding a church at the Oak of Mamre where God had appeared to Abraham (*VCon* III, 51–3).

Places associated with scripture therefore furnished a geographical focus for Christian devotion. The anonymous \*Bordeaux Pilgrim, author of the first pilgrimage narrative—a new literary account—recorded the locations of biblical events visited in 333 all across the land, from the Bath of Cornelius at Caesarea of Palestine (Acts 10), to Joseph's tomb near \*Neapolis (Nablus; Joshua 24:32), to Jerusalem and the Holy Sepulchre, and on to the new church at Mamre. Later in the century, in 381–4, another pilgrim, a religious sister called \*Egeria, wrote home to her sisters probably in \*Gaul about the spiritual rewards of 'biblical realism' (E. D. Hunt). Seeing the rediscovered places of the events, standing where the prophets, the apostles, and the Lord himself had stood, touching the actual stones and the wood of the True Cross, she and her companions read the appropriate passage of scripture, and offered \*prayer and the \*Eucharist. Sometimes they received \*eulogiae, tangible blessings, even if they were just fruit from S. John the Baptist's orchard (15, 6; cf. 3, 7). Members of the imperial \*aristocracy came to the Holy Land for the good of their souls. So did crowds of ascetics who settled in Jerusalem, Egeria's *monazontes* and \*virgins (24, 1). \*Jerome and \*Paula established parallel male and female \*monasteries at Bethlehem, while S. \*Melania the Elder and \*Rufinus, and later S. \*Melania the Younger and Pinian, created rival communities on the Mount of Olives. Pilgrims of lower social status brought other forms of \*asceticism to Palestine, Ss. \*Hilarion of \*Gaza and Chariton in the 4th century, then S. \*Euthymius and his successors from the early 5th century, who created the so-called \*lavra communities in the \*Judaean Wilderness east of Jerusalem. These were cells for solitaries linked by pathways with chapels for weekly prayer, for the Eucharist, and for meals. Portrayed by \*Cyril of \*Scythopolis, this form of monasticism reached its zenith with S. \*Sabas in the 6th century. It was apparently among these monks that the term Holy Land came to denote Christian Palestine.

Across the Empire both Christian literature and art declared the Holy Land's attractive power. \*Gregory of \*Nyssa resisted the enthusiasm (*Ep.* 2), but \*Paulinus of \*Nola encouraged the faithful to 'see and touch the places where Christ was present' (*ep.* 49.14). The contemporary \*apse \*mosaic in the Church of S. Pudenziana in \*Rome represented a jewelled cross, the Sign of the Son of Man at the Last Times, appearing above the hill of Golgotha against the backdrop of the Jerusalem skyline. Returning pilgrims disseminated saints' or \*martyrs' relics, oil from the holy places, and dust whose healing properties derived from association with \*holy men and holy places. These blessings were contained in boxes or \*pilgrimage flasks decorated with

motifs evoking visual as well as tactile participation in Holy Land sites. The \*Sancta Sanctorum Reliquary at Rome, possibly of the 6th/7th century, is one such box.

After the \*Arab invasion and the Muslim capture of Jerusalem in 638, Christians (and Jews) expected the imminent End of the Age and the coming of the Messiah. \*John of Damascus among others bore witness to continuing reverence for the physical Holy Land and the Holy City, which Christian inhabitants and pilgrims continued to visit, including the Gallic Bishop Arculf whose impressions of \*Umayyad Palestine were recorded by the monk \*Adomnán, writing on the island of Iona, out on the edge of the western ocean. **holy men, Christian** Term coined by P. Brown to refer to certain figures of authority in Late Roman society. Looking back to the pagan precedent of the 'divine man' (Gk. *theios anēr*) and influenced by the notion of 'liminality' derived from the anthropologist V. Turner, Brown's seminal 1971 article portrayed the Christian holy man as a rural \*patron, whose status as an 'outsider' enabled him to function as a social mediator in the \*provinces of the East Roman Empire, especially in \*Syria. Few scholarly articles have achieved such a symbolic status: for example, its twenty-fifth anniversary provoked two symposia and collections of essays, one containing Brown's own retrospective on the topic (1998).

Subsequent scholars, however, including Brown himself, have modified his original portrait in significant

ways. By 1983 Brown had come to see the 'holy man' as the bearer of *paideia* and as an exemplar of holiness, of 'Christ made accessible', who served as a model for imitation and as a vehicle of Christianization. He no longer saw holy persons acting in 'splendid isolation', but rather as 'less dramatically removed from the average ethical life of their fellows' and as bearers of the 'central value system' of a community. By 1995 Brown admitted that his 1971 article had mistakenly taken at face value the one-sided portraits of holy persons presented by the authors of Late Antique \*saints' lives. He now emphasized the holy man as 'arbiter of the holy', whose displays of power facilitated the transition from \*paganism to Christianity.

More recent scholars have carried Brown's revisions even further, emphasizing, for example, the character of the 'holy man' as a self-conscious literary construction (Cameron). Others have drawn attention to \*pagan parallels (Fowden) or analogous figures in \*Jewish tradition (Janowitz). Still others have pointed to the overlap and interaction between holy men and other figures with authority, such as the Christian \*bishop (Rapp, Sterk, Urbainczyk). Perhaps the most important development in recent decades has been the shift from a socio-anthropological approach to a more literary and rhetorical analysis of the function of 'holy men' (and women) as a narrative device to articulate the intellectual concerns of the author (Clark). **holy men, pagan** Exponents of claims to knowledge of the divine world acquired independently of civic institutions, poetic inspiration, or philosophic argument. The narrowness of the criteria for admission to elite status in Antiquity meant that the claim to, and active demonstration of personal, usually charismatic religious authority remained attractive from the Archaic period in Greece right through to Late Antiquity as a means of acquiring life-advantages. Success here mainly required social, not technical, skills—maintaining a balance between \*asceticism, control of the marvellous (especially divinatory powers), and the promulgation of traditional ethical values. The penalty for failure was to be accused of *thaumatopectia* ('mere wonder-working'), *atheotes* ('godlessness, atheism'), *asebeia* ('impiety'), and *goeteia* (magical practice). Lucian attacks Peregrinus on grounds of mere showmanship; \*Philostratus defends \*Apollonius of \*Tyana on all these counts. The Cynics provided models of ascetic virtue widely appropriated under the Empire from Nero to \*Julian; a wonder-working \*Pythagoras' became a life-model in certain \*Neoplatonist circles. In the 4th century the role tends to be associated with \*theurgy; prominent examples were \*Maximus of \*Ephesus and \*Chrysanthius of \*Sardis (\*Eunapius, *Lives of the Philosophers*, 473–81; 500–5). **holy oil** See CHRISM.

**Holy Translators, Armenian** The 5th-century group of monks and scholars gathered by the \*Catholicus \*Sahak I Part'ew and the \*bishop Mesrop \*Mashtots to prepare the first \*Armenian \*translation of the \*Bible. The story of the translators and their work is given primarily in the *Life* of Mashtots' by \*Koriwn, who names himself as one of the pupils and translators. Near the end of the 4th century, as portrayed in the \**Buzandaran Patmut'iwkn'*, there remained a great deal

of resistance to the official conversion of \*Armenia to Christianity. One of the obstacles was the lack of any written form of the \*Armenian language; texts of the Bible were often read in \*Syriac (or, less often, \*Greek) and translated orally for the people. According to Koriwn, Mashtots' travelled and sent his pupils throughout \*Syria and the Eastern Roman Empire in search of biblical and patristic texts to study and translate. The translation of the Bible itself is thought to have been completed around 435; the first wave of Armenian literature, including translations of patristic texts, continued throughout the rest of the century.

The *Life* by Koriwn gives an oblique view of the dual influence of Greek and Syrian Christianity within Armenia and the rest of the Caucasus. His description of the invention of the alphabet itself, wherein Mashtots' finds a Syrian-inspired script inadequate to represent the Armenian language and finally arrives at an alphabetic script, has been taken as evidence that Syrian influence was waning in the Armenian Church at this time. TLA *Life of Mesrop Mashtots*: ed. with comm. K. H. Maksoudian, with ET by B. Norehad, *Koriwn: Vark' Mashtots'i* (1985).

**Homer in Late Antiquity** The poetry of Homer retained a uniquely privileged position in Late Antiquity. In the first instance his \*epic narratives and rich word-hoard continued to underpin Greek literary culture. Quintus Smyrnaeus chose to continue the story of the War of Troy from the precise point where Homer had left off at the end of *Iliad* XXIV over 1,000 years earlier. In the central section of the *Dionysiaca*, \*Nonnus boldly reintegrated the narrative of the *Iliad* into his own account of the Indian War, in self-conscious emulation of, and in competition with, his 'father Homer' (*Dionysiaca*, XXV, 265).

In contrast, the prose works of \*Dictys and \*Dares took a more critical stance, seeking to challenge the authority of Homer's poetic narrative with their 'first-hand' accounts of what 'really' happened at Troy. Such overt criticism was unusual, however. A spirit of reverence for the 'divine' figure of the poet can clearly be seen in \*Porphyry's *Homeric Questions*, an important work in the history of Homeric scholarship. When faced with textual problems (*zetemata*), Porphyry's solution is not to correct Homer, but to work harder in order to understand what Homer must be saying. In a similar manner, the development of \*Neoplatonism in the 3rd century did not lead to a rejection of Homer as a moral and philosophical touchstone, but led instead to a change in the way that Homer was read: the search for meaning was now channelled beneath the surface of the text into the realm of allegorical interpretation. Porphyry's interpretation of the Cave of the Nymphs in the *Odyssey* shows how Homer could be co-opted to the service of Neoplatonism.

The apparent chasm between Homer and Christ could also be bridged by \*allegory. The image of Odysseus lashed to the mast, for example, was interpreted as a prefiguring of Christ on the \*Cross. 'All the poetry of Homer,' said \*Basil, 'is a praise of virtue' (*Ad adulescentes*, 5).

RECS

Lamberton, *Homer the Theologian*.

F. Buffière, *Les Mythes d'Homère et la pensée grecque* (1956).

**homicide** The *Lex Cornelia de Sicariis et Veneficiis* of 81 BC, which first defined homicide as a crime in Roman \*law, was originally intended to prosecute political murder, but soon encompassed domestic murder also. \*Constantine I classed the killing of children *in potestate* as murder (*CTh* IX, 15, 1), as well as the intentional killing of slaves, but not the killing of slaves for 'correction' (*emendatio*) (*CTh* IX, 12, 1–2). Imperial amnesties excluded those convicted of murder (*homicidii crimen*) and its aggravated forms, \*parricide, and poisoning (e.g. *CTh* IX, 38, 3).

Late Roman law continued to distinguish between intentional and unintentional killing. A murder charge could only be brought for the former. Evidence for certain methods of violence provided confirmation of intent (*voluntas*): the use of kicks, stones, or sticks pointed towards accidental death, while tools such as swords or axes revealed purposeful killing (*\*Digest*, XLVIII, 8, 1, 3; *CJust* IX, 16, 5 (6); \*Basil, *ep.* 188).

Originally the statutory penalty for homicide had been \*exile with loss of citizenship (*deportatio*) or, for the lower classes, hard labour. By Late Antiquity the suggested penalty for murder was \*execution, also for convicts of higher rank (\*Paul, *Sententiae*, V, 23, 1–2). It cannot be established how frequently these penalties were applied or how many murderers were brought to justice. Relatives of victims sometimes seem to have shunned the expense and risks of a murder trial (*CJust* VI, 35, 9). Murder was frequently included in early Christian catalogues of grave sins. Christian sources also suggest that redress for murder was sought through the ecclesiastical process of \*penance, rather than through a public criminal accusation before a magistrate (\*Augustine, *sermon*, 82, 11–12).

**homilies, Armenian** \*Sermons were composed in Armenian from the 5th century onwards. They were originally patterned on \*Greek and \*Syriac models as established by, among others, \*Ephrem the Syrian, \*Aphrahat, \*Cyril of \*Jerusalem, \*Theodore of \*Mop-suestia, \*John Chrysostom, \*Gregory of \*Nazianzus, and \*Basil of \*Caesarea. Some of the early \*translations into \*Armenian from Greek are sufficiently exact for

## Homoeans

them to be of use to textual critics engaged in establishing the original Greek text. Translations continued to be made after the Late Antique period.

Among original works, the *Yatsakhpatum* (*Yačaxapatum*), ascribed to S. \*Gregory the Illuminator (d. c. 328) but composed later, addresses practical matters concerning sin, repentance, and holiness. The catechetical instruction known as the *Teaching of S. \*Gregory the Illuminator* is a 5th-century exposition of Christian doctrine based on the creed, of the fulfilment of Old Testament promises in the New, and of the need for repentance. Homilies ascribed to the \*Catholicus \*John (Yovhan) Mandakuni (r. 478–90) may belong to John (Yovhannēs) Mayragomeci (7th cent.); they address various vices, sometimes outside the contemporary Armenian context. The important homilies of \*Elishe (Elišē) Vardapet attract scholarly debate and growing attention. Doctrinal opposition and adversaries of the established Church are addressed, e.g. in the homilies of John Awnetsi' (Yovhannēs Awjnets'; r. 711–28). TMvL

**Homoeans** Upholders of a theological position that emerged in the mid-4th century, was expressed theologically in the 'Dated Creed' of the Council of \*Sirmium (\*Socrates, II, 37), and ratified at a \*council at \*Constantinople in 360 (\*Philostorgius, IV, 10–12). Favoured by the \*Emperor \*Constantius II (d. 361) and championed by Acacius of \*Caesarea (d. 365) and Eudoxius of \*Antioch (d. 370), it asserted that God the Son is 'like' (*homoios*) God the Father without referring to the contentious but important issue of substance (*ousia*). This compromise position had short-lived success and ultimately failed within the Roman Empire to unite the more extreme and radically different theological positions of the Homoousians, who upheld the theology of the Council of \*Nicaea, and the \*Anomoeans. However, \*Ulphilas, apostle of the \*Visigoths, accepted the position ratified at Constantinople in 360, with the result that most of the Germanic rulers who came to dominate Western Europe and Latin-speaking \*Africa in the 5th century were Homoean in their Trinitarian theology and so were stigmatized as 'Arians' by indigenous Christians. BKS; OPN

Hanson, *Doctrine of God*, 557–97.

Heather and Matthews, *Goths in the Fourth Century*, 135–41.

**homosexuality** Same-sex desire and relationships feature in various Late Antique sources. The \*Emperor \*Constans I is said to have had a predilection for attractive barbarian boys (Aurelius \*Victor, *Caesars*, 41). The \*hairy Emperor \*Julian comments that he and his entourage disappointed the soft people of \*Antioch by not becoming lovers of beautiful youths (*Misopogon*, 365A). The \*eunuch \*consul \*Eutropius was said to be the lover of Ptolemy, who eventually cast him off (\*Claudian, *In Eutropium*, I, 61–77). These examples all have pejorative connotations.

The question of an increase in hostility to 'homosexuality' in Late Antiquity is a central concern in modern debate, usually located within the context of the Christianization of the Empire. With the value placed on both chastity and sex within marriage, homosexuality became further castigated and was often associated with the old '\*pagan' ways (though traditional views were, in fact, critical of passive homosexuals). Emperors moved against male–male sex. Under \*Theodosius I and \*Valentinian II a constitution against passive homosexual prostitutes was issued in \*Rome in 390 (\**Collatio Legum Mosaicarum et Romanarum*, 5; *CTh* IX, 7, 6). \*Justinian I cracked down on homosexuals both passive and active; the \*Bishop of \*Diospolis was punished with castration (\*John Malalas, XVIII, 18; \*Procopius, *Anecd.* 11, 34–6; *NovJust* 77 and 141).

Most of the evidence for homosexuality concerns male couples, but lesbians can be found also. A \*letter of the 6th-century monk Paul Helladicus, which discusses the potency of sexual desire and tells a story about a eunuch monk who lusted for his young godson, addresses lesbianism in nunneries. **honestiores and humiliores** The distinction between *honestiores* ('those of privileged rank') and

*humiliores* ('those of low distinction') was traditional in the Roman Empire and exists in the classical jurists, but first becomes prominent in the *\*Sententiae* of Paul, a legal compilation made around AD 300 in *\*Africa*. However, in the Later Empire the distinction became significant in Roman criminal *\*law*, because the evidence of *humiliores* might be obtained under *\*torture* and if found guilty they might suffer harsher penalties; under the Tetrarchic *\*Manichaean Law* guilty *honestiores* were sent into *\*exile*, whereas *humiliores* went to the *\*mines*. The dichotomy was not systematic, as the legal system permitted substantial discretion to judges who over time imposed ever more violent penalties. KH Jones, *LRE* 519–21.

P. Garnsey, *Social Status and Legal Privilege in the Roman Empire* (1970).

Rilinger, *Humiliores–Honestiores*.

**honorati** Retired imperial officials with *\*titles* of rank as a reward for service, and others with honorary titles accorded to them by the *\*emperor* as a mark of esteem. From the 4th century those with honorary titles were obliged to furnish *\*horses* (e.g. *CTh* VII, 23, 1; cf. VI, 35, 2; XIII, 5, 15) and from the early 5th century recruits for the *\*army* (e.g. *CTh* VII, 13, 15 and 18).

By custom, *honorati* attended their provincial assemblies (*\*conventus*), were permitted to sit on the bench with the provincial *\*governor* unless personally involved in the case being tried (*CTh* I, 20, 1 of 408), and were exempt from duties in the local *\*city council*. Illicit purchase of titles occurred. AGS

**Honorias** *\*Province* of north-west *\*Anatolia*, including Hadrianopolis, formerly part of *\*Paphlagonia* and the eastern *\*cities* of Bithynia. It was created between 384 and 387, and governed by a *\*Praeses*. In 535/6 it was combined with Paphlagonia, and placed under a *\*Praetor* (*NovJust* 29) but probably separated again before the death of *\*Justinian I*. An important *\*inscription* refers to abuses perpetrated against the population by armed mounted agents of large land-owners (*xylokaballarioi*; *AE* 1985, 816; *SEG* XXXV, 1360). SM

Mitchell, *Anatolia*, vol. 2, 160.

**Honorius, Flavius** (384–423) Western Roman *\*emperor* (395–423) Younger son of *\*Theodosius I* and Aelia Flaccilla, Honorius was born in *\*Constantinople* on 9 September 384 and was appointed *\*consul* in 386 and *\*Augustus* in 393 (*\*Socrates*, V, 25, 8). In 394 he followed his father to *\*Italy* to suppress *\*Eugenius* (*\*Zosimus*, IV, 58, 1). After Theodosius' death (395) Honorius was appointed emperor, sharing power with

his brother \*Arcadius, causing a *de facto* division of the Empire.

Described as a passive emperor isolated in his \*palace (\*Sidonius, *Carmen*, 5, 358), Honorius at first resided in \*Milan, but during the invasion of \*Alaric (402) moved the \*court to the safety of \*Ravenna, which became the residence of Western emperors in the 5th century, and then of the subsequent \*Ostrogothic kingdom and Byzantine \*exarchate. At court, Honorius was dominated by powerful military advisers, such as \*Stilicho, who was appointed regent by Theodosius (\*Ambrose, *De Obitu Theodosii*, 5) and whose claims of guardianship over Arcadius led to frequent conflict with the Eastern court. Honorius successively married Stilicho's two daughters: Maria in 398, probably depicted in a \*cameo with Honorius (Delbrueck, *Consulardyphtichen*, 258–61), and after Maria's death in 408, her younger sister Thermantia. Both marriages were childless. In 408, Honorius came under the influence of the \*Magister Scrinii \*Olympius, who had Stilicho deposed and executed, but was soon replaced by Jovius the \*Praefectus Praetorio of \*Italy (409). After this civilian interlude, the general Flavius Constantius became the new power behind the throne, marrying Honorius' sister Galla \*Placidia (417) and eventually becoming co-emperor as \*Constantius III in February 421 until his death in September the same year.

Honorius' reign was marked by the \*Barbarian Invasions. In 401–2 Alaric invaded northern Italy and besieged Milan, but was defeated by Stilicho, who also repelled \*Radagausius' invasion in 406. Reportedly on the last day of that year, a \*confederation of barbarians crossed the frozen Rhine and, after two years wandering in \*Gaul, \*Suebes, \*Vandals, and \*Alans crossed to \*Spain (409), while \*Burgundians settled in eastern Gaul (\*Orosius, VII, 40–3). Honorius' erratic policy towards barbarians, fluctuating between resistance and agreement, was a failure, and eventually led to Alaric's two sieges of \*Rome (408 and 409) and the sack of \*Rome in August 410 (\*Sozomen, IX, 9), which alarmed Romans and sparked controversy between pagans and Christians (reactions recorded in contemporary \*sermons of \*Augustine as well as his *City of God*, and in the *Histories* of \*Orosius). Eventually a treaty permitted the \*Visigoths to settle in \*Aquitaine as \*foederati in 418, creating the first barbarian kingdom on Roman soil (*Chron. Min.* II, 19), so that by Honorius' death in 423, \*Britain and most of Spain and Gaul were lost to direct imperial control.

This instability led to several insurgences and usurpations, some directly orchestrated by barbarian chiefs, as in the case of the \*senator Priscus \*Attalus, appointed emperor twice, first by Alaric (409) and by Alaric's successor \*Athaulf (414). In Britain, abandonment and disaffection led to the successive usurpations of

Marcus (406–7), Gratian (407), and \*Constantine III (407–11), who crossed to the Continent finding support among the Gallo-Roman \*aristocracy. Honorius recognized Constantine as co-emperor in 409, but disagreement in Constantine's ranks led to the rebellion of his general \*Gerontius, who appointed \*Maximus, probably Gerontius' son, as Augustus in Spain (409). In 411 imperial troops commanded by Constantius defeated both Constantine III and Gerontius, but the power vacuum in Gaul was quickly filled by the usurper \*Jovinus, in turn defeated by Athaulf's *foederati* in 413.

Another arena of conflict was \*Africa. In 398 \*Gildo revolted against Honorius and submitted Africa to Arcadius, but was defeated a year later. In 413 another \*Comes Africae, \*Heraclian, rebelled and attempted, unsuccessfully, to extend his power to Italy.

A committed Christian emperor, Honorius sought to enhance the privileges of the clergy (*CTh XVI*, 2, 29) and legislated against \*paganism (*CTh XVI*, 10, 19), practitioners of \*astrology (*CTh IX*, 16, 12), and heresy and schism (*CTh XVI*, 10, 15–18; XVI, 5, 37–61). He also supported \*John Chrysostom against \*Eudoxia (*CollAuell* 38) and was involved in the controversial election of Boniface as \*bishop at Rome in 418 (\**Liber Pontificalis*, 44), but his efforts to contain the spread of \*Pelagianism were unsuccessful (PL 48, 379–82).

Honorius died on 15 August 423 without a direct successor (\*Socrates, VII, 22, 20). The \*Primicerius Notariorum \*John seized the opportunity to be proclaimed emperor and reigned until \*Aspar overthrew him in 425 and reinstated the Theodosian dynasty in the person of \*Valentinian III. DN

**Honorius I** \*Bishop of \*Rome 625–38. Honorius' interventions in the \*Monothelete controversy generated his subsequent condemnation at the Third \*Council of \*Constantinople (680–1). The \**Liber Pontificalis* (72), however, concentrates on his restoration and embellishment of \*Rome's churches, notably \*S. Agnese fuori le

Mura and the \*Vatican, which he reroofed with \*bronze taken, with imperial permission, from the \*Temple of Rome and Venus. CTH

**honour and shame** See *PHILOTIMIA*.

**Horapollon the Elder** (early 5th cent.) \*Egyptian \*grammarian who once taught in \*Constantinople, father of the Alexandrian \*philosophers Asclepiades and Heriascus and grandfather of \*Horapollon the Younger. EW

*PLRE* II, Horapollon 1 (correcting *PLRE* I, 442).

**Horapollon the Younger** (late 5th cent.–early 6th cent.) \*Philosopher at \*Alexandria, born in \*Egypt, son of the philosopher Asclepiades and grandson of \*Horapollon the Elder. He married his cousin, the daughter of the philosopher Heraiscus. She left him for a lover and, after she removed property from Horapollon's house, he wrote a \*petition seeking legal redress (P.Cairo, 3, 67295). He taught \*grammar and philosophy in Alexandria and may be the author of an Alexandrian \*chronicle (\*Photius, *Bibl.* 280) as well as an extant treatise on hieroglyphics. Brought up as a \*pagan, he attracted the attention of an imperial investigation into Alexandrian teachers in the later 480s. He was tortured and his uncle died while in hiding. After the investigation ended, Horapollon is said to have become a Christian 'without any apparent compulsion' (\*Damascius, *VI* *Isidori*, 120B). EW

*PLRE* II, Horapollon 2.

**Hormisdas (MP Ohrmazd)** Son of the Sasanian King \*Hormizd II and brother of \*Shapur II. In c. 324 he fled to \*Constantine I (\*Zosimus II, 27) and was later given military commands by both \*Constantius II (whom he accompanied on his visit to \*Rome) and \*Julian. During Julian's Persian campaign, he regularly acted as negotiator with the Persians. His fate after AD 363 remains unclear; however, he apparently had a son of the same name. A Constantinopolitan palace eventually taken over by \*Justinian I was associated with the family. JW

*PLRE* I, Hormisdas 2.

**Hormizd, Rabban** (7th cent.) East Syriac monastic founder. Born in Beth Lapat (\*Gondeshapur in \*Khu-zestan), Hormizd became a disciple of \*Bar 'Idta, and later founded north-east of Alqosh the famous \*Monastery of Rabban Hormizd, which has survived into modern times. This monastery adopted the reforms of \*Abraham of Kashkar and, from the 7th century onwards, became an important centre of the \*Church of the East and place of burial for patriarchs. An extant *Life* of Hormizd, written by the monk Simeon in prose and verse (*BHO* 383–4), outlines rivalries between its \*Nestorian monks and \*Miaphysites, especially those of the Monastery of Mar \*Mattai. The monastery was abandoned in 1743, but reoccupied by Chaldaean Catholics in the 19th century. The Syriac manuscripts of its library have survived frequent violence. FJ

**Hormizd I Ardashir (MP Ohrmazd I Ardaxshir)** Persian king (r. 270/2–3) and youngest son of \*Shapur I. He was involved in the military campaigns against the Romans of his father Shapur I, and was eventually chosen over his older brothers to follow his father as Shahanshah. He built the city of Ram-Hormizd in

## Hormizd II

\*Khuzestan (\*Tabari, V, 833). He was succeeded by his son \*Bahram I. TD

*EncIran* XII/5 (2004) s.n. Hormozd I, 462–4 (M. R. Shayegan).

PLRE I, Hormisdas I.

Daryaei, *Sasanian Persia*.

**Hormizd II** \*Sasanian king (302–9), son of \*Narseh (293–302), succeeded by his sons Adur-Narseh (309) and \*Shapur II (309–79). Not much is known of his reign, but he has been noted for the persecution of \*Manichaeans (al-Biruni) and the adoption of Christianity by \*Armenia shortly before his accession to the throne. AZ

*EncIran* XII/5 (2004), 464–5 s.n. Hormozd II (A.S. Shahbazi).

PLRE I, Hormisdas II.

**Hormizd III** Persian king (r. 457–9). He fought with his brother \*Peroz over the throne while their mother Denag was regent. During Hormizd III's rule, the Empire lost control of \*Albania. His reign ended when Peroz, with the aid of the \*Hephthalites, deposed him (\*Tabari, V, 872). TD

PLRE II, Hormisdas III.

Daryaei, *Sasanian Persia*.

**Hormizd IV** Persian king (r. 579–90) and son of \*Khosrow I Anoshirvan. He was responsible for decimating the ranks of the high nobility and \*Zoroastrian clergy (\*Sebeos, 10, 73) and promoting the landed gentry (the \**dehqan* class). His general, \*Bahram VI Chobin, was able to defeat the \*Türks, but because of a minor loss in \*Armenia the general was slandered and removed from command, which incited him to revolt and declare himself king. Two Persian nobles, Wistahm and Windoe, conspired to depose and blind Hormizd and brought his son \*Khosrow II to power, with the help of the Roman \*Emperor \*Maurice. TD

PLRE III, Hormisdas IV.

Daryaei, *Sasanian Persia*.

**Hormizd V** Shahanshah (?630–632) during the confused years following \*Heraclius' invasion of the \*Persian Empire. Mints in Persian \*Mesopotamia issued \*coinage in his name over three years. \*Sebeos (ch. 40) says he was a grandson of \*Khosrow II and was strangled by the \*army of \*Shahrwaraz. \*Theophanes (AM 6120 and 6131) confounds him with \*Yazdegerd III, the last \*Sasanian Shah. OPN

*EncIran* XII/5 (2004) s.n. Hormozd V, 467–9 (A. Shapur Shahbazi).

**Hornhausen Reliefs** Sandstone relief \*sculptures from Hornhausen, Saxony-Anhalt, Germany. The best preserved of them shows a mounted warrior above an

interlaced \*animal motif. Fragments of another eight panels are similar, or depict animals including \*deer. They probably came from the choir \*screen of a chapel of the first half of the 7th century and were later reused as grave markers in the late \*Merovingian to Carolingian \*cemetery. SMa

**Horonon** The key fortress on the Roman \*frontier with \*Tzania, in the \*province of \*Pontus Polemoniacus. Roman \*emperors paid \*gold to appease the Tzani. Under \*Justinian I, \*Sittas defeated them and established a garrison in Horonon and sought to convert them to Christianity (\*Agathias, V, 1ff.; \*Procopius, *Persian*, II, 30, 12–24). The site of Horonon has not been located. MO

Braund, *Georgia*, 289.

**horses and donkeys** Neither the Romans nor Persians relied so heavily on equids as did the \*Sarmatians, \*Huns, and other steppe \*nomads. Horse-rearing nomads depended on the mobility provided by equids to drive their herds and to conduct \*warfare, and horses were employed throughout many ancient cultures for riding, \*draught and \*pack work, hides, milk, and \*meat. In the Roman and \*Persian empires, horses were also used extensively as riding animals, in war, in overland transport, and in sport, especially \*chariot racing, \*polo, and \*hunting. An extensive literature on \*veterinary medicine, the \**Hippiatrica*, prescribed for their care. Cut marks and other signs of butchery are generally absent from horse remains within the Roman Empire, so it would appear that a taboo against eating horses prevailed. In the \*Germanic cultures of post-Roman northern Europe, horsemeat was apparently consumed regularly.

The steppe horses of European and \*Central Asian nomads were hardier than the more refined breeds available to the Romans and, unlike the latter, did not need stabling. \*Vegetius (*Ars Veterinaria*, III, 6–7; IV, 6) noted that Hun horses were ram-headed, short-statured, heavy-boned animals with long bodies and little fat, possessing great stamina and long lifespans. Famous Roman breeding grounds included \*Epirus, \*Thessalia, \*Sicily, \*Spain, \*Africa, and \*Cappadocia—regions where sufficient pasture made possible the raising of quality stock. Horses were especially important in Cappadocia; extensive imperial stud farms there served both the \*army and the \*Cursus Publicus; thieves taking these curule horses from \*Andabilis north of the \*Cilician Gates incurred a fine of one pound of \*gold (CTh

X, 6, 1). These animals exhibited the same set of general characteristics; they were lighter boned and thus more refined, though taller, heavier, and finer coated than their steppe relatives.

Horses bred in the Persian Empire shared these characteristics, and through intensive selection Persian warhorses (like that carved in stone at \*Taq-e Bostan) became notably large, capable of carrying fully armoured horsemen and often barding (horse armour) in addition to the weight of armament and tack. The most famous Persian breed was the Nisaeen horse from Media; these were tall, fast horses esteemed as cavalry chargers (\*Ammianus, XIII, 6, 30). Although horse culture was well established in pre-Islamic \*Arabia, as attested in \*poetry (*Mufaddaliyat*, II, p. 235 Lyall), the origins of the Arabian breed(s) are disputed, with various crosses of North \*African animals being the most likely ancestors.

The donkey (ass) was the most common riding and pack animal and was also used for turning \*mills in both the Roman and Persian worlds. Apuleius' novel *The Golden Ass* illustrates entertainingly their many uses. In Late Roman \*Egypt, references to donkeys far outnumber those to \*camels (Bagnall, *Egypt*, 4); in the well-watered \*Nile Valley, where trips were relatively short, the superiority of the ass is clear. Donkeys were also used for long-haul caravan \*trade, for instance by traders who used asses to carry \*fruit from the \*Negev to Egypt (P. Ness. 90, 91). Likewise, in Persian \*Mesopotamia the donkey had an important function in powering mills (*Babylonian Talmud Mo'ed Katan*, 10b), as mounts, and as pack animals (*Babylonian Talmud Baba Mes'ia*, 32b). Mules, crosses between male donkeys and female horses, were widely used in cartage and as riding animals. Capadocian types were apparently well bred and excellent animals (\*Gregory of Nyssa, PG 46, 308). MD

**hospitalitas (ius hospitum)** Roman legal practice permitting the accommodation of soldiers (Lat. *hospites*) within the home of a civilian *dominus* or \**possessor*. Soldiers were not usually on campaign when \*billeted on private householders. The householder was obliged to surrender one-third of his \*house without remuneration (*CTh VII*, 8, 5 of AD 398). The *hospitalitas* was supposed to involve only provision of the relevant rooms, but it seems that, despite legislation (*CTh VII*, 8, 10 of AD 413), these uninvited guests could be demanding, even threatening violence if their hosts did not supply additional items such as \*bread, oil, and wood. The tale of \**Euphemia and the Goth* suggests what people might be afraid of.

Later on, according to several evidences, the term was used both to refer to the accommodation of soldiers in transit and to describe the allotment of land to a \*barbarian. This method of settlement was applied to, or by, the \*Visigoths in \*Aquitaine, in 418, and later in \*Spain (\**Book of Judges (Leges Visigothorum)*, VIII, 5, 5; X, 1, 8-9; XVI), the \*Burgundians in \*Sapaudia (\**Lex Burgundionum*, 38; 55,2), and the \*Alans in central and southern \*Gaul (\*Fredegar, *Chron.* II, 46); and, in \*Italy, both by \*Odoacer's \**foederati* in 476, and subsequently by the \*Ostrogoths c.490 (\*Cassiodorus, *Variae*, I, 14, 18; II, 16, 17; VII, 3). The Roman practice of billeting provided a model, which could be developed in the late 5th and early 6th centuries for the settlements of the \*barbarians. There is no evidence, however, to show that the *hospitalitas* system, in its original form, was one of the major methods employed to accommodate them. PT

**hospitals** Places set apart for the overnight relief and lodging of the impoverished sick and needy, hospitals are one of the significant inventions of Christian Late Antiquity. \*Pachomius may have been a pioneer in providing a space for sick monks in his Egyptian \*monastery. Yet initiatives directed in a general way at the sick and poor seem to have begun around AD 350 in \*Constantinople and certain cities of \*Anatolia. The complex of hospital providing some medical assistance, with a poorhouse, and separate leprosarium which S. \*Basil established in the 370s outside \*Caesarea of

\*Cappadocia was an influential model. It shows the range of overlapping functions that might be fulfilled by these houses for the 'nourishment of the \*poor', or the 'reception of strangers' as they often came to be called. They represented a visible return for the tax privileges lavished on the clergy by \*emperors, disbursing some of the Church's growing wealth, and enabling \*bishops to consolidate their urban leadership. In that sense the hospital is an ideological as well as an architectural construction. Founded by clerics and lay persons as well as by emperors, hospitals spread round the Mediterranean, especially to \*Italy, \*Gaul, and \*Africa.

**hostages** (Lat. plur. *obsides*) Hostages were often used as guarantors in military and diplomatic negotiations between states, and on a domestic level. In Late Antiquity, the Roman Empire was increasingly a giver rather than solely a receiver of hostages. In particular, hostage relations between the Roman and \*Persian empires in the 4th century suggest parity between them, a pivotal instance being the settlement of 363 (\*Ammianus, XXV, 7, 13).

Hostages were also taken from \*frontier peoples. Ammianus Marcellinus (XVIII, 6, 20) describes a journey with Jovinianus, satrap of \*Corduene in the \*Transtigrinane regiones, a former Roman hostage (Lat. *obsidatus*). \*Theoderic the \*Ostrogoth may have been a hostage for the peace between Theodemir and \*Leo I in \*Constantinople from 461 to 471 (\*Jordanes, *Getica*, 281).

J. F. Matthews, 'Hostages, Philosophers, Pilgrims and the Diffusion of Ideas in the Late Roman Mediterranean and Near East', in F. M. Clover and R. S. Humphreys, eds., *Tradition and Innovation in Late Antiquity* (1989), 29–49.

**hostels** Various lodgings for travellers were provided in Late Antiquity. The \*Bordeaux Pilgrim provides a comprehensive list of official *mansiones* on the roads between \*Bordeaux and the \*Holy Land by way of the \*Via Militaris and \*Pilgrims' Road and back again by way of the \*Via Egnatia through \*Rome to \*Milan. Such buildings (Gk. *stathmos*) provided stabling for animals and lodgings for travellers.

The Greek *xenodocheion* had multiple functions. The term was used for guest houses associated with

\*monasteries, or for \*hospitals sponsored by the Church or state, but it generally denoted an urban institution to aid the local \*poor. In the 370s, Basil built an elaborate charitable compound outside \*Caesarea of \*Cappadocia called the *Basileiados* or 'New City'; this was principally a hospital intended to care for the sick, but it also provided accommodation for 'those who visit us while on a journey' (Basil, *ep.* 94; cf. \*Gregory of \*Nazianzus, *Oration* 43, 63). It was the example set by earlier Christian establishments of this sort which inspired \*Julian to write in 362 to his pagan high priest of \*Galatia urging him to set up *xenodocheia*, provisioned partly by the state and partly by local pagan ('Hellenic') \*villages, to care principally for the poor but also for strangers (*ep.* 22 Wright, 429C–431 B). Some *xenodocheia* also served as more traditional inns (later *khans*), like that built by \*Masona, \*Bishop of \*Mérida (d. c.600), in \*Spain (*Lives of the Fathers of Merida*, V, 3, 13). The example attested in rural north \*Syria at Umm el-Khallaḥil (Lassus, *Inventaire*, 67) was also probably multifunctional.

The Greek *pandocheion* was generally an inn serving the needs of travellers, but these buildings also served as warehouses, caravan halts, \*taverns, and brothels. A rock-cut example comprising a series of caves originally founded in the 3rd century is known from the road between \*Batnae (Suruc) and \*Edessa (Sanliurfa) in \*Osrohoene (Mango). Rabbinic sources refer to inns (*pundāq*) throughout \*Palestine and \*Mesopotamia, and caravanserais and inns for merchants are well known from archaeological remains at Roman \*Palmyra and \*Sasanian \*Rayy (near mod. Teheran). In \*Umayyad and \*Abbasid times these inns (now called *fundaq*, adopted from the Gk. word) continued to be maintained and used. Innkeeping apparently faded out in the post-Roman West; the medieval *fondaco* was not an inheritance from Roman custom but an institution adopted from contact with \*Arab civilization MD; OPN O. R. Constable, *Housing the Stranger in the Mediterranean World: Lodging, Trade, and Travel in Late Antiquity and the Middle Ages* (2003).

C. Mango, 'A Late Roman Inn in Eastern Turkey', *OxJnArch* 5/2 (1986), 223–31.

**household** The \*Latin term *domus* (Gk. *oikos* or *oikia*) denoted the primary socio-economic institution of the Late Roman world, both its people and their property. Members of a household included the nuclear family, in some cases the extended family (e.g. unmarried siblings), slaves, and other dependants (the \**familia*). As property, a household constituted all buildings, lands, animals, and slaves owned by its members.

The material size of households varied immensely, but those belonging to the Empire's wealthiest citizens included multiple \*villas, urban properties, and even small \*villages, as may be appreciated from the \**Letters*

of \*Symmachus and the *Life* of S. \*Melania. Aristocratic householders owned buildings and estates scattered around the Mediterranean basin, which they leased out or, less typically, administered directly. In the East, the elite \*estate was a highly sophisticated administrative regime. \*Archives of the 6th century from the \*Apion households in \*Egypt reveal domestic infrastructures encompassing thousands of acres of arable land and multiple dwellings; hierarchically organized agents and stewards oversaw the quotidian business of leasing, farming, and agricultural production; and armies of labourers worked the land and factories.

Because of its centrality in the agrarian-based Late Roman economy, the household was a powerful, male-dominated entity linked conceptually and materially to the public business of governing. A man skilled in the science of household management (*oikonomia*) was thought to have the necessary qualities of a capable statesman. However, women could also legally own property and hence act as a household's chief owner and administrator.

The Late Roman household was a place of religious practice. Pagan householders constructed \*temples and Christians chapels on their urban and rural properties for their household's private use. Although Christianity did not radically transform the household (there is no 'Christian household' *per se*), it nevertheless modified it. The rise of \*asceticism inspired experiments in domestic life. These ranged from minor alterations in daily routine (e.g. the addition of periods of \*prayer and \*Bible reading; restricting guests to co-religionists and family members) to more extreme acts of renunciation aimed at core domestic practices. Attempts by Christian authorities to regulate lay households were largely limited. \*Bishops exhorted parishioners to treat their slaves more humanely, donate their wealth to the Church, refrain from certain forms of domestic recreation that the Church deemed immodest (e.g. excessive drinking), and marry only once. However, evidence shows that these calls were by no means universally heeded. Generally speaking, the Late Antique household was a deeply traditional institution that was independent from the Church and stood at the centre of Late Roman life.

**houses, barbarian** Domestic buildings in Europe beyond the Roman Empire took various forms in different regions. From the Rhine up to southern and western Scandinavia, wooden \*longhouses were the focus of many settlements from late prehistory to the early Middle Ages. In the Late Roman Iron Age, structures over 50 m (165 feet) long were not uncommon. The \*roofs of these houses were supported by rows of internal posts and the space was divided into separate spaces for people (with hearths) and animals. Although individual longhouses differ from one another, a shared spatial pattern persisted over a long period that was manifest in paired entrances and roof timbers, subdivisions, placement of hearths, and dimensions. After the 5th century both the buildings and the space occupied by animals shrank significantly, as shown by examples from the province of Drenthe in the Netherlands. By the 7th century around the mouths of the Rhine, and by the 10th or 11th century in Scandinavia, bow-sided timber buildings without internal roof-supporting posts had superseded the earlier longhouses.

Archaeological evidence shows that 'short houses' without internal posts or animal byres became increasingly common in northern parts of Europe from the 5th century, as at Wijster (Netherlands) and Nørre Snede (Denmark). Sunken-featured buildings (\*SFBs, French *fonds de cabane*, German *Grubenhäuser*) were also common in settlements of this period. The evidence for them consists of oval or oblong features cut into the ground surface, with two or more postholes indicating a timber roof. Debates about functions of SFBs persist: the finds from different examples suggest they were used variously for craftworking, storage, or occupation. In parts of Eastern Europe, large rectangular SFBs with hearths were sometimes the only type of building in a settlement; in Northern and Western Europe, smaller *Grubenhäuser* were normally ancillary to the principal domestic structures.

Various other house types existed elsewhere in northern and western parts of continental Europe in the \*Migration Period. In southern Germany settlements with *Grubenhäuser* and rectangular post-built timber houses c. 12–18 m (40–60 feet) long were common. In northern and western \*Gaul a growing number of recently excavated sites are providing evidence for settlements with timber post-built houses (often with oval ends) and sunken-featured buildings. Some settlements with many irregular sunken-featured buildings were established on earlier Gallo-Roman sites. Stone began to be used again for domestic buildings in this region from the 7th century onwards.

A similar diversity characterizes the early medieval houses of the British Isles. In the east of \*Britain, longhouses are virtually unknown. Instead, the earliest

medieval settlements are typified by relatively short-lived posthole structures, often interspersed with SFBs (as at \*Mucking, Essex). Such settlements are labelled \*Anglo-Saxon primarily on geographical and chronological grounds, but it is worth noting that timber structures were also the most common form in much of southern and eastern Britain during the Late Roman period. In contrast to the longhouses of continental Europe, most timber buildings of 5th–6th century date in \*Britain were small, rarely exceeding 8–10 m (26–33 feet) in length by 4–5 m (c.13–16 feet) in width. These structures often had doors facing one another in the middle of their long sides, but there were few internal divisions and evidence for byres is lacking: they closely resembled the 'short houses' of northern Europe. After about 600, other building techniques such as post- or plank-in-trench became more common. \*Timber remained overwhelmingly the most common building material, but there was a gradual tendency towards larger buildings with more subdivisions or annexes. Structures also began to be rebuilt on the same site rather than relocated after a few decades. A number of excavated sites provide evidence for buildings laid out in rectilinear patterns around planned yards or enclosures from the late 6th century onwards.

The fragmentary evidence from western Britain shows there were several different types of houses. At Trethurgy, Cornwall, a few relatively large oval houses (over 80 square metres, over 850 square feet) were rebuilt several times and occupied from the mid-2nd to the 6th centuries AD. By contrast, the nearby cliff-top site at \*Tintagel had many small, oblong buildings. Construction techniques also vary, ranging from stone-walled footings to timbers set in construction trenches.

The early medieval domestic architecture of \*Ireland was based on the late prehistoric roundhouse tradition. Buildings were generally small (4–6 m, 13–19 feet, in diameter), though the largest known examples have a floor area of about 35 square metres (c.375 square feet). Well-preserved waterlogged examples provide evidence for post-and-wattle or wattle-and-daub walls. Additional structures were sometime appended to existing houses, creating buildings with a figure-of-eight plan. SCT

**houses, Roman and post-Roman** The Late Roman houses we know most about are those of the rich. Contemporary writers sometimes describe their

amenities and splendours, while passing over in silence the living conditions of peasants and the urban \*poor, and modern archaeologists too have concentrated their energies on houses from the top end of society, drawn to them by their \*mosaics, \*sculpture, and interesting architectural forms. In the West, the rich divided their time between large urban houses known at the time, and in the modern literature, as *domūs* (singular *domus*) and the equally impressive rural \*villas, where they spent their \*otium. In the East the tradition of urban dwelling by the civic \*aristocracy was even more deep-rooted, with little tradition of villa life.

Classically, a *domus* was single-storeyed, with extensive use of expensive and exotic decoration in \*marble, mosaic, and wall painting. It was often built around a courtyard with surrounding colonnade (a peristyle), and included such features as heated \*baths for pleasure and cleanliness, or an external water feature (a nymphaeum) to provide a degree of coolness in the heat of summer. A feature of many aristocratic houses, characteristic of the Late Roman period, was the inclusion in a central location of a splendidly decorated rectangular room with an \*apse. It is assumed, probably rightly, that this was a formal reception room, where a \*patron, seated in front of the apse, received his clients, a fact which confirms that the houses of notable men (Gk. *dunatoi*, Lat. *potentes*) served not only as private dwellings, but also as the public face of their influence and power. The precise design and decoration of *domūs* varied by region. For instance, extensive carpets of mosaic were a feature in some provinces, and not in others—but, in its essential character, the type of housing inhabited by the rich was the same across the Empire. Aristocrats, whether in \*Britain or \*Syria, shared the same expectations of cultured domestic ease.

The dwellings of those lower down the social scale are far less well known: for instance, a 4th-century list of the buildings of \*Rome suggests that the ordinary inhabitants of the city still lived in the massive \*brick-built apartment blocks of early imperial times known as *insulae* (see ROME, REGIONARY CATALOGUES OF). There is no way of knowing to what extent these *insulae* had changed in character over the centuries, nor for how long apartment living persisted into the 5th and 6th centuries. For \*Constantinople, the bustling metropolis of Late Antiquity, we know virtually nothing about housing below the level of the elite. The Late Roman 'ordinary' dwellings that we know most about are the remarkable stone-built rural houses of the \*Limestone Massif of northern Syria, which are often dated by \*inscriptions and which were so robustly built that many of them still stand to their full height. These houses are impressive in their solidity, but modest in their size—with lower floors that were given over to animals or to storage and an upper inhabited level of

very few rooms. These Syrian houses are grouped together into \*villages, providing a vision of how the majority of people lived outside the carefully planned cities of the ancient world. These villages were unplanned, with winding access between the houses, and could be large, with several substantial and impressive stone-built churches, and occasionally even public amenities such as a bath building.

We have a clearer idea of what happened to housing from the 5th century onwards in the northern \*provinces of the former Roman Empire, than in the south and east, because only recently have archaeologists in the Mediterranean region become interested in what would once have been dismissed as 'squatter occupation' and would therefore have been left unstudied. In the north, a characteristic of dwellings in post-imperial times (in both town and countryside) was the near universal abandonment, even for aristocratic dwellings, of mortared stone- or brick-walling, of solid floors, and of tiled roofs. Dry-stone or timber walling, beaten earth floors, and thatched roofs became ubiquitous. The evidence currently available suggests that almost all the *domūs* and villas of the Roman period were abandoned in the 5th century, and that those which survived did so only in severely attenuated form. A visitor to northern Gaul in around 600 would have seen almost nothing still standing that was visibly 'Roman' except for some surviving city walls and a few churches, while in \*Britain not even the churches survived (except at \*Canterbury and \*Whithorn).

Further south, in the Mediterranean region, there was more continuity of Roman styles of domestic building, and at least the rulers in Church and state continued to live in \*palaces which were recognizably Roman in their solidity and architectural pretensions, sometimes indeed with such continuing amenities as baths. However, most aristocratic *domūs* were abandoned, sometimes after a period in which their more sumptuous features (such as mosaic flooring) fell into disrepair, and in which their larger rooms and courtyards were subdivided by flimsy walling, turning these large complexes into areas of multi-occupation. Where and how large landowners of the Mediterranean region lived in the 7th century is currently something of a mystery. As far as we can tell, traditional villas and *domūs* were abandoned, but well-appointed houses of a different design, which might have replaced them, are strikingly absent from the record. This absence may in part be a trick of the evidence, since it is possible that upper-class living moved to upper floors, where it would leave little or no trace at ground level for archaeologists of the future to find. But it is also likely that, as in the northern provinces, both town- and country-dwellers increasingly built their houses of wood and other perishable materials, enjoying a lower level of

comfort and leaving only ephemeral remains in the archaeological record.

**houses, senatorial** The \*senators of \*Rome and \*Constantinople maintained lavish houses in the two \*cities, which served both as private dwellings and as the public face of their power and prestige—several of Rome's senatorial houses, for instance, contained displays of honorific statuary, donated by grateful \*clients and designed to impress visitors. Archaeology has shown that in Rome senators' houses were primarily older, inherited structures, which were continuously embellished through the 4th century. A visitor to Rome at the very beginning of the 5th century observed that some of the city's houses had the same amenities as medium-sized cities. Archaeological evidence, however, suggests that many of Rome's richest houses fell into decay during the 5th century, presumably because of the city's declining power and wealth. In Constantinople, there is much less archaeological evidence, but some 50 aristocratic houses are named in written sources, and the remains of two important houses have been discovered and partially excavated just north of the \*Hippodrome. Unsurprisingly, in what was a new capital, these were newly built structures, with complex ground plans in the very latest style (consisting of linked rotundas and multi-apsed buildings).

**Huns** A group of Inner Asian (probably Altaic, not Iranian) steppe \*nomads who migrated to Eastern Europe in the 4th century. Scholars disagree over the possible equation of the Huns with the Xiongnu (Hsiung-nu) mentioned in Chinese sources, and not all of what is in Graeco-Roman sources is easy to credit (\*Ptolemy, III, 5; \*Eunapius, fr. 41; \*Agathias, V, 11, 2–3). The Huns moved westward to the Pontic Steppe c. AD 370 under Balamber, where they defeated the \*Alans (remnants of the \*Sarmatian tribal confederation) and \*Ostrogoths (375), thus setting in motion key events in the \*Barbarian Migrations (including the movement of the Ostrogoths and Visigoths into the Roman Empire (\*Ammianus Marcellinus, XXXI, 2–3; Eunapius, fr. 42)).

The Huns seemingly lacked central leadership at this time. Some became Roman \**foederati* in \*Pannonia (380), supporting \*Theodosius I against \*usurpers. Others raided southwards into \*Armenia, \*Syria, \*Palestine, and \*Mesopotamia (395–6), as recorded by \*Jerome (*ep.* 60, 16 and 77, 8) and (in \*Syriac) by \*Cyrillona (Absamya, Quirillona, 72–87). After accumulating significant booty, they returned to the Pontic steppe, where, as in Pannonia, the Hun-led confederation (including Alans, \*Goths, and other barbarians) continued to dwell. At times, Hun mercenaries were employed by the Romans against other Huns or Goths. \*Aëtius, who was later to be the general who stopped \*Attila's invasion of Roman territory at the \*Catalaunian Plains in 451, was a hostage with the \*Visigoths, and then during this time (c.405–8) with the Huns (\*Gregory of \*Tours, *HF* II, 8).

A Hun invasion of \*Thrace in 422 under Ruga (*PLRE* II, Rua) resulted in a treaty that guaranteed the Huns an annual payment of \*gold. After Ruga

died (434), his nephews Bleda and Attila became joint rulers of the eastern and western halves of Hun territory. When \*Constantinople refused to make the agreed gold payments, the Huns attacked Roman territory in 441 and 442 (\**Chronicon Paschale* ad ann. AD 442); the war lasted until 447, during which time Attila murdered Bleda (444/5). In 449 an embassy was sent to Attila, which was accompanied by the historian \*Priscus; large fragments survive of his vivid description of the ravaged \*Balkans, of Attila's wooden palace, and of Hun royal drinking rituals (\*Priscus, frs. 1–25 Blockley; ET Gordon; quoted by \*Jordanes, *Getica*, XXIV, 123; XXXV, 183; XLII, 222; XLIX, 254). The embassy was unsuccessful, as soon afterwards Attila overran Thrace and came within 48 km (30 miles) of Constantinople; \*Theodosius II paid him off with 6,000 pounds of gold and promise of a further 1,000 pounds of gold annually. (*Chronicon Paschale* ad ann. 450; \*Theophanes, AM 5942). After the death of Theodosius II and succession of \*Marcian in 450, the Romans made no further payments. Responding to pleas from \*Valentinian III's sister, Attila invaded the Western Empire, but was defeated by Aetius (451). After another Hun invasion of northern Italy in 452 (\*Procopius, *Vandalic*, III, 4), Attila withdrew to Pannonia, where he died in 453 (\*John Malalas, XIV, 10).

Fighting amongst Attila's sons for the succession resulted in the \*Gepids, and later the Romans proceeding to defeat the divided Huns in 455 and 468 (*Chronicon Paschale* ad ann. AD 469), thus ending Attila's empire. By the late 5th century, the Attilid Huns are absent from the sources, which instead (as with the Scythians before them) use the term 'Hun' to describe other nomadic groups: \*Hephthalites, \*Kidarites, \*Sabirs, \*Onoghurs, \*Utrigurs, \*Kutrigurs, \*Bulgars, \*Avars, \*Türks, Hungarians, and various unidentified steppe nomads. Hun remnants were probably absorbed into later nomadic states in the region, particularly the Bulgars and \*Khazars, and it was 'Huns' whom the Persian Empire feared would breach the \*Caucasus Passes at Derbend (\*Procopius, *Persian*, I, 10, 6–8). 'Caucasian Huns' are referred to in \*Armenian and Syriac sources in the 6th–7th centuries (\*Zacharias Rhetor, XII, 7; \*Movses Kaghankatvatsi, II, 39–45; \*Sebeos, 4, 10–11, 32–3), either as Persian mercenaries or as converts to Christianity; earlier ones may have been Sabirs, while later ones were unidentified groups under Khazar overlordship. Eastern Christian apocalyptic texts, such as \*Ephrem the Syrian (CSCO 321, Scr. syr. 139 (1972), 79–94), Ps.-\*Methodius (CSCO 541 Scr. syr. 221 (1993), 24–6), and \*Sahdona (CSCO 225, Scr. syr. 113 (1965), 257–8), tend to equate the Huns with the hordes of Gog and Magog, the opponents of Alexander the Great (cf. Ezekiel 38).

Like other Inner Asian steppe dwellers, the Huns were pastoral nomads and excellent mounted warriors, skilled in \*archery (\*Olympiodorus, fr. 19). The \*Emperor \*Maurice advises attacking them in February or March when their horses are in poor condition (\**Strategicon*, VII, proem). They served, not always willingly or soberly, in Roman \*armies (Procopius, *Vandalic*, III, 12; III, 18; IV, 1; V, 3 and 5 and 27; VI, 1) and were used as light \*cavalry in the Persian army (Procopius, *Persian*, II, 26, 5–11).

The ethnic origins of the Huns are still disputed and little evidence of their language remains; personal names recorded in the sources include those of Germanic, Iranian, Turkic, and hybrid or indeterminate origin. Classical accounts indicate the Huns had Mongoloid features, but burial remains suggest that their confederation was a mixture of racial types. The sources provide valuable but limited information on Hun military, diplomatic, religious, and burial practices, all of which conform to typical Inner Asian steppe nomad culture.

**hunting and hawking, Arab** Large mammals, such as gazelle, ibex, and oryx, were abundant in Arabia and the Syrian desert. Such big game was hunted with nets or from horseback or on foot using hounds, especially the Arabian saluki hound, a large gazehound renowned for its stamina. The \*Umayyads were keen hunters and drew on Roman and Sasanian practices; during their rule technical literature from both ancient empires was translated into \*Arabic. \*Yazid II (d. 744) built a hunting lodge at \*Qusayr 'Amra on the Jordanian steppe where wall paintings depict scenes of the royal hunt. Cheetahs and caracal lynx were trained as hunting companions and used to take large game such as ostrich, gazelle, and wild ass. The depiction of a hunting hawk in the Hall of Hippolytus (6th cent.) at Madaba indicates that Roman elites there were avid falconers and their knowledge probably passed to the Arabic speakers living in the region. The *Kitab Dawari al-tayr* (*Book of Birds of Prey*) written by the chief huntsman of two

hunting and hawking, barbarian

Umayyad \*caliphs, al-Ghitrif b. Qudama al-Ghassani, used material drawn from Indian, Mesopotamian, Sasanian, and Roman sources. MD

Z. M. Hasan, *Hunting as Practised in Arab Countries of the Middle Ages* (1937).

G. L. Fowden *Qusayr 'Amra: Art and the Umayyad Elite in Late Antique Syria* (2004), 85–114.

**hunting and hawking, barbarian** Hunting was an important pursuit among the \*aristocracy of the barbarian states that succeeded the Roman Empire. Its purpose was not only to supply \*meat and provide for communal banquets. It was also a noble pastime, which, as the image of war without its guilt and only 25 per cent of its danger, trained men for battle, provided them with exercise, and gave opportunities to deploy martial prowess and display the wealth required to furnish hounds and hunt servants. \*Deer, boars, and hares were the principal quarries. These were hunted with a variety of hounds, including tracking hounds, gazehounds for smaller game such as hares, and hounds which brought large game to bay or caught it (\**Lex Salica*, *Karolina*, MGH LL.nat. Germ. 4/2, cap. 47/2). \*Frankish kings preserved forests specifically for hunting (\*Gregory of Tours, *HF* X, 10).

Knowledge of falconry probably originated in \*Central Asia and spread to Germanic and Iranian groups around the Black Sea. By the period of the \*Barbarian Migrations, falconry was probably well established among the barbarians of central and northern Europe and by the 6th century at the latest was commonplace: the *Pactus Legis Salicae* (MGH LL. nat. Germ 4/1, cap. 7, 1–3) and the \**Lex Burgundionum* (MGH LL. nat. Germ. 2/1, cap. 98) laid down harsh penalties for the theft of hawks. MD

R. Hennebicque, 'Espaces sauvages et chasses royales dans le Nord de la Francie, VIIème–IXème Siècles', *Actes historiens médiévistes* 10 (1979), 35–57.

**hunting and hawking, Persian** (MP *naxcihr*) The Sasanian \*aristocracy were avid hunters and falconers, and the image of the royal hunter was integral to Sasanian royal identity. The subject of the chase appeared frequently in Sasanian art, as in the \*rock reliefs of \*Bahram II at \*Sar Mashhad and \*Taq-e Bostan which depict \*Khosrow II (r. 590–628) engaged in \*deer and boar hunts. \*Textiles and numerous \*silver vessels depict royal hunts, such as Metropolitan Museum 34.33, which portrays \*Peroz (r. 459–84) or \*Qobad (Kavadh) I (r. 488–97, 499–531) hunting rams.

\*Bahram I is alleged to have remarked that a man who did not hunt or fight was worthless. The \**Res Gestae Divi Saporis* (ŠKZ 43, 10 and 50, 12) attests to the 'Master of the Hunt' (MP *Naxcihrbed*) and 'Master of Boars' (MP *Wārāzbed*) as offices in \*Shapur I's \*court,

and literary sources describe later kings such as \*Khosrow I (r. 531–79) as maintaining professional falconers and hunt servants. As in the Roman and Germanic worlds, hunts in open country in the \*Persian Empire relied on hunt servants and hounds, but there were also controlled hunts which took place in permanent or temporary enclosures at country estates (MP \**dastgird*). Although hunting was a male pursuit, rock reliefs and poetry portray women watching hunts, especially those held within enclosures. \*Ammianus described one round hunting enclosure at \*Ctesiphon housing \*bears and \*lions. \*Heraclius' troops marvelled at Khosrow II's estate at \*Dastgerd in AD 625/6, which was stocked with ostriches, gazelles, wild asses, peacocks, pheasants, and even lions and tigers (\*Theophanes, AM 6118).

These places were remembered long after the \*Arab conquest. Ferdowsi's epic poem the *Shahnama* (Davis, 810) portrays Khosrow II as staging elaborate hunts with 500 falconers, whose birds included sparrowhawks and saker and peregrine falcons. Some Sasanian hunting and falconry traditions are preserved in \*Arabic manuals such as the *Kitab duwari al-tayr* as well as the medieval Persian treatise *Jawareh nama*. MD; MPC

**hunting and hawking, Roman and post-Roman**

Roman hunting had various objectives. There were the specialists who captured wild beasts for spectacles in urban arenas (Lat. \**venationes*; Gk. *kynegesion*). Animals for the beast shows commonly came from North \*Africa and \*Egypt, though \*Syria had vast hunting lands as well. \*Elephants, \*lions, bears, and ostriches were common quarry, though giraffes and many other species were also captured, including boars.

Scenes of capturing animals are depicted in the 4th-century Great Hunt \*mosaic of the Villa Casale (\*Piazza Armerina) in \*Sicily. A mosaic from El Kef (\*Sicca Veneria) shows \*deer and ostriches penned up together. There were still lions in areas around the eastern \*frontier (\*Ammianus, XVIII, 7) and a law of 417 complained that animal trappers under the control of the \*Dux had been habitually outstaying their welcome at \*Hierapolis (Mabbog) in \*Euphratensis (*CTh* XV, 11, 2).

Hunting was also carried on for pest control, for food, and for sport. The \*emperors specifically permitted anyone to kill lions, in the interests of public safety (*CTh* XV, 11, 1 of 414). Skill in hunting was an attribute of a gentleman. Oppian of \*Apamea (distinct from

Oppian, author of the *Halieutica*) wrote hunting poetry. \*Nemesianus celebrated it as an essential element of noble \*otium. Naucratis, younger brother of \*Basil of \*Caesarea, abandoned a promising public career to live an \*ascetic life in the wooded Pontic hills where he varied the diet of the elderly \*poor in the hospice he ran by feeding them on the fruits of the chase (\*Gregory of Nyssa, *VMacr* 8). His grandparents had similarly lived on game when taking refuge from the Great \*Persecution (\*Gregory of Nazianzus, *On Basil*, 7–8). Numerous mosaics in the Levant illustrate aristocratic enthusiasm for hunting there. \*Meleager's hunt of the Calydonian Boar remained a popular theme in art. Hunting was one of the favourite pursuits of \*Synesius, the 5th-century \*Bishop of \*Ptolemais in \*Libya (*ep.* 148, 80). Hunting mosaics on the floors of churches, as in the 6th-century \*Basilica of Doumetius at \*Nicopolis of \*Epirus, evoked God's plenty. Animals pursued and eaten included boar, hares, and deer.

Imperial enthusiasm for the chase is less well attested for Roman emperors than it is for their \*Sasanian contemporaries. \*Theodosius II died as the result of a fall from his \*horse while out hunting in the Lycus Valley near \*Constantinople (\*Theodore Lector, *HE* fr. 3, 353). Theodosius, son of the Emperor \*Maurice, was hunting at Kallikrateia (Athyras, mod. Büyük Çekmeçe) when the \*army asked him to replace his father in 601/2 (\*Theophanes, *AM* 6094). The palace of Damatrys on the Asiatic side of the Sea of \*Marmara was certainly equipped with a hunting park by the 10th century, which is said to have been founded by \*Tiberius II and certainly existed in 695.

Wildfowling by catching birds on sticks anointed with birdlime had been a pastime since the Hellenistic period. Hawking (falconry) became fashionable during Late Antiquity, perhaps under Germanic or steppe influence. There are mosaics from \*Vandal Africa illustrating falconry, and \*Luxorius wrote a poem (14) disparaging an acquaintance who starved his hawks to keep them sharp. The mosaics of the Villa of the Falconer in \*Argos, \*Greece, of c. AD 500 depict a falcon being used to catch a duck and hare coursing using fast sight hounds, as well as the Labours of the Months. By the 6th century, falconry was already well established in Roman culture in the East and had a long history in the West.

**al-Husayn b. 'Ali** (c.626–680) Grandson of the Islamic Prophet \*Muhammad by his daughter \*Fatima and the fourth \*Caliph, \*'Ali, and regarded as the third imam by most sects of \*Shi'a \*Islam.

Following the death of his father after the First \*Arab Civil War (\**Fitna*), he and his elder brother Hasan chose not to challenge the reign of the \*Umayyad Caliph \*Mu'awiya. However, Husayn refused the caliph's attempts to secure recognition for his son \*Yazid as successor. At Mu'awiya's death he again refused and, along with fellow dissenter \*'Abd Allah b. al-Zubayr, fled to \*Mecca for sanctuary.

Husayn was invited by his father's former Iraqi supporters to come to \*Kufa in order to seek the \*caliphate himself. During the journey he and many members of his family were killed by an Umayyad \*army at \*Karbala.

The principal sources are \*Tabari (XIX) and al-\*Baladhuri, *Ansab al-Asbraf* (esp. vol. 2). Much \*poetry and literature exists celebrating his supernatural characteristics and remembering his martyrdom. RJJ  
*EL* 2 vol. 3 (1971) s.v. al-Ḥusayn b. 'Alī b. Abī Ṭālib (Veccia Vaglieri).

**Huwwarin (Hawwarin)** (ancient Evaria in \*Syria) Home to two bishoprics after the \*Council of \*Chalcedon, one espousing the council canons and the other, \*Miaphysite in conviction, opposing them. The former ministered to the settled population of the town and the latter to the nomadic tribes surrounding it. Whilst the site has never been comprehensively excavated it has the remains of seven different churches and is dominated by a large square tower. This has been attributed to \*Yazid I, following the \*Arabic literary sources. However, the structure is constructed of Roman \*spolia and its exact date is unclear.

**Hydatius** Chronicler of the years from 379 to 469. Hydatius was born in the *civitas* of Lemica (near Xinzo de Limia) in \*Gallaecia c.400, elected \*bishop, probably of Aquae Flaviae (mod. Chaves, Portugal), in 428, and died c.470. His life was eventful: he made a \*pilgrimage to \*Palestine and met \*Jerome in 406–7, petitioned \*Aëtius in \*Gaul for aid against the \*Suebes occupying \*Gallaecia in 431, was nominated to Pope \*Leo I by

Bishop Turibius of Astorga to combat \*Priscillianism in 445, and was kidnapped by a Suebic warlord in 460.

His \*chronicle continues the tradition of \*Eusebius and Jerome, and is the principal witness to the end of Roman rule in \*Spain. The work is structured around the \*Visigothic invasion of Gallaecia and \*Lusitania in 456–7, and must have been begun in its aftermath; he believed the End to be imminent (in 482, based on the apocryphal \*letter of Christ to Thomas), and interpreted events accordingly. The chronology is fivefold, given by imperial regnal years, Jubilees from the Ascension, Olympiads, years since the birth of Abraham, and the Spanish *aera* system.

There is no complete manuscript: there are one nearly complete copy, made at \*Trier around 830, a late copy of this, and epitomes of variable faithfulness to the text. The interrelationship of these witnesses is highly complex, but the text must be reconstructed from them; interpretation and correction of its chronology has also proven controversial. GDB

**hymns, Greek** (Christian) There are passages in the New Testament that have been interpreted as evidence of early Christian hymnography (e.g. Eph. 1: 3–8, Phil. 2:6–11, 1 Peter 1:3–5, and the many hymns in the Apocalypse), but only the two songs in Luke's Infancy narrative (the song of Mary: Luke 1:46–55, and of Zacharias: Luke 1:68–79) entered into the Byzantine Office, where they formed the final canticles of Matins.

It is generally thought that early Christian hymnography derived from the Synagogue, though the earliest extant Christian hymn, found on a \*papyrus, is the \*Oxyrhynchus hymn (P.Oxy XV [1922], 1786, 21–5), which is marked to be sung according to one of the classical musical modes. The vespertal hymn \**Phos hilaron* (Φως ἡλαρόν) is mentioned as ancient by \*Basil of \*Caesarea in the 4th century (*De Spiritu Sancto*, 73: PG 32: 205A).

Although it is probably not true that early monasticism was opposed to singing, early monastic \*chant was

doubtless simple. It was in the context of services for lay people, the so-called 'Cathedral Office', that the earliest developments of Greek hymnography took place. The 'sung service' (ᾠσματικὴ ἀκολουθία), a vigil service before Sundays and great feasts, is attested from the 4th century; to this service belonged the singing of the canticles (or odes), eventually eight from the Old Testament and two (counted as a single canticle) from the New.

The first major development in Greek hymnography was the \**kontakion*, and the greatest composer of such *kontakia* (indeed, maybe the inventor of the genre) was \*Romanus the Melodist. Originally from \*Syria, he arrived in \*Constantinople probably in the early years of \*Justinian I's reign, and composed many *kontakia*, verse sermons that were chanted during the Ἀσματικὴ ἀκολουθία, with a refrain in which the congregation doubtless joined. Romanus composed *kontakia* on themes and persons from the New Testament, especially on the Person and Life of Christ, as well as on other subjects, including a *kontakion* on 'earthquakes and fires', which alludes to the \*Nika Riot (AD 532) and the destruction of the churches of the \*Holy Wisdom and the \*Holy Peace.

Gradually the vigil service of the Cathedral Office combined with the more sober monastic vigil, and in the 7th century a new form of hymnography, the *kanon*, evolved in monastic circles in \*Jerusalem to accompany the singing of the canticles, which now formed part of monastic matins. The *kanon* consisted of verses composed to accompany the closing verses of the canticles at matins; its great exponent was \*Andrew of Crete (d. 740). Whereas the *kontakion* usually has a narrative structure, the *kanon* more commonly takes the form of a meditation on the mystery concerned. *Kontakia* continued to be composed, even though the *kanon* became more popular and eventually supplanted the *kontakion*, which was reduced to a couple of verses incorporated into the *kanon*. A. Lingas, 'The Liturgical Place of the Kontakion in Constantinople', in Constantin C. Akentiev, ed., *Liturgy, Architecture, and Art in the Byzantine World* (1995), 50–7.

**hymns, Jewish** Jewish hymns were produced from the Late Roman period onwards in Syro-Palestinian communities. Embellishment of \*synagogue liturgy by distinctive genres of congregational hymns became increasingly popular on the Sabbath and holidays. The Day of Atonement was enriched by lengthy compositions, versifying the history of the world from the days of creation to the sacrificial ritual of Aaron the high priest. Similarly, threnodies and penitential hymns were recited on days of mourning and commemoration.

In distinction from biblical psalmody and poetry, synagogue hymns were called *piyyutim*, a term derived from \*Greek *poiesis*. The general term is *piyyut* ('synagogue hymnography'), reflecting the fascinating contribution of cantor-poets to Jewish religious culture in the early Byzantine and Islamic periods. Biblical and rabbinic themes are reworked and expanded in mostly strophic poems with the employment of acrostics and rhyme. The language and lexicon is jargonic-poetic Hebrew, at times mixed with elements from Aramaic and \*Greek.

Since the discovery of the Cairo Genizah manuscript collection, the study of liturgical poetry has been revolutionized. Modern research has highlighted the status and activities of hymnists like Yannai(-os) who can be called a Jewish Melodist, of the same quality as his contemporary colleague \*Romanus the Melodist, the famous composer of \**kontakia* for the Christian-Byzantine church \*liturgy.

Both Yannai and Eleazar birabbi Kilir (= Kyrillos) occasionally allude to historical circumstances, such as the oppression of the \*Jews by the Byzantine \*emperor or the decreasing status of Judaism in a Christian world. Additionally, Kilir refers to the arrival of the Arabian kingdom Ishmael, which will lead to deliverance from the wicked kingdom of Edom, Byzantium. The tradition of *piyyut* was to be continued in the world of \*Islam, and particularly Kilirian compositions were transmitted from Palestine to the Jewish communities of \*Sicily, \*Italy, and Germany. L. J. Weinberger, *Jewish Hymnography: A Literary History* (2000).

**hymns, Latin** Latin hymns in Late Antiquity are almost entirely Christian, liturgical, or paraliturgical in nature. Some texts, such as the \*Exultet and \*Te Deum, were written in rhythmic \*prose, after the example of the biblical Psalms and cantica, while \*Marius Victorinus experimented with rhythmic forms and strophic structure. An abecedarian psalm (*Psalmus responsorius*) in rhythmic verse, probably from the late 3rd century, survives on \*papyrus; the abecedarian form was later adopted by \*Augustine and \*Fulgentius of Ruspe to combat \*heresy. \*Hilary of \*Poitiers is the author of the earliest hymns in classical \*metres—three survive, though incomplete—but \*Ambrose of \*Milan gave the liturgical hymn its definitive form. The fourteen hymns that have the best claim to Ambrosian authorship are written in eight four-line stanzas of iambic dimeters, a form that was imitated by \*Sedulius, \*Ennodius, and \*Venantius Fortunatus. Shortly after Ambrose, \*Prudentius composed hymns on a more ambitious scale and in a variety of metres in his *Cathemerinon* and *Peristephanon*, which were modelled on liturgical forms but probably not designed for such use. The end of the period of Late Antiquity also saw the first

hymns written in accentual form in imitation of quantitative metres. MJR

**hymns, pagan and literary** For ancient theorists, hymns are vehicles for \*praise of gods, corresponding to encomia in praise of men. Despite very different intellectual and spiritual outlooks, some Late Antique hymns continued archaic and classical traditions in respect of form: many continue to employ the hexameter \*metre, use epithets (often in asyndetic lists) and relative clauses to identify and define the deity, and make extensive use of *Du-Stil*. \*Proclus' seven \*Neoplatonic hymns are of this character. Lists of powers and prerogatives are common, especially in aretologies of \*Isis and Sarapis; in general, the predicative style, in which the deity's characteristics are defined and celebrated, prevailed at the expense of mythical narratives and genealogies. Other compositions continue to regard themselves as 'hymns', although formally hardly that: the \*Emperor \*Julian's *Hymn to the Mother of the Gods* (composed during her spring \*festival in \*Constantinople, 362) and *Hymn to King Sun* (written for the Heliada in \*Antioch in December 362) are prose tracts designed to restore pagan wisdom to its ancient honour; it is their celebratory and (in their final sections) supplicatory character that makes them hymnic. Predicative hymns in this period reflect the general tendency towards syncretism (e.g. \*Nonnus' Hymn to Heracles Astrochiton, *Dionysiaca* 40, 369–410). Many are directed towards the gods of the traditional pagan pantheon, perhaps under Orphic or Neoplatonic guise; others address \*cities (Melinno's celebration of \*Rome, possibly Hadrianic), parts of the \*landscape (e.g. the \*Nile), or components of the cosmos (Ocean, the \*Sun, the Moon). **hymns, Syriac** According to \*Ephrem (*Against Heresies*, 53), \*Bardaisan (154–222) was the first person to adapt to \*music the \**madrasba* (by Ephrem's day, the standard equivalent for 'hymn'). In the *Acts of Thomas* (108–13) *madrasba* is the term used for the 'Hymn of the Pearl', while the sung poem on the Bride of Light (6–7) is called a *zmirta* (compare *mazmure*, 'Psalms'). Ephrem's own *madrashe* are stanzaic poems employing

nearly 50 different isosyllabic metres, each of which had its appropriate melody or *qala*. The titles of the melodies were transmitted with the hymns, but the music was handed down aurally. In his panegyric on Ephrem, \*Jacob of Sarug (d. 521) states that his *madrashe* (which had refrains) were sung by women's choirs.

As a poetic form the *madrasba* may have influenced the emergence of the *\*kontakion* in \*Greek. In due course repertoires of *madrashe* were adapted to the eight tones and classified in the *Beth Gazzza*, or 'Treasury', a counterpart to the Greek Hirmologion. Several other terms were used for poetry sung (as opposed to chanted) in a liturgical setting, in particular *zmirta* 'song' (the term used of the \*Odes of Solomon'), *quqaya* (named after \*Symeon quqaya, the Potter, in the 6th cent.), *\*sogitha* (normally a *madrasba* with a simple metre, often with an \*acrostic and/or a dialogue), *teshbohta*, and *qala* (in an extended sense). A collection of 366 *ma'nyatha* (conventionally translated 'hymns') by Severus (d. 538) and others were translated into \*Syriac by \*Paul of \*Edessa c.625 and revised by \*Jacob of Edessa in 675; subsequently these were provided with indications of the eight tones (and so the collection has sometimes been called an Octoechos). Probably already before the end of the 8th century, Greek canons were being translated into Syriac. By the time of the earliest surviving liturgical manuscripts (c.9th cent.) 'hymns' of various types play a very prominent role in most services. SB

For Ephrem's *madrashe*, see under EPHREM.

**Hypatia** (c.355-415) Mathematician and \*philosopher, daughter of the \*Alexandrian teacher \*Theon

and an editor of his commentary on \*Ptolemy's *Almagest*. She trained under her father and showed such natural aptitude that she took over his \*school. She may also have held a public teaching position in Alexandria. The philosopher and future \*Bishop \*Synesius of \*Cyrene was a student of Hypatia and a number of his extant \*letters show how much he valued their relationship. The philosophy that she taught was closer to that of \*Plotinus than the teaching influenced by \*Iamblichus popular in \*Athens in the early 5th century. A letter of Synesius suggests that Hypatia's school competed to attract students with the circle headed by \*Plutarch of Athens (*ep.* 136), and her enrolments may have suffered as the reputation of Plutarch's school grew. Because of her reputation for prudence, Hypatia enjoyed frequent audiences with imperial and local officials. In the early 410s, her public activities drew her into a confrontation between \*Cyril, Patriarch of Alexandria, and Orestes, the \*Praefectus Augustalis. She was murdered by Cyril's supporters in early 415, a murder that later pagan sources characterized as a philosophical \*martyrdom (\*Damascus, *Visidori* 43E). Some Christians criticized Cyril for his role in her murder (\*Socrates, VII, 15), but Egyptian traditions maintained that it was a justified killing of a magician (\*John of \*Nikiu, 84, 87-103).

**Hypatius, S.** (d. 446) Monk and then hegumen of the \*monastery of \*Rufiniana, on the eastern shore of the \*Bosporus, from c.400 till his death in 446. Hypatius is known to us principally from the *Life* written by his disciple Callinicus soon after his death. Originally from \*Phrygia, Hypatius became a leading figure in the religious life of \*Constantinople; he received visits from the \*Emperor \*Theodosius II and his pious sisters. His closeness to the \*court may account for his notable lack of involvement in the \*Nestorian controversy (despite Callinicus' manifest fictions to the contrary), in which many monks of the city protested against the emperor's reluctance to accept Nestorius' condemnation at the \*Council of \*Ephesus (431). A few years earlier he had used his good relations with the court to defend the newly arrived \*Acoemete monks against an attempt by his own \*bishop, Eulalius of \*Chalcedon, to expel them from his \*diocese. His own ascetical teaching was notable for its moderation, while he encouraged the laity to be confident that they could attain salvation in the world.

RMP  
BHG 760: Callinicus, *Vie d'Hypatios*, ed. G. Bartelink (SC 177, 1971).

**Hypsistarii** Worshippers of *Hypsistos*, 'the highest god', sometimes Zeus Hypsistos or Theos Hypsistos. They are attested mostly in Asia Minor and on the north shore of the Black Sea in the 3rd and 4th centuries. They seem to have constituted a distinct community, perhaps with links to the Jewish proselytes called 'god-fearers' in the Acts of the Apostles. \*Gregory of \*Nazianzus in 374 describes his youthful father's Hypsistarian rejection of idols, \*sacrifice, and certain foods, fire worship, and Sabbath-reverence. \*Gregory of \*Nyssa mentions Hypsistarii and \*Jews together. \*Epiphanius of Salamis describes how 'Messalians' or 'Euphemites' gathered for \*prayer (*proseuchai*), \*lamp-lighting, and \*hymn-singing. Many \*altars and \*votive \*inscriptions testify to worship of Hypsistos by simple people. Nothing in the inscriptions suggests that the

Highest God was considered an entity which made all things out of nothing or that the Hypsistos Theos was considered the exclusive object of worship, though it is possible that an oracle given by Apollo at \*Claros inscribed on the city walls at Oenoanda may refer to this cult.

**Hystaspes, Oracles of** A group of fragments, loosely apocalyptic in content, which, according to modern scholarship, may or may not have been composed as a single whole. Themes quoted from the *Oracles* (especially those in the quotations by \*Lactantius, *Inst.* VII, 15 and 18) consist essentially of utterances attributed to a certain Hystaspes, a Persian king who is identified in ancient sources as the king who patronized Zardušt (Zoroaster) or the father of Darius I or both (\*Agathias, II 24, 6; cf. \*Ammianus, XXIII, 6, 32). As with the \*Sibylline Oracles, the fragments are quoted to provide foreign non-Christian corroboration of Christian prophecy (Justin Martyr, 1 *Apology*, 20; 44; Clement of \*Alexandria, *Stromata*, VI, 5, 42–3).

# I

**Iader (Jader)** (Gk. Diadora, Italian Zara, mod. Zadar, Croatia) \*City of \*Dalmatia made a *colonia* under Augustus; signs of centuriation survive. \*Bishop Felix attended the \*Council of \*Aquileia in 381. From the late 5th century the \*Ostrogoths controlled Dalmatia, but after prolonged contention finally ceded control to \*Justinian I's armies in 553. Despite threats from \*Avars and \*Slavs (e.g. in 598/9), Iader remained the principal city of Byzantine Dalmatia from the 7th to 9th centuries. An early Christian \*basilica, \*baptistry, and bishop's palace have been found under the Romanesque cathedral of S. Anastasia, near the Roman forum, and traces of several 5th/6th-century churches nearby. IDS

I. Goldstein, *Bizant na Jadranu* (1992).

**Iamblichus** (AD c.245–c.325) \*Neoplatonist \*philosopher. Details concerning his life are few and mostly contested, mainly because our chief source of information about him is a brief and somewhat fanciful biography by \*Eunapius in his *Lives of the Philosophers and Sophists*. According to this, Iamblichus was born in \*Syria at \*Chalcis (mod. \*Qinnasrin), to a wealthy and prosperous family. \*Syria was then at peace under Roman rule but was soon invaded by the Persian King \*Shapur I in 256. Iamblichus first studied under Anatorius, before either studying with \*Porphyry or reading the works of Porphyry, former student and biographer of \*Plotinus, the founder of Neoplatonism. In time he had a dispute with Porphyry over the practice of \*theurgy, religious \*magic. He later defended theurgy in his *De Mysteriis*. He returned to Syria, where he founded his own \*school either at \*Apamea or \*Daphne, which, according to Eunapius, became very popular and attracted many devotees. Here he established a standard curriculum which sought to systematize the hermeneutics of Plato and Aristotle and which utilized extensively mathematical ideas. In addition, the order in which

Plato's dialogues was to be studied was set down. As with most things about Iamblichus, the date of his death is uncertain, but it is thought that he died c.325 during the reign of the \*Emperor \*Constantine I.

## Works

Iamblichus produced a vast body of work, much of which survives only in fragments. The *De Mysteriis* is a response to Porphyry's criticisms of theurgy and may have been written while he was still in contact with Porphyry, or shortly after their separation. There is some dispute, in terms of both style and content, over whether it was written by Iamblichus himself, but, if not, it almost certainly emerged from his school. We also have fragments from his *De Anima* preserved by \*John Stobaeus, which may also belong to this early period. Four books and fragments of a fifth from a collection of ten on Pythagorean doctrine also survive (*Vita Pythagorica*, *Protrepticus*, *De Communi Mathematica Scientia*, and *In Nicomachi Arithmetica Introductionem*). In addition, in the school Iamblichus wrote large-scale commentaries on Platonic and Aristotelian texts, which also survive in fragments; the Platonic fragments have been collected by J. M. Dillon. We also have references to, or fragments from, a number of other works. The most significant is a large commentary on the \**Chaldean Oracles*. \*Damascius refers to a 28th book of this commentary. We also have fragments in \*John Stobaeus from a collection of sixteen letters addressed to various persons. Yet in spite of an impressive array of titles, no definite order can be imposed on the chronology of Iamblichus' writings, nor in truth can we speak with authority about his philosophical development.

## Doctrine

Like all Neoplatonists, Iamblichus' philosophy is fundamentally grounded in Platonism, but he introduced to the theory presented by Plotinus modifications which included a strong Neopythagorean \*number theory, combined with theurgy from the *Chaldean*

*Oracles* and a basic denial that rational thought alone can bring the philosopher to the gods. But without a surviving metaphysical work from Iamblichus himself we are left, to a large extent, with what was attributed to him by his successors. It seems, though, that Iamblichus was not satisfied with the original Neoplatonic triad of One, Intellect (*Nous*), and World Soul. Concerned about the transcendence of the One, Iamblichus introduced a higher principle above it, which he termed the Ineffable. Iamblichus also introduced divisions among the lower hypostases to account for further plurality. Some scholars believe, mainly on the basis of what we find in \*Proclus, that Iamblichus introduced henads (individual ones, each identified with a traditional god), each of which governs a series of manifestations of itself at lower ontological levels (*seira*), as a means of connecting his transcendent Ineffable with the rest of the chain of being. This multiplication of the ranks demoted individuals in the hierarchy of being and was tied firmly to Pythagorean mathematical proportions, as well as allowing Iamblichus to accommodate numerous Greek and Oriental deities into his system at the various levels. Iamblichus also diverged from Plotinus on the way salvation could be achieved in his system. Against Plotinus, he argued that the soul does descend into matter in its entirety and that its return to its source requires more than the use of dialectical reasoning; return requires also the help of numerous divinities called on through the performance of certain rites collectively known as theurgy.

### Influence

Iamblichus at first breathed new life into pagan philosophy. The \*Emperor \*Julian the Apostate received his soubriquet because of his attempt to reject Christianity in favour of a pagan philosophy based fundamentally on the theurgy of Iamblichus, although Christianity was to win. In the 6th century \*Dionysius the Pseudo-Areopagite adapted Iamblichus' philosophical structure, modified by Proclus, to Christianity and these writings were essential in later shaping the development of Christianity, especially through the \*Latin translations of Duns Scotus Eriugena Iamblichus' influence was once more felt through the Renaissance Neoplatonists such as Marsilio Ficino. **Ibadites** A branch of the \*Kharijites, distinguished from the others by a less actively hostile attitude towards non-Kharijite Muslims: they did not have to be fought and killed if they refused to become Kharijites. Taking their name from the obscure 'Abd Allah b. Ibad (c.700), they first emerged in \*Basra during the Second \*Arab Civil War (684–92) and developed a community there in the following decades. Relations with the \*Umayyad \*caliphate fluctuated, and they took part in some revolts. From Basra they spread to other places, especially North \*Africa and \*Oman, where a substantial Ibadi community still flourishes. GRH

**Ibas of Edessa** (d. 457) Theologian, translator, and \*Bishop of \*Edessa (from 436). As a member of the School of Edessa, Ibas initiated the translations of \*Theodore of \*Mopsuestia (d. 428) into \*Syriac. Of Ibas' works, only a *Letter* about Christology, addressed to Mari 'the Persian', survives. Edessa at the time was deeply divided between those (led by Bp. \*Rabbula) who favoured the Christological position of \*Cyril of \*Alexandria and those who advocated a Dyophysite view in the Antiochene tradition, identifying two Natures in Christ. Despite a conflict with Rabbula, Ibas succeeded him in 436 as Bishop of Edessa and initiated a building programme. At the 'Robber' \*Council of \*Ephesus in 449, the opponents of Ibas effected his condemnation, but the Council of \*Chalcedon (451), after reading aloud the *Letter to Mari*, reinstated him as a bishop. Under

**Iberia** Kingdom of Eastern \*Georgia, also known as Kartli, founded in the 3rd century BC with the help of the Seleucid Empire. The capital \*Mtskheta lay along major trade routes. The strategic importance of Iberia lay in its control of the \*Caucasian Passes. \*Scanda and \*Sarapanis were important forts at the border of Colchis (later \*Lazica). To the south there were frequent border disputes with (Caucasian) \*Albania and \*Armenia. From the 1st century AD Iberia engaged in active \*diplomacy with the Roman Empire. Hadrian exchanged lavish gifts with Parsman II; some survive in burials at Mtskheta. Iberia became a Roman protectorate with the Treaty of \*Nisibis, in 298, and remained allied to Rome through the 3rd and 4th centuries. In 326 or 337 Iberia was converted officially to Christianity under \*Mirian I. Near the end of the 4th century, following the death of the \*Emperor \*Julian, most of Iberia returned to Persian control. In 482–5 King \*Vakhtang I Gorgasali rebelled against Persian rule and united Iberia with part of Lazica. He made possible an autocephalous Church of Georgia with its seat at Mtskheta, and, with his son Dachi, founded a new capital at \*Tbilisi. Iberia was reincorporated into the \*Persian Empire from the end of the 6th century. In the 670s the prince of Kartli Guaranes II transferred his allegiance to the Eastern Roman Empire and was given the rank \*Curopalates. The Arabs conquered Kartli in the mid-7th century. MO

**Ibn al-Kalbi, Hisham** (c.737–819/821) Polymath from \*Kufa. Like his father before him, Ibn al-Kalbi

wrote on a large variety of topics but was particularly renowned as a specialist on genealogies. Of his large oeuvre only a few works are extant today: the collection *Jamharat al-nasab* (Genealogical Tables) survives only in fragments, whereas a short treatise on the most famous \*horses of the pre-Islamic \*Arabs, *Ansab al-Khayl*, and the *Kitab al-Asnam* (Book of Idols) survive in their entirety. In the latter, Ibn al-Kalbi collected information on cults and deities in the pre-Islamic \*Arabian Peninsula and thereby created a valuable source on how Muslim traditionists imagined the religious prehistory of \*Islam.

**Ibn Ishaq** (c.704–767) Medinan collector of biographical material about the Prophet \*Muhammad. Ibn Ishaq was born in \*Medina, and spent time in \*Egypt before settling in Baghdad. He is best known for his association with a *sira* (biography) of the Prophet Muhammad, the *Sirat rasul Allah* or *al-Sira al-nabarwiyya*, which survives only in a form substantially reconstructed and revised by Ibn Hisham (d. 833). This work details the Prophet's career from the time of his first revelation to his death, covering his preaching in \*Mecca, his emigration to Medina, and his military campaigns. The material was drawn from the \*Qur'an, \*poetry, oral sources, and perhaps some earlier written works. Two of the most frequently cited informants are \*Abd Allah b. Shihab al-Zuhri (d. 742) and \*Urwa b. al-Zubayr (d. 712). Some later accounts suggest these two wrote their own, earlier biographies of the Prophet, but the evidence is tenuous. Recent work by Görke and Schoeler has largely disproved the case for a book by 'Urwa, and later accounts cannot even agree on whether al-Zuhri approved of writing tradition down at all.

In any case, the book Ibn Ishaq composed is no longer extant; there are several different later recensions, some more complete than others. The fullest version was substantially revised after Ibn Ishaq's death, first by al-Bakka'i (d. 800), and then again by Ibn Hisham. In Ibn Hisham's introduction (shifted by Guillaume, in his translation, to the back of the book, along with other passages he considered to be non-Ibn Ishaq interpolations), he notes that he is 'omitting' various categories of Ibn Ishaq's material from his recension: that which he considers irrelevant, or is not mentioned by the Qur'an, together with 'things which are disgraceful to discuss' and 'matters which would distress certain people' (*Life of Muhammad*, 691). One notable example of such 'disgraceful' material is the 'Satanic Verses' incident, in which Muhammad was

said to have been tricked by Satan into including verses in the Qur'an praising a trio of local pagan goddesses, before realizing his error and removing them. \*Tabari, cites Ibn Ishaq from other recensions notably those of Salama b. al-Fadl (d. 807) and Yunus b. Bukayr's (d. 814) of which the latter survives, partially, as an independent manuscript. The Satanic Verses episode is included by Tabari, but is omitted by Ibn Hisham. Ibn Ishaq's posthumous reputation was decidedly mixed; while many medieval writers praised him, some accused him of including reports he knew to be false. NC

**Iconium and Konya Plain** \*City set in a central \*Anatolian plain farmed since Neolithic times, in the 4th century in \*Pisidia, and from c.370 metropolis of \*Lycaonia (\*Basil, *ep.* 138, 2). The city is overbuilt by Seljuk and modern Konya, but the Alaeddin Mosque and other Islamic buildings contain \*marble \*spolia.

Ss. Paul and Barnabas passed through (Acts 13: 51–14: 23), and it was at Iconium, according to the legendary late 2nd-century *Acts of Paul and Thecla*, that S. \*Thecla first heard S. Paul preach. \*Bishops and synods are recorded from the mid-3rd century (\*Firmilian of \*Caesarea in \*Cyprian, *ep.* 75, 7, 4; \*Eusebius, *HE* VI, 19, 18; VII, 7, 5; VII, 28, 1). \*Amphilochius (bishop c.370–after 394), cousin of \*Gregory of \*Nazianzus, corresponded with \*Basil.

\*Shapur I captured the city in 260 (\**Res Gestae Divi Saporis*, 33). \*Brigands from the highlands of \*Isauria threatened it regularly. A raid in 353 was revenge for some Isaurians being fed to wild beasts in the Iconium amphitheatre (\*Ammianus, XIV, 2, 1)—there was no Lent or \*Easter amnesty for Isaurian bandits (*CTh* IX, 35, 7 of 408). S. Thecla averted a later brigand attack (*MirThecl* 6). Nevertheless, rural settlements in the Konya Plain grew in number and size in the 5th to 7th centuries, spreading onto marginal land to accommodate an increased population. Iconium was first overthrown by the \*Arabs in 732. PhN; OPN

**Iconoclast Controversy** The years c.726–87 and 815–43 were a period of official imperial support for a religious movement in the Eastern Roman Empire that rejected the veneration of \*icons. The full extent of Iconoclasm, including support for policies and oppression of dissenters, is debated. The uncertain chronology of the early sources, which include \*letters of the \*Patriarch Germanus and the defence of icons by \*John of \*Damascus, makes the precise development of principles unclear. While arguments evolved, at all times the primary issue was the doctrine of salvation, whether icons were efficacious or instead confused the material and the holy and thus promoted \*idolatry.

Although opposition to icons had its roots in Late Antiquity, proximate causes for official Iconoclasm were

views hostile to the practice of *proskynesis* (\**adoratio*) before icons, and opposition to broader justifications for icons emerging from the \*Quinisext Council (692). The second period of \*Arab conquests of the early 8th century and a volcanic eruption in summer 726, in the Aegean Sea between the islands of \*Thera and Therasia, also had an effect. Idolatry was identified as the cause of divine disfavour. More broadly, the controversy involved an assertion of imperial authority (if not necessarily Caesaropapism) vis-à-vis the religious hierarchy. Islamic iconoclasm was roughly contemporaneous; its supposed influence on Byzantine policy through Bishop \*Constantine of \*Nacolea is a tradition that dates to the Second \*Council of Nicaea of 787.

Early arguments against icons were based on the Old Testament prohibition against graven images. Imperial policy centred on curbing the inappropriate honour shown in the *proskynesis* before icons, honour which was rightly owed to the \*Eucharist, to the Church, and to the \*Cross, which was both a divine emblem and a symbol of imperial authority and \*victory. The \*Emperor \*Leo III installed a cross on the Chalke Gate, the main entrance to the Great \*Palace in \*Constantinople. His alleged order to remove the Christ icon from the gate, however, seems to be a later, polemical interpolation of the early 9th century.

Leo III may have announced his support of iconoclasts publicly in 726. In 730, he convened a \*Silentium at which he asked church leaders to subscribe to a new imperial position on images, and the Patriarch Germanus resigned in opposition. He was replaced by his former syncellus, Anastasius, who submitted to the policy. Popes \*Gregory II and \*Gregory III were also opposed to the imperial position.

Limited opposition to images gained wide clerical support by the 740s, and a letter from Germanus to Thomas of Claudiopolis suggests that the movement was widespread. \*Artavasdus may have restored icons during his revolt in 741 against \*Constantine V, although political motivations for this cannot be discounted.

The development and institutionalization of Iconoclasm under Constantine V, evidenced by his preaching throughout the Empire and his document the *Peuseis*, were possibly associated with a \*plague that swept the Empire 746–50. Arguments in this phase emphasized theological and Christological perspectives, namely that icons threatened to confuse the human and divine natures of Christ by depicting only the former. The *Horos* (Definition) of the Council of \*Hieria (754) forbade the display of images in churches or in private homes, and asserted that the Eucharist was the only appropriate image of Christ.

The *Horos* also emphasized the official forms of spiritual authority, vested in the clergy, against unofficial claimants, including monks and \*holy men. This

marked the division between monks on the one hand and the emperor and clergy on the other that was to be sustained throughout the subsequent history and historiography of the Iconoclast Controversy. The organization of monastic opposition to Iconoclasm before the 9th century is uncertain, though, and there were certainly Iconoclast monks.

There is some evidence of the destruction of images in the period after 754, although it was not systematic. There is also possible evidence of the destruction of texts relating to the theology of images, and of \*mosaics, which were replaced by \*crosses or whitewashed. A period of limited and selective persecution of monks and \*monasteries, beginning with the execution of S. Stephen the Younger in 765 and ending in 772/3, is probably connected to a broader purge of Constantine's political enemies. However, there was a successful propaganda campaign against Constantine and his policies, which underlies the historiographic record of his and his father's reigns. RCW

**iconography, apocalyptic** Apocalyptic images in Late Antiquity anticipate the End of Time and the return of Christ the King rather than a catastrophic destruction of the world. The Books of Revelation, of Daniel, and of Ezekiel are drawn upon and used in various combinations with imperial iconography. Christ is seated either on a \*throne or a globe holding an open scroll, or a scroll with seven seals, or an open \*book with inscriptions from prophecy or the New Testament. He wears imperial robes of \*purple and \*gold, and can be either bearded or beardless. The four Rivers of Paradise, the four evangelist symbols, the twenty-four elders, a heavenly \*court of \*angels and saints, and the \*cities of \*Bethlehem and \*Jerusalem often surround Christ. The \*apse \*mosaics at Hosios \*David in \*Thessalonica and S. Vitale in \*Ravenna are variations on these themes. The absent Christ, who will return at the End of Time, is represented by the Agnus Dei or the *hetoimasia*, an empty throne with a Jewelled \*Cross (*crux gemmata*) or a Gospel Book. A simple cross is found in some church \*apses on the \*Tur 'Abdin; many early Christian writers thought that the Sign of the Son of Man would be a Cross in the Heavens. Apocalyptic imagery is most often found in apses or \*domes of churches, mausolea, or \*baptisteries, indicating an anticipation of resurrection at the Second Coming. The Last Judgement is rarely shown

in Late Antiquity, though \*sarcophagi do show Christ separating the \*sheep from the \*goats. DHV; OPN

G. Hellemo, *Adventus Domini: Eschatological Thought in 4th Century Apses and Catecheses* (1989).

**iconography of New Testament events** Christ's life, \*miracles, and Passion are major themes derived from Gospel narratives. The earliest 3rd-century scenes emphasize Christ as a miracle worker: for example, Healing the Paralytic and Walking on Water (\*Baptistry, \*Dura Europos, c.245) and Healing the Haemophiliac (\*Ss. Marcellino e Pietro \*catacomb). Banqueting scenes are frequent on 3rd-century \*sarcophagi and \*catacomb painting, but it is unclear whether the seven figures seated around a table are shown attending an Agape feast, a \*refrigerium (meal celebrating the deceased), the Last Supper, or a heavenly banquet; it may be that all of these memorial feasts are being represented simultaneously and \*typologically. By the 4th century, the repertoire of NT scenes expands with emphasis on specific aspects of Christ's earthly life. The Annunciation and the Adoration of the Magi are the most frequent representations of his birth. Christ's \*baptism, which initiated his earthly ministry and refers to all Christian baptism, is frequently shown on \*sarcophagi and in \*baptisteries since both deaths and baptisms are rites of passage between earthly life and rebirth into the Kingdom of Heaven. Christ's most frequently depicted miracles, such as the Raising of Lazarus, restore life or health. Heroic feats such as turning water into wine at the Wedding of Cana and the Multiplication of Loaves and Fishes are depicted, perhaps for their \*Eucharistic significance. Parables are rarely represented, though that of the Wise and Foolish Virgins (Matt. 25:1–13) appears in the \*Rossano Gospels because it refers to the return of the Bridegroom. Scenes from the Passion narrative are notable in their focus on triumph. The Entry into Jerusalem (an \*adventus) and Christ Before Pilate (as an equal) are given triumphal overtones. Scenes of torment such as the Flagellation, the Crucifixion with a dead Christ, or the Lamentation are rarely or never shown. The Maries at the Empty Tomb and the Ascension dominate the post-Crucifixion events, as eyewitness testimonies of the Risen Christ. DHV

Grabar, *Iconography*.

Schiller, *Ikonographie*.

**iconography of Old Testament events** The earliest surviving Jewish and Christian arts share

common Old Testament scenes such as the Sacrifice of Isaac and the Crossing of the Red Sea, though the emphasis is either on Jewish history or Christian typological interpretations: the Sacrifice of Isaac, for example, as Yahweh's covenant with his people or as a prefiguration of Christ's sacrifice and the \*Eucharist. The \*synagogue at \*Dura Europos, \*Syria, demonstrates that Jewish communities commissioned a variety of triumphant scenes from Jewish history and Yahweh's covenant with his people. Christian patrons favoured stories with themes of salvation, such as Jonah and the great fish, the Three Hebrews in the Fiery Furnace, and Daniel in the Lion's Den, found in such funerary contexts as the Roman \*catacombs. By the 4th and 5th centuries the repertoire of Old Testament scenes had expanded and was integrated into a system of \*typology where antetypes interwove strands from sacred history and the \*liturgy. Old Testament narratives and figures offered a dramatic variety of subjects open to iconographic interpretation. At S. Vitale, \*Ravenna, scenes of offering by Moses, Melchizedek, and Abel are antetypes of the Eucharistic offering and the offerings of the people in the liturgy. Old Testament events demonstrated God's work through sacred history and its \*apocalyptic culmination at the End of Time. The antetypes from Jewish history offered a means of enriching commentary on the liturgy and Christian history because they were viewed as forerunners, or counterparts, of New Testament events. DHV

**iconostasis** See SCREEN.

**icons** The \*Greek word *eikon* may denote any visual image, but in religious contexts it usually denotes a cult or sacred image, particularly the portrait of a god or holy person. Parallel words include the Greek *eidolon* or *agalma*, and the \*Latin *imago* or *simulacrum*, also used for memorial portraits of ancestors or \*emperors as well as for representations of divinities (see FAYYUM PORTRAITS). In Christian practice, the term normally refers to visual depictions of Christ, the Virgin \*Mary, \*angels, or the saints. Christian icons also depicted biblical narratives related to church feasts (e.g. the

Hospitality of Abraham) or scenes from the life of Christ or a saint. Portrait icons normally present their subjects in a frontal pose (showing part or all of the body) with surrounding details usually limited to identifying attributes, and minimal landscape or architectural structures to provide context. The saint's name also appears.

Icons can be of any size and made from a wide variety of materials (e.g. \*ivory, \*mosaic, wood, or cloth), but most commonly are portable panel paintings made with egg tempera or encaustic on prepared wood. \*Gold leaf may be applied to backgrounds and details (e.g. haloes). Precious metal coverings sometimes protect the images except for their faces and \*hands. Portable icons are often placed on stands and changed according to the feast or season. Permanently installed icons decorate church walls, domes, apses, and screens (*iconostases*).

Although Christian pictorial art had emerged by the early 3rd century, the oldest surviving icons (in the strict sense of the term) are those which have been preserved in the \*Monastery of Mount \*Sinai and include a 6th-century image of Christ and a small image (now in Kiev) of the young \*military \*martyrs Ss. \*Sergius and Bacchus. Although styles evolved through the centuries, icon painters normally based their work on existing models, attempting to produce faithful copies rather than original works. They also tended to eschew naturalism by using broken or inverted \*perspective, limiting cast shadows, and indicating garment folds with sharply delineated planes and highlights.

These images were usually produced by trained icon painters (often monks). However, some icons were believed to have miraculous origins—to have been \**acheiropoietos*, made without hands. These include the famous \*Mandylion, which tradition says was thought to have been created by the impression of Jesus' face on a cloth brought by a messenger from the King of \*Edessa, and the \*Camuliana image of Christ, imprinted supernaturally upon the veil of a \*Cappadocian woman called Hypatia. The originals no longer survive but were copied and reproduced countless times. Although some were known to work \*miracles, the primary basis for an icon's sanctity was its reference to the holy person or event which was its prototype, and its significant role in personal and communal devotional practice. Christians accorded these images special veneration by offering \*prayers, or such signs of honour as \*kisses, prostration, burning candles, or \*incense. This honour they understood to be transmitted to the icons' prototypes. Over the centuries such practices were sometimes deemed idolatrous and, during the \*Iconoclast Controversies, secular and religious officials sought to destroy the images and to prohibit their liturgical use. **Ildefonsus of Toledo** \*Bishop of \*Toledo (657–67). Professed since youth in the suburban \*monastery of Agali, Ildefonsus succeeded his teacher \*Eugenius as bishop. A prolific author, his *On Illustrious Men* (*Vir. Ill.*) follows in the tradition of \*Jerome, \*Gennadius of \*Marseilles, and \*Isidore of \*Seville, but focuses as much on the personalities, monasticism, and pastoral endeavours of his episcopal predecessors as on the literary accomplishments of luminaries such as Isidore and \*Braulio of Saragossa. Ildefonsus also wrote two surviving theological treatises, *On the Virginity of Saint Mary* and *On the Knowledge of \*Baptism*, a guide for the newly baptized, *On the Journey from the Desert*, and contributions to the \*liturgy. He is the subject of a biographical eulogy (*BHL* 3917) by \*Julian of Toledo, his successor as bishop, and of an early medieval hagiographical life. GDB

**Illerup (Illerup Ådal)** Site of large \*weapon deposits in Jutland, Denmark. Large-scale excavations since the 1950s have produced more than 10,000 objects from four different sacrifices between c. AD 210 and 450. Weapons (spears, javelins, shields, swords, bows and arrows, battleaxes) have been excavated as well as personal \*dress fittings, valuables, \*tools, horse \*harness, and devices for medical treatment. The objects are interpreted as the \*arms and belongings of defeated warrior groups, which were collected and sacrificed. The largest deposit, from around AD 210, comprises equipment belonging to a group of about 400 individuals. On the basis of the material quality and production techniques of the weapons and equipment, different social levels of Germanic warriors can be distinguished. Of particular importance is the large quantity of organic items (e.g. shafts, shield boards, \*combs). The weapons show evidence of ritual destruction during the sacrifice as well as damage related to previous fighting. AR

**Illus** Soldier under the \*emperors \*Leo and \*Zeno. When \*Basiliscus seized power in 475, Illus deserted Zeno. After Basiliscus failed to keep his promises, Illus helped restore Zeno to power, though he also kept Zeno's brother \*Longinus as a hostage in \*Isauria between 475 and 485. In 477 he was appointed \*Magister Officiorum and \*patricius, and was made \*consul for 478. Upset at Illus' betrayal of her brother Basiliscus, \*Verina, Zeno's mother-in-law, tried to have Illus murdered in 478. When the plot failed, Zeno turned her over to Illus who imprisoned her at \*Papirius in Isauria. Illus was instrumental in defeating \*Marcianus' revolt in 479. Then \*Ariadne, Verina's daughter and Zeno's wife, tried to have Illus killed. Zeno moved him to \*Antioch in 481 and promoted him to \*Magister Militum per \*Orientem. However, after this attempt on his life, Illus habitually wore a hat to conceal the loss of an ear.

When Illus refused to release Longinus in 483 he was dismissed from his post. He rebelled in 484 and Zeno sent another Isaurian general, \*Leontius, against him. Illus, now with the support of Verina, declared Leontius \*Augustus at Antioch in \*Syria. After \*John Scytha defeated Illus at Antioch he retreated to Papirius in Isauria. In 488 the fortress was betrayed and the heads

of Leontius and Illus were impaled on the \*walls of \*Constantinople.

Illus had two brothers named Flavius Appalius Illus Trocundes and Aspalus, and a half-brother \*Lilingis. He was a Christian with two daughters, Thecla and Anthusa. He was 'fond of learning' and was noted for reading during the siege of Papirius. HE

**illustris** See TITLES OF HONOUR, ROMAN.

**Illyricum** Term used by the Late Roman \*administration to denote areas of the \*Balkans. It is not used in the \*Verona List.

The \**Notitia Dignitatum* records the \*Dioecesis of Illyricum, under the \*Praefectus Praetorio of \*Italy, comprising the north-west Balkan provinces of \*Pannonia Prima and Secunda, \*Savia, \*Dalmatia, and \*Noricum Ripensis and Mediterraneum ([*occ.*] II, 2–5 and 7; II, 28–34), that is to say the provinces of the Verona List Dioecesis \*Pannoniae, except for \*Valeria.

At the same time, the *Notitia* lists the Praefectus Praetorio of Illyricum as controlling the \*Dioecesis \*Macedoniae and the Dioecesis \*Daciae (in modern \*Greece and the central north Balkans), with the Dioecesis Macedoniae being administered directly by the Praefectus himself and Daciae having a \*Vicarius (*Not. Dig. [or.]* I, 3 and 34; III, 1–19).

\*Hierocles (638, 1–657, 9) lists the cities of the provinces of the Dioecesis Macedoniae and the Dioecesis Daciae followed by those of the province of \*Pannonia, under the heading Eparchia Illyrikou.

*Barrington Atlas*, 102, 49–50, 55, 57–60.

**images, attitude towards** At the heart of articulate ancient attitudes toward images (*imagines*) is the tension between visual perception and reality. In the critiques of intellectuals of all kinds, including \*pagans, \*Jews, and Christians, the influence of Plato's distrust of the sense of sight can be found. Man-made art objects, particularly representations of the gods, were judged to be mere outward appearances to which less-educated viewers mistakenly attributed intrinsic power. Plutarch (c.AD 46–120) argued that the ancient Romans believed it was both impossible to perceive a deity with the eyes and disrespectful even to attempt to make such an image (*Life of Numa*, 8, 8). Portraits, even of living humans, were thought to be particularly deceitful. For example, according to his biographer \*Porphyry, the \*Neoplatonist \*philosopher \*Plotinus (c.205–270) refused to allow his likeness to be recorded, insisting that it would be no more than an image of what was already only an image: his physical appearance

(*VPlot* 1). Porphyry elsewhere defended the anthropomorphic depictions of the gods, arguing that no one actually mistook a statue for a divine being (*Peri agalmaton*, 1). Nevertheless, because honour shown to them was presumed to be transmitted to the immortal or divine beings they represented, most Roman religious rituals were performed in the presence of images of the gods. Similarly, imperial \*portraits were a central focus for the conduct of civic ceremonies.

The Jewish philosopher Philo (c.280 BC–AD 50) followed Plato in his objection to religious images, arguing that artisans who fashioned images out of earthly materials had led humans into error about the proper conception of the ever-living God, citing the prohibition of images in the Ten Commandments (Exod. 4:20; Deut. 5:8). Other Jewish thinkers, including Josephus, understood the prohibition of figurative art to be definitive, and the Roman introduction of imperial portraits into the \*city of \*Jerusalem a form of desecration (*Bellum Judaicum*, II, 9, 2). Despite these clear condemnations in documents, archaeological evidence shows that Jews incorporated figurative subjects into the decoration of their \*synagogues in the 3rd to 6th centuries (e.g. at \*Dura Europos, \*Sepphoris, and Beth Alpha). According to the Jerusalem \*Talmud, some \*rabbis tolerated pictorial images in synagogues so long as congregants did not bow down to them.

Following S. Paul's condemnation of those who worshipped objects made of stone, metal, or wood (Rom. 1: 22), the first generations of Christian teachers believed that the practice of honouring images of the pagan gods was idolatrous. Such writers as Justin Martyr, Clement of \*Alexandria, and Tertullian insisted that no man-made artefact could circumscribe the divine being and mocked those who mistook pagan statues for living divinities (e.g. Tertullian, *De Idolatria*). A similar sensibility was expressed in the 36th canon of the \*Council of \*Elvira, which forbade paintings on the walls of churches, lest viewers be tempted to venerate them. Nevertheless, the emergence of two-dimensional Christian symbolic narrative art in the early 3rd century and the \*Cleveland Marbles serve as evidence that some Christians did not regard representational art as in itself idolatrous. As Christianity was adopted by Roman \*emperors during the 4th century, religious \*iconography blossomed. Monumental depictions of Jesus, the Virgin \*Mary, and other holy men and women appeared on the walls of \*basilicas and shrines. Some writers continued to denounce visual depictions of the divinity, as in the \*letter supposedly written by \*Eusebius to \*Constantia—a document whose authenticity is controversial. Others cautioned against the potential abuse of saints' portraits. A famous correspondence

between \*Gregory the Great and Serenus of \*Marseilles demonstrates Gregory's conviction that religious pictures had a permissible, didactic use, that Christians should not mistakenly adore them, and that they should not be destroyed (*epp.* IX, 105 and XI, 13). \*Icons became widely popular at all levels of society from the 6th century onwards; \*Agathias was not alone in writing \*epigrams in praise of icons and the spiritual beings they represented.

The representation of Christ continued to be a matter of debate. A canon of the \*Quinisext Council (in Trullo) of 692 condemned the use of a symbolic lamb in place of a human representation of Christ, arguing that to do so was to deny the Incarnation. These matters came again to the fore during the \*Iconoclast Controversies of the 8th and 9th centuries, when the implications of images for orthodox Christological doctrine were disputed. The Second Council of \*Nicaea in 787 was able to assemble a formidable dossier of patristic testimony in favour of Christian veneration (Gk. *douleia*) of icons, distinct from the adoration (Gk. *latreia*) offered legitimately only to God.

Early \*Islamic attitudes toward images were more consistently negative than those of either Jews or Christians. The \*Qur'an includes no specific condemnation of artistic representations. But Islamic \*hadith maintained that, on the Day of Judgement, those who make images will be obliged to animate their works or be punished. The first historical act of Islamic iconoclasm was \*Muhammad's destruction of the images of native Arabian deities, housed in the Ka'aba at \*Mecca. (631). Although actual practices varied, the general view is that it is impermissible to depict living (animated) beings, particularly their \*eyes. The most important early condemnation was that of the \*Caliph \*Yazid II, who issued an iconoclastic decree in 732, about the time that the Byzantine Emperor \*Leo III began his campaign against Christian images. **images of emperors** These were commonplace, particularly in civic settings. They fulfilled various functions. Imperial busts, statues, and coins developed their own, related, iconographies which were subject to stylistic and ideological changes over time, although the three most common types were military (cuirassed), civilian (togate), and heroic (naked). During the reign of an individual \*emperor, there was a marked standard for the imperial image across the Empire. The emperor's image was symbolic of his legitimacy and status (in approval e.g. \*Lactantius, *Mort.* 25, 1; \*Zosimus, II, 9, 2). Destruction of imperial images could indicate disapproval (e.g. *Mort.* 42, 1; \*Eusebius, *HE* VIII, 13, 15). Imperial portraits might be reworked with the image of a successor (e.g. \*Jerome, *In Abacuc*, III, 14).

The imperial image evoked the emperor himself, and mistreatment of it imperilled its perpetrator. An insurrection might take the form of attacks on imperial images, as during the \*Antioch Statue Riots (\*Libanius, VII, 23). The symbolic power of imperial images was such that they could be places of refuge for slaves (\**Digest*, XXI, 1, 17, 12) or sites of religious portents. An emperor's image could also be the focal point of the \*imperial cult; it might be honoured in \*temples, and carried in \*procession during \*festivals. The reverence paid to imperial statues seems to have been influential on the Christian cults of \*relics and \*icons. *See also* PORTRAITURE, IMPERIAL.

**images of gods** The personified forms of the pagan gods were represented in multifarious contexts performing various functions. \*Mosaics showing Dionysus were a common theme for interior decoration in the \*houses of great men in North \*Africa and \*Antioch. Statues of the gods might be among the amenities of a \*bathhouse. Properly consecrated by a competent person, a sculpture might become a cult statue or a statue believed to avert evils, like that of Heracles Alexikakos set up at \*Ephesus (\*Lactantius, *Inst.* V, 3, 14). It might even, once the appropriate rites had been performed, be able to utter \*oracles, like the statue of Neryllinus at Troy (Athenagoras, *Legatio*, 26, 3–4) or the anti-Christian image of Zeus Philios set up by \*Theotecnus, \*Curator Rei Publicae of \*Antioch in the final stages of the Great \*Persecution.

What these different kinds of images had in common was that each individual divinity was recognizable by his particular attribute, the lyre of Apollo or the snake-wreathed staff of Asclepius. The learned \*Neoplatonist

philosopher \*Porphyry in his *On Images* (*Peri Agalmaton*), a treatise which survives mostly in fragments cited in \*Eusebius, *Praeparatio Evangelica*, interpreted these emblems as \*allegories of the various interlocking natural functions of the gods. He considered that those who could not discern the allegorical significance of the divine images (by whom he presumably means the Christians) were as ignorant as an illiterate man faced with an \*inscription (*On Images*, fr. 1), a view in parallel with his estimate of their foolishness in reading \*allegory into unpromising texts such as the Bible (Eusebius, *HE* VI, 19, 4), when they could like him be allegorizing \*Homer.

In the Christian Empire, images of the gods had various fates. \*Constantine I himself took sculptures from many \*cities of the Empire to \*Constantinople to be displayed not for their pagan significance, but merely as works of art. Before the doors of the new \*Senate House stood the statues of Zeus from the \*oracle at \*Dodona and of Athena from the island of Lindos. A collection of masterpieces displayed by the \*court chamberlain \*Lausus included the Aphrodite of Cnidus and the statue of Zeus from \*Olympia; at Olympia itself, in the 5th century, it seems that a gallery was arranged along the portico at the side of the \*temple for the display of ancient bronzes.

Other well-known statues were less fortunate; the chryselephantine Athena was removed from the Parthenon by 'those who move what should not be moved', but it was only in a spiritual sense that she went to live with \*Proclus (\*Marinus, *Life of Proclus*, 30). Other images were buried ritually, or had \*crosses marked on their foreheads to exorcize any lingering \*demons. Casual representation of the gods, such as the images stamped on pottery \*lamps, came gradually to be supplanted by Christian themes. But Dionysus continued to stagger, hog-whimpering drunk, across the dining-room floors of the great men of Antioch well into the 4th century.

**imitation and allusion, art** Romans favoured art which imitated nature. For Quintilian and Vitruvius naturalism was the ultimate goal of the arts; \*Pliny the Elder records in his *Natural History* (35, 65) a famous anecdote about grapes painted by Zeuxis which appeared so realistic that they deceived the birds.

Late Antique artists, however, rather than merely copying nature preferred to produce artefacts which could be the object of highly complex symbolic and exegetical interpretation. For \*Philostratus the Younger and \*Epiphanius of Salamis art cannot be true and images lie. It is against the background of such rhetorical assumptions that \*Plotinus and \*Proclus elaborated a new understanding of artistic mimesis in an overall philosophical framework. Plotinus in his *Enneads* (V, 8, 1–2) defends art as resulting from the assimilation of a higher archetype. Visible beauty can lead those who contemplate it through metaphysical *mimesis* ('likeness') to higher realms of beauty, beyond physical appearances. Proclus in his commentary of Plato's *Republic* defines the artistic image as a likeness that encompasses morality as well as visible similarity, and therefore intimates a higher spiritual truth.

From the 4th century onwards, Christian wall paintings and \*mosaics provided a complex network of allusions to sacred realities. They were able to add typological resonance to the liturgical drama performed between the walls on which they were painted. So, the mosaics in the sanctuary at S. Vitale in \*Ravenna which represent Abraham entertaining \*angels and preparing Isaac for sacrifice on one side and the Sacrifice of Abel and Melchizedek's offering of bread and wine on the other served to bring out the significance of the \*Eucharist being offered at the \*altar below.

With the growing popularity of \*icons from the 6th century onwards the faithful were able to look directly at a physical representation and see beyond it to a higher spiritual reality, so that Christians came to recognize the saints they saw in their \*dreams from the portraits of them they had seen on panel paintings. The notion that individual representations on icons refer to a higher spiritual archetype, as articulated by \*John of \*Damascus and other opponents of \*iconoclasm, resonated therefore with a broad Christian public. S. Bussels, *The Animated Image: Roman Theory on Naturalism, Vividness and Divine Power* (2012), 57–101.

**imitation and allusion, Greek** Mimesis of earlier texts was a common feature of much ancient literature. In particular, the demands of high-style Greek prose from the later 1st century AD onwards required authors, whether \*pagan or Christian, to engage in imitation of the language of earlier authors. The models were overwhelmingly Attic prose writers and poets, but the \*epic dialect originally used in the poems of \*Homer and then developed by Hellenistic authors such as Callimachus was used in poetry. This linguistic mimesis, though demanding, was also creative, allowing the formation of new words and the extension of the range of meaning of certain items of vocabulary, as well as the use of words of Hebrew origin. A similar process of creative imitation can be seen at the level of content in the poetry of \*Nonnus.

Imitation and allusion constitute communicative systems in their own right. The ability to use the classical language and genres, or to allude to specific texts and narratives, served to mark both author and audience as recipients of classical culture, as \*Basil of Caesarea advocated in his *Address to Young Men on How They Might Derive Benefit from Greek Literature*. The use by Christian authors of allusions to classical poetry can be read in this way, but may also function as a means of showing that Christian culture could not only equal but surpass its classical predecessors, as argued by \*Eusebius in his *Praeparatio Evangelica* and, rather differently, by \*Theodoret in his *Cure for Greek Diseases*. RW

A. P. Johnson, 'Hellenism and its Discontents', in *OHLA*, 437–66.

G. Agosti, 'Greek Poetry' in *OHLA*, 361–404.

**imitation and allusion, Latin** Late Antique \*Latin authors engaged assiduously with the work of their predecessors in a variety of ways, ranging from allusion and stylistic imitation (*mimesis*) through to extensive reuse of material, often without acknowledgement. Poets such as \*Ausonius and \*Claudian frequently imitated and alluded to classical forebears, especially \*Vergil, as did authors of explicitly Christian poetry, including \*Paulinus of Nola, \*Juvenius, and \*Prudentius, who combined traditional literary forms and tropes with biblical allusions. The \*centos of authors such as \*Proba, Ausonius, and \*Luxorius may be regarded as extreme examples of Late Antique engagement with Vergil.

Similar trends are evident in \*panegyrics, especially the *Duodecim \*Panegyrici Latini*, in which authors frequently followed earlier models closely (e.g. \*Pacatus' borrowings from the *Panegyricus* of Pliny the Younger). Panegyrists also inserted allusions to other ancient prose and verse authors, as did some historians, most notably

\*Ammianus Marcellinus (Kelly). More generally, it was usual for writers of narrative histories and epitomes to incorporate unattributed material from earlier authors, as is evident from the number of texts that appear to draw on the so-called \**Kaisergeschichte*. Pseudonymous texts, such as the spurious correspondence between \*Seneca and S. Paul, also flourished during Late Antiquity, with the most notable example being the enigmatic \**Historia Augusta*. **immunity** Term in Roman public \*law for a fiscal exemption from \*taxation or other state burdens. It was used in a similar fashion by 6th-century \*Frankish kings for reallocating state revenue, ostensibly to offset some other service performed by the immunist and deemed valuable to the state.

A new style of immunity arose in the late 6th and 7th centuries prohibiting judges from entering \*estates to collect judicial fines and fees owed to the fisc; these revenues passed instead to the recipient of the exemption. These are conveniently called judicial immunities to distinguish them from the earlier type but they are still fiscal because they involve renders due to the fisc. The relation between late 7th-century \*charters documenting judicial exemption and taxation is controversial, as is the relation of immunity to private jurisdictions. Frankish immunities were granted to clerics, churches, and lay magnates. ACM

A. C. Murray, 'Merovingian Immunity Revisited', *History Compass* 8/8 (2010), 913–28.

**imperial cult** A term synonymous with '\*emperor worship', referring to the performance of religious rituals with a focus on both past and current emperors. Posthumous deification had become the official norm under the Julio-Claudians (excepting 'bad' emperors) in the 1st century AD. Notions about the divinity of a living emperor varied among the general population but offerings were routinely made to the \**numen* or \**genius* of the living emperor. \*Oaths could be sworn by the *genius* of the emperor (Tertullian, *Apology*, 32; Minucius Felix, 29, 5). Under the \*Tetrarchy, imperial iconography promoted close associations between \*Diocletian and Jupiter, and between \*Maximian and Hercules.

Imperial cult was supported by an infrastructure of \*temples, and a priesthood which continued to operate in places into the late 5th, and perhaps early 6th

century. The adoption of Christianity as the imperial religion challenged but only slowly dislodged traditional practices. Several Christian emperors were styled *divus* after death. These included \*Constantine I (*CIL* VI, 1151, dating from 337–40) and \*Theodosius I (*CIL* VI, 1783, dating from 431). In \*Africa, continuity of imperial cult continued under the \*Vandal kings, under whom a priesthood of the imperial cult survived for decades. Practice changed most decisively as East Roman imperial ritual became more emphatically Christian—especially in the 5th to 7th centuries, when coronation by the \*Patriarch of \*Constantinople, latterly in church, emerged.

The religious character of the imperial cult in Late Antiquity is therefore problematic, and was probably viewed by some Romans as problematic in the course of the 4th century. Offering \*incense to the image of the emperor had been from the time of Pliny the Younger in the first decade of the 2nd century onwards (*ep.* X, 96–7) precisely the very simple \*sacrifice demanded of Christians to test their willingness to honour the 'natural Gods' and Christians such as Athenagoras in the late 2nd century had demurred, assuring the emperor that they prayed for him, even if they did not pray to him (*Legatio*, 37). There is no evidence of such offerings being continued after Constantine (except under \*Julian); indeed when \*Constans I gave permission for a \*temple for the imperial family to be erected at \*Hispellum in 337 he specifically forbade that it be 'polluted with the deceits of any contagious *superstitio*' (*ILS* I, 158–9). It may be argued that the traditional honours paid to the emperor's power came in the 4th century to be 'secularized', along with other apparently pagan activities, from reading \*Vergil to decorating the dining-room floor with a \*mosaic of Dionysus.

A Christian understanding of imperial power slowly developed in parallel to this process. In his \*panegyric celebrating 30 years of Constantine as an emperor, \*Eusebius of Caesarea melded Hellenistic political theory with a conviction that emperors owe their authority to the One God of the Christians. Such thoughts came eventually to be expressed in imperial ideology, so that under \*Justinian II in 692/5 the face of Christ came to be represented on the obverse of the \*coinage.

**imperial estates** Different types of lands dispersed across all parts of the Empire comprised the Late Roman imperial estates. There was the *\*Res Privata* in the strict sense, the *\*Domus Divina*, and the *Fundi Fiscales* or *Tamiaci*. From the mid-4th century AD onwards these terms were often used synonymously, reflecting an increasingly fluid use of these financial resources by the state.

Tenancy was the usual method of exploitation everywhere, though its terms varied. Lands might be managed both by administrators and tenants (*\*actores* and *\*conductores*), but remain under the control of imperial agents. Even more frequently the government encouraged conversion of public landed resources into private landed capital by the practice of *ius privato salvo canone* (*CJust* XI, 62, 10) and compulsory purchases of uncultivated land, or *\*agri deserti*.

Large estates, many of which were imperial lands, generated huge revenues, much of which accrued in cash. In *\*Africa Proconsularis* and in *\*Byzacena*, for instance, imperial estates constituted 18.5% and 15% respectively of the total area of the two provinces (*CTh* XI, 28, 13). In *\*Cyrrhus*, in *\*Syria*, 16% of the taxable land units (*\*iuga*) of the region belonged to the state. Imperial domains are also attested in *\*Italy*, *\*Bithynia*, *\*Cappadocia*, *\*Palestine*, and, of course, *\*Egypt*. In the latter, large estates, considered part of the *Domus Divina*, were managed by members of the landed imperial aristocracy (P.Heid. IV, 219–20; P.Oxy. L 3585; *Sammelbuch*, XX 14091). These men wielded considerable social and economic influence over private as well as imperial estates. *\*Coloni*, who usually cultivated land as tenants (*CJust* V, 62, 8), increasingly became hereditary workers (*CJust* XI, 68, 1), bound to estates by fiscal liability towards the landlord (P.Oxy. XVI, 1915 of AD 560: *\*anapographoi georgi*; P.Oxy. L, 3584 of AD 439–62: *paroikos*, both compared with *CJust* XI, 48, 22; *CJust* I, 2, 24; *NovJust* 7, 120). The practice of estate workers paying taxes to the imperial authorities through their landowners progressively became part of a public legal practice whereby such liabilities were associated with an estate's acquisition of privileged fiscal status (*\*autopragia*). **Imru' al-Qays** Arabian military leader known from the Namara tombstone (AD 328), which identifies him as 'King of the Arabs' and \*phylarch; it describes his subjugation of Arabian tribes and victory at \*Najran. The Namara tombstone, one of the earliest extant \*Arabic-language inscriptions, is open to various interpretations, prompting debate over the historicity of Imru' al-Qays, though he is often linked to the Imru' al-Qays b. 'Amr mentioned in Muslim-era narratives about the \*Lakhimids (Retsö, 467–80, Bowersock, 138–42). He is not to be confused with the 6th-century Arabian poet Imru' al-Qays, author of one of the Seven Golden Odes. PAW

**incantation bowls** Plainware pottery vessels with Aramaic, Mandaic, or \*Syriac inscriptions protecting named men and women from demons and malevolent beings. Major concentrations occur in southern \*Mesopotamia, at Nippur and adjacent cities, including Kish and Babylon. \*Nineveh in northern Mesopotamia has also yielded sporadic specimens. They date from the Late \*Sasanian to the Early Islamic period (5th–7th cents.), the latter confirmed by their archaeological context at Nippur (WG area). Used by \*Jewish, \*Mandaean, and \*pagan communities, incantation bowls provide information about vernacular religious culture in Mesopotamia. ECDH

**incense and the incense trade** The aromatic resins frankincense and myrrh were harvested from trees which flourished in the Roman period in the Horn of Somalia and the \*Arabian Peninsula. They were traded extensively with the Roman Empire, particularly for use in temples and subsequently in Christian churches. Frankincense and myrrh were priced according to

quality and harvest times and reached the Mediterranean by an overland caravan route through the Arabian Peninsula. Basalt stones used as \*ship ballast from the \*Hadramawt (southern \*Arabia) found at \*Myos Hormos and \*Berenice suggest a Red Sea \*trade route through the \*harbour of Qana on the southern Arabian peninsula.

Incense had many uses, from the domestic (cooking, ointment) to the ceremonial. It was buried with the dead and offered in \*sacrifice. \*Origen (*Exhortation to Martyrdom*, 45) complains that the incense offered to the \*pagan gods nourished evil \*demons. Even after \*Constantine I forbade blood sacrifice, incense continued to be offered by \*pagans (\*Libanius, *Oratio*, 30, 7). \*Dionysius the Ps.-Areopagite (*Ecclesiastical Hierarchy*, I, 3, 2 and 4, 2) records Christian clergy censuring their congregations, the offerings, and the \*altar. \*Egeria (24, 10) says so much incense was burned in the Cave of the Anastasis at \*Jerusalem that the entire \*basilica smelt of it.

**India and Ceylon** Understanding references to 'India' in Late Roman texts is complicated by the flexible use of this term by contemporary authors. 'India' might denote any region south and/or east of the Red Sea, including \*China, \*Ethiopia (\*Aksum), the Indian subcontinent, and South-East Asia. \*Rufinus of \*Aquileia's account in his *Ecclesiastical History* of the conversion of Aksum to Christianity by the brothers \*Frumentius and Aedesius makes this especially clear in his account of the brothers setting out on a voyage to India (= India) before being captured in India (= Aksum) following a rupture of Roman–Aksumite diplomatic relations (I, 9). Book XI of the anonymous 6th-century text known as the *Christian Topography* (often ascribed to \*Cosmas Indicopleustes) likewise lists as the plants and animals of India a range of species originating in northern and southern India and East Africa. It is likely that the term 'India' often denoted simply an origin of eastern goods, although some authors could be more specific. \*Procopius, for example, provides an account of a mission from \*Justinian I to Aksum, asking for aid in breaking the Persian stranglehold on the maritime \*silk trade, but concludes that the Aksumites (Ethiopians) could not provide this because the Indians put in at Persian-dominated \*harbours (*Persian*, I, 20, 9–12).

It is unlikely that India was in diplomatic contact with the Late Roman Empire, but \*Ammianus Marcellinus

refers to ambassadors from 'the Indian nations' meeting the \*Emperor \*Julian (XXII, 7, 10). The Kushan Empire, which flourished in northern India until the 3rd century, may also have based elements of its coin design on Roman models, though whether as a diplomatic gesture or as a convenient model is unknown. The theory that Kushan coinage was struck substantially from recycled Roman \*gold and therefore constituted evidence for trade has been conclusively disproven. Diplomatic contact between the \*Persian Empire and northern India is depicted at \*Naqsh-e Rostam, in the form of an 'Indian' (probably referring to the region of modern Afghanistan) bringing tribute to the Shah (Back, 285–8). It is likely, and lamented bitterly by authors like Procopius, that Persia traded significantly with India. The nature and scope of this trade remains obscure. \*Mesopotamian \*amphora sherds identified at the port site of Pattanam in Kerala in south India and subsequently identified at other sites in India indicate the potential for future archaeological research.

At the Roman end of these \*trade routes, \*pottery evidence and excavations on the Red Sea coast of \*Egypt have already demonstrated a Late Antique revival in Roman \*trade with India, which had declined sharply in the 4th century. Though trade probably did not recover its earlier volume, the sites of \*Myos Hormos and \*Berenice on the Red Sea coast, which were developed in order to facilitate Roman trade with India, indicate increased activity from the 4th century until the eventual decline of this commerce in the 6th century.

It is less clear how far Sri Lanka (Ceylon) was in direct contact with the Roman Empire, or whether some products reached it by way of India. The most significant textual source for direct communication with Sri Lanka is the 6th-century text *The Christian Topography*. Book XI of the *Topography* refers to traders from the Persian and Roman empires (XI, 15), though little archaeological evidence corroborates this and it is unclear whether the author himself had travelled there. It also contains a second-hand story, in which a friend of the author and a Persian \*merchant showed their respective imperial \*coinages to the King of Taprobane, earning a favourable judgement of the Roman Empire (XI, 17–20). The incident where Roman \*coinage is used to demonstrate Roman virtue to a king of Sri Lanka, however, is a motif possibly modified from \*Pliny (*Natural History*, VI, 24, 84–5).

The *Christian Topography* also refers to a Christian community on Sri Lanka, under the jurisdiction of a Persian \*bishop (XI, 14). Christianity appears to have arrived in India and Sri Lanka in Late Antiquity, but more is known of its origins and early development in south India, where communities known as Mar Thoma Christians claim a heritage dating in some cases to the proselytizing work of the Apostle S. Thomas. RRD

**India and south Asia, Christianity in** A settled Christian presence in south \*India, with some spread to Sri Lanka (Ceylon) and further east, is securely attested from the 6th century, but communities had probably existed in India from at least the 4th century. Modern communities, concentrated in Kerala (South India) and called S. Thomas, Syrian, or *Māppīla* Christians, claim a 1st-century conversion by S. Thomas, though the Acts of \*Thomas (*ATh*) are concerned mainly with areas further north. The *Acts*, composed wholly or partially in the 3rd century, though surviving only in later \*Syriac and \*Greek versions, describe the Apostle's mission in the Indo-Parthian realm of King Gondopernes/Vindapharna (c. AD 30–64) (*ATh* 1) and the territory of the legendary King Mazdai (*ATh* 7).

A strong connection has been posited between early Christian communities in south Asia and Roman, Persian, Ethiopian, and Arabian Far Eastern \*trade. Various Roman sources mention Christians travelling these trade routes (e.g. *ATh* 1; \*Cosmas Indicopleustes, 11; \*Procopius, *Persian*, I, 20).

Early communities in India and south Asia apparently had a \*Syriac origin and fell under the jurisdiction of the \*Church of the East. In the mid-7th century the \*Bishop of \*Fars was also responsible for a region, called 'India', extending possibly to the Malay Peninsula. It is difficult to discern from the records of the Church of the East details of the size, status, or coherence of these early communities.

Indian sources include \*copper plate documents including a 4th-century grant by a Cēra king in Kodungallur of 72 privileges to Syro-Persian Christians, shared with local Jewish \*merchants, and also

the Tharisa Church or Kollam copper plates dated AD 849 which record landownership by Christians on the Malabar coast. Local traditions provide Late Antique origins for many unusual practices of the modern S. Thomas Christians and other Christian groups in south Asia but Late Antique evidence is elusive. Physical remains from Late Antiquity are limited, but a small number of so-called 'Nestorian' \*crosses, some with \*Pahlavi inscriptions, of which at least ten have been found in Pilar, Goa, Chennai (Madras), and two at Arunadhapura in Sri Lanka, may date from the 9th century or earlier. **indiction and superindiction** These are, respectively, regular and irregular periods in the cycle of Late Roman taxation and assessment. Financial bureaux made annual estimates of total government costs (chiefly for the \*army, civil \*administration, and civic expenses) for the coming year and set tax rates accordingly. This process was called *indictio*. Taxes were then collected each year but only tallied every five years. From the reign of \*Constantine I or perhaps even of \*Diocletian (AD 297), three five-year periods constituted one revenue indiction.

This span was also used as a dating device; bureaucrats and writers attributed individual events to the appropriate year within the fifteen-year indictional cycle. This practice raises problems for historians, as an event may be ascribed in a source to a particular year within the fifteen-year span of an indiction, but it may not always be clear which fifteen-year span is envisioned.

Not all taxes were collected or tallied on this five-yearly cycle. Some special taxes such as \**aurum coronarium* and \**aurum oblativum* were collected every five years from the \*emperor's accession, while some such as the \**collatio lustralis* (Gk. *chrysargyron*) were collected on a four-yearly basis. These overlapping cycles formed the core of the Late Roman system of \*taxation, which made the government increasingly effective at covering ordinary and unexpected needs.

Sudden shortfalls or raised expenses were covered by recourse to *superindictiones* or *indictiones extraordinariae*, synonymous terms for additional levies. These took the form of increased tax rates, local burdens, or the requirement of special services (*munera sordida*). PT Jones, *LRE* 61, 449–62.

**infanticide and the exposure of children** Practices widespread in the Roman Empire as a way of controlling family size and disposing of unwanted infants. Although a \**paterfamilias* had *ius vitae necisque* (the power of life and death) over his whole \*household, the legal right was generally deployed only at the time of a birth. Children might be exposed or killed outright for various reasons: poverty, questions of paternity, physical defect, ill omen, and gender choice were the most common. Girls were more likely to be exposed, but were also more likely to be taken and brought up, often as slaves or prostitutes. In cases of physical defect, newborns were typically drowned (Seneca, *De Ira*, I, 15, 2). Christians (drawing on Jewish objections) opposed these practices from an early date. Justin Martyr (*1st*

*Apology*, 27) argued that exposure of children might lead to a parent unknowingly engaging in incest with an abandoned child. Almost all apologists declared infanticide a serious sin.

The methods and extent of infanticide and exposure are unclear, but in the 4th century stronger efforts were made to end such practices. Christian writers had moral objections to exposure: \*Lactantius considered it \*paricide (*Inst.* VI, 20, 17–25). Church \*councils condemned the practice; e.g. canons 63 and 68 of the Council of \*Elvira (305/6). The Church also acted in a positive manner: it became increasingly common for exposed children to be accepted as pledges by \*monasteries. The first orphanage was founded in the mid-4th century. There were also state initiatives: \*Constantine I severed the *potestas* of fathers who abandoned their children (*CTh* V, 9, 1; cf. V, 10, 1); \*Valentinian I explicitly outlawed infanticide (*CTh* IX, 14, 1) and later \*Justinian I forbade the enslavement of exposed children (*CJust* VIII, 51, 3). Neither infanticide nor exposure ended, but they became unacceptable. GSN

**infantry, Roman** The infantry component of Roman armies during the 1st to 3rd centuries AD was supplied by the \*Praetorian Guard, 25–33 *legiones* (of 5,500 men each), and the *cohortes* of the \*auxilia (of 500–800 men each), supplemented by ethnic *numeri* and the contingents supplied by allies and subordinate peoples.

The *legiones* evolved during the 3rd century so that greater emphasis was placed on specialists integrated in their ranks (\*archery, \*artillery, etc.), but in the 4th century they shrank as these specialists were hived off into separate units. By the time of the \**Notitia Dignitatum* the *legiones* were 1,000–1,500 strong, supplemented by formations styled *auxilia*, perhaps 500–800 strong. The old *cohortes* were largely relegated to a lower status in the \*frontier forces and had also dwindled in size. Thus the Roman infantry was made up of *legiones* and *auxilia* \*palatina, *legiones* and *auxilia* \*comitatenses, *legiones* pseudocomitatenses, units styled 'milites' or

'*numeri*', frontier *cohortes*, and barbarian warriors in regular regiments as integrated recruits, in settled bodies of \**laeti*, or in large formations under their own leaders (\**foederati*).

Estimating the strength of Late Roman armies based on the *Notitia Dignitatum* is notoriously difficult, but some proportional observations may be made, based on minimums for \*field army regiments (*legiones* at 1,000, 500 for all others: West 94,500 infantry, 23,500 cavalry; East 89,500 infantry, 25,000 cavalry) and frontier formations (200 for all: West 26,200 infantry, 15,000 cavalry; East 31,000 infantry, 31,600 cavalry). Western forces had a lower proportion of cavalry to infantry than those in the East, unsurprisingly given the traditional cultural bias towards horse-archery in the eastern frontier \*provinces. Nevertheless, proportions in the field armies differed only marginally (West 80% infantry, East 78%). The 'mobility' of field armies did not, as often opined, depend on their having an unusually large mounted component, as in fact the rate of strategic movement would have differed little between cavalry and infantry. (Asiatic cavalry armies were a very different proposition.)

Despite textual uncertainties, \*Vegetius is the most informative surviving writer on infantry \*recruiting, training, equipment, functions, and tactics. Unfortunately, past scholars have uncritically followed his moralizing tone and adopted a model of Late Roman decline in infantry quality and equipment provision (Vegetius, *De Re Militari*, 1, 20). On the contrary, the narratives of \*Ammianus, \*Procopius, \*Agathias, \*Menander Protector, and the \**Strategicon* of \*Maurice make it clear that armoured infantry continued to play a pivotal role in both \*sieges and open battles. Late Roman foot soldiers fought skilfully and determinedly, even in defeat, as at the battles of \*Adrianople in AD 378 and \*Callinicum in 531. As a result of the impact of 5th-century \*Hun and 6th-century \*Avar \*warfare, the mounted component did increase proportionally, but in the period of Maurice and \*Heraclius field armies were still made up of 71% infantry. Approximately two-thirds of the latter were armoured, close-order troops, the rest missile-armed skirmishers (*psiloi*). JCNC Jones, *LRE*, ch. XVII.

**inflation** An economic phenomenon—often perceived as negative—that involves a reduction in the value of currency causing a concomitant rise in the nominal price of goods. A temporary rise in the price

of one or more goods due to real or perceived shortage is *not* typically referred to as inflation: inflation refers to changes at the point of currency supply rather than in the supply of goods. Lack of dense price data from Late Antiquity can make it difficult to differentiate between true inflationary periods and seasonal and/or geographical variations in prices. Nevertheless, it seems clear that the 3rd and early 4th centuries saw serious inflationary problems in the Roman currency system.

Inflation is usually perceived as negative due to its destabilizing effect on \*monetary systems. It may be devastating for those who hold stores of currency or have fixed wages, which are not quickly adjusted to reflect new values. The real value of \*debts is also reduced, however, with positive ramifications for debtors and at least initially those who control the money supply benefit as they are able to buy supplies and pay their employees at a reduced real price. Inflation is thus often caused by governments increasing their supply of money to meet budgetary shortfall.

The Roman treasury was somewhat limited in its ability to increase currency supply by the fact that the monetary system depended upon precious-metal denominations supposedly valued by their metal purity and content. The costs of minting were also not negligible. Unlike a fiat currency, money supply could not be indefinitely increased. Nevertheless, the metal content of coins could be interfered with to stretch precious metal resources further—a process usually referred to as \*debasement. Debasement led to inflation as users recognized the reduced actual value of coins and market forces tarified their buying power accordingly.

Throughout the 3rd century there was a near continual debasement of \*silver coinage, such that the \**antoninianus*, the successor of the \**denarius*, contained less than 5% silver. Among the effects of debasement were the disappearance of \*gold from circulation, as those who possessed it hoarded it as a more reliable store of value than \*coinage; a return to payment in kind for the \*army; and drastic reduction in the real salaries of other public employees. The Tetrarchic \*Prices Edict (301) attempted to regulate inflation by reining in increases in the price of goods, but the failure of the \*Tetrarchic Currency Reform to stabilize the value of coinage made its efforts ineffective.

In the first three-quarters of the 4th century the price of gold and other commodities continued to rise, generating a socially destabilizing gulf between those who possessed gold and those who did not. The introduction of the high-purity gold \**solidus* by \*Constantine I eventually created a reliable standard by which prices could be reckoned. Although the value of \*bronze coinage continued to fluctuate and often decrease, the effects and duration of future inflationary periods were hereafter more limited. AAB

 Potter, *Empire at Bay*, 256.

**Ingund** (d. c.585) Daughter of the Frankish King \*Sigibert I and his Visigothic wife \*Brunhild. She was married in 579 to \*Hermenigild, son of the Visigothic King \*Leovigild, and seemingly played a part in her husband's \*conversion to Catholicism. When Hermenigild's revolt against his father failed, Ingund and her infant son Athanagild fell into Byzantine hands, and were seemingly used as leverage to obtain Frankish military assistance for the Byzantines in \*Italy, but Ingund died en route to \*Constantinople. **inhabited scroll** An artistic motif used in many media in Late Antiquity in which scrolls of vine or acanthus \*foliage frame images of \*birds, insects, or \*animals, as well as scenes of human figures. The motif was especially popular in the \*mosaics which often decorated the floors and \*apses of churches, but was also used in architectural \*sculpture, paintings, and \*metalwork. Inhabited scrolls in Hellenistic art were originally linear patterns. Roman and Late Antique artists decorated entire surfaces of buildings and objects with the inhabited scroll pattern, a development which reached its peak in the Eastern Roman Empire in the 6th century.  Hachlili, *Ancient Mosaic Pavements*, 111–47.

**inheritance and wills** In Roman \*law an inheritance could be passed on according to the rules of intestate or testate succession. In the case of intestate

succession the heirs were called to the inheritance by the rules of the Roman civil law, rather than by the express intentions of the deceased. Roman rules for intestate succession thus effectively operated as a set of default rules which only came into operation when an individual either failed to leave a will, or when the will that had been left failed. The post-classical Roman rules for intestate succession were complex but focused upon ensuring transmission of the patrimony to the deceased person's closest relatives—in most cases these would be the deceased's children, although this would be others if the deceased died childless.

A claim for testate succession, on the other hand, could only be made if it was in accordance with a decedent's express intention, whether that intention had been made known via a written document (a duly witnessed will, a codicil, or even a \*letter) or through some unwritten means. Any Roman citizen with full legal capacity could make a will. The fact that Roman law allowed inheritances to pass outside the \*family via written testaments, legacies, and *fideicommissa* ('trusts') created a highly complicated set of legal rules and remedies.

Nonetheless, the technical distinctions of classical Roman law—such as those between civilian heirship and praetorian *bonorum possessio*, universal succession and individual legacies and trusts, formal wills and formless written *codicilli*—seem to have become less relevant to later Roman juristic discussion and legal practice.

As regards intestate succession, emancipated children were gradually assimilated to those who were not emancipated from paternal power (*patria potestas*). As regards testate succession, a limited liberty was eventually conceded to the testator for the benefit of concubines and illegitimate children from a concubinate.

Slaves were exempt from intestate succession, nor could they bequeath to anyone; if they were instituted as heirs, they acquired for their masters. The \*patron was one of the freedman's intestate heirs.

Besides making provisions for the family and other extraneous persons, wills allowed testators to take care of their salvation. From at least AD 321 (*CTh* XVI, 2, 4) Christian churches were able to inherit; the *portio Christi*, allotments to the \*poor and so forth, seem to have been common. Legacy hunters were a phenomenon well known to \*Ammianus (XIV, 6, 22–6; XXVIII, 4, 22); attempts by the clergy to obtain the estates of wealthy \*widows were countered by \*Valentinian I (*CTh* XVI, 2, 20).

By the early 5th century wills were expected to be written instruments, complete with the signature of the testator and the seals of seven witnesses. Later Roman law had a number of formal requirements in order for a will to be considered valid, including that it had to have

been duly witnessed or deposited in the \*archive of a municipality or an imperial bureaucratic archive. In 446 the Western \*Emperor \*Valentinian III confirmed the validity of 'holographic wills'—wills written entirely in the testator's own hand, which did not have to be witnessed, signed, or sealed (*NovVal* 21, 2)—but this constitution was not included in \*Justinian's *Code*, nor was it confirmed by any of Justinian I's subsequent *Novels*.

Under the early and late Empire close descendants (or ascendants) who could demonstrate that they had been left less than a quarter of the share that they would have received if the testator had died intestate could pursue a *querela inofficiosi testamenti*: a complaint against an 'undutiful' will. Close relatives who had not been disinherited with good reason could expect to be left what came to be referred to as the 'legitimate portion': 'a quarter of the prospective intestate share'. There was, however, unlimited liability for debts related to the inheritance; the acceptance of an inheritance could only exceptionally be contested in cases of insolvency of the estate (*InstIust* 2, XIX, 6).

\*Justinian I fundamentally reorganized the law of succession. He partly followed through the tendencies described above, and partly restored classical structures.

**initiation, Zoroastrian** In the \*Sasanian period both women and men underwent an initiation ritual (*navjot*) to become Zoroastrians once they reached the age of puberty. Ritual activities included tying a sacred girdle around the body (MP *kustig*) along with donning a white undershirt (MP *shabig*). The tying of the *kustig* was performed by the priest while reciting the sacred prayers of induction. The inductees then recited prayers and drank *gomez* (bull's urine) to cleanse themselves.

**insanity** Late Antique cultures overall upheld the classical view that mental illnesses reflected either the control of the sufferer by an external force (divine or \*demonic), or an unhealthy state of the body. Medical writers in the Methodist tradition and, more influentially,

\*Galen and his followers classified the principal somatic conditions indicated by mental abnormality as phrenitis, melancholia, and mania, as well as delineating more specific conditions such as lovesickness and lycanthropy. Treatments for these were more likely to include the standard ones for physical ailments—\*diet, purging, bleeding—rather than restraint or beating; and might extend to the quasi-psychotherapy of listening to appropriate \*music. The daily life of those who had no access to such therapy is hard to reconstruct. The biographies of holy \*fools, simulating derangement for spiritual ends, portray urban madmen as among the dregs of society, living very rough and subject to violence. \*Hagiography sometimes shows us those who were judged insane (but not possessed) seeking relief at shrines. And some institutional help for the demented may occasionally have been available, even before the rise of \*Islam, with which the earliest insane asylums have been associated.

**inscriptions, Aksumite** Aksumite inscriptions occur formally on \*coinage and on stone, informally as \**graffiti* on rock surfaces and on \*pottery. With the exception of two vellum manuscripts, parts or all of which may be of Aksumite age, no other inscriptions on perishable materials are currently known (see GARIMA GOSPELS). The formal stone inscriptions at \*Aksum are by far the most informative. They are in two languages, \*Greek and \*Ge'ez, the latter being written in two scripts, of which one is derived—perhaps as a deliberate archaism—from an earlier southern \*Arabian form of writing, the other being early Ethiopic. The known examples come from the 4th, 6th, and 8th/9th centuries. Two almost identical 4th-century inscriptions give effectively the same text in Greek and in both Ge'ez scripts, and were erected beside the roads leading into Aksum from the north and south-east; others were on the sides and backs of monumental thrones. They record the military exploits of King \*Ezana in conquering neighbouring peoples, exacting \*tribute, and resettling captives, and provide coincidental information relating to religion, including the adoption of \*Christianity. Two 6th-century Ge'ez inscriptions provide similar information relating to King \*Kaleb and to his son, WZB. The latest inscription dates from the time when Aksum had ceased to be the political capital.

**inscriptions, Persian** The 'epigraphic habit' characteristic of the Graeco-Roman world was never as pronounced in the \*Persian Empire. \*Sasanian shahs made public records of their achievements, notably the \**Res Gestae Divi Saporis* (ŠKZ) inscribed in \*Greek, Middle \*Persian, and Parthian on the Ka'aba-ye Zardosht at \*Naqsh-e Rostam by \*Shapur I, and the inscription of \*Narseh in Middle Persian and Parthian at \*Paikuli, near \*Qasr-e Shirin. The powerful \**mowbed* \*Kerdir (Karter) also recorded his achievements on stone at Naqsh-e Rostam, \*Naqsh-e Rajab, and \*Sar Mashhad. Inscriptions have also been found on \*bridges (for instance at \*Firuzabad) and on \**daxmags*. Apart from assorted \**graffiti* and \**dipinti*, particularly from \*Dura Europos, most inscriptions from the Sasanian period are on \*seals.

**inscriptions, Roman and post-Roman** During the 3rd century the number of inscriptions set up in Roman \*cities dropped dramatically from its 1st/2nd-century peak. In many regions the 4th–6th centuries then witnessed a marked increase in inscriptions. Indeed, in \*Syria, \*Palestine, and western \*Britain the 5th–7th centuries marked the peak for the local epigraphic habit. Such cities as \*Salona, \*Trier, and \*Carthage each have more than 1,000 Late Antique inscriptions, while Tarragona and \*Naples have several hundred. \*Rome itself has over 40,000. In the East, \*Corinth has over 600 inscriptions, with similar numbers at \*Athens and \*Aphrodisias.

Few attempts have been made to explain the initial decline. Some have suggested that the broadening of citizenship in the provinces by the Constitutio Antonina, the \*edict of Caracalla of 211 granting citizenship to all free inhabitants of the Empire, reduced the perceived social benefits of advertising Roman citizenship on inscriptions. Such explanations fail to explain why numbers also fall in \*Italy at the same time. Attempts to explain the subsequent rise in the number of inscriptions have been even fewer. The phenomenon is likely to be linked to \*conversion to Christianity, though it could not provide a chronology for conversion. Another suggestion is that sociopolitical uncertainty in the 4th–5th centuries made an above-ground legible status symbol attractive for those struggling to maintain or assert a sense of their place in the world (or the next). While this is likely to be true, it makes even more puzzling the relative absence of 3rd-century inscriptions.

### Types of inscriptions

In the East official secular inscriptions continued into the late 7th century; indeed, imperial and prefectual \*edicts and decrees only became common as inscriptions from the period of the \*Tetrarchy. Some laws are found in multiple copies such as the Tetrarchic \*Prices Edict (some 40 inscriptions), the 6th-century edict for \*Cyrenaica from the \*Praefectus Praetorio Athanasius (SEG IX, nos. 356 and 414), and an edict of \*Justinian II of AD 688–9 from \*Thessalonica. Civic honorific inscriptions and statues were rare by the early 5th century. The most common form of inscription was the \*epitaph.

In the West even in the 4th century inscribed laws and decrees are unknown, but large numbers of secular building inscriptions survive from \*Italy and North \*Africa (references for Africa in Lepelley, *Cités*). In the later 5th–6th centuries secular public inscriptions are rare although the \*Burgundian King \*Gundobad recorded

defensive work at Geneva in the late 5th century (*CIL* XII, 2643), and officials of the \*Moorish King Masuna recorded building work at Altava in \*Mauretania Caesariensis in AD 508 (*CIL* VIII, 9835).

Official Christian inscriptions range from inscribed liturgical calendars in \*Spain to records of \*relic depositions across North Africa. More common are inscriptions recording church building or donations supporting such activity (e.g. Caillet, Rhoby, et al.). Informal \*pilgrim (and other) \**graffiti* are attested in this period from sites across \*Egypt, \*Sinai, \*Palestine, \*Anatolia, Italy, \*Gaul, and Spain, such as the 133 *graffiti* from fragments of wall plaster from the basilica at \*Trier published by Binsfeld (*AE* 2006, 848).

### The texts of epitaphs

With Christianity came new funerary formulae which tended to convey an image of slumber or peace—*Hic iacet, Hic requiescit in pace, Dormit in pace, ἐνθα κίτε, ὦδε κίτε, ἐνθάδε ἐν εἰρήνῃ κεῖτε*. These could be regionally distinct, thus *Fidelis in pace* was most common in \*Carthage and *Hic requiescit in somno pacis* was specific to \*Calabria.

While there are occasional anonymous epitaphs, on the whole the one absolute was a name. Other information included an age at death, mention of family, and a date of death. The many regional, provincial, or civic \*eras of Anatolia and the Near East continued to be employed, as did the Spanish *aera* and the Mauretanian *anno provinciae*. In Egypt the \*Era of the Martyrs was used. As the period progressed, regnal dates appear on inscriptions carved in the new kingdoms of the West, and on Byzantine inscriptions.

Inscriptions in the Roman \*catacombs rarely included the status of the person commemorated, but this pattern was not universal. At \*Corycus (Korykos) in \*Cilicia over 85% of nearly 600 Christian epitaphs included a status or profession. In the West only the city of \*Concordia in Italy can compare in terms of proportions with a recorded status, though elsewhere this information was not rare.

### Script

Inscriptions did not often conform to classical capitals. In the West the capitals became narrower and more elongated and often varied in size, with an occasional minuscule letter. In some cases minuscule lettering becomes more frequent, such as at \*Hadrumetum (Sousse) in Africa, Vicenza in Italy, and in \*Britain and \*Brittany. Ligatures are common and can become very involved, while abbreviations (marked by a superlineate line) abound for oft-repeated words such as the *nomina sacra*, or for *p(res)b(yte)r*, meaning a Christian \*priest. Greek also moved away from the classical monumental style with greater inclusion of cursive

forms of lettering. Typical late forms include the rounded E and S, and cursive forms of A and W.

### Decoration

Christian epitaphs often carry Christian decorative elements such as \*crosses, a chi-rho, the 'apocalyptic letters' *alpha* and *omega*, palm fronds, doves, or an *orans* figure. MAH

**inscriptions, Semitic** Semitic inscriptions from Late Antiquity represent the continuation of an earlier Semitic practice combined with the so-called 'epigraphic habit' of the Roman Empire. They belong to various genres, ranging from well-developed to simple, including administrative, building, legal, funerary, religious, votive, and *graffiti*. (See sub-entries under: INSCRIPTIONS, SEMITIC, ARABIC; INSCRIPTIONS, SEMITIC, JEWISH; INSCRIPTIONS, SEMITIC, SOUTH

ARABIAN; INSCRIPTIONS, SEMITIC, SYRIAC.) Inscriptions are also attested for other dialects of Aramaic, especially from the first three centuries AD: Nabataean from the Roman province of \*Arabia, exhibiting features from Ancient North Arabian, which probably reflect the spoken language; Palmyrene from the caravan city of \*Palmyra (Semitic *Tadmur*) in Phoenice Libanensis (many of these inscriptions are bilingual with \*Greek, such as the famous Palmyrene tariff inscription); and Hatran from outside the Roman Empire in northern Mesopotamia. In addition to Aramaic, inscriptions in Classical Ethiopic (\*Ge'ez) are attested from the kingdom of \*Aksum (modern-day Eritrea and northern \*Ethiopia). Inscriptions in Old North Arabian are also found in the \*Arabian Peninsula. AMB

**inscriptions, Semitic, Arabic** The \*Arabic language is first known from epigraphy. For example, at Dedan in north-west \*Arabia, an Arabic-language inscription that dates from before AD 1 is written in a local script derived from South Arabian. During subsequent centuries local scripts such as Nabataean were used in making the few Arabic inscriptions that survive. From the 6th century AD the first very few inscriptions in what is recognizably Arabic script survive in what is now \*Syria. A small number of Arabic inscriptions also survive on the \*Arabian Peninsula from the same period.

The coming of \*Islam in the middle decades of the 7th century coincides with a very marked increase in the number of extant Arabic inscriptions. Several major collections from this period have been published (see bibliography), but no comprehensive edition exists. Hoyland, *Seeing Islam* (Excursus F, 687–93), which was brought up to date in Hoyland (2006), collects the dated \*Umayyad-era inscriptions with references. The earliest Islamic-era rock inscription so far discovered is a \*graffito from northern Saudi Arabia, approximately 17 km (10 miles) south of Hegra. Inscriptions from this era can provide important insights into the political and religious development of the early Muslim community. \*Qur'anic phraseology is common across all genres of early inscriptions, but these do not always replicate the canonical text. Perhaps the most famous example of this phenomenon is the mosaic texts of the \*Dome of the Rock, commissioned by \*Abd al-Malik (c.691). The earliest epitaph yet discovered comes from \*Aswan, Egypt, and is dated to c.651. It

contains language comparable to that found in the Qur'an, including the common appeal for forgiveness, *ighfir l-*. The same expression is again encountered in a *graffito* from the environs of \*Karbala (c.683/4). Seven milestones from the time of \*Abd al-Malik (c.685–705) are known, one of which contains the *Shahadah*, the Muslim declaration of faith. Two dams commissioned by \*Mu'awiya bear dedicatory inscriptions (c.661–80), one at Ta'if dated c.676 and the other, undated, at \*Medina. Other early dedicatory inscriptions are only known from literary sources as the originals are no longer extant (Hoyland, *Seeing Islam*, 701–3). AMA

**inscriptions, Semitic, Jewish** There is no consensus as to what exactly defines a Jewish inscription. Noy et al. (vol. 1, v) have suggested a series of features which can be considered typically Jewish, including the use of Hebrew, the presence of distinctively Jewish names, and provenance from a \*synagogue. Accordingly, the Jewish inscriptions of Late Antiquity consist mostly of epitaphs and \*synagogue inscriptions, although some important \*graffiti exist. The cemetery of \*Beth She'arim is one of the best preserved from Late Antique \*Palestine. Its catacombs have yielded hundreds of inscriptions, mainly in \*Greek but also in Hebrew and Aramaic. Likewise, the \*catacombs of Rome contain a rich collection of epitaphs which shed important light on the city's Jewish community. Synagogues are an important provenance for rock and \*mosaic inscriptions. The famous synagogue of \*Dura Europus contains an exquisite donor inscription dated to c.245. The \*Sardis synagogue yielded some 85 fragmentary inscriptions, some on the mosaic floor and others on plaques. In northern Arabia, Jewish inscriptions are found primarily at Hegra and Dedan, and consist mostly of *graffiti* and short tomb inscriptions, neither of which contain much

information (Hoyland). In contrast, the epigraphic record of South \*Arabia is a rich source of Jewish inscriptions dating from the 4th to 6th centuries AD. AMA

**inscriptions, Semitic, Old South Arabian** Old South Arabian (also known as Ancient/Epigraphic South Arabian and Ṣayhadic) is a Semitic language attested in inscriptions from the southern part of the \*Arabian Peninsula (mod. Yemen and Oman) from the 1st millennium BC until the mid-6th century AD. Though previously classified as a South Semitic language (with \*Arabic, Ethiopian Semitic, and Modern South Arabian), Old South Arabian is now considered part of Central Semitic, with Arabic and the North-West Semitic languages, which include Ugaritic, Aramaic, and Canaanite (Hebrew, Phoenician, Moabite, etc.). Old South Arabian can be divided into at least four dialects: Sabaic, Minaic, Qatabanic, and Ḥaḍramitic. Sabaic is by far the best attested. Setting aside *graffiti* containing personal names, the majority of Old South Arabian writing occurs on monumental stone inscriptions of various genres (dedicatory, building, funerary, and legal). Texts are also found cast in bronze or stamped on coins as well as written on small wooden sticks and palm-leaf stalks. AMB

**inscriptions, Semitic, Syriac** Christian inscriptions written in \*Syriac script inherited from Edessan Aramaic first appear in \*Syria and \*Mesopotamia at the end of the 4th century AD. They are engraved on stone (lintels, funerary stelae) or drawn on \*mosaic and frescos. An important means of expression in Syriac churches, they still appear today in religious buildings, houses, and on furniture. Syriac inscriptions commemorate the builders and the dead for whom the sanctuaries have been erected or embellished and give details about the construction, including the date. Some describe local events. Inscriptions of the 5th century in the area of

\*Antioch are dated according to the era of Antioch, but the majority of Syriac inscriptions everywhere are dated according to the Seleucid era. Some medieval inscriptions are dated according to the 'era of the Arabs'.

The oldest dated Syriac inscription is from the Nabgha monastery near Jerablus in north Syria (AD 406/7). The oldest dated inscription in \*Osrhoene is that of Bishop \*Rabbula (AD 425/6). The principal corpora of inscriptions are found in Syria—mainly in the dead cities of the \*Limestone Massif, where the oldest inscriptions are found (5th and 6th cents.)—in the churches and monasteries of \*Tur 'Abdin (south-east Turkey), and in Iraq where almost all Syriac churches contain inscriptions dated between the 8th and the 20th centuries. Inscriptions are also found in Lebanon (mainly in \*Maronite churches), Commagene, \*Armenia, \*Palestine, \*Egypt, Kyrgyzstan (at the Mongol period), \*China (7th and 14th cents.) and Kerala, \*India (16th to 20th cents.). **insignia** People and groups in the Later Roman Empire indicated who they were by the use of a wide range of \*symbols. Individuals often used \*monograms, like those on the column \*capitals of the Church of the \*Holy Wisdom in \*Constantinople. From the 6th and 7th centuries onwards these were often to be found on lead \*seals, large numbers of which survive (and are illustrated in line drawings in *PLRE* IIIB).

The civil and military \*administration indicated the rank of its officials with appropriate formal emblems. The manuscripts of the *\*Notitia Dignitatum* illustrate insignia appropriate to each high-ranking official (reproduced in line drawings in the edition of O. Seeck). All of them had been issued with imperial \*letters of appointment, their *\*codicilli*, and these are shown standing set on a table, open like a codex or \*diptych. Only the \*Praefectus Praetorio and \*Praefectus Urbi were accorded an official four-horse carriage. The insignia of many civil administrators included a *\*theca*, a ceremonial pen-case and inkwell tripod decorated with imperial portraits; al-\*Baladhuri tells a story explaining the shift from \*Greek to \*Arabic in the \*Umayyad administration in 703 as the result of the \*caliph's anger when a Greek clerk misused an official inkwell (*Futūḥ al-Buldān*, I, 301). Others have emblems appropriate to their work. The Praefectus Praetorio has full-length female personifications of the *\*dioeceses* he oversees, \*Vicarii and \*governors personifications of the provinces they govern, and the \*Quaestor Sacri Palatii, the emperor's legal draughtsman, a bundle of rods and a bookcase labelled *Leges Salutares* (Salutary Laws). A poem of \*Prudentius (*Peristephanon*, X, 141–5) enumerates various insignia for high dignitaries,

naming the *fascēs* (bundles of rods), *securēs* (axes), *lictor* (beadle carrying the *fascēs*), *sella* (judgement seat), *\*toga praetexta*, and *tribunal*, though his list may be self-consciously antiquarian.

The rank and function of officials of the imperial administration were also apparent from their \*dress. Both military and civilian officials wore a \*belt of office (*cingulum*) signifying their *militia*, or service under the emperor. The insignia of the \*Comes Sacrarum Largitionum illustrated in the *Notitia Dignitatum* includes belts and buckles, as his department was in charge of their production, at least of those for the higher ranks (*occ.* XI, 2; *or.* XIII, 2). Basic military \*dress was the *strictoria* and \*chlamys, as well as \*arms and armour; the emperor in uniform wore a \*cuirass (metal breastplate) and \*paludamentum (military cloak), fastened with the distinctive round imperial \*fibula with pendants. There were distinctive shields for particular corps (many of them illustrated in the *Notitia Dignitatum*). \*Draconarii wore gold torcs. Government officials often fastened their chlamys with a crossbow fibula (German *Zwiebelknopffibula*). The chlamys worn by civilian officials would have a coloured \*tablion, which might bear a picture of the emperor.

The ceremonial dress of a \*consul or suffect consul was the *\*toga picta* or *trabea*; the Emperor \*Gratian presented \*Ausonius with a *trabea* decorated with gold thread and an image of \*Constantius II to mark his consulship (Ausonius, *Gratiarum Actio*, 11), and they are illustrated on the presentation diptychs of 6th-century eastern consuls. \*Senators were forbidden to wear military dress in \*Constantinople (*CTh* XIV, 11, 1 of 382). The wearing of trousers in the City of \*Rome was forbidden in laws of 399 (*CTh* XIV, 11, 2–3). \*Philosophers continued to wear full beards and the philosopher's cloak or \*pallium (*CTh* XIII, 3, 7).

Imperial \*regalia took many forms, but its most distinctive features were the \*purple and, from \*Constantine I onwards, the \*crown or diadem. Emperors would grant the right to specific items of regalia to client kings and other rulers.

***Institutiones* of Justinian** The *Institutiones* or 'Institutes' of \*Justinian I were published with the *Constitutio Imperatoriam* on 21 November 529 and alongside the \*Digest and \*Justinian's *Code* form part of the *Corpus Iuris Civilis*, the codification of Roman \*law accomplished by Justinian. To complement the codification of imperial constitutions and Roman jurisprudence, Justinian instructed \*Tribonian, with the help of \*Theophilus and \*Dorotheus (professors of law in \*Constantinople and \*Beirut respectively), to compose an elementary textbook on the model of the *Institutes* of the classical \*jurist Gaius. The *Institutiones* were intended to bring the instruction in Roman law into line with the significant changes that had been introduced and granted exclusive validity by Justinian. Since the authors took Gaius as the basis of their text, the *Institutiones* of Justinian are in effect a 6th-century modernization of his classic textbook, albeit with some important modifications. Though only an elementary introduction to Roman law, the *Institutiones* were expressly endowed with the force of law. Like Gaius, the *Institutiones* fall into four books treating (1) the sources of law and persons (status, \*family, \*marriage), (2–3) things (property, \*succession, obligations), and (4) actions (procedure, criminal law). They remained the most widely read introduction to Roman law until the rediscovery of Gaius in 1816. JND ed. P. Krüger, *Corpus Iuris Civilis* I (<sup>11</sup>1954).

**insular manuscripts, illuminated** 'Insular' in this context refers to the culture of \*Britain and \*Ireland, c.550–850. This period witnessed the reception and flowering of the book arts, producing some of the finest early medieval illuminated manuscripts. These drew upon models from the Late Antique Mediterranean and upon the rich preliterate traditions of the Celtic and Germanic peoples to produce a distinctive reflection of the mixture of peoples and influences present in the islands in the aftermath of the Roman Empire. Germanic \*animal interlace and Celtic Iron Age La Tène spiralwork combine with Mediterranean figural art and calligraphic local responses to the Roman system of \*scripts. In the great Gospelbooks, such as the Book of Durrow and \*Book of Kells, the \*Lindisfarne and \*Echternach Gospels, the Word explodes across the page, becoming an icon in its own right, accompanied by \*carpet pages, Evangelist miniatures, and arcaded canon tables. Such 'Hiberno-Saxon' art, encountered in Ireland, Scotland, and Northumbria, also influenced the book arts of southern England, which were also subject to more overtly romanizing trends, as were the Northumbrian scriptoria of \*Wearmouth-Jarrow, \*Ripon, and \*York. This can be observed in Kentish manuscripts, such as the Vespasian Psalter, the Stockholm Codex Aureus, and the Royal Bible, and Mercian books such as the Barberini Gospels and the Book of Cerne. **intelligence, military** Information of military value encompassed a range of material, including knowledge of enemy geography, resources, and military capabilities, forewarning of troop movements, and awareness of tactical deployment. Some of this information was acquired through embassies and undercover \*spies, but the \*army also had troops whose focus was intelligence-gathering. \*Cavalry units of scouts (*exploratores*) came to the fore on the frontiers of western provinces in the

late 2nd and early 3rd centuries, and *exploratores* feature in various 4th-century sources. The \**Notitia Dignitatum* suggests that specialized units were no longer prominent by the early 5th century, but *exploratores* appear in \*Maurice's \**Strategikon* in the late 6th century, albeit used interchangeably with *kataskopoi* and *skoulkatoroi* (9, 5). There is also textual and archaeological evidence for imperial outposts beyond the northern frontiers in the 4th century, which may have functioned as early warning stations. To anticipate waterborne threats, camouflaged scouting skiffs were deployed at sea, particularly off \*Britain (\*Vegetius, *De Re Militari*, 4, 37), and patrol boats were used along the Danube \*frontier (and presumably also the Rhine) (*CTh* VII, 17, 1 [412]). It is difficult to generalize about the effectiveness of these various measures: while the disaster at \*Adrianople (378) was due in part to poor intelligence about \*Gothic forces, good information about the \*Vandal fleet contributed to \*Belisarius' success in \*Africa in 533. **interpreters, diplomatic** See *INTERPRETES*.

**interpretes** Interpreters of 'sundry' or 'all peoples', employed in \*diplomacy, attached to the staff (\**Scriinium*) of the \*Magister Officiorum (\**Notitia Dignitatum* or. XI, 52 and occ. IX, 46). \*Priscus (frs. 7 and 8 Müller = frs. 11 and 14 Blockley) mentions an interpreter named Vigilas who negotiated with \*Attila. \*Sergius the Interpreter was admired by \*Khosrow I (\*Agathias, *Histories*, IV, 30, 3–5). JND  
Jones, *LRE* 584.

Lee, *Information and Frontiers*, 41, 51, 66–7.

**invective** (Lat. *vituperatio*; Gk. *ψόγος*) Literary genre characterized by rhetorical abuse, and so the reverse of the \*praise offered in \*panegyric oratory, whose principal themes it frequently inverted. By comparing individual political figures to accepted political ideals, the extent of their shortcomings could be represented (Flower, 28). Such shortcomings might be serious, such as \*Diocletian's lust for building in \*Lactantius' *On the Deaths of the Persecutors* (*Mort.* 7, 8–10) and \*Julian's invasion of the \*Persian Empire in \*Gregory of \*Nazianzus' *Orations* IV and V *Against Julian*, or personal, such as Galerius' resemblance to his own pet \*bears (*Mort.* 21, 5–6). In the hands of a panegyrist these matters could easily be occasions for praise.

Late Antique invectives survive in both prose and verse. Christianity added fresh elements to the classical repertoire. For Lactantius, the collapse of the \*Tetrarchy

was God's judgement against persecutors (*Mort.* 1 and 52). Contemporaries reading \*Procopius' *Secret History* would find most alarming the account of the \*Emperor \*Justinian I prowling the corridors of the Great Palace as a headless \*demon (*Anecd.* 12, 18–32; cf. 18, 1 and 36–7).

Convention, as well as prudence, indicated that the *stilus major* of panegyric (not even history) was the appropriate genre for discussing the regime under which an author was himself living (cf. \*Ammianus, XXXI, 16, 9). The invective poems of \*Claudian *Against \*Eutropius* and *Against \*Rufinus*, written in the territories of the Western \*Emperor \*Honorius, both target ministers of the rival \*court in the East. Lactantius denounced the \*Tetrarchy after its disappearance; Gregory wrote after Julian was dead. Exceptions are the repetitive vilification of \*Constantius II by Lucifer the anti-Arian Bishop of Cagliari and Procopius' *Secret History*, written, though presumably not published, in Justinian's lifetime.

Invective might be directed at groups as well as at individuals. The homilies of \*John Chrysostom against the Jews, for instance, employ rhetorical conventions of invective (Wilken, 95–127). SEB; OPN

**Iona** (est. 563) Island \*monastery founded by the Irish saint \*Columba. Lying in the Irish territory Dál Riata, Iona was possibly granted to the community by its ruler Conall mac Comgaill. Until the mid-8th century the majority of abbots came from Columba's familial line, Cenél Conaill, members of the powerful Uí Néill dynasty. Iona became the head of the Columban federation with monasteries in \*Britain and \*Ireland. According to \*Bede (*HE* III, 3–4), its abbot Ségéne sent the missionary \*Aidan (d. 651) to Northumbria at the behest of King \*Oswald. Iona's influence in Britain was compromised by its refusal to adopt the Roman \*Easter until 716. Texts produced at Iona include \*Adomnán's *Vita Columbae*, and the non-extant Iona annals, which form the basis of the *Chronicle of Ireland* up to c.740. ED

M. Herbert, *Iona, Kells and Derry: The History and Hagiography of the Monastic Familia of Columba* (1996).

**Ireland** The modern Anglicized name 'Ireland' derives from the island's early Celtic name \**Íweriū*,

Old Irish *Ériu*. This name is likely to have meant 'the fertile land', and in its original formation is most likely to have expressed the strong associations between the earth, fertility, and the feminine. This fundamental link between the fertility of the land and female fertility is a universal belief that is further expressed in other early names for Ireland which often transmogrified into female personal names. Along with *Ériu*, Ireland was identified at times with women named Banba and Fótla.

The \*Greek *Ierne* and the \*Latin form *Hibernia* (*Hivernia*) appear to relate to the ethnic name for the island's people, the *Ivernioi*. These people are historically recognizable as the Érainn, and are first recorded in \*Ptolemy's *Geography* c. AD 150 (II, 1). Ptolemy places them quite clearly as inhabiting the south-west of Ireland. Later genealogies and sagas imply that various peoples belonging to the Érainn ruled over other regions and that they were once particularly powerful. The Corcu Loígde ('people of the calf goddess') ruled considerable lands in the south, while the Dál Riata and Dál Fiatach dominated the north-east and parts of western Scotland well into the medieval period. One of the foremost heroic kings in Irish mythology, Conaire Már, was of the Érainn, and his biography describes his seizing the kingship of \*Tara, only to lose it and die when he broke all the taboos imposed on him at the beginning of his reign. By the time that early Irish genealogies and laws were committed to writing in the 7th century, three races were designated as the free races of Ireland, namely, the Érainn, the Ulaí (Ptolemy's *Uoluntii*), and Féni. The latter consisted of peoples who rose to power in the 5th and 6th centuries AD, among them the Éoganachta of Munster and the Connachta in the northern half of Ireland. Latin writers of Late Antiquity from outside Ireland often refer to the inhabitants of Ireland collectively as Scotti (\*Orosius, I, 2; cf. \*Isidore, *Etymologies*, XIV, 6), a term also used of those in western Scotland (\*Bede, *HE* I, 1).

The influence of earlier classical observations on Ireland, such as those made by Julius Caesar (*Gallic War*, V, 13) or Strabo (*Geography*, IV, 5, 4), continued to be felt into Late Antiquity. According to these descriptions, Ireland was an island in Ocean on the periphery of the habitable world and barely habitable because it was constantly cold (e.g. 'glacialis Ierne': \*Claudian, *De IV Consolatu Honorii* 33), a belief that was reinforced by the association of the name *Hibernia* with the Latin adjective *hibernus* 'wintry'. Its inhabitants were savages who devoured human flesh and were enormous eaters. Indeed, the root of the ethnonym 'Gael', which became the common name for the Irish, is clearly Welsh *Gŵyddyl*, meaning 'wild men, forest people'. Ireland was where the limits of the habitable earth were fixed.

This theme of Ireland being at the ends of the earth is echoed by S.\*Patrick and by S.\*Columbanus. The latter transformed this apparent disadvantage into the fulfilment of a momentous biblical prophecy: the conversion of the Irish to Christianity heralded the Second Coming, as Christ's message had now spread to the ends of the earth.

As contacts with Ireland increased in Late Antiquity, and especially as the Irish were active in raiding and settling western \*Britain, historians of the period provided more accurate and detailed information than their predecessors. \*Ammianus Marcellinus, writing about the \*Barbarian Conspiracy of 367–8, names the Irish (\*Scotti) among the peoples who were attacking Britain, the others being the \*Picti and the Atacotti—who also may have been Irish (XXVII, 8, 5). In the 5th century, the Christian historian \*Orosius made more benign comments on Ireland, declaring that although smaller than Britain in extent, it was of greater value because of the favourable nature of its climate and soil (I, 2). The 5th century saw the beginnings of Latin \*literacy in Ireland, including the gradual dissemination of texts such as Orosius' *History*, and the first accounts to emanate from the island itself. The oldest, and most renowned, of these are the *Confessio* and *Epistola* of the British \*Bishop S. Patrick.

S. Patrick provides us with a first-hand account of Ireland, and of the relations between the Irish and their neighbours, particularly along the western coast of Britain. He confirms that raiding for slaves was a common activity on both sides of the Irish Sea. He himself was captured in his father's \*villa, and brought to Ireland when he was 16. In his *Epistola*, he admonishes a British king, Coroticus, for taking some of his converts away as slaves. On the structure of authority in the country, he relates how he gave \*gifts to kings and judges, and that the sons and daughters of kings travelled with him and became Christian monks and \*virgins. This was a society in the throes of a significant cultural and religious change, and, as S. Patrick witnesses, this \*conversion process was neither swift nor easy. It was also a conversion of people on the fringes of the Roman world, a point stressed a few times by the British bishop in his declaration that he was living 'as an alien among non-Roman peoples, an exile on account of the love of God' (*Epistola*, section 1).

In regard to the physical characteristics of the countryside and its economy, the archaeology of Late Antiquity in Ireland is only just beginning to yield a coherent picture. During the first centuries AD, intensive \*farming seems to have declined and there was a consequent phase of woodland renewal. Settlements are difficult to identify but the methods for disposal of the \*dead show a shift from \*cremation to extended inhumation, most particularly from the 5th century

onwards. This change does not necessarily reflect the adoption of Christianity, as many graves of the period are not situated in known ecclesiastical sites but rather in ancestral burial mounds (*ferta*). An occasional burial is accompanied by grave-goods, which must have a religious significance. A spectacular example is that of a woman buried during the 4th/5th century in a pre-historic mound in Fartagh, County Galway, along with the complete body of a \*horse.

Nevertheless, archaeological evidence for contacts with western Christendom is becoming more evident. Roman material in Ireland is broadly divided into two phases. Objects dating to the 1st/2nd centuries AD are often linked to refugee movements from Britain. A later 4th- to 7th-century phase reflects increasing trade contacts with the Late Roman world. Imports of \*pottery included containers for \*wine, \*olive oil, and other provisions and also high-status tableware. Imports of coins and \*jewellery, and military payments in the form of \*hoards of hack \*silver, support the historical record that the \*aristocracy in Ireland was well aware of Roman culture and also that it served in the \*armies of the Late Roman Empire.

Christianity percolated into Ireland in various ways. The papal missions of Popes Celestine and \*Leo I arrived in the person of \*Palladius, the courtier sent to Ireland in AD 431 'to those Irish believing in Christ'. Christianity came from Britain through missionaries such as S. Patrick, and through personal contacts, most of which were probably familial.

Significant changes happened to Irish society and its economy during the 6th century. Palaeobotanists and ecologists have identified a narrowing of tree rings in Ireland between AD 536 and 541 caused by some natural phenomenon, either volcanic or climatic, in line with similar evidence for the \*Dust Veil of 536 recorded worldwide. Chronological references are made in the *Annals of \*Ulster* (536 and 539) to 'a failure of bread' which suggests outbreaks of \*famine at that time.

A change in \*settlement patterns, which led to the existence of far more visible monuments in the countryside, came with the building of thousands of ring forts or raths and lake dwellings (crannogs). These were the farmsteads of early Ireland that supported a \*cattle-based dairying economy and afforded shelter and protection to the free classes. They can be seen dotted throughout Ireland, often with internal mounds surrounded by at least one bank and ditch. Crannogs, small man-made islands built on raft-like foundations and protected with woven wooden palisades, are particularly prevalent in the Midland and northern Lakelands.

The establishment of churches, and most especially monastic communities, contributed to economic and social change. Monasticism appears to have brought industrial \*mills and milling to Ireland, while such communities also provided for the \*poor in times of

crisis and acted as trade distribution points. Such transformation also caused political upheaval that brought about the downfall of many old dynasties and the rise of new dynasties who were to hold on to power until the 12th century. EB

P. B. Golden, *Khazar Studies*, vol. 1 (1980), 175–6.

**Irenopolis** Easternmost \*city of \*Cilicia Secunda, also called Neroniades. There are hot springs nearby. Irenopolis minted coins up to the time of \*Gallienus. \*Bishop Narcissus was active at the \*Council of \*Nicaea (\*Theodoret, *HE* I, 7), was involved with the candidature of \*Eusebius of \*Caesarea for the see of \*Antioch in 332 (\*Letter of \*Constantine in *VCon* III, 62), and opposed \*Athanasius in the Christological controversies under \*Constantius II. Irenopolis is listed in the \**Notitia Dignitatum* (or. 11, 24) as the site of \**fabricae* for manufacturing lances supervised by the \*Magister Officiorum. It should not be confused with Irenopolis of \*Isauria (mod. Çatalbadem, formerly Yukarı İrnebol). OPN

TIB 5 Kilikien (1990), 245–8.

**Irish language and literature** Irish belongs to the \*Celtic linguistic family of Indo-European. Insular Celtic consisted of two branches, Goedelic which is the basis of Irish, Manx, and Scottish Gaelic, and Brythonic which is the basis of Breton, Cornish, and Welsh. Celtic was spoken in \*Ireland by the beginning of the 1st millennium AD, as Ptolemy's *Geography* records recognizable Celtic place names and tribes. The earliest form of written Irish survives in formulaic \*ogam inscriptions which record personal names and patronymics. The introduction of \*Latin \*literacy and familiarity with Roman cursive \*script, which developed

into a separate insular script, accelerated the need for greater cohesion in Irish. A rapid development of the language during the 5th and 6th centuries led to major orthographical and phonological changes. Between the 6th and early 9th centuries Irish went through various phases categorized as Archaic Irish, Classical Old Irish, and Middle Irish.

Vernacular glosses and texts dating to at least the 7th century survive in contemporary continental manuscripts and in later Irish manuscripts. These are marginal and interlinear glosses on commentaries on the \*Bible, the Psalms, church fathers, and Latin \*grammar books. The 7th-century 'Cambrai homily', which is probably the earliest continuous religious prose text in Irish, is a \*sermon on the Christian way of life and on concepts of \*martyrdom. The contemporary *Audacht Morainn* is one of the earliest medieval versions of the Mirror of Princes in which a \*king is advised on governing his people. Fragmentary poems composed by Colmán mac Lenéni, founder of the church of Cloyne, County Cork (d. 600), praise kings and worship Christ in concise language and strict \*metre. The prosimetric list of the kings of \*Tara, *Baile Chuinn Chétchatbaig*, incorporates elements of Late Antique \*rhetoric style while at the same time following native metrical rules. The greatest volume of early vernacular literature survives in heroic tales which range from the epic biographies of heroic kings to finely constructed love stories. *Aislinge Óenguso*, 'The Dream of Óengus', tells of the lovesickness of the deity Óengus for a woman who appeared in a \*dream. Óengus, helped by other otherworldly beings, sought her in the fairy mounds of Ireland. He located her and they both returned to his residence at Newgrange in the shape of swans. This beautifully crafted story attests to the sophistication of this literature. The pinnacle of early Irish literature is the epic *Táin Bó Cuailnge*, 'The Cattle Raid of Cooley'. This tale relates the quarrel over their fine bulls between the warrior-queen Medb of Connacht and the heroic King of the Ulaid, Conchobar mac Nessa. The biography of the hero Cú Chulainn is at the heart of the *Táin*. Composed in its earliest form in the 7th century, the *Táin* and most vernacular texts survive only in medieval manuscripts of the 12th century and later. EB

M. Werner, *Adelsfamilien im Umkreis der frühen Karolinger* (1982).

**iron and ironworking** (Lat. *ferrum*, Gk. *σίδηρος*) Iron deposits were exploited throughout the Late Roman Empire. Mines are attested in southern \*Gaul (Les Martys, Aude) and near \*Autun in the 3rd or 4th century. Written sources document iron \*mining in Gaul, in \*Norikum, on Elba and \*Sardinia (cf. \*Rutilius Namatianus, *De Reditu Suo*, 1, 351–6; *CTh* X, 19,6 [AD 368], 9 [AD 378]), in Dalmatia (\*Cassiodorus, *Variae*, 3.5; \**Expositio Totius Mundi et Gentium*, 53), Thrace (*Expositio*, 51), and \*Macedonia (*Not. Dig.* [or.] 2, 36; *Expositio*, 51). Some were perhaps located near the \**fabricae* at \*Niš (Naissus) and \*Thessalonica (*Not. Dig.* [or.] 11, 36f.). Further evidence points to iron being extracted on \*Cyprus (*Expositio*, 63) and at numerous sites in the Taurus Mountains in \*Cappadocia. In 372 \*Basil of \*Caesarea requested the responsible authority to alleviate the tax burden on Cappadocian iron miners (*ep.* 110; cf. \*Pliny, *Natural History*, 34, 41); these taxes were levied in kind at the rate of one-fifth of total production (*CTh* XI, 20, 6).

It was forbidden to trade iron beyond the limits of the Empire (*Digest*, 39, 4, 11; *Expositio*, 22 [AD 360]; *CJust* IV, 41, 2 [AD 456]), but iron was probably imported. According to a text attributed to \*Zosimus of \*Panopolis (3rd cent.), sword blades made of crucible steel were imported from Persia (*Collections Alchimistes*, 3, 347ff. [Gk], 332 [tr.]).

On the orders of the \*Praefecti Praetorio iron was supplied to the state *fabricae* (*CTh* X, 22, 2 [AD 388]), which produced shields (*scutaria*), swords (*spatharia*), and/or \*arms and armour (*loricaria*, *armorum*) or specialist equipment (*Not. Dig.* [or.] 9, 18–39; [occ.] 11, 16–39). The wrought iron gained from smelting and subsequent hammering (in order to remove slag) could attain different qualities, some with sufficient quantities of carbon to be classified as steel. For the production of blades, iron and steel rods could be twisted together and hammered repeatedly (pattern welding). Smiths also supplied the markets with a variety of iron implements, vessels, ornaments, etc. Written evidence for iron smiths comes from \*Egypt where they formed \*guilds (P.Oxy. 84, 2718) and celebrated cultic \*festivals (e.g. at Deir el-Bahari/\*Thebes).

**irrigation** In much of the Mediterranean world, irrigation was restricted by terrain and lack of surface water. Small-scale watering, especially of \*garden crops, and smaller-scale canal and \*aqueduct irrigation was practised in \*Gaul and \*Italy, and \*Spain possessed extensive irrigated landscapes (Butzer et al.), especially in the east. Roman systems in Upper \*Mesopotamia fell into varying states of disrepair in the 6th and 7th centuries and were rehabilitated only under the \*Umayyads, who expanded agriculture settlement through an aggressive programme of canal, dam, and \**qanat* building.

\*Egypt, though rainless, seemed fabulously rich in Antiquity because of its irrigation-based agriculture. The land, or at least its delta, was, according to Herodotus' famous saying (II, 5, perhaps originating from Hecataeus), 'the gift of the river', *scilicet* the \*Nile, with its annual inundation. The river's gentle downward gradient made the principal method that of basin irrigation, the construction and maintenance of parallel and transverse embankments to contain floodwater. This required great labour and therefore, in good times, either the efficiency of a rigidly centralized state administration or the steady application of local knowledge. Which is of more importance is debated; opinion currently favours the latter. Land beyond the floodplain of the Nile, dedicated to orchards and vineyards, was irrigated artificially. In places this was accomplished with the ancient *shaduf* (a scoop at the end of a pole set on a fulcrum). The Hellenistic period saw the introduction of the Archimedean screw and the animal-driven wheel known in \*Greek as a *mechane* and in \*Arabic as a *sagiya*, whose use spread widely in the Roman and Late Antique periods. The latter development is reflected in a new type of document (5th–7th centuries) recording the replacement of broken or worn-out machinery parts, often axles; P.Oxy. XIX, 2244 is a list of such replacements.

In Persia, *qanats* supplied most irrigation, though the later \*Sasanians built large-scale canal projects in the Diyala River and elsewhere in Persian \*Mesopotamia; these contributed to salinization and environmental collapse. In southern \*Arabia, the breach of the \*Marib Dam between AD 575 and 600 spelled the end of the \*Sabaeen kingdom which had depended on hydraulic agriculture.

**irrigation, Persian and Mesopotamian** \*Farming in Persian \*Mesopotamia in the \*Sasanian period depended on irrigation to increase the area of land which could be cultivated. By Late Antiquity, canal irrigation in Mesopotamia and \*Khuzestan had been practised for thousands of years, but under the Sasanians it was extended to levels not equalled until modern times. The \*Arabic sources refer to the 'cut of the Khosrow' (Al-Kātūl al-Kisrawī), which irrigated the area east of the Tigris from a point above modern Samarra to the area south of Baghdad, and the 'canal of \*Narseh' (Nahr al-Nars), which ran south of Babylon past Nippur. Such royal names suggest investment by Sasanian monarchs. Canals like these may have been dug during the Sasanian period or they may have been existing watercourses which were repaired, extended, or dredged. Identifying a particular canal in Late Antique Mesopotamia depends greatly on the existence of an alignment of sites that, in the absence of excavations, can be dated by surface \*pottery of Sasanian and/or early Islamic date. In addition, water-lifting devices may have been used in some cases, particularly on the Tigris, Karkheh, and Karun rivers.

The situation on the Iranian Plateau was very different. In the absence of perennial streams, most irrigation relied on hand-dug wells or on \**qanats*. Sasanian legal sources (e.g. the \**Matigan-i Hazar Datastan*) refer to *qanats*, which could form part of sophisticated schemes of hydraulic engineering. At the time of the \*Arab conquest *qanats* were encountered by 'Abdallah b. 'Amir's forces in \*Khorasan, and in the 9th century, according to Gardizi, the Tahirid ruler Abdullah Tahir commissioned a tract on the law relating to *qanats*. DTP

**Isaac** \*Exarch (and \**patricius*) of \*Ravenna (625/6–643/4). Armenian by origin, he previously held military command in the East. His time in \*Italy saw conflict and intrigue with both \*Lombards and popes. In 640 Isaac exiled clergy and oversaw the confiscation of treasures from the Lateran Palace. In 643 he crushed a rebellion in \*Rome led by the \**chartularius* Mauricius. In the mid-620s Pope \*Honorius asked Isaac to help restore the Lombard King Adaloald; and in 630 he had the Lombard \*Dux Taso killed at \*Ravenna, possibly prompted by King Ariold (\*Fredegar, IV, 69). In 639 he founded a church at Torcello in the Lagoon of \*Venice (*AE* 1973, 245). The \**Liber Pontificalis* (75) claims Isaac died of a stroke at Ravenna, but he probably died in the bloody conflict at the River Scultenna at the exarchate's western border where \*Rothari was extending Lombard territory. Isaac's \*sarcophagus, preserved in S. Vitale at Ravenna, records how he kept hold of Rome and the West (*CIG* IV, 9869). NJC *PLRE* III, Isaacius 8.

**Isaac of Antioch** (5th–6th cent.) Conventional author of a corpus of over 200 metrical homilies and \*hymns in \*Syriac on biblical, ascetical, monastic, and historical themes, many preserved in 6th-century manuscripts. \*Jacob of \*Edessa (d. 708) identified three separate authors of this corpus: Isaac of \*Amida, who visited \*Rome and \*Constantinople (early 5th cent.); Isaac 'the Great' from Edessa, who spent time in \*Antioch (late 5th cent.); and another, later Isaac of Edessa (early 6th cent.). An additional author, Isaac the Solitary, appears to have also contributed to the corpus. The work of delimiting and studying the corpus is still in its early stages. KSH

**Isaac of Nineveh (Isaac the Syrian)** (7th cent.) \*Bishop, hermit, and \*Syriac mystical writer of the \*Church of the East. He originated from Qatar (Beth Qatraye) and was made Bishop of \*Nineveh by the \*Catholicus George whose term of office (661–81) provides the only firm chronological basis for Isaac's life. A few months after the ordination he left office in order to become a hermit in south-west Iran.

His writings were handed down in at least five 'Parts', of which the first three and the fifth are known to us. His 'First Part' was translated into \*Greek at the monastery of S. \*Sabas in \*Palestine (8th/9th cent.). As a starting point for \*translations into several other languages, this version made Isaac a spiritual authority for all the Eastern Orthodox (Chalcedonian) churches. The other 'Parts', rediscovered only in recent years, focus in particular on God's infinite love which contradicts the idea of eternal damnation. For Isaac, the peak

of mystical experience is reached in \*prayer beyond words and imaginations ('non-prayer'). KPe

**Isauria and Isaurians** A mountainous region of southern \*Anatolia lying between \*Pisidia and \*Pamphylia to the West, \*Lycaonia to the north, and \*Cilicia to the east. There were over twenty \*cities in Isauria, though only the inland cities of Germanicopolis, Claudiopolis, and the coastal city of Anemurium (\*Anamur) were of much size, and there is far less archaeological evidence than in similarly located cities in Lycia and Pisidia. The interior was dominated by the Calycadnus River Valley, flowing through the Taurus Mountains to \*Seleucia. Although the Late Roman \*province, first created as an independent province in the mid-3rd century, was named after the city of Isaura (later \*Isaura Vetus), this lay outside Isauria in Lycaonia. The provincial capital was at Seleucia. Isauria is placed in the \*Dioecesis of \*Oriens in the \*Verona List (255 recto, 20) and in the *\*Notitia Dignitatum* (or. XXII, 31). The governor was often a \*Praeses, though he was sometimes assigned troops and in an unusual arrangement made \*Dux or \*Comes, as in the *Notitia Dignitatum* (or. XXIX).

The population had a reputation for producing \*brigands. \*Ammianus Marcellinus records raids in 354, 359, and 368, while a widespread set of raids in 404 are referred to in \*letters by both \*John Chrysostom and \*Jerome. The poverty which encouraged banditry also made this area a productive source of soldiers, with Isaurian regiments being particularly prominent in the Roman \*army from the middle of the 5th century onwards, giving its name to various corps under the \*Magister Militum Praesentalis (*Not. Dig.* [or.] V, 25 and 66) and the Magister Militum per Orientem (or. VII, 20 and 56). One of these soldiers, \*Tarasicodissa, married the daughter of the \*Emperor \*Leo I c.466 and, having changed his name to \*Zeno, himself became emperor in 474. This period saw much \*patronage and money flow into Isauria as Zeno promoted his friends and relatives. This prosperity also involved the region in Roman imperial politics, and Roman armies fought in the region in 475–6, 484–8, and 491–8. Following the conclusion of the war under \*Anastasius I, some Isaurians were resettled in \*Thrace, while others found work as labourers or as monks. Following the rise of \*Islam in the 7th century, the region became a sector of the \*Arab–Byzantine \*frontier in \*Cilicia.

Despite its reputation for banditry, and despite the continued presence of a local Isaurian language (though not recorded epigraphically), the region was well integrated into the Roman Empire. \*Pottery imports of Mediterranean fine ware reached into the interior, \*bishops from the province regularly visited \*Antioch and \*Constantinople, and several \*sermons of Basil, Bishop of Seleucia in the late 5th century, are preserved (*CPG* 6655–74). Isaurians had a reputation as \*masons in 6th-century Constantinople. The shrine at Meryemlik, near Seleucia, of S. \*Thecla, legendary companion of S. Paul, was visited by the Emperor Zeno himself. The region's remoteness means that many archaeological sites are well preserved, in particular the church complex at \*Alahan. HE

**Isfahan** (MP Spahān 'city/camp of the armies') Fertile and prosperous region of the \*Persian Empire north of \*Fars on the western side of the Iranian Plateau,

mentioned already in the \*inscriptions of the \*mowbed \*Kerdir. It is attested as Spahān on \*Sasanian \*seals and appears in the Sasanian text *Šāhrestānīhā ī Ērānšahr*.

Isfahan is the name also of the region's principal fortress-city, though the usual MP name for the city is Jay or Gay. The *\*Res Gestae Divi Saporis* (ŠKZ) mentions a governor (Shahrab) of Gay, and a mint (mint mark GD) is attested from the mid-5th century into the Islamic period. \*Movses Khorenats'i (III, 35) records the transfer of \*Jews from \*Armenia to Isfahan under \*Shapur II. The Shahrestan or Gay \*Bridge east of the city retains its Sasanian piers. On a rocky eminence 8 km (5 miles) west of the city stand the remains of a tower and a \*fire temple which are visible from a considerable distance. There was a \*bishop of the \*Church of the East already in the 5th century. \*Arab armies took the city in the aftermath of their victory at the Battle of \*Nahawand in AD 640 (19 AH). DTP; OPN

**Isho'yahb II of Gdala** (d. 644/5) \*Catholicus of the \*Church of the East. Isho'yahb II studied and later taught at the School of \*Nisibis, but left the school in protest against the theology of its director \*Henana. He then led the school of Balad until elected catholicus in 628. In 630, he was sent as ambassador by the Persian Queen \*Boran to negotiate peace with the \*Emperor \*Heraclius in \*Aleppo. He is credited with later negotiating with the \*Caliph \*Umar al-Khattab a treaty of protection for Christians. His writings, including a Commentary on the Psalms, are largely lost. CJ

ed. (with FT) L. R. M. Sako, *Lettre christologique du patriarche Isho'yahb II de Gdala* (1983).

**Isho'yahb III of Adiabene** (c.580–659) Theologian, monk, and author; \*catholicus of the \*Church of the East 649–59. Isho'yahb came from a wealthy family of Kuphlana in \*Adiabene. His father Bastomagh, a landowner, was a benefactor of the recently founded \*Monastery of Bet 'Abe where Isho'yahb asked to be buried.

Isho'yahb studied at the School of \*Nisibis, but left it with others in protest against the \*theology of \*Henana the director, and joined the \*Monastery of Bet 'Abe. Isho'yahb was elected \*Bishop of \*Nineveh (628), then \*Metropolitan of \*Arbela. He took an active part in theological controversy, opposing the theology of one *gnoma* in Christ advocated by \*Sahdona (Martyrius) and \*Syriac Orthodox Christians. In 630 he formed part of the embassy to the Emperor \*Heraclius from \*Boran, daughter of the defeated and deceased \*Khosrow II.

In the early years of \*Islam when apostasies increased, he calmed Christians, in particular quelling separatist tendencies in the \*dioceses of \*Fars and Bet Qatraye (Qatar). He also reformed the \*liturgy and the breviary. Over 100 \*letters survive, giving valuable information on ecclesiastical events and relationships between Christians and Muslims. Isho'yahb also wrote \*hymns, refutations of \*heresies, and historical narratives. \*Thomas of \*Marga (I, 69–80; II, 123–79) and \*Bar 'Ebroyo (Bar Hebraeus, *Chronicon Ecclesiasticum*, III, 130–2) both give accounts of him. **Isidore** (mid-5th cent.–early 6th cent.) Philosopher. A native of \*Alexandria, Isidore studied \*philosophy there under the brothers Heraiscus and Asclepiades before heading to \*Athens in 470 to complete his education under \*Proclus. In Athens, he read Plato under Proclus and Aristotle under the guidance of \*Marinus. He returned to teach philosophy after turning down a

request to succeed Proclus as head of the Athenian school (\*Damascius, *VI Isidori*, 98C).

Isidore was a mediocre teacher who was quick to criticize and often had trouble explaining his ideas clearly. His analysis of texts relied more on his inspiration than his knowledge of other commentators. He twice attempted to flee Alexandria in 489 rather than compromise in the face of an imperial investigation of \*pagan teachers. The first attempt failed when he was discovered loading books onto a boat, but the second attempt, a journey to Athens by land, succeeded. Damascius accompanied Isidore on this journey, saw Isidore's actions as embodying philosophical principles, and was converted to the philosophical life. When Isidore reached Athens, he was prevailed upon to take over as head of the Athenian \*Neoplatonic school but left the city soon afterwards (Damascius, *VI Isidori*, 151 A–F).

He left no known writings, though Damascius does indicate that he occasionally wrote extremely unpolished poetry. Damascius' *Life of Isidore*, written between 517 and 526, serves to illustrate Isidore's exemplary nature by comparing him explicitly and implicitly to a range of contemporary pagan intellectuals. Aside from a few scattered references elsewhere, most of what is known about Isidore derives from this text. ER

**Isidore of Miletus** Engineer, \*architect, and mathematician from \*Miletus who, with \*Anthemius of \*Tralles, was chief architect in the rebuilding of the Church of the \*Holy Wisdom after 532 (\*Procopius, *Aed.* I, 1, 24; \*Paul the \*Silentiary, *Ecpbrasis*, 552–3). They also offered advice on the flood defences of \*Dara (*Aed* II, 3, 7–14). Isidore taught in \*Constantinople, was mentioned by other mathematicians as their master, wrote a commentary on the lost *Kamarika* of \*Hero, and is said to have collated or annotated \*Eutocius' commentary on Archimedes' *On the Sphere and Cylinder*. His nephew, also \*Isidore, was also an architect (*Aed.* II, 8, 25). ER

PLRE IIIA, Isidorus 4.

**Isidore of Miletus the Younger** Nephew of the \*architect \*Isidore of \*Miletus and himself an architect. He participated in the fortification of \*Zenobia under the architect Johannes (\*Procopius, *Aed.* II, 8, 5), and he is perhaps the engineer Isidore mentioned in inscriptions of AD 550 from \*Chalcis in \*Syria. He was entrusted with the rebuilding of the \*dome of the Church of the \*Holy Wisdom in \*Constantinople

after its collapse in 558 (\*Agathias V, 9, 3–9; \*Paul the \*Silentiary, *Ecpbrasis*, 315–19; \*Theophanes, AM 6055; cf. \*John Malalas, XVIII, 143). ER  
PLRE IIIA, Isidorus 5.

**Isidore of Seville** (c.560–4 April 636) \*Bishop of \*Seville from 599/601 until his death and voluminous author of works on \*grammar, exegesis, church discipline, and history that enjoyed wide diffusion and consistent popularity throughout the Middle Ages.

#### *Life and times*

Isidore was born to a family from Cartagena; he succeeded his brother \*Leander as Bishop of Seville in c.600. He assembled the Second Council of Seville in 619, where the two Natures and single Person of Christ were defined as against the Acephalite heresy, as well as the \*Homoean (\*Arian) beliefs recently abjured by the \*Visigothic kings. He also assembled the first version of the *Hispana* conciliar collection. The authenticity of his letters is controversial, but he did correspond with \*Braulio of Zaragoza, who edited his *Etymologies* and composed a profile of his life and works. Isidore wrote a *Chronicle* and a *History of the Goths, Vandals, and Sueves* under King \*Sisebut (r. 611/12–20), revising them under \*Suinthila (r. 621–31); he structured his narratives by reign, and fitted the Visigothic kingdom into universal history. While he dedicated his *Etymologies* and *De Natura Rerum* to Sisebut, who replied with a poem on \*eclipses, he criticized Sisebut after the king's death for forcibly converting Jews, and transferred his \*praise to Suinthila. By virtue of seniority, Isidore presided over the Fourth Council of \*Toledo in 633, perhaps drafting the acts. These required bishops to establish episcopal \*schools on the model of those at Seville, and the council closed by condemning conspiracy against the king, beginning an alliance between Church and crown. His death is described by Redemptus, \*Deacon of Seville. GDB

#### *Works*

Isidore's grammatical works include *Differences*, treating distinctions between related words (book 1) and entities (book 2), and *Synonyms*, a meditation on repentance illustrating synonymy. The encyclopedic *Etymologies* (or *Origines*), probably his best-known work, deploys classical and patristic erudition to reveal how a word's 'origin' reveals essential truth concerning the thing itself (I, xxix, 2). Books 1–5 cover the learned disciplines (grammar, \*rhetoric, dialectic, \*mathematical sciences, \*medicine, and \*law), leading to a survey of Christian doctrine and worship (6–8). Languages and social groups (9), and adjectives describing humans (10) form the bridge to natural history (11–14, 16), and thence to techniques such as building, \*farming,

\*warfare, and food preparation (15, 17–20). *The Nature of Things* (*De Natura Rerum*) pairs classical \*cosmology with Christian \*allegory.

*The Book of Numbers* (*Liber Numerorum*) applies the same allegorical method to numbers found in the Bible to reveal \*number symbolism. Aside from the *Expositions* (or: *Questions*) on the Old Testament, Isidore's exegetical output takes the form of handbooks. These are the *Prooemiae* (introductions to the books of the Bible), the *Lives and Deaths of the Fathers* (*De Ortu et Obitu Patrum*), and *Allegories* (typological and moral interpretations of OT and NT figures).

*The Origin of Offices* covers 'offices' in both senses, i.e. Christian \*liturgy, including 'Mozarabic' rites, and the duties of different ranks within the Church. *On Heresies* (perhaps not authentic), *On the Catholic Faith against the Jews*, and the *Rule for Monks* respond to doctrinal and disciplinary challenges in the Spanish Church. Finally, *Sentences* expounds basics of faith and moral theology.

Isidore also composed three works of history: *On Famous Men* (*De Viris Illustribus*), which includes many Spanish Christian authors; a universal *Chronicle*; and *The Origin* (or *History*) of the Goths, with addenda on the \*Vandals and \*Suebes. This last work stands in the tradition of \*Latin histories of barbarian peoples, but adopts a perspective peculiar to Isidore's situation. The \*Visigoths are furnished with a double *origo*, biblical and classical, but their destined *patria* is \*Spain, where they will unite with the Hispano-Romans in a catholic Christian kingdom. This destiny is announced in the *Laus Spaniae*, a prefatory encomium of Spain itself, the fertile 'mother of princes and of peoples'. FW

**Isidorus, Aurelius** (c.270–post 324) Keeper of a large family \*archive (c.180 \*papyri) related to the private and public dealings of himself and his \*family in the Fayum \*village of \*Karanis located in the Arsinoite \*nome. Isidorus was one of at least eight children born to Ptolemaeus and Herois. His papers, which also concern the affairs of his brothers, illustrate, in a similar way to the \*Sakaon Archive, agricultural activities and \*village administration in the last quarter of the 3rd and first quarter of the 4th century. Isidorus was a landholder, tenant farmer, and performer of the civic duties known as liturgies, serving among other functions as village \*headman (*komarch*) and *tesserarius*, in the latter capacity overseeing the return of fugitives who had taken shelter in his village (see ANACHORESIS). He is representative of a dying breed of citizen farmer who balanced the responsibilities of a demanding and often corrupt liturgical system with diverse farming interests. RA

**Isidorus, Flavius Anthemius** (\*Consul 436) Native of \*Egypt and son of the powerful \*Praefectus Praetorio \*Anthemius, he was \*Proconsul \*Asiae, then \*Praefectus Urbi at \*Constantinople in 410–12, before becoming Praefectus Praetorio of \*Illyricum (424) and of \*Oriens (435–6). \*Isidorus of Pelusium wrote to him. Sozomenus, his \*Domesticus, may be the historian \*Sozomen. ADL

PLRE II, Isidorus 9.

**Isidorus of Pelusium** Prolific monastic writer of the late 4th to early 5th centuries. Well educated (probably

in \*Alexandria), Isidorus appears to have taught \*rhetoric in Pelusium until he retired to the desert of \*Nitria. Upon his return to \*Pelusium, Isidorus was ordained as a \*priest, but he spent most of his long career in a \*monastery outside the \*city. It was there that he penned nearly 2,000 elegantly crafted \*letters to a wide assortment of monks, priests, \*bishops, local officials, imperial administrators (including \*Theodosius II), and assorted laymen, especially throughout the \*province of \*Augustamnica Prima. He was an admirer of \*John Chrysostom, and an ardent advocate of high moral standards among the clergy. Isidorus' letters reveal him to be a sensible exegete and a devout ascetic who remained fully engaged with the lives of his numerous correspondents. CJH

**Isis, cult of** A shorthand expression for the religious dimension, focused on Isis, Serapis, Osiris, Harpocrates, and Anubis, of a much wider long-term interaction between Hellenized \*Egypt and the rest of the Empire. The cult was always strongest in the east Mediterranean, where it often continued to form part of local practice until the late 4th century. At \*Rome, *vota publica* coin issues with Isiac motifs were struck until AD 379 and cult practice in the Iseum Campense seems to have continued until \*Theodosius I, but explicit evidence for worship is limited to private houses of the \*aristocracy. The Serapea of \*Menouthis and \*Alexandria were destroyed by \*Theophilus, \*Patriarch of Alexandria, in 389 and 391/2. \*Justinian I ordered the closure of the \*Temple of Isis at \*Philae, a centre of \*pagan practice, in 535/7. A synthetic treatment of the topic in Late Antiquity is a desideratum. RLG

**Islam** Islam became the name for the strand of monotheist belief with an \*Arabic scriptural tradition that took shape in the Near East in the 7th and 8th centuries AD. The Arabic word *islam* literally means 'submission' or 'surrender' and is usually understood to refer to the believer's submission to the will of God. Muslim, literally 'one who surrenders', is derived from the same consonantal root. Both terms took some time to become the most common labels used by adherents to the new religious movement. \**Muhajir* ('emigrant') and *mu'min* ('believer') are among the more common self-descriptions in the documentary evidence from the 7th and early 8th centuries.

The traditional Islamic sources, which largely date in their extant form from the 9th century AD and later, present Islam as a religious tradition established by \*Muhammad b. 'Abd Allah (d. AD 632), a \*merchant from the small shrine town of \*Mecca in the western highlands of the \*Arabian Peninsula. Between about 610 and his death in 632, Muhammad received revelations from the unique God of the Judaic and Christian traditions. Opposed in his home town of Mecca, he founded in 622 a new political community of believers at \*Medina (formerly Yathrib), about 300 km (180 miles) to the north. Under his leadership, this Medinan community enjoyed significant political and economic success, uniting many of the \*tribes of Arabia in a federation and in AD 629–30 forcing his former opponents in Mecca to recognize his leadership.

Already in the latter years of Muhammad's life, expansionist \*warfare had brought his followers into contact with tribes allied with the Roman and \*Persian empires. Then, in the decades immediately after Muhammad's death, his west Arabian followers presided over a wave of conquests that broke Greater \*Syria and \*Egypt away from Roman control, and seized \*Mesopotamia and parts of Iran, precipitating the collapse of the \*Sasanian dynasty. Many of the later sources state that God's revelations to Muhammad were collected into a written book during these same decades in the middle of the 7th century, and there is mounting documentary evidence that the Arabic \*Qur'ān was indeed circulating in this period.

With the conquest of much of Roman and Persian territory, the west Arabians became the leaders of a vast tributary empire. Conflict within the west Arabian elite, combined with tensions within and between the tribes in the conquered provinces, caused two periods of particularly violent unrest, the \*Arab Civil Wars, remembered in the later sources as the First and Second \**Fitnas* ('trials' or 'temptations') of AD 656–61 and 683–92. The \*Umayyad branch of Muhammad's tribe of \*Quraysh emerged victorious from both these conflicts, at the expense of their rivals within Quraysh. The Zubayrid branch of Quraysh seems to have abandoned

any aspiration to lead the new polity thereafter, while the Hashimite branch became the focus for the aspirations of a number of groups aggrieved by the success of the Umayyads and their Syrian tribal allies. In 750, a rebellion beginning on the eastern frontier of the new empire created by the \*Arab Conquests succeeded in overthrowing the Umayyads and in installing the \*Abbasid branch of the Hashimite tribe in power, with a new capital in Iraq (\*Mesopotamia).

Historical study of this first century or so of Islam has focused above all on two related questions. The first of these concerns the history of the formation of the scriptural tradition of Islam. This includes both the Qur'an and the traditions about the actions and conduct of Muhammad and his associates, traditions known collectively as the \*hadith, as well as \*Shi'a traditions about the various Shi'i imams, who were descended from Muhammad's cousin \*'Ali and daughter \*Fatima. The second question concerns Arabic \*historiography, that is to say the historical reliability of these materials and the other elements of the Islamic tradition, notably the *sira* material about the biography of Muhammad and the *akhbar* ('reports') about the early history of Islam, which were compiled in works of *ta'rikh* ('history'). In answering these two questions, many scholars have engaged with the third problem of how early Islam should be related to its wider context: understanding the formation and character of the Islamic tradition has increasingly been seen to demand interpretations that situate it in relation to other religious currents in the Late Antique Near East. Explanations for the development of social and political formations in the early Islamic period have also engaged to varying extents with wider Late Antique political, economic, and social history. In what follows, some of the more important strands of scholarship in relation to early Islam in its Late Antique context are outlined.

Much recent study has considered the extent to which the bundle of religious, social, economic, and political developments in the Near East, often collectively labelled as the 'rise of Islam', belong to 'Late Antiquity' (itself an equally capacious and variously defined category). That the culture of early Islam in some respects belonged to Late Antiquity had been proposed by art historians such as A. Riegl in the late 19th century, and Semiticists such as C. H. Becker. More recently, P. Brown's *The World of Late Antiquity* (1971) was an important stimulus to studies of Islam that identified continuities with the Late Roman past, and G. Fowden's *Empire to Commonwealth* (1993) examined interactions between monotheist belief and imperialism in Late Antiquity, noting how the former allowed for the survival of cultural identities long after the collapse of political empire in both Rome and Islam.

Whereas Brown and many of his successors came to the study of Islam from Late Roman Christianity, scholars working primarily on Islam itself and the Arabic sources also brought comparative perspectives and new methods to bear on early Islam in the 1970s. P. Crone and M. Cook's *Hagarism* (1977) and Crone's *Slaves on Horses* (1980) pursued the implications of a very sceptical reading of the later Arabic tradition, and also made conclusions based upon comparison with early medieval developments in Europe and Scandinavia. However, in these works and others, such as Crone and M. Hinds's *God's Caliph* (1986), there was a tendency to emphasize the distinctiveness of the Islamic tradition and its Arabian origins. In *Meccan Trade and the Rise of Islam* (1987), Crone took a similar approach to the economy, suggesting that west Arabia at the time of Muhammad was economically isolated, and that Islam might have had some of the characteristics of a 'nativist' revolt against the Roman Empire.

Since the 1990s scholarship has brought together the implications of Late Antique studies and sceptical source criticism for the early history of Islam. Many of the sceptics' conclusions have been challenged or revised, with more subtle source-critical approaches gaining ground, and more careful consideration of the non-Arabic sources. Important contributions include the work of F. M. Donner and R. Hoyland. Comparative archaeological and historical approaches, such as those by H. Kennedy and C. Wickham, have also led to new consideration of how the Near East fitted into the wider economic and political patterns of Late Antiquity. Source-critical approaches to the hadith and *sira* have been refined, for example by H. Motzki. New approaches to the material evidence for early Islam, such as the studies of early Qur'an manuscripts by F. Déroche, are also yielding important results. There has also been a return to questions of the relationship between the Islamic scriptural and wider literary tradition and other Middle Eastern traditions. A prominent example of such an approach is the *Corpus Coranicum* project, which has sought to identify intertextualities between the Qur'anic text and texts of other Late Antique religious traditions.

Because much of the scholarship that prompted a more contextualized approach to Islamic origins was carried out by Late Roman and Byzantine specialists, the legacy of Sasanian Iran and the Asian context for early Islam has been somewhat neglected. However, new archaeological work in Iran and \*Central Asia, as well as new consideration of sources for the Islamic east, is beginning to redress this imbalance. Greater attention is also now being focused on the Arabian Peninsula in the period before Muhammad. A growing corpus of pre-Islamic Arabian epigraphic and archaeological

evidence promises a more precise context for the early 7th-century developments that led to the coming of Islam.

**L'Isle-Jourdain** (départ. Gers, France) A roadside \*vicus in \*Aquitaine, perhaps the *mutatio Bucconis* visited by the \*Bordeaux Pilgrim. It acquired a church and \*baptistery in the 5th century.

Adjacent to this a \*cemetery containing high-status burials developed in the first half of the 6th century. The grave-goods deposited in these burials have much in common in their volume and nature (\*arms and \*weapon deposits, \*belt buckles) with those found in cemeteries in north-east \*Gaul, and have been plausibly associated with \*Frankish military expansion into the region after the Battle of \*Vouillé. CD; STL

S. Bach and J.-L. Boudartchouk, 'La Nécropole franque de l'Isle-Jourdain', in X. Delestre, ed., *La Datation des structures et des objets du Haut Moyen Âge* (1998), 213–32.

**Isle of Man** (Old Irish *Mano* and Old Welsh *Manau*) An island in the Irish Sea. Located on a primary sea route, *Monapia* occurs in classical geographies. In early \*Irish and \*Welsh literature it is associated with the deity Manannán mac Lir (Manawydan). Its alternative

names, *Emain Ablach*, 'Emain of the apples', and *Ynys Afallach*, 'the isle of apples', and the Arthurian 'Isle of Avalon', reflect its other worldly characteristic. Control of Man vacillated between Irish, British, and Northumbrian dynasties. Kings of Gwynedd ruled it to the 9th century. The 7th-century *Life* of S. \*Patrick relates how the saint converted a Cyclops and sent him as bishop to Man to succeed two British \*bishops. This suggests that major churches competed to govern Man. The art and \*inscriptions of the island, including bilingual \*Latin and Irish \*ogams, reflects the cultural influence of its various settlers. EB  
V. Kneale in Koch, *Celtic Culture*, 673–84 (s.v. ELLAN VANNIN).

**isnad** Arabic-Islamic term, associated with the study of \*hadith, used to refer to the chain of narrators who have transmitted a report. The root of the word *isnad* is related to the idea of 'support' or 'backing up', and therefore refers to the main concern of hadith scholars: establishing the degree to which a report is authentic and considered an accurate transmission of the original statement about an event. Although the primary focus of hadith studies was the accurate reporting of prophetic hadiths, the *isnad* is used more widely in Muslim intellectual culture as a tool for establishing scholarly and textual authority. **issue marks and privy marks** In coin design, these are marks in addition to the \*mint mark, possibly indicating the purpose of minting, the quality of the coinage, or the minting personnel. Privy and issue marks appear widely on Roman and post-Roman \*coinage. Some, such as \*OB and \*PS, relating to guaranteed metal purity, are well understood. Others, such as SM (\*Sacra Moneta), apparently relate to the authority under which a coin was struck and possibly its bullion source. Various marks such as pellets/dots, stars, and other small shapes in the field of coin designs remain mysterious. They may have indicated people involved in

the manufacturing process, smaller mint subdivisions (\**officinae*), or have carried no meaning, though they are sometimes useful in identifying the mint of coins with similar overall designs. RRD

**Istemi (Ishtemi, Stembis, Sizabul)** (d. 576) Co-founder of the First \*Türk Empire (552) and Yabghu Khagan (Qaghan) under his elder brother, \*Bumin \*Khagan (r. 552). Under Bumin's son Muqan Khagan (r. 553–72), Istemi extended the empire southward to the Iron Gate (north of \*Tirmidh), conquering \*Sogdiana and reducing \*Hephthalite territory to \*Tukharistan before, together with \*Khosrow I Anoshirvan, destroying Hephthalite power altogether (557–61). Türk rule spread westward across the steppe under Istemi, absorbing or displacing other steppe nomads (\*Avars, \*Bulgars, \*Oghurs, and others). The \*Orkhon inscriptions (263–4) describe Istemi's role in organizing the western Türks, perhaps referring to the traditional decimal organization of Turkic armies. He was succeeded by his son \*Tardu (r. 576–603, intermittently), under whom the eastern and western halves of the empire separated.

Like Bumin, Istemi's name is probably Iranian, derived perhaps from the \*Khotanese for 'land', hence 'Ruler of the Land'. Chinese, Byzantine, and Muslim sources give different variants of his name: Shidianmi (Shih-tien-mi) or Sedimi (Se-ti-mi) in Chinese annals (Chavannes, *Documents*, 38, 47); Stembis-khagan in \*Theophylact Simocatta (VII, 7, 9); Sizabulos or Silzibulos in \*Menander Protector (fr. 10.1–4, 19.1); and Sinjibu in Markwart, *Catalogue* (10, 38–9) and \*Tabari (V, 152–3). The last two probably reflect the title *Sri Yabghu* used by Istemi's Iranian-speaking subjects.

As Menander Protector describes, after unsuccessfully attempting to sell \*silk to the Persians, 'Sizabulos' dispatched a Sogdian-led embassy to the Romans in c. 568. A series of reciprocal Roman–Türk embassies followed, including that of \*Zemarchus (569–71/2), who concluded a treaty between Istemi and the \*Emperor \*Justin II. MLD

**Isthmia** The \*Temple of Poseidon at Isthmia in \*Greece and the ruins of the theatre were quarried in the 5th century for construction of the defensive Hexamilion (Six Mile) or Isthmian \*Wall. The drains to the Roman \*baths became clogged after AD 400, and the building collapsed in the late 6th century. The 5th-century fortress east of the baths and the site of the temple appear to have been occupied by entire families in Late Antiquity, even in times of peace. Evidence of \*Slavic habitation indicates the ultimate failure of the Isthmian Wall. PA

**Italia Suburbicaria** \*Division of the \*Dioecesis Italiae created along with \*Italia Annonaria when the administration of the Dioecesis Italiae, whose \*provinces are (lacunously) recorded in the \*Verona List (256, 8–12), was subdivided. It appears in the \**Notitia Dignitatum* (occ. XIX) as those provinces of the Dioecesis Italiae which came under the \*Vicarius Urbis Romae, who resided at \*Rome and was the most senior of the western Vicarii, outranking the Vicarius Italiae (occ. I, 24) when that office was not folded into that of the \*Praefectus Praetorio per Italiam, but junior to the \*Praefectus Urbi of Rome. The Vicarius had jurisdiction over seven \*provinces in central and southern \*Italy and the islands of \*Sicily, \*Sardinia, and \*Corsica. MMA

**Italy** Late Antique Italy comprised the Apennine peninsula and the Po Valley, bounded on the north by the Alps, and the islands of \*Sicily, \*Sardinia, \*Corsica, and Malta.

### Administrative organization

Italy was organized by Augustus in the 1st century into eleven regions directly under imperial command, and exempted from *tributum*. Progressively, Italy tended to lose its specific status; at the end of the 3rd century, \*Diocletian organized it into \*provinces without fiscal privileges. These formed the \*Dioecesis of Italy, which, from the 320s on, was under the authority of two \*Vicarii: the Vicarius Italiae had charge of the administration of \*Flaminia et Picenum, \*Aemilia et Liguria, \*Venetia et Histria, \*Alpes Cottiae, and \*Tuscia et Umbria (comprising \*Italia Annonaria, intended to supply the needs of the imperial \*administration; the \*Vicarius Urbis \*Romae controlled the southern provinces of \*Samnium, \*Lucania et Bruttium, \*Campania, \*Apulia et Calabria (\*Italia Suburbicaria, which was to supply \*food and \*wine for the \*city of \*Rome). Sicilia, Sardinia, and Corsica are mentioned in some Late Antique lists of Italian provinces. The provinces of \*Raetia Prima and Secunda were under the authority of the \*Vicarius Italiae. In the 4th century, \*governors of Italian provinces had consular rank and the two Italian Vicarii were subject to the \*Praefectus Praetorio of Italy, \*Africa, and \*Illyricum.

### Political history

In the 3rd century, \*emperors stopped living permanently in Rome. During the \*Tetrarchy, they occasionally used \*Milan as their imperial residence. Rome was the seat of \*Maxentius from 306 to 312. \*Constantine I did not stay in Italy after his victory at the Battle of the \*Milvian Bridge outside Rome in 312. He visited Rome again in 315 and in 326 for his \*Vicennalia. He entrusted the government of Italy to his youngest son, \*Constans I, before 335, but Constans stayed in Italy only until 340. In 354, \*Constantius II stayed in Italy for a few months after his victory over \*Magnentius. The next \*emperor to move to Italy was \*Valentinian II, who lived in Milan with his mother \*Justina from 379 to 383, when \*Magnus Maximus marched on Italy. This brought \*Theodosius I to Italy in 387 to suppress him. Theodosius was in Italy again to suppress \*Eugenius in 394 and died at Milan. After his death, his son \*Honorius lived in Italy, moving his residence to \*Ravenna. Subsequent Western emperors till 476 divided their time between Ravenna and Rome. These emperors ruled an ever more reduced territory. In addition, the loss of imperial control over \*Spain and \*Gaul after 409 and the invasion of \*Africa by the \*Vandals in 429 meant that Italy was missing fiscal

resources, vital for the city of Rome and for the imperial \*court.

Italy often saw contests for imperial power. \*Philip the Arab and \*Decius fought near \*Verona in 249, \*Aemilianus and \*Trebonianus Gallus at Interamna in 253. \*Aureolus revolted in the area of Milan in 267. \*Galerius raided central Italy when he tried to fight Maximian in 307. Constantine I marched from Gaul to Rome in 312. Control over Italy was a major cause of the conflict between the two sons of Constantine, \*Constantine II and Constans, a conflict ending in battle near \*Aquileia in 340. When claiming the title of \*Augustus in 360, \*Julian did not pass through Italy but sent part of his army to besiege Aquileia. In 387, Magnus Maximus invaded Italy to take control of the whole western part of the Empire, and was defeated by Theodosius I near Aquileia. The final battle between Theodosius and \*Eugenius was fought in the same area. An army sent from \*Constantinople fought the \*usurper \*John, who had taken over the throne after the death of Honorius in 423, near Ravenna and at Aquileia. \*Aëtius fought the \*Comes \*Boniface in Italy in 432 to obtain control of the army. After the end of the Theodosian dynasty in Italy, \*Ricimer defeated Aëtius near Piacenza in 456 and \*Majorian near Tortona in 461. In 472, \*Ricimer rebelled against the Emperor \*Anthemius, besieged Rome, and took the city. The same year, \*Orestes, \*Magister Militum in Gaul, rebelled against the new Emperor \*Julius Nepos and marched on Italy. In 476, the composite army of Orestes proclaimed \*Odoacer as king; Odoacer occupied \*Pavia, marched against Orestes, and killed him at Piacenza. In 490, Odoacer had to face \*Theoderic the \*Ostrogoth, sent by the Emperor \*Zeno. After an initial defeat in the area of Milan, Odoacer fled to Ravenna where he was besieged for three years and killed. Theoderic's reign was peaceful, but the death of \*Amalasuintha, regent of \*Athalaric the young heir of Theoderic, was the pretext for the \*Byzantine invasion of Italy by the army of \*Justinian I. It is difficult to decide if this constituted a civil or a foreign war. In any case, it lasted twenty years and brutally devastated the whole peninsula. Ravenna was conquered in 540; in 555, Justinian's \*Pragmatic Sanction gave a new administrative framework to Italy, now part of the Byzantine Empire.

Italy was not immune to external threats. In 258, \*Alamans raided many Italian cities before being defeated by \*Gallienus at Milan. They attacked again in 271 and were defeated by \*Aurelian at Piacenza. \*Alaric and \*Radagausius raided northern Italy in 403 and 405. From 408 to 412–13, Alaric and the \*Visigoths invaded the whole peninsula, and sacked Rome in August 410. During the long reign of \*Valentinian III, Italy had to face attacks by the Vandals in Sicily in 440

and a raid by the \*Huns of \*Attila, who sacked the whole Po Valley in 452. In 455, \*Geiseric the Vandal landed in \*Ostia, captured Rome, and sacked it. In 568, \*Lombards conquered most of the northern provinces of Italia Annonaria, so putting an end to Italy as a coherent political unit.

### *Social and economic evolution of Italy*

In 325, Constantine I suppressed the obligation for \*senators to own land in Italy. Nevertheless, the most prominent families of the senatorial \*aristocracy continued to live in Rome, and to maintain vast properties all over the peninsula. They played an important role in shaping the provincial society of Italian cities. Through \*patronage or \*governorships, they maintained close links between these cities and Rome. Their considerable wealth was an important factor in general prosperity and their progressive decline caused economic changes. If only a few left after the Visigothic Sack of \*Rome in 410, many more decided to leave after the Vandal Sack of \*Rome in 455; the loss of large parts of their properties in the western provinces was another reason for their decline. Meanwhile, local churches developed as substantial landowners, especially the church at Rome and, in the 5th century, at Ravenna. The balance of wealth in Italy was completely upset after the end of the 4th century.

Rome remained an abnormally large city until the 5th century. Most of the agricultural production in \*Italia Suburbicaria was meant to feed Rome. While Italy lost control over western provinces, the needs of the \*court stimulated economic activity in northern Italy until the 6th century. There is strong evidence of a decline in the population at Rome from the second half of the 5th century onwards. The demographic collapse seems to be at least accentuated in the 6th century, first because of the \*Byzantine invasion, which caused devastation all over the country, and second because of a series of \*epidemics connected with the Justinianic \*Plague. The demography of the rest of Italy is even more difficult to understand.

### *Ecclesiastical Italy*

Ecclesiastical Italy is a rather heterogeneous construction. The Bishop of Rome was the \*metropolitan in Italia Suburbicaria, where there were many episcopal sees. The Bishop of Milan was metropolitan in Aemilia et Liguria, and the Bishop of Aquileia was metropolitan in Venetia et Histria, both vast ecclesiastical regions with fewer episcopal sees. During most of the 4th century, imperial policy favouring or opposing the definition of the Nature of Christ adopted at the \*Council of \*Nicaea created confusion in some areas. In 381, the Council of Aquileia established strong Nicene unity among Italian churches, and many new episcopal sees

were founded at the time. \*Ambrose as Bishop of Milan began energetic efforts to organize the clergy. Ecclesiastical geography changed according to the personality of bishops and the political function of the churches, with great advantage for Milan until 402, for Ravenna after this time, and always for Rome.

The conquest of Italy by the Byzantines created a new situation for Italian churches. Imperial agreement was now sought for the consecration of bishops of Rome and Ravenna. The Pragmatic Sanction gave bishops an important role in the civil \*administration of Italy. The \*Three Chapters schism, after 555, separated from communion with the see of \*Rome almost all the churches of northern Italy until 568. In the process of reducing the schism, the Bishops of Rome managed to reinforce a centralized ecclesiastical organization under their authority. At the time of Pope \*Gregory I the Great, Rome was metropolis for all the churches of Italy, with the sole exception of Aquileia and some of its dependants, which maintained their autonomy until the end of the 7th century. **itineraries** \*Vegetius (III, 6) recommends that military commanders study *itineraria* in their theatres of operations. These should include *itineraria picta*, accurately showing mountains and rivers as well as \*roads, so presumably \*maps more elaborate than the Peutinger Map, though less grandiose than the world map studied by the pupils of \*Eumenius in the portico of the schools at \*Autun (*PanLat* IX (IV) 20, 2).

Several written itineraries survive. Some, such as the detailed list of place names and distances recorded by the \*Bordeaux Pilgrim of 333, and the itinerary and expenditure account by \*Theophanes of Hermopolis from the 320s, certainly record actual journeys. Others may do so; these would include some of the routes in the \*Antonine Itinerary, or the Minnesota \*papyrus which lists 62 (surviving) place names from \*Heliopolis in \*Egypt via \*Jerusalem, \*Sasima, and the \*Pilgrims' Road to \*Constantinople and then (fragmentarily) back as far as \*Antioch of \*Pisidia.

More puzzling are the Vicarello Beakers (*CIL* XI, 3281–4), four \*silver cups, found in a large \*hoard of votive treasure at a shrine of Apollo near \*Rome deposited in the late 4th century. These are engraved with

about 100 place names and mileages following a round-about overland route from Gades (mod. Cadiz) via \*Arles and \*Ariminum (mod. Rimini) to Rome. Some of them may date from the 4th century, not least because three of them use the word *itinerarium* or *itinerare* which is first attested in the sense of 'list of places visited' in 4th-century texts. It is possible that the information on such itineraries derived ultimately from *tabellaria* inscribed on stones near the gates of important \*cities.

The *Anonymi \*Cosmographia* of c.700, also known as the *Ravenna Cosmography*, lists regions and places from \*India to \*Ireland without giving mileages and so more closely resembles the *Synecdomus* of \*Hierocles.

There were also travel poems, such as \*Rutilius Namatianus' elegiac account of his voyage from Rome to \*Gaul in 417 and \*Lactantius' lost hexameter *hodoeporicum* from \*Africa to \*Nicomedia (\*Jerome, *Vir. Ill.* 80). These sometimes represented banalistic mileages with a circumlocution worthy of the \*Jewelled Style (e.g. Metrodorus, *Greek Anthology*, XIV, 121). OPN

**Itta (Iduberga)** (d. c.651/2) Wife of \*Pippin I, \*Mayor of the Palace of \*Austrasia, and mother of \*Grimoald, Begga, and \*Gertrude. After her husband's death in 640, she retired to her estates and, on the advice of Bishop \*Amandus, founded a \*monastery at \*Nivelles, for herself and Gertrude, where she died. She also founded a Monastery of the *Scotti* at Fosses.

**ivan** See AYVAN.

**ivory** Export of this commodity, which contributed greatly to the prosperity of the \*Aksumite kingdom, is recorded from the 1st century AD in the *Periplus of the Erythraean Sea*. Availability of ivory has been cited as a factor that contributed to the westerly location of the Aksumite capital. After the extinction of the North

African \*elephant, the price of ivory in the Roman Empire saw considerable fluctuation, notably in the years preceding the Tetrarchic \*Prices Edict of 301; these changes were closely mirrored in Aksum's prosperity. \*Adulis, in addition to being the principal port through which ivory left Aksumite territory, may also have provided trans-shipment facilities for tusks from further south. Discoveries at \*Aksum, notably in the 4th-century 'Tomb of the Brick Arches', also show the artistic and technological expertise that was devoted locally to the working of ivory. The decline of Aksum, and the eastward transfer of the capital in the 7th century, accompanied the severe reduction in \*trade between Aksum and the Roman Empire when \*Arabs gained control of the Red Sea waterway. **ivory in art** The history of ivory carving is a story not of continuous development but of waves of activity, usually focusing on specific kinds of objects within discrete periods. Ivory was prized in contexts that valued its high density for fine carving, and its creamy, lustrous surface, so much so that in the Later Roman Empire it was used for luxury combs, where bone, a cheaper material, would have been more robust and effective.

The most important use of ivory in Late Antiquity was to make \*diptychs, pairs of hinged plaques decorated on the outside surfaces, and designed to encase messages, which would be written on \*papyrus attached to the inside of the plaques. They were used for many purposes, for instance, to announce important events in great families (as in the case of the \*Nicomachorum-Symmachorum Diptych of 402). In more elaborate examples, larger panels were created by combining multiple plaques.

Ivory diptychs also announced to friends and acquaintances the successful completion of the games held by those assuming office as \*quaestor, \*praetor, suffect consul, or \*consul, or in a \*province as the Flamen of the \*Imperial Cult. \*Theodosius I issued a law in the East in 384 prohibiting the presentation of ivory and \*gold in connection with games by anyone but \*consuls (*CTh* XV, 9, 1). There is evidence, however, especially from the \*letters of \*Symmachus, that other office-holders, especially in the West, did send out ivory diptychs.

Over 40 diptychs survive, with dates ranging from 406 until the abolition of the consulate in 541. The 5th-

century diptychs come mostly from the West and all known eastern diptychs date from between 506 and 541. Most of the imagery on the surviving specimens, generally showing consuls robed in the *trabea* or \**toga picta* of their office and presiding at their inaugural games, was conventional, but those with religious imagery document the shift from pagan religion to Christianity. Like many luxury arts, the style is generally conservative, tending towards classicism.

Pyxides (small circular boxes made from sections of a tusk) usually served Christian users, to judge from the biblical scenes that far outnumber mythological or genre scenes.

Objects such as the \*Brescia Casket from the 4th century, and the Throne of \*Maximian, \*Bishop of \*Ravenna (546–57), are rare survivals of what was probably a fairly widespread use for ivory, namely the revetment of furnishings. \*Cyril of \*Alexandria sent a present of 32 ivory chairs to the \*court at \*Constantinople in hopes of influencing the outcome of the \*Council of Ephesus in 431, and ivory fittings for \*furniture have been found at \*Kenchrae, the port of \*Corinth. Ivory plaques were also used for \*book covers, as in the panels known as the Milan Diptych, the S. Lupicin Diptych (now BNF Lat. 9384), and the Murano Diptych. The function of the ivory plaque known as the \*Translation of Relics Ivory remains unclear.

Ivory was clearly carved at Constantinople, and excavations on the Palatine Hill at Rome have uncovered material from an ivory and bone workshop which into the 5th century produced objects as various as needles and handles, dolls, furniture decoration, and \*jewellery. Production outside \*Italy or \*Constantinople has proven difficult to locate. Workshops at Alexandria and in \*Gaul in the 6th century, and a school in \*Palestine in the 7th or 8th century, have all been proposed, but with little scholarly consensus. JEH

**Izla, Monasteries of Mount** Mount Izla, the escarpment which forms the southern edge of the

\*Tur 'Abdin, to the north of the Mesopotamian Plain and the modern Turkish–Syrian border, and north-east of \*Nisibis, was the home of several \*monasteries of the \*Church of the East.

The 'Great Monastery', near the highest point of the escarpment, was founded in the mid-6th century by \*Abraham of Kashkar, who inspired a monastic revival in the Church of the East. Abraham studied at the \*School of \*Nisibis, is said to have learned monasticism in \*Scetis, then returned to live in a hidden cave on Mount Izla. Many ascetics were drawn to him and, apparently in June 571, he wrote a rule for them. Their distinctive tonsure differentiated them from \*Messalian and \*Miaphysite ascetics. Abraham was succeeded by his disciples Dadisho (d. c.604), who also composed canons, and \*Babai the Great (d. c.628/30), whose canons partly survive in \*Arabic translation. In Babai's time, disputes, particularly concerning married monks, dispersed many brethren who founded other monasteries elsewhere (\*Thomas of Marga, I, 8–23; cf. II, 2). Parts of the vertiginous buildings,

including architectural \*sculpture, survive, despite pil-laging in 1926.

On the plateau above the Great Monastery is the massively walled Monastery of Mar Melke, which existed in the 7th century. The church was destroyed in 1926 and rebuilt in 1955. Below the Great Monas-tery are the monasteries named after John the Bedouin (Mar Yohannan Tayaya) and Mar \*Awgen. Some Late Antique elements survive at Mar Awgen, though it was rebuilt in the 13th century; it is now again occupied by monks. ACMc; OPN

# NOTE TO THE READER

**O***DLA* aims to provide information about Europe, Western and Central Asia, and Africa north of the Sahara in the millennium between the mid-3rd and the mid-8th century AD. The very broad range of civilizations involved has often made it difficult to decide what terminology to adopt. The aim has in general been to use the names, words, and spellings that are most familiar to English-speaking scholars of Late Antiquity. It is hoped that the result may not appear excessively eclectic; the cross-references may help readers find what they are looking for.

Some specific observations may also prove helpful.

**Abbreviations** There are separate lists of general abbreviations and bibliographical abbreviations. The names of ancient authors are not abbreviated, nor are the titles of their works, except for the most obvious (e.g. *Chron.*, *HE*).

**Alphabetical order** Entries are arranged in alphabetical order of headwords. Arabic al- is ignored in forming alphabetical order and the prefix S. (for saint) is ignored when applied to persons, but not when it forms part of a place name (e.g. Mamas, S. is the martyr but S. Mamas is the harbour on the Bosphorus). The sub-entries in areas covering multiple civilizations are sometimes arranged chronologically rather than alphabetically.

**Authors** The identity of the author of each entry is indicated by initials, and these are recorded in the list of contributors. In cases of multiple authorship, the initials of all authors are given. In particular R. R. Darley has contributed numismatic supplements to numerous entries.

**Bibliography** Most entries are provided with a brief list of suggestions for further reading. These follow a standard order.

First, if appropriate, stands a brief identifying reference to a standard multi-volume work of reference such as the *Prosopography of the Later Roman Empire* (*PLRE*), the *Encyclopaedia Iranica* (*EncIran*), or the *Encyclopaedia of Islam* (*EI 2* or *EI THREE*). References to names in *PLRE* are generally given not to the full name but only to the name under which an individual is alphabetized in *PLRE* (e.g. Severus 16, not Acilius Severus 16). References to *EI 2* use its systems of transliteration.

Editions and translations of works written by the subject of the entry (if he is an author) are then listed, followed by details of other ancient sources (such as saints' lives). Such lists of ancient works are not intended to include every edition of an author but they do aim to give details of current critical editions, particularly those which have commentaries. Preference is given to translations into English, but some details of those into other modern languages or into Latin are also furnished.

Finally, modern studies are listed.

**Cross-references** At the first occurrence in an entry of a name or word that has its own entry in *ODLA* (or in some cases an adjective associated with such a name or word) an asterisk precedes the name or word. It has therefore been necessary to vary the conventional use of the asterisk in historical

Note to the reader

linguistics: in *ODLA* a word in an ancient language which is not directly attested in a surviving text but whose existence may be scientifically inferred is marked by a double asterisk, rather than by the conventional single asterisk.

**Dates and times** All dates are AD unless otherwise stated. There was no 'common era' in Late Antiquity; in fact Justinian I required the date of all laws to be stated in three separate ways. Other eras, such as the era of the Greeks, of the Martyrs, the indiction cycles and so forth are explained in the entry 'eras'.

Periods of time are indicated by an en rule, thus:

Constantine I the Great (\*emperor 306–37)

The outer ranges of possible dates concerning which precision is not possible are indicated by a shilling stroke, thus:

Constantine was born in 272/3

The abbreviation *c.* (about) is used only if greater precision is not possible. The abbreviation *fl.* (*floruit*—he flourished) indicates the date when a person was approximately 30 years old.

**Measurements** are given in metric and imperial (avoirdupois) units. When Roman miles or Roman pounds are meant, they are specified.

**Names** Uniformity has in general taken a second place to familiarity. In general the forms adopted are those most commonly used in English-language scholarship on Late Antiquity.

#### *Personal names*

For persons within the Roman Empire and its successor states English forms are used if they are familiar (e.g. Constantine, Ambrose). If no English form exists, then Latin forms are preferred to Greek (e.g. Procopius, not Prokopios).

Arab, Armenian, Georgian, Persian, and Syriac names are generally rendered in their own forms (e.g. al-Mundhir, not Alamundarus, Trdat not Tiridates, Jacob Burd'oyo not Jacob Baradaeus). This does not apply where an individual is better known by a different name (e.g. Cyrus al-Muqawqas, Patriarch of Alexandria, rather than the Georgian form Kyron of Mtskehta) or there is a familiar English form (e.g. Gregory the Illuminator, S.). Germanic and other barbarian names are not in general Latinized (e.g. Fritigern, not Fritigernus). Persian names are given in their transliterated New Persian form; a list of Middle Persian and Greek equivalents for the names of Persian kings is given in the regnal list at the end of the book.

Saints known for their sanctity are accorded the title S.; those known principally as authors or rulers are not. Variants of names are frequently given following the initial headword and appropriate use has been made of cross-references.

#### *Place names*

As with personal names, English forms are used if they are familiar (e.g. Lyons not Lugdunum or Lyon, Aleppo not Beroea or Haleb, Constantinople rather than Konstantinoupolis or Istanbul). This includes the names of modern capital cities (e.g. Ankara not Ancyra or Angora, but exceptionally Serdica rather than Sofia). Places principally known as the objects of archaeological investigation are given the names used by their excavators (e.g. Dağ Pazarı, Amorium).

If there are no familiar English forms, Latin forms are preferred to Greek or other ancient or modern forms (e.g. Ephesus not Ephesos, Hierapolis of Syria rather than Syriac Mabbog or Arabic Membij).

The names of Roman dioceses are given in either the genitive or in the adjectival form (e.g. Dioecesis Thraciae, Dioecesis Pontica). The names of Roman provinces are given in the nominative forms found in the *Verona List* and *Notitia Dignitatum*.

**Terminology** Terms employed are those generally familiar to the vast bulk of English speakers, such as 'pagan' (rather than 'heathen' or 'polytheist'). Exceptions made in the interest of theological accuracy are Miaphysite rather than Monophysite and, where appropriate, Homoean rather than Arian. The Christian Church in Persian Mesopotamia is referred to as the Church of the East. A distinction is made between monotheism and henotheism.

Special problems arise with the term 'Byzantine'. Many historians of the Greek world, including the compilers of the *Prosopography of the Byzantine Empire* (PBE), use the term Byzantine to refer to the history of the Roman Empire from the reign of Heraclius (610–41) onwards. On the other hand, historians and archaeologists working in Egypt and the Holy Land generally describe as Byzantine the period between the Tetrarchy in the late 3rd century and the Arab conquests of the mid-7th century, and other conventions exist in other bodies of scholarship. J. B. Bury eschewed the term altogether and wrote always of the East Roman Empire. *ODLA* has not gone to that extreme, but in general favours the term 'Roman' and applies the term 'Byzantine' to Late Antiquity only where 'Roman' would sound bizarre, so that Justinian I's Italian wars are termed the Byzantine invasion and occupation of Italy, rather than the Roman invasion of Italy.

**Titles of officials and corps in the Roman imperial service** These are given in Latin, as there are no universally agreed translations, and literal translation leads to banality (Master of the Soldiers), ambiguity ('chamberlains' might denote *cubicularii* or *castrenses*), or absurdity (Comes Rei Privatae as Count of the Private Thing, *agentes in rebus* as 'doers in things'). In particular, *advocatus* is not translated as barrister.

# J

**Jabal Says (Jabal Usays)** An extinct volcano with a perennial water resource c.100 km (60 miles) east of \*Damascus, dominated by the remains of a so-called Desert Castle (*qasr*) built by the \*Caliph al-\*Walid I. Some 50 buildings have been discovered, among them a \*mosque, a \*bath complex, commercial buildings, and a residential area. Some of the excavated structures can be assigned to a pre-Islamic, \*Ghassanid phase of settlement. This evidence can be related to an \*inscription mentioning a soldier in the service of the Ghassanid King al-\*Harith. The text dates to AD 528/9 and is one of the earliest examples of written \*Arabic.

**Jacob Baradaeus** See JACOB BURD'OYO AND JACOBITES.

**Jacob Burd'oyo and Jacobites** (c.500–578) Jacob's name Burd'oyo (Syr. 'of the saddlecloth') is sometimes Latinized as Baradaeus. Anti-Chalcedonian, \*Bishop of \*Edessa (from 542/3), missionary, and pastor, whose ordinations of bishops led to the establishment of the episcopal hierarchy of the \*Miaphysite \*Syriac Orthodox Church (called 'Jacobite' after him).

Born in \*Constantia-Tella, Jacob was a monk at the \*Monastery of Phesilta on Mount \*Izla early in his life. He came to \*Constantinople in the 530s as a representative of the anti-Chalcedonian communities, and was greatly favoured by the \*Empress \*Theodora. Upon the request of the \*Ghassanids he was ordained Bishop of Edessa by the \*Patriarch Theodosius of \*Alexandria, and travelled extensively in the eastern provinces ordaining two patriarchs, 27 bishops, and other clergy

in \*Anatolia, \*Syria, \*Egypt, and the \*Persian Empire. Jacob died in 578 during one of his pastoral visits. Nine of his \*letters (some written with other bishops) and other texts attributed to him are preserved in \*Syriac, \*Arabic, and Ethiopic.

**Jacob of Edessa (Syr. Ya'qub)** (d. 708) \*Syriac Orthodox \*Miaphysite scholar and \*Bishop of \*Edessa. Originally from the village of 'Ayn Dābā in the territory of \*Antioch, in his youth Jacob studied scripture and the church fathers with a perideute (a travelling \*priest) named Cyriacus and eventually moved to the \*Monastery of \*Qenneshre where he became a monk. Located across the Euphrates from \*Carchemish-Europus/Jirbās, Qenneshre had been an important centre of \*Greek–Syriac \*bilingualism in the Miaphysite

world since the 6th century and it was at Qenneshre that Jacob initially studied Greek. \*Severus Sebokht (d. 667), a learned polymath with interests in both philosophy and science, would probably have been at Qenneshre when Jacob was a young man and it is possible that Jacob studied with Severus.

From Qenneshre, Jacob went to \*Alexandria where, according to a short *vita* preserved in the medieval chronicle of \*Michael the Elder (Michael the Syrian), he 'gathered wisdom'; in one of his \*letters, Jacob refers to the \*Jews and 'Hagarenes' (i.e. Muslims) he saw while in \*Egypt. From Egypt, Jacob returned to \*Syria, to \*Edessa, where he was made bishop by the Miaphysite \*Patriarch of \*Antioch Athanasius II of Balad (d. 686). Athanasius was another bilingual Miaphysite polymath who, like Jacob, had studied Greek at Qenneshre. Jacob spent only four years as Bishop of Edessa before leaving, out of anger that church \*canons were not being properly enforced.

From Edessa, Jacob moved first to the monastery of S. Jacob of Kayshoum and from there to the monastery of Bet Malkā/Eusebona where he spent eleven years teaching the Greek language and the scriptures in Greek, before leaving the monastery after conflict with monks there who 'hated Greeks'. From Eusebona, Jacob moved to another monastery, Tell 'Ada, taking seven of his disciples with him. Jacob was at Tell 'Ada for nine years before returning to his position as Bishop of Edessa after the death of Habib, the man who had replaced him as bishop after he had left Edessa some two decades previously. Jacob would serve as bishop for only a short period, however. Four months after his return to Edessa, Jacob went back to Tell 'Ada to retrieve his library and died there on 5 June 708. Jacob was buried at Tell 'Ada; \*miracles were subsequently associated with his \*relics.

The Miaphysite Syriac Orthodox Church of the 7th century was characterized by a number of polymathic bishop-scholars who knew Greek and Syriac at very high levels. These men were usually associated with the Monastery of Qenneshre, and it was these individuals who were responsible for making possible Syriac-language Miaphysitism through their \*translations and writings. Jacob is perhaps the most distinguished representative of this class and stands out as one of the most gifted philhellènes in the entire history of Syriac literature. Jacob's interests were extremely broad: he translated the *Categories* of Aristotle, made a revised \*translation of the *Cathedral Homilies* and *Hymns* of \*Severus of \*Antioch, issued a revised translation of the Greek Old Testament, translated the *History of the Rechabites*, the *Acts* of the \*Council of \*Carthage of 256, and may have carried out a translation or a revised translation of the *Homilies* of \*Gregory of \*Nazianzus. Jacob's writings also include an *Enchiridion* (a guide to the meaning of various

philosophical terms), commentaries and scholia on the \*Bible, a \**Chronicle*, the earliest extant Syriac grammar, polemics against Chalcedonians, and a \*Hexameron. This latter was completed by \*George, Bishop of the Arab Tribes (d. 724) after Jacob died, and George, along with John, the learned \*stylite of Litarb, belonged to a circle of scholars of which Jacob seems to have been an important part.

Jacob was also an active liturgist and \*letter writer. More than 50 of his letters and letter fragments survive and are an invaluable source of information on the social and cultural history of \*Umayyad \*Syria, especially in his replies to canonical questions. The letters, along with Jacob's biography, suggest that he was as difficult on a personal level as he was brilliant on a scholarly one.

**Jacob of Nisibis** (d. 338) The first known \*Bishop of \*Nisibis (from c.308/9). The poet and \*deacon \*Ephrem the Syrian, who grew up during Jacob's episcopacy, describes him as an energetic and eloquent leader who nurtured and established the Church in Nisibis. In 325 Jacob attended the \*Council of \*Nicaea and appears to have promoted Nicene orthodoxy. Ephrem credits Jacob with animating resistance to the siege the Persians carried out for two months in 337/8 (*Carmina Nisibena*, XIII, 17; XIX, 16; cf. \*Jerome, *Chron.* 234 d and f Helm; \*Theodoret, *HE* II, 30, 2) and that his \*relics 'protected Nisibis... in the time of her pruning'. His \*sarcophagus is still venerated in the \*baptistery built by his successor Vologeses. His reputation reached \*Gennadius, not wholly accurately (*Vir. Ill.* 1), and later \*Syriac and \*Armenian legends embellish Jacob's accomplishments.

**Jacob of Sarug** (mid-5th cent.–521) Itinerant \*priest and \*bishop, titled the 'Flute (or Harp) of the Holy Spirit' in west Syriac tradition, often considered the greatest poet of the \*Syriac language after \*Ephrem the Syrian. Born in Kurtam on the Euphrates, Jacob was educated at the School in \*Edessa, though he did not embrace the Dyophysite ('two natures') Christology advocated by many there. For many years he preached in towns, \*villages, and \*monasteries of the district of Sarug (south-west of Edessa). In 519, he was consecrated Bishop of \*Batnae in Sarug. More than 220 of his verse homilies (\**memre*) from a collection reputedly numbering more than 700 have been edited, with many more still unpublished and even unidentified, surviving especially in liturgical manuscripts. Six prose \*sermons (*turgame*) on the major \*festivals of the Church and 43 \*letters have been published. Miscellaneous other texts remain as yet unpublished; three \*anaphoras and the \*Maronite service of \*baptism are also attributed to him.

Jacob's fame rests primarily, and justly, on his extensive homiletic corpus. Here he addressed a wide range of topics: theological, pastoral, ascetic, hagiographical, and liturgical, rendering rich theological reflection in simple yet elegant metred couplets. He drew deeply and widely on the Syriac exegetical and hermeneutical trajectories that preceded him, particularly the writings of Ephrem the Syrian. His brilliance lay in the graceful lyricism with which he crafted cherished themes and images of Syriac tradition into classic formulations. At times prolix, he was an artist of formidable skill, delicately interweaving familiar teachings with boldly original presentations. His homilies on the Virgin \*Mary provide ample illustration of these traits.

Among his finest homilies are those that retell biblical stories imaginatively in the form of dramatic narratives. Here Jacob showed tremendous verve and, often, startling emotional power. He took pleasure in elaborating the biblical text with fictive speeches and dialogue, and showed a profound grasp of moral psychology. His love for typology was exuberant. He often exhorted his congregation on the dangers of reading scripture literally, urging them instead to approach the \*Bible with humility, love, and discernment (*parushutha*).

Jacob's homilies bear few historical markers; neither dates nor locations are evident. Occasionally a monastic

or civic audience is apparent, but most are impossible to place. Passionate, colourful, and sometimes long-winded, he showed no interest in historical controversy. His homilies did not engage the Christological polemics sundering the Eastern Churches in the wake of the \*Council of \*Chalcedon (451). Similarly, in his series of homilies *Against the Jews*, his \*rhetoric lacked the violent invective displayed by \*John Chrysostom and others. Instead, he rehearsed standard themes with no real indication of interaction with a living Jewish community. Nonetheless, his homilies illuminate Late Antique city life. Jacob decried the continuing presence of \*pagan religion and worried about his congregation's apparent enthusiasm for public \*entertainments, with their seductive \*music, lascivious plots, and heady atmosphere. In homilies on the \*liturgy and on the commemoration of the \*dead, he presented invaluable descriptions of liturgical practice along with interesting observations of congregational behaviour. Exasperated by those who were inattentive or restless, he delighted in the glorious singing of the well-behaved congregation. SAH GEDSH s.v. Ya'qub of Serugh, 433–5 (Brock).

**Jacob of Tsurvavi** \*Georgian \*priest and hagiographer of the late 5th century. Author of the *Passion of S. Shushanik* (BHO 1107), he had personally witnessed Queen \*Shushanik's trial. The \*Armenian \*Book of Letters mentions a certain Jacob, Bishop of \*Tsurvavi, whom some scholars identify with the hagiographer. NA Rayfield, *Literature of Georgia*.

ET K. Maksoudian and C. H. Zakian, *The Passion of Saint Shushanik* (1999).

**Jacob the Newly Baptized** (fl. 630/40) Author of the *Doctrina Jacobi Nuper Baptizati* (*The Teaching of*

*Jacob Newly Baptized*), a Christian anti-Jewish polemical tract in \*Greek, probably written 634/40 in the context of the anti-Jewish policy of the \*Emperor \*Heraclius in \*Palestine after 628. It supposedly records a \*dispute in 634 at \*Carthage between Jacob, a \*Jew forced to convert, and other Jews, whom he tries to convert to Christianity. The text gives one of the earliest external accounts of \*Islam. It mentions a Saracen Prophet who proclaims the advent of a Jewish Messiah, thus contradicting Islamic accounts and suggesting that \*Muhammad was perceived by the Romans as a Jewish prophet.

IT-N  
*Doctrina Jacobi nuper baptizati*: ed. with FT, G. Dagron and

V. Déroche, 'Juifs et chrétiens dans l'Orient du VII<sup>e</sup> siècle',  
*TM* 11 (1991), 47–229.

P. Crone and M. Cook, *Hagarism* (1977).

Hoyland, *Seeing Islam*.

D. Olster, *Roman Defeat, Christian Response* (1994).

**Jacob the Recluse** (d. 421) An 8th-century *Vita* describes Jacob and his ascetic brothers travelling from \*Egypt to \*Tur 'Abdin in northern \*Mesopotamia, driven by persecution under the \*Emperor \*Julian. Jacob and his *confrères* build a \*monastery at Salah. The *Vita* attributes numerous \*miracles to Jacob. The story gives a hagiographical account of relations between Persians and Armenians and monks in northern Mesopotamia and mythologizes the early history of the monastic settlements in Tur 'Abdin. It is historical in alluding to the Emperor \*Constantius II's fortification of \*Amida and of the two citadels of \*Cephas (Hassan Keyf) and Rhabdion (Hatem Tai Kalesi).

#### STUDIES

Palmer, *Monk and Mason*, 6–7, 231.

**Ja'far al-Sadiq** (699/700 or 702/3–65) Sixth Twelver \*Shi'a Imam (successor to his father, the fifth Imam, \*Muhammad al-Baqir), he was a noted \*Medinan jurist and \*hadith scholar respected across sectarian boundaries. Known for quietist policies, he and his father shied away from the revolutionary ambitions held by other Shi'a, in particular the revolt of \*Zayd b. 'Ali.

Ja'far was the final imam agreed upon by both the Twelver and the Isma'ili sects; a major schism occurred thereafter. He named his eldest son Isma'il as successor,

who predeceased him; the Isma'ili held to this designation, while the Twelvers believed the imamate passed to his living son, Musa.

R. Buckley, 'Ja'far al-Šādiq as a Source of Shi'i Traditions', *Islamic Quarterly* 43 (1999), 37–58.

**Jafnids** The term refers to an \*Arab family dynasty, also known as Ghassanids, allied with the Roman Empire in the 6th century, whose leaders were Jabala, al-\*Harith b. Jabalah (Arethas), al-\*Mundhir b. al-Harith (Alamundarus), and al-\*Nu'man b. al-Mundhir (Naamanes III). Other individuals connected to the family are known, such as the brother of al-Harith, Abu-Karib (Abocharabus), and another Jabala (Gabalas), a son of al-Harith (Michael the Elder, *Chron.* IX, 33). There is debate over the accuracy of the title. Contemporary Graeco-Roman sources never allude to 'Jafnids'; instead, like \*Nasrid, the term Jafnid is derived from Muslim authors, such as \*Hamza al-Isfahani (*Ta'rikh*, 114–15). By contrast, the name Ghassan does appear in pre-Islamic source material. However, the use of the term is desirable as it defines the leaders, for whom we have a reasonable amount of primary source material, against the wider group of people, about whom we only rarely hear, e.g. when rioting at \*Bosra (Bostra) after al-Mundhir b. al-Harith was deposed in 582 and the alliance between the Jafnids and the Romans ended (\*John of Ephesus, *HE* III, 176–7 Payne Smith). Identifying the Jafnids as an elite stratum has provided some much-needed precision in modern scholarship. In particular, it allow us to provide useful comparisons with the barbarian elites in the post-Roman west, as well as to understand better the integration of the Jafnids into the religious, social, and political structures of Late Roman elites.

**Jakuszowice** (Nidzica River valley, Southern Poland) Economic and political centre from the 1st century BC to the 5th century AD, and site of an exceptionally rich man's grave of the early 5th century. Though some 300 km (c.180 miles) beyond the Roman \*frontier, the community had strong links with the Roman provinces. Roman imports include \*fibulae, fine \*pottery, and \*coinage. An onion-head fibula suggests personal contact between Roman officials and the \*aristocracy at Jakuszowice. The rich burial includes \*arms and other objects ornamented with \*gold inlaid with garnets. The grave goods and burial practices combine elements from contrasting traditions, as they blend Eastern equestrian customs with Western ornamentation. PSW

K. Godłowski, 'Jakuszowice: A Multi-Period Settlement in Southern Poland', *Antiquity* 65 (1991), 662–75.

**Jamasp (Zamasp)** \*Sasanian King of Kings (r. 496–8), and son of \*Peroz. The \*aristocracy installed him after the deposition of his brother \*Qobad I in a *coup d'état* because they were concerned at the prevalence of \*Mazdakism and at Qobad's reforms. Qobad returned with a \*Hephthalite army; Jamasp abdicated and was pardoned. \*Joshua the \*Stylite (23–4), writing a decade later, and \*Procopius (*Persian*, I, 5–6) provide details, as do \*Agathias (IV, 28) and \*Tabari (V, 86), who both had access to Persian royal annals. KR

*Enclran* XIV/5 (2008) s.v. Jāmāsp I, 453–4 (J. K. Choksy). *PLRE* II, Zamasphes.

**Jarir** (c.653–c.732) Jarir b. 'Atiyya b. al-Khatafa (Hudhayfa) b. Badr was an Arab poet who, together with al-\*Akhtal and al-\*Farazdaq, formed the celebrated triad of \*Umayyad poets. Born to a poor family, Jarir reflected social tensions among the \*Arabs in his \*poetry, as well as the conflicts between Arab and non-Arab Muslims, whom he considered as equal to one another. After extensive travels in search of \*patronage, he succeeded as a eulogist at the Umayyad \*court in \*Damascus. His \*panegyrics glorified the power of the Umayyads, but also defended his northern Arab tribe \*Tamim, which periodically supported the opposition

to the Umayyads, so he was less favoured by the Umayyad \*caliphs than al-Akhtal or al-Farazdaq. Jarir's rivalry with both of them took the form of numerous satirical and polemical poems (*naqa'id*), and became legendary, gaining him lasting popularity. KDM

*El* 2 vol. 2 (1965) s.v. Djarir, 479–80 (Schaade and Gätje).

C. Robinson, *Empire and Elites after the Muslim Conquests* (2000).

**Jebel Barisha** Part of the \*Limestone Massif of northern \*Syria between \*Antioch and \*Aleppo. There are extensive ruins of \*villages, presenting an almost entire rural landscape. It includes important sites such as \*Deches, Meez, Dar Qita, Baaude, and Babisqa. KETB

H. C. Butler, F. A. Norris, and E. R. Stoeber, *Syria: Publications of the Princeton University Archaeological Expedition to Syria in 1904–5 and 1909. Division I. Geography and Itinerary* (1930), 60–79.

**Jebel Seman** Part of the \*Limestone Massif of northern \*Syria, immediately west of modern \*Aleppo. On the western side is the peak of the Jebel Sheikh Barakat, an important \*pagan cult centre. To the north lies the Christian cult centre of \*Qalat Seman, enclosing the remains of the column on which stood S. \*Symeon Stylites the Older. KETB

H. C. Butler, F. A. Norris, and E. R. Stoeber, *Syria: Publications of the Princeton University Archaeological Expedition to Syria in 1904–5 and 1909. Division I. Geography and Itinerary* (1930), 60–79.

**Jebu Xak'an (Ziebel)** (fl. 627–30) \*Khazar or Western \*Türk Yabghu Khagan and ally of the \*Emperor \*Heraclius, described as brother and viceroy of the King of the North (\*Movses Kaghankatvatsi, II, 11–12; 14; 16) and second in rank after the \*Khagan (\*Theophanes, AM 6117; cf. \*Nicephorus, 18), both probably meaning the Western Türk Khagan. Jebu Xak'an accepted Heraclius' offer of an alliance in 626, leading Khazar forces south into Persian-held Caucasian \*Albania in 626/7. He met his new ally Heraclius at \*Tbilisi in 627 and they unsuccessfully besieged the city.

Jebu Xak'an and his son, the Shad, returned to besiege Tbilisi in 628 and again in 629, when they finally captured it, slaughtering its inhabitants. Persian and Khazar armies clashed in Khazar-held \*Armenia in 629/30, resulting in a resounding Khazar victory, but shortly afterwards Jebu Xak'an was overthrown and Heraclius' daughter, who had been betrothed to 'the Turk', was recalled to \*Constantinople. Some scholars have equated Jebu Xak'an with Tong Yabghu Khagan, ruler of the Western Türk Khaghanate (d. 628/9), but more likely he was Tong's older brother/uncle Sipi. Confusion over Jebu Xak'an's identity reflects in part the uncertain transition from Western Türk rule to Khazar autonomy at this time. MLD

**Jeme** Town in the western Theban region of \*Egypt, across the \*Nile from \*Thebes. First established as an administrative settlement around the 11th century BC, its size and population vacillated in the following centuries. Jeme was built among the ruins of Medinet Habu, the mortuary \*temple of Ramesses III, eventually overtaking the temple's architecture with its conglomeration of multi-level mud-brick houses and its churches.

The town began to flourish around AD 600: the surviving documentary evidence (mainly \*Coptic \*papyri and \*ostraca) shows a busy, vibrant community of men

and women engaged in various economic and administrative activities. Although small (c. 1,000–2,000 inhabitants) and relatively unknown outside western \*Thebes, Jeme was important within its own region. The town had administrative, social, and economic associations with the \*monasteries that dotted the bordering plains. It was sustained by \*farming on the flood plains of the \*Nile Valley. By 785, the written record ends; it appears that the town was abandoned around this time.

**Jerash** See GERASA.

**Jerome** (c. 347–419) Noted translator and Christian writer who laboured in a \*monastery in \*Bethlehem to produce, among many other works, a \*Latin translation of the Hebrew \*Bible which became the basis for much of the Vulgate. Aside from his commentaries and translations, he produced other theological works in response to \*Jovinian and \*Pelagius. His personal relations with female \*virgins and \*widows, particularly \*Paula, who founded the monastery he lived in, represent one example of the \*asceticism and multifaceted gender relationships of the period.

### Early life

Jerome was born in Stridon, a town on the border of \*Pannonia and \*Dalmatia. \*Prosper of \*Aquitaine records his birthdate as 331, but a scholarly consensus has formed around a later date, around 347. His \*family seems to have had some wealth, at least enough to send him to \*Rome for \*education. After living briefly in \*Trier, Jerome joined a group of aspiring ascetics in \*Aquileia in 369. There he formed friendships with the later \*bishops \*Chromatius and \*Heliodorus, both of whom would fund his production of translations and commentaries. During this period he also grew close to \*Rufinus of Aquileia. Jerome would later describe the group as 'a community of the blessed' (*Chron.* 247f Helm).

After residing in Aquileia for only three years, Jerome suddenly departed under suspicious circumstances which would later cause him to write \*letters of apology (*epp.* 11–12). Jerome took refuge in the \*Syrian desert. After residing with Evagrius of \*Antioch for a period, in 375, Jerome withdrew to become a hermit for eighteen months. The period seems to have been a fruitful one for Jerome, but he eventually was drawn into a controversy about episcopal succession in Antioch. Jerome supported Paulinus, who also ordained Jerome as a \*priest during this period. Jerome also testifies that it was during his time in the desert

that he had a now-famous vision where he was accused of being 'a follower of Cicero and not of Christ' (*ep.* 22).

In 380, Jerome accompanied Paulinus in order to attend the \*Council of \*Constantinople. While there he brought \*Eusebius' *Chronicle* up to date and translated into Latin select homilies on the Prophets by \*Origen, the first Latin translations of works by Origen. Following the council, Jerome travelled to Rome.

There, he acquired a new \*patron in \*Damasus the \*bishop. He also began teaching a group of women in the house of \*Marcella, a group that included the most important woman in Jerome's life, the widow Paula, who later founded the monastery that would house Jerome in Bethlehem from 389 onwards. Paula's daughter Eustochium, who was the recipient of many of Jerome's letters, was also part of the group from an early time. Beginning in letters to her and in other tracts, Jerome became a fearsome advocate of \*virginity during this time in Rome. After the death of Damasus, Jerome was faced with insinuations concerning his relationship with Paula. The Roman clergy inveighed against him, and he, along with Paula and her daughter, set out for \*Palestine in 385.

### Bethlehem

Jerome and his party arrived in Palestine in 386, quickly making friends with S. \*Melania the Elder and Rufinus. Other than a short excursion to \*Egypt to listen to \*Didymus the Blind in \*Alexandria, they would remain there or nearby for the rest of their lives. Paula founded twin monasteries in Bethlehem by 389, one for men and one for women. The following years saw Jerome produce an enormous burst of commentaries and new translations of first the Psalms and then the rest of the Hebrew Bible from the Hebrew instead of the \*Greek of the Septuagint (for a full chronology of Jerome's works see Williams, 267–301). Beginning in 393, Jerome was dragged into the \*Origenist controversy. Firmly aligned with \*Epiphanius of \*Salamis against Origen, Jerome was briefly excommunicated by \*John II, \*Patriarch of \*Jerusalem, and broke off his friendship with Rufinus who was then living on the Mount of Olives with S. Melania the Elder. After Rufinus returned to \*Italy, Jerome and he each wrote an *Apology* for their actions, and it was only an intervention by Chromatius of Aquileia in 402 which quieted the feud, though Jerome continued to refer to Rufinus as both 'scorpion' and 'grunting pig' (*ep.* 125). Jerome's work continued to pour forth from Bethlehem though, pausing only briefly in 404 to mourn the loss of his patron Paula, for whom he composed a moving *epitaphium*.

At this time he also began a serious correspondence with \*Augustine of \*Hippo, which was to last through the Pelagian controversy. Pelagius had found refuge in

Palestine after his ideas were condemned in \*Carthage. But in 415 the monk Paulus \*Orosius arrived bearing two letters from Augustine for Jerome denouncing Pelagius. Jerome took up the attack, quickly dashing off *Dialogue Against the Pelagians*. The act seems to have set off the partisans on Pelagius' side, and in spring 416, they attacked and burned the twin monasteries in Bethlehem. Jerome and Eustochium, joined by a new Paula, the granddaughter of the original, fled to a nearby tower. The attack caught the attention of western writers including Pope Innocent and Augustine, who used the event to condemn Pelagius anew. Jerome and the women returned to the monasteries in Bethlehem by 419. At the time, he was in the process of finishing a commentary on Jeremiah, a work which would have completed a set that covered all the prophets. Unfortunately, Jerome was to leave his last work unfinished. He died on 30 September 419, and was interred in the Church of the Nativity in \*Bethlehem very near Paula. RJM

**Jerusalem** (Hebrew Yerushalayim; Gk. (H)ierosolyma, Ierousalēm (LXX); Lat. (H)ierusalem, (H)ierosolyma, Aelia (Capitolina); Arabic ʿIlīyā, al-Quds, i.e. the Holy). Important inland city in \*Palestine, located between the Mediterranean and the Dead Sea and a holy site to Judaism, Christianity, and \*Islam.

Jerusalem is built on hilly terrain and flanked by two deep valleys to the east and south. In Late Antiquity the \*city was connected by direct roads to \*Neapolis (Nabulus) via \*Scythopolis to the north, Philadelphia (\*Amman) by way of Jericho to the east, \*Elusa by way of Hebron to the south, as well as with the Mediterranean coast by way of \*Nicopolis (Emmaus), \*Lydda-Diospolis, or Eleutheropolis.

In the wake of the Bar Kokhba-revolt (AD 132–5) the city, destroyed by Titus in 70, was refounded by Hadrian as the Roman *colonia* of Aelia Capitolina. A Roman legionary camp of the Legio X Fretensis was garrisoned there from 70 until the soldiers were eventually withdrawn to \*Aila at the head of the Red Sea under \*Diocletian.

While it was forbidden by law for Jews (and Judaeo-Christians) to enter the city, several Gentile Christian travellers, among them Melito of \*Sardis (d. c.180), visited the city prior to 325, the year in which \*Helena, the mother of \*Constantine I, went to Jerusalem on

\*pilgrimage and supervised the construction of two churches commemorating the last teaching and Ascension of Christ on the Mount of Olives (Eleona) at Jerusalem, and his Nativity in nearby \*Bethlehem. At the same time, substantial imperial funds were made available to the \*Bishop of Jerusalem to destroy the principal Roman \*temple, work which resulted in the discovery of the place of Christ's burial and Resurrection, over which a shrine was built (\*Eusebius, *VCon* III, 25–43). By the mid-4th century, in the time of \*Cyril of Jerusalem (c.350–387), the Relic of the True \*Cross was treasured in the church at Jerusalem; its veneration on Good Friday is described in the late 4th century by the pilgrim \*Egeria who was in the Holy Land between 381 and 384 (*Itinerarium*, 37, 1–3). By 395, it was believed that Helena was responsible for its discovery (\*Ambrose, *Funeral Oration on Theodosius*, 40–51).

Helena's journey also marks the onset of the flow of a great number of pilgrims, some of whom decided to settle in Jerusalem. Despite the growing theological importance of the See of Jerusalem, especially during the episcopate of Bishop Cyril, the Church of Jerusalem remained subject to the ecclesiastical jurisdiction of its metropolis in \*Caesarea Maritima, the provincial capital of \*Palaeestina Prima. Imperial engagement after the time of Constantine I ceased almost completely for the rest of the 4th century—leaving aside \*Julian's unsuccessful plans to rebuild the Jewish Temple in 363, described by \*Ammianus Marcellinus (XXIII, 1, 2–3) and \*Ephrem the Syrian.

At the beginning of the 5th century, Jerusalem received \*city walls, perhaps initiated by \*Aelia \*Eudoxia, the wife of \*Arcadius, or by Aelia \*Eudocia, the wife of \*Theodosius II, who resided in Jerusalem from 442/3 until her death in 460. While \*Juvenal of Jerusalem achieved the elevation of his bishopric to the status of a \*patriarchate at the \*Council of \*Chalcedon in 451, the majority of the local clergy and monks rejected the Christological somersault he performed there, so that he was ousted and had to be reinstalled with the aid of imperial troops. During the same period, Jerusalem was adorned with various church buildings and grew continuously not least through the influx of Christian pilgrims initially coming from the West, but—especially in later times—from the East, from as far as \*Georgia, \*Armenia, and even the \*Persian Empire. Various pilgrim \*hostels, known from literary sources and some excavations, for example outside the present Jaffa Gate, point to the large number of pilgrims, whereas various tombstones and other \*inscriptions, among them the earliest texts in the Armenian and Georgian script, record their varied geographical origins.

\*Justinian I commissioned the building of a gigantic church dedicated to the Mother of God (known as the 'Nea') on the south side of the city, which alluded to

Solomon's Temple and was, like many other buildings, most likely destroyed in the \*Persian invasion of 614, when Jerusalem's most important \*relic, the True Cross, was taken to \*Ctesiphon. After his victory over the Persians, \*Heraclius brought back the True Cross to Jerusalem in a triumphal procession.

The \*Arab conquest followed soon afterwards. Already in 637, however, the city was besieged by the Muslim \*armies led by the \*Caliph \*Umar b. al-Khat-tab, and was eventually surrendered by Patriarch \*Sophronius. Umar spared the Christian population as well as the Church of the Holy Sepulchre and all other holy places; the place where he performed his first prayers was commemorated with Jerusalem's first \*mosque (although not at the place of the present-day 'Umayy Mosque south of the Holy Sepulchre).

Until the Islamic conquest of Jerusalem, no Jewish institutions or houses of prayer are attested in the city, except for the ruins of a \*synagogue mentioned in the 4th century by the \*Bordeaux Pilgrim in 333 and by \*Epiphanius of Salamis. It is likely that pious Jews visited the city on the Ninth of Av to lament the destruction of the Jewish Temple. There is, however, archaeological evidence that Jewish populations settled in nearby places such as Ramat Rahel, where they lived side by side with veterans of the Legio X Fretensis.

Under \*Umayyad rule, Jerusalem was governed from \*Damascus. Several administrative buildings south of the Temple Mount date to this period. According to Muslim tradition, Jerusalem was identified with the destination of \*Muhammad's Nocturnal Journey (*isra'*; \*Qur'an 17: 1). While it is possible that the \*Dome of the Rock (Qubbat al-Sakhra), built under the \*Caliph \*Abd al-Malik in 691/2, originally continued in a Jewish tradition to mark the place of God's presence, the building soon commemorated Muhammad's *isra'*—as did the al-Aqsa Mosque, which was completed in the reign of 'Abd al-Malik's son, al-\*Walid I, between 706 and 717. While the al-Aqsa Mosque underwent various alterations, especially in the medieval crusader period, the Dome of the Rock preserves its Umayyad interior decoration.

## Jerusalem, Aqsa Mosque and Dome of the Rock

Islamic buildings located on the Temple Mount or Haram al-Sharif. Jerusalem held a special status in early \*Islam as the first orientation of \*prayer (*\*qibla*), prior to 624, while the association between the Haram al-Sharif and the *masjid al-aqsa* ('furthest mosque') of the Prophet \*Muhammad's Night Journey (*isra'*, Q. 17: 1) seems to have been well known by the early 8th century. While it is possible that a simple \*mosque was erected on the site in 638, there is more certainty that one existed by the time of the composition of \*Adomnán's *De Locis Sanctis* (*On the Holy Places*), written before c.692.

More conclusive physical evidence comes from the reigns of the \*Umayyad (r. 661–750) \*caliphs \*Abd al-Malik (r. 685–705) and al-\*Walid I (r. 705–15). The Aqsa Mosque was transformed into a large enclosed prayer hall, probably comprising fifteen aisles arranged perpendicular to the *qibla* (south) wall. The central aisle was wider and led to a monumental \*dome at the crossing with a transept running parallel to the *qibla* wall. The building underwent further changes during the \*Abbasid (r. 750–1258) and Fatimid (r. 909–1171) dynasties. After an \*earthquake in 1033 the mosque was reduced to seven aisles. An unusual feature of the Aqsa throughout its history has been the absence of an arcaded courtyard.

The \*Dome of the Rock (Qubbat al-Sakhra) is set on a platform near the centre of the Haram al-Sharif. Recent archaeological discoveries, including the Kathisma Church and the \*martyrium in \*Caesarea, suggest that the \*octagonal plan employed in the Dome of the Rock draws upon Late Antique Syro-Palestinian Christian models. The Dome of the Rock encloses an outcrop of rock with two ambulatories, and is entered by four portals located at the cardinal points. The interior is extensively decorated with \*mosaics,

comprising \*foliage and decorative themes that often rely upon Byzantine and Sasanian prototypes, and long lines of \*Arabic written in gold on a blue ground (containing the date of 72 AH, equivalent to AD 691–2). The intended meanings of this monument have been much debated; the surviving \*inscriptions are most significant in this regard with their assertions of the oneness of God and the prophethood of Muhammad, and their denial of the Christian concept of the Trinity. Scholars have also made symbolic connections with the Temple of Solomon and pointed to the role of Jerusalem at the end of time. Later dynasties further embellished the Dome of the Rock; for example, the glazed tiles that now cover the exterior were commissioned by the Ottoman Sultan Süleyman I (r. 1520–66).

**Jerusalem, churches of** The meeting place of the first Christian community of \*Jerusalem was located on Mount Sion; nothing of this survives. Literary accounts of Christian \*pilgrimage to Jerusalem before the 3rd century point to various holy places on the Mount of Olives and in Gethsemane. With the expansion of Christianity, more and more churches were gradually constructed in Jerusalem with a clear focus on places that commemorated Christ's deeds and Passion. A defining trait of Jerusalem's ecclesiastical landscape was the development of a \*stational liturgy on important feast days during which \*processions took place and Gospel traditions were enacted by visiting the respective holy places and reading out the corresponding biblical passages. This is attested by the pilgrim \*Egeria (381–4) and in the \*Armenian and \*Georgian \*Bible Lectionaries. Processional routes could be altered in order to incorporate new churches. During ordinary weeks, however, the liturgy focused on the Church of the Holy Sepulchre and the Hagia Sion.

#### *Church of the Holy Sepulchre/Anastasis*

As a result of the interest in Jerusalem of \*Constantine I and his \*family after the \*Empress Helena's journey to the \*Holy Land in 326 (\*Eusebius, *VCon* III, 25–40), the religious heart of the city moved from Mount Sion towards the Sepulchre of Christ, whose discovery was later associated with Helena's visit. The church was

constructed by Bishop Macarius on orders from Constantine in the heart of the city on top of a Roman \*temple next to the forum. Eusebius' account stresses the careful removal of the polluted soil; the archaeological evidence suggests usage of \*spolia in the church's foundations. The compound consisted of two separate churches. The Anastasis Rotunda (diameter 33.7 m, over 110 feet) covers the free-standing Tomb of Christ in the shape of an *aedicula*. East of it was a five-aisled \*basilica with a gallery, the only church building in Jerusalem facing west; remains of this can still be seen despite heavy rebuilding over the centuries. The churches were connected by an open courtyard containing the rock of Golgotha. The main entrance was reached from the eastern *cardo* by way of steps and another courtyard. The entire building was used for processions, as attested in the *Catecheses* of \*Cyril, \*Bishop of Jerusalem, which also are the earliest text to mention the Relic of the True \*Cross; Egeria (37, 1–3) describes the liturgical veneration of the Cross, and \*Ambrose in 395 is the first to associate its Invention with Helena (*On the Death of Theodosius*, 46). By the 6th century many biblical traditions previously associated with the Temple Mount (e.g. the Sacrifice of Abraham and the Altar of Zachariah) had been transferred to the Anastasis. The True Cross was captured in the Persian sack of \*Jerusalem in 614 and returned by the Emperor \*Heraclius in 629. The \*Patriarch Modestus rebuilt the church after it had suffered destruction in 614, adding a tetrapylon to the rock of Golgotha. The compound continued to be the religious centre of Jerusalem after the \*Arab conquest. A chapel of Mary is attested near the western courtyard from the late 7th century, and recent excavations in the Coptic Patriarchate have unearthed an annexed three-aisled church with a \*dome, most likely dating from early Islamic times, north of the Constantinian basilica.

#### *Other churches in the Old City*

##### **Sion**

Besides the Anastasis, the Church on Mount Sion was Jerusalem's second most important church in Late Antiquity. While a previous building on this spot is mentioned by Egeria, a monumental five-aisled church (c.58 × 38 m) was built around 390, most likely by Bishop \*John II with donations from the Theodosian dynasty. The church commemorated the events of Pentecost and was therefore associated with the Holy Spirit. The south-eastern corner became associated with the place of the Last Supper from the 5th century onwards and is the only part still surviving. Sion housed various sacred objects (e.g. the Crown of Thorns, and the Column of Flagellation).

### House of Pilate, S. Sophia, and House of Caiaphas, S. Peter in Gallicantu

Little is known about the places of Christ's trial, which were shown to the \*Bordeaux Pilgrim in 333. Churches were built on top of these sites perhaps following the \*Council of \*Chalcedon (451) or under the Emperor \*Zeno. In the Christological controversies of the 5th and 6th centuries, the Church in the House of Pilate (Praetorium) was renamed S. Sophia perhaps as a counterpoint to the Church of the Holy Wisdom at \*Constantinople. Accounts from the 6th century mention a side chapel of the Flagellation; however, no part of this church is archaeologically attested. Excavations in the church commemorating Peter's denial of Christ in the south of the Old City have brought to light rectangular foundation walls that may be interpreted as a \*monastery built above pre-Christian funerary caves.

### S. Stephen

Built by the \*Empress \*Eudocia and consecrated in 460, S. Stephen was Jerusalem's first church dedicated to a specific saint. The church was located outside the northern city \*gate (the modern Damascus Gate) and had a complex architectural plan with a three-sided polygonal \*apse and floor \*mosaics of which large parts are extant. It was adorned with architectural \*sculpture influenced by Constantinopolitan patterns. A monastery and \*hospital (possibly a leprosarium) connected with the church are attested until the 9th century.

### Churches at the pools of Bethesda and Siloam

These two churches were constructed during the first half of the 5th century near the pools of Bethesda (north of the Temple Mount) and Siloam (in the south of the Old City), both of them on pre-Christian sacred sites. The churches were lavishly built: Bethesda at the end of a ramp traversing the pool over large substructures, and Siloam at the culmination of a long processional route dating from the Second Temple period. Initially both were three-aisled churches (22 × 18 m, 72 × 59 feet, and 32 × 18 m, 105 × 59 feet respectively) commemorating places where Christ worked \*miracles. From the 6th century onwards Bethesda was thought to be the birthplace of the Blessed Virgin \*Mary.

### Kathisma Church and Mary's Tomb

The first places commemorating the Virgin Mary were those of her alleged repose (*kathisma*) on the way to \*Bethlehem, and of her tomb, assumed to be located in the Kidron Valley. The veneration of both places probably started in the wake of the dispute over Mary's

title as \*Theotokos at the Council of \*Ephesus (431), while the respective buildings are attested archaeologically soon thereafter. The Tomb of Mary consisted of a cross-shaped lower church centred on the tomb and an octagonal upper church, which was built at the behest of the Emperor \*Maurice in c.600. The Kathisma Church was initiated by the Roman matron Hicelia in the mid-5th century as an octagonal building centred on the rock of Mary's repose. The church had an ambulatory with adjacent side chapels and was rebuilt in the 6th century when a basin was added around the rock. After the \*Arab conquest, a \**mihrab* was added when the church became a Muslim place of remembrance for Mary/Mariam; it continued, however, to be visited by Christian pilgrims.

### Nea Theotokos

After an initial plan to erect a new (*nea*) church of Mary was abandoned during the patriarchate of Elias due to financial problems, the Emperor \*Justinian I took it up. The now much larger church was consecrated in November 543, on the festival of Mary's Presentation in the Temple. It was located at the south end of the *cardo* and became Jerusalem's largest church building measuring more than 75 m (c.250 feet) in length. An engineer, Theodore, was sent from \*Constantinople, and a completely new \*quarry had to be dug for the construction works. The Nea compound contained a hospital, a \*library, guesthouses, and a \*cistern in which a building \*inscription naming Justinian has been discovered.

### Churches on the Mount of Olives

#### Ascension Church (Eleona) and Imbomon

A three-aisled church close to the top of the Mount of Olives or Eleona (Gk. 'olive yard') commemorating Christ's Ascension was founded during Helena's journey in 326 (Eusebius, *VCon* III, 41–7). It contained a courtyard on a platform and the cave where Jesus taught after the Resurrection. The compound was more than 70 m (230 feet) long (church 29.5 × 18.6 m, 97 × 81 feet) and seems to have been repaired after the \*Persian invasion of 614. This site was apparently not congruent with local traditions, so the Imbomon, located very near the Eleona, commemorated the exact place where the Lord ascended on the highest summit of the Mount of Olives. The place was adorned with a circular structure (diameter 37 m, 121 feet) by the Roman matron \*Poenenia and was restored by the Patriarch Modestus (d. 630) after the Persian sack. The footprints of Christ were shown to pilgrims in the centre of the building (first attested by \*Paulinus of Nola in 402). \*Adomnán recording the observation of the pilgrim Arculf in the 7th century, and Willibald of Eichstätt in the

## Jerusalem, Persian sack and occupation

8th century mentions a rotunda with several concentric ambulatories and an open ceiling.

### Lazarion

The first building commemorating Christ's raising of Lazarus from the dead was built c.390 on the eastern slope of the mountain. This three-aisled basilica had a courtyard from where the subterranean crypt of Lazarus could be reached. Excavations have unearthed parts of the building decoration and mosaic pavements. The church was rebuilt and domed, most likely in the 6th century.

### Ecclesia Elegans

A three-aisled church, dating most probably from the 380s, with three \*apses and a courtyard was located on the lower slopes of the Mount of Olives. The central apse and nave enclosed a flat rock (8.8 × 5.3 m, 28 feet 10 inches × 17 feet 5 inches); traces of its mosaics can still be seen in the modern Church of All Nations. The building is most likely to be identified with a church mentioned by Egeria and \*Jerome, built over the place of Christ's \*prayer at Gethsemane. It seems that the church was damaged in 614 and that the commemoration of its Gospel tradition moved to the area near the modern Dominus Flevit Chapel.

### Private chapels and monasteries

Most private foundations in Jerusalem were located on or near the Mount of Olives, e.g. the Monastery of Innocentius (c.370) and the \*monasteries and nunneries of S. \*Melania the Elder and S. \*Melania the Younger. Larger chapels were located in the monasteries of Bassa (S. Menas) and Flavia (S. Julian). The Empress Eudocia built a \*hostel and old people's home with a large chapel dedicated to S. \*George; this is perhaps to be identified with recently excavated remains of a large foundation near Ketef Hinnom outside the city's Western Gate. Armenian monasteries, dating from the 6th century, have been discovered north of the city and on the Mount of Olives. The Iberians (Georgians) kept a monastery and guest houses near the Tower of David and in the city's surroundings (S. Theodore at Bir el-Qutt). UEV; KMK

**Jerusalem, Persian sack and occupation** The Persians captured \*Jerusalem in May 614. The \*Sasanian commander \*Shahrwaraz advanced from \*Caesarea to Jerusalem and captured the city after a twenty-day siege. The most important source, the account of \*Antiochus Strategus, dates the fall to early May, while other sources put it later in the month. \*Heraclius' brother Nicetas had earlier salvaged the Sacred Sponge and Spear, but the Relic of the True \*Cross was removed by the Persians, a significant blow to Roman morale.

Resistance to the besiegers was fierce. Christian sources allege \*Jews collaborated with the Persians, while the \*circus \*factions led resistance. Massacres followed the fall, although the figures given are inflated; physical damage may also have been limited. Many were deported to Persia after the siege, including the \*Patriarch Zachariah. The Persians allowed rebuilding to take place during their occupation. After he had overthrown \*Khosrow II, Heraclius restored the Cross in person on 21 March 630. GBG

**Jerusalem, See of** Bishopric and patriarchate (from AD 451 onwards), according to Christian tradition the See of James the Just, called the 'brother of the Lord', whose \*throne survived till the time of \*Eusebius (*HE* VII, 19) and who was martyred in 62 (II, 23). Over the first three centuries Jerusalem's bishopric lost its importance as a centre of Christianity as a result of Roman reactions to the Jewish uprisings of 66–70 and 132–5. Little is known about the leaders of the Jerusalem community that had its centre at Mount Sion. At the \*Council of \*Nicaea (325) the Church of Jerusalem was credited only with an honorific status; however, the see's rank was not elevated so Jerusalem remained subject to the provincial metropolis of \*Caesarea Maritima. Regular conflicts between the Jerusalem \*bishops and their superiors at Caesarea occurred until the Council of

Chalcedon (451) when Jerusalem was promoted to the status of a patriarchate.

Macarius I (314–33), bishop for much of \*Constantine I's reign, was entrusted with the construction of the Church of the Holy Sepulchre. From his episcopate until the time of the Crusades the names of his successors are all known; further information on the majority of them is however sparse. The most notable were \*Cyril (c.350–387, with interruptions), who promoted the city ambitiously and was a prolific theological author, and \*Juvenal (422–58), who succeeded in raising Jerusalem's status to be a patriarchate, equal in rank with \*Constantinople, \*Antioch, \*Alexandria, and \*Rome, and with jurisdiction over the churches in the provinces of \*Palaestina Prima, Secunda, and Tertia.

From the mid-5th century onwards, most influential clergymen in Jerusalem had started their careers in one of the \*monasteries in the \*Judean Wilderness. Both these monasteries and the Church of Jerusalem were staunch supporters of the Christological definition of the \*Council of \*Chalcedon, even though frictions with \*Miaphysites arose frequently, culminating in the apostasy of the years 451–3 and the election of an anti-Patriarch, \*Theodosius. **Jesus, pagan views of** Jesus occurs in Late Antique pagan literature principally in anti-Christian polemic. \*Porphyry's *Against the Christians* seems to make a distinction between the Christ of the Gospels and Jesus the sage, and in the fragments securely attributed to him attacks the latter only once (fr. 70 Harnack) while directing most criticism to the former (fr. 65 Harnack). Elsewhere, Porphyry indicates some respect for Jesus as a wise teacher (*On Philosophy from Oracles*, frs. 345–6 Smith), though quoting \*oracles of Hecate that designate Jesus a 'dead god' whose sufferings were deserved (fr. 343 Smith).

\*Hierocles (at \*Lactantius, *Institutes*, V, 2–3; and Eusebius, *Contra Hieroclem*), best known for comparing Jesus to the \*miracle-working sage \*Apollonius of \*Tyana, also claimed Jesus was a bandit-chief, a practitioner of \*magic, and when tried an inept defendant.

The \*Emperor \*Julian saw Jesus as inconsistent in his approach to the Law and as teaching inanities, while unable to aid his own people (*Contra Galilaeos*, frs. 98, 100, 213bc); Christians worshipped the 'corpse of a Jew' (194d).

The anonymous pagan opponent(s) in \*Macarius of Magnesia's *Apocriticus* especially denounced Jesus for inconsistency (3, 18) and for teaching barbaric nonsense (3, 15).

J. G. Cook, *The Interpretation of the New Testament in Greco-Roman Paganism* (2000).

**Jesus Prayer** A Byzantine \*prayer known most commonly in the form, 'Lord Jesus Christ, Son of God, have mercy on me [a sinner]'. The origins are biblical pleas for divine mercy (e.g. Matt. 9: 27 and 15: 22; Luke 18: 13) joined to the practice of invoking the name of Jesus. The latter is traceable to \*Diadochus of Photice (mid-5th cent.), who urged the constant repetition of 'Lord Jesus' as a means to focus the mind and attain non-discursive, imageless prayer of the kind recommended by \*Evagrius of Pontus. The components of the longer formula are suggested in the *Life of Dositheus* by \*Dorotheus of \*Gaza (c.540). The full development of the spirituality and practice was in the 14th-century Hesychast movement. CAS

**jet** A black, polishable, and very compact coal used for \*jewellery since prehistory. Jet became popular in the 3rd and 4th centuries and again in northern Europe during the Anglo-Scandinavian and Viking periods. The main source for jet was \*Whitby on the north Yorkshire coast. AH1

H. Muller and K. Muller, *Whitby Jet* (2010).

**Jeweled Style** Characterization of prevalent stylistic practice in Late Antique poetry in which authors created jewel-like effects by the ordering and juxtaposition of individual compositional units. Typically enumerative schemes combine with a synonymic sequence of verbs and patterns of antitheses to create a grid-like compositional field that throws into focus the individual word, its choice, and position. Regularity highlights variation within that grid. Individual elements by their prominence and setting contribute colour and brilliance of language. The emphasis on the small-scale, circumscribed compositional unit promotes fragmentation and miniaturization, attention to the refinement of detail. Sometimes such passages are set in a frame by introductory or concluding lines, but their self-contained structure itself is often enough to set them apart. This emphasis on individually circumscribed compositional units finds expression in large narrative poems in their often discontinuous nature, their tendency to break down into independent, loosely connected episodes. The metaphor of jewels/the jewelled for literary style is common in Late Antiquity, as an alternative to flowers/the flowered, showing that elements of a text are understood in terms of \*light and colour, as multicoloured jewels the poet manipulates like a jeweller to produce striking effects by means of juxtaposition and contrast.

In art a similar aesthetic was at work, for instance, in the prevalence of enumeration and row composition, the attention to detail at the expense of naturalistic representation, and the ornamentation of geometrically circumscribed spaces.

MJR

Roberts, *Jeweled Style*.

**jewellery, barbarian** At the beginning of the Late Antique period, new eastern elements, including \*silver sheet \*fibulae, appeared in jewellery along the Danube \*frontier. Also, a polychrome style of decoration, influenced strongly by Roman-Hellenistic art, emerged in the 3rd century AD in the Black Sea area. Single-mounted precious \*stones and coloured \*glass were used in barbarian \*metalwork.

Many extraordinarily rich graves of barbarian military leaders are known from the first half of the 5th century. The treasures buried in places such as \*Untersiebenbrunn combine steppe nomadic and Mediterranean styles. The richness of the princely culture formed by the \**foederati* buried with these treasures is apparent in the Roman \*provinces, as may be seen from the Wolfsheim treasure of c.378, excavated near \*Mainz and now in the Wiesbaden Museum. At the same time it spread quickly into free Germany across the Roman \*frontier, as is apparent from the \*Pietroasa Treasure. Typical of such treasures are \*golden barbarian insignia, such as massive bracelets, \*rings, necklaces, and pendants as well as \*belt fittings showing Eastern influence, and also Roman badges of civil or military rank, such as crossbow \*fibulae. Gold \*bracteates and pendants of the type known as berlock pendants (French *breloque*) were also popular in northern Europe.

During the 5th century, the Scandinavian \*animal style spread southwards. Simultaneously, the polychrome style began to be used for garnet \*cloisonné pieces and became the dominant fashion among the emerging barbarian \*aristocracy in all of Europe, as is impressively exemplified by the finds (now mostly lost) from the tomb of the \*Merovingian \*Childeric I (AD 481/82). Cloisonné objects, especially brooches and \*earrings, were worn by women in addition to other jewellery, such as hairpins, \*amulet pendants, and necklaces with glass beads and precious stones. After reaching a high point in the 6th century, the animal style vanished from the Continent in the early 7th century, but lingered on in Scandinavia and the British Isles, where examples have been found at \*Sutton Hoo and in the \*Staffordshire Hoard.

**jewellery, Persian** Jewellery was important in Iran both as adornment and as social statement. To Roman eyes, Persians wore a great deal of jewellery (\*Ammianus, XXIII, 6, 84; \*Agathias, III, 5). Nobles wore jewelled belts, diadems, necklaces, and \*earrings, which the Shahanshah bestowed on them when they were raised to the \*aristocracy or appointed to an office (KKZ 4, Ammianus, XVIII, 5, 6–7; \*Procopius, *Persian*, I, 17, 26–30). Officials displayed such adornments on their \*seal portraits (e.g. London, British Museum 119994). As seen at \*Taq-e Bostan and in several museum collections, chest harnesses and belts with gold appliqué segments and pendants were important in the late years of the \*Sasanian dynasty (BM 134716–134733; Brussels IR 1262; Washington, Freer & Sackler Gallery S1987.201A–ii; Paris, Louvre AO21405). Granulation and repoussé ornament embellished such \*gold work. \*Rock reliefs of the 3rd–4th century portray necklaces of \*pearls or round beads. Others appear inlaid with precious or carved semi-precious \*stones (cf. Teheran, Reza Abbasi Museum 2640). The Sasanian King's jewels were described as overwhelmingly magnificent (\*Libanius, *ep.* 331, 1; \*Theophylact Simocatta, IV, 3; Procopius, *Persian*, I, 4).

MPC

**jewellery, Roman and post-Roman** From the 3rd century, jewellery became progressively more elaborate and was increasingly employed to denote status especially in the case of \*belts, \*rings, brooches, and \*fibulae, and—in the case of \*emperors—jewelled diadems.

Crossbow brooches of \*gold were, like belts, indicative of high office, and were frequently embellished on the foot or even on the bow with openwork, and sometimes inscribed with an \*acclamation in celebration of an imperial \*anniversary, having presumably been bestowed on such an occasion. However, most brooches of this type were fashioned from base metal (though they were often gilded) and worn by men of lesser rank who wished to maintain an appearance of rank. Emperors are generally portrayed wearing oval jewelled brooches, often with pendants set with \*pearls and precious \*stones suspended from them.

Female jewellery was often very elaborate and it too incorporated openwork designs as well as jewels in multiple colours. The parure included \*earrings, collars, necklaces sometimes with pendants suspended, embellished with \*cameos, body-chains, bracelets ornamented

in repoussé or openwork, and rings. Such jewellery is replicated in works of art such as the \*mosaic portrayal of \*Theodora and her ladies in S. Vitale at \*Ravenna. There were workshops in \*Constantinople, in \*Italy, and elsewhere.

Unsurprisingly, in broad respects, these fashions were replicated outside the boundaries of the Late Roman state with adapted forms of brooches based on the crossbow type such as the square-headed brooch in 5th-century \*Britain and jewelled necklaces with pendants including \*crosses suspended from them, though native fashions (such as the penannular brooches, sometimes richly enamelled, in western Britain and \*Ireland) continued to be worn. **Jews, relations with non-Jews** Despite their traditional cultic exclusivity—usually respected by common practice and by Roman \*law—Jews fitted themselves into their \*cities of residence, which outside the Land of Israel universally held Gentile majorities. Diaspora Jews considered these cities their *patria*, while \*Jerusalem remained the 'mother city' (*mater-polis*; for 1st cent., Philo, *In Flaccum*, 46; 5th cent., *Letter of \*Severus* 18, 19). Entanglements with urban gods evidently did not restrict Jewish participation in public life: they served as ephebes, athletes, and \*actors; as \*city councillors, teachers, and patrons of competitions dedicated to foreign gods. Various \*synagogue \*manumission \*inscriptions opened by invoking the god of Israel while closing with the names of 'lower' (thus, \*pagan) deities. Further, Gentiles both pagan and, eventually, Christian, formed part of the foot-traffic through urban synagogues, some of which, as at \*Sardis, stood at the architectural and social heart of their cities. In many ways, then, except for their general scruples regarding public cult, Jews were

not all that separate. All the evidence of two-way socializing suggests that a high degree of social integration coexisted, for Jews as for other groups, with religious (better: ethnic) distinctiveness.

Beyond encouraging and supporting such voluntary Judaizing (\*'god-fearing'), synagogue communities both before the Late Roman period and also long afterwards received Gentiles as 'converts'. Antiquity had no word for such 'conversion', and given the ethnic embeddedness of ancient divinities, the idea hardly made sense. How could a non-*Ioudaios* become a *Ioudaios*? The closest Roman analogues were adoption and \*marriage, both of which ritually created a bond of (legal but fictive) kinship, creating an obligation on the part of the adoptee or the wife to new deities, rituals, and ancestors (cf. Plutarch, *Moralia*, 140D). Both pagans and Christians complained about such radical affiliations to Judaism, and Christian \*emperors ultimately levelled legal disabilities against the Christian, the *nostrae fidei hominem* who chose to convert (CTh XVI, 9, 5, of 423).

#### Rhetorical characterization

The 'rhetorical Jews' constructed by pagan ethnography and later by Christian \*martyr passions and polemical treatises do not prepare us for this picture. Graeco-Roman ethnographers charge Jews as antisocial, separate, secretive, clannish, and sexually profligate, sacrificing humans and occasionally eating them. But these ethnographers similarly charged Egyptians, Persians, Scythians, Gauls, Britons, and Germans: the image of the foreign was formed from a reversed portrait of the idealized 'self'. (Indeed, the characterization of the non-Jew as 'the goy' functions identically in rabbinic discourse.) The fact that we know so much more about pagan anti-Jewish stereotypes than we do about the stereotyping of these other ethnicities is directly attributable to the activity of later Christians, who preserved the hostile pagan remarks against Jews while augmenting them with their own (e.g. that Jews instigated pagan \*persecutions of Christians). The Jewish mastery, however, of the classical curriculum, their prominence in and evident comfort with majority culture, and their ready reception of pagan and Christian contemporaries—much complained-about—tell against such charges of separateness and hostility.

#### Law and society

From the mid-2nd century onwards, church \*canon law provides glimpses of Roman Jewish–Gentile interactions: Christian Gentiles, like their pagan contemporaries, attended synagogue services and celebrated Jewish \*festivals; they married Jews (Council of \*Elvira, canon 16), asked \*rabbis to bless their fields

(canon 49), accepted Jewish hospitality (canon 50), and enjoyed extra-marital sexual relations with Jews (canon 78). They kept the Jewish Sabbath and worked on \*Sundays (Council of \*Laodicea ad Lycum, canon 29), received festal gifts and tokens of *matzah* (canons 37–8), tended \*lamps in synagogues on \*festivals (canon 70), and determined the date of \*Easter by reference to Passover. These attest to Christian presence and active interest in synagogue activities.

As the Christianization of the Empire gathered momentum toward the end of the 4th/beginning of the 5th century, the language of imperial \*law came to echo the tropes of *contra Iudaeos* theological rhetoric. Judaism became a feral and nefarious sect (*feralis et nefaria secta*: CTh XVI, 8, 1; 8, 2; 8, 8; 8, 9). Conversion to Judaism was denounced (XVI, 8, 1; 8, 7; 9, 5), and characterized as polluting oneself with Jewish contagions (*iudaicis semet polluere contagiis*: XVI, 7, 3). Jews were prohibited from holding high office in the military or civil \*administration. Legal prescription, however, cannot be equated with social description. For the same period, archaeological, epigraphical, and literary evidence complicates the black-and-white picture tendered by canonical and secular codes. This evidence includes the construction of new synagogues in Roman \*Palestine, inscriptions at \*Aphrodisias with public lists of converts to and \*patrons of the Jewish community, and the *Letter of Severus of \*Minorca*, which names the illustrious figures of Theodorus and Caecilianus). The Christian destruction and appropriation of synagogues, frequently attested in the late 4th–5th century, continued to be for this whole period against the letter of Roman law. From \*Theodosius I onwards, emperors were concerned to coerce in the first place, Christian heretics, and in the second place, pagans. By comparison Jews were protected under law (*Iudaeorum secta nulla lege prohibita*: CTh XVI, 8, 9 of 393).

#### Eschatological non-Jews

Jewish \*apocalyptic thought—beginning with the late canonical prophets and continuing through the Apocrypha and pseudepigrapha, the Dead Sea Scrolls, the Epistles of S. Paul, the synoptic Gospels, and the Book of Revelation in the New Testament, through the rabbinic period and beyond—looked forward to an apocalyptic end time when the god of Israel would establish final universal sovereignty, the Kingdom of God. Jewish apocalyptic eschatology scarcely speaks with one voice, but one of its strong themes is the inclusion of other nations, and even of their gods, in endtime events. These eschatological Gentiles are a purely hypothetical construction. They conform to neither of the other two kinds of actual Gentile affiliation with Judaism that we have considered. Like god-fearers, they would remain Gentiles; unlike god-fearers, they would not worship

their native gods. Like converts, they would worship the Jewish god alone; unlike converts, they would not assume Jewish ancestral, thus ethnic, practices. Eschatological Gentiles in other words are neither converts nor god-fearers. They represent a unique category. In the Last Days, these people would enter God's kingdom *as Gentiles*, but they would not worship idols any more. Jewish apocalyptic thought, in other words, severed Antiquity's normal and normative correspondence of ethnicity and cult. PFr

**Jews and Judaism** In antiquity, relations between heaven and earth were commonly configured along ethnic lines: gods and humans formed family groups, and what we consider 'religion' the ancients saw as an inheritance (Lat. *mos maiorum*, Gk. *ta patria êthê, paradosis patrikôn* (cf. Paul, Galatians 1: 14). Gods no less than humans were in this sense 'ethnic' also, associated with a particular place and people.

Late Antique 'Judaism' both harmonizes with this generalization and sounds interesting variations on it. Like other gods, the Jewish god was also associated with a specific place and people: the Temple of God in \*Jerusalem in Judaea was his particular dwelling place (Habbakuk 2: 20; Matthew 23: 21) and the site of his revealed cult (Paul, Romans 9: 4–5); he was the god 'of Abraham, Isaac and Jacob' and their descendants; his people were known as *ioudaioi* or *iudaei* (translatable both as 'Judeans' or as 'Jews'). But this very specifically Jewish deity had much broader scope: Jews insisted that their god was also the highest god, the ultimate object of worship for all other gods and peoples (see section below on 'Theology').

Beginning in the 6th century BC, a significant portion of the Jewish people lived in \*Babylonia and, eventually, further east, in Persia; in the West, following in the wake of Alexander's victories, Jews spread across \*Egypt, Asia Minor, and the Peloponnese, to be found by the Roman period in North \*Africa, \*Spain, and \*Gaul as well. Jews variously adapted to their local environments, preserving in varying degrees a knowledge of Hebrew but assuming Aramaic as their vernacular in the East and in the land of Israel, and \*Greek and to a lesser and later extent \*Latin further West. Jews became athletes, \*actors, and authors of literary

work, they served as generals and as soldiers in foreign armies, and as citizens, they took their place as members of \*city councils. Yet across all these centuries, cultures, and vast territorial expanses, they also maintained a discernible and trans-local identity.

### Scripture

Ancestral stories and practices were preserved and promulgated through sacred writings, designated in Hebrew *TaNaK*: *Torah* ('Instruction', the first five Books of Moses), *Nevi'im* ('Prophets'), and *Ketuvim* ('Writings'). Wherever Jews travelled, they took their texts with them; when their vernaculars shifted, the language of these texts shifted also. Aramaic *targumim* and further West, the Greek translation of the Hebrew Scriptures known as the Septuagint (LXX) mediated the older Hebrew traditions. Outside observers both pagan and, eventually, Christian, from one end of the Empire to the other, commented on observable Jewish practices: most mention the Sabbath, observance of the \*festivals, avoidance of pork, male circumcision, and avoidance of \*pagan cult. Instruction in tradition was a weekly event, when the books of Moses (Gk. *ho nomos*, 'the Law') would be expounded in the community (the \*synagogue). This widely available library of sacred texts (*ta biblia*, 'the books') in a sense stabilized tradition and enabled its exportation.

### Sectarianism

Texts, however, could also be a destabilizing factor. Their very authority required that they be continuously brought up to date to fit new contexts. Jews throughout the Hellenistic and Roman periods variously 'rewrote' the \*Bible through translation, re-creations (*Jubilees*, *Testament of Job*, 4 *Ezra*), formal commentaries, and *midrashim* (creative extensions of biblical narrative). Contemporaries considered that these various texts attested to the existence of various communities, and that these different communities constituted different 'sects'. Interpretation of texts inevitably affected religious practice. 'There was in Judaism a factor which caused sects to begin,' \*Origen remarked in the early 3rd century, 'which was the variety of interpretations of the writings of Moses and the sayings of the prophets' (*Contra Celsum*, III, 12).

One of the most audacious, long-lived, and successful updates of biblical material was the *Mishnah*. Redacted from earlier Hebrew oral traditions in Roman \*Palestine c.200, its six 'orders' enunciated ways to fulfil divine commandments (*halachah*), often conveying the various opinions and arguments of different teachers (\**rabbis*). Ultimately, the *Mishnah* called forth further commentary, the *Gemara*, written in Aramaic. Redacted separately in Roman Palestine and in Babylonia (4th and 5th cents. respectively),

*Gemara* together with *Mishnah* constitutes the core of the \*Talmud, the vital literary legacy that became the foundation for all later forms of rabbinic Judaism. Halackhic authority did not imply literary monopoly; throughout Late Antiquity, Jews in the Eastern Empire produced a vast and varied literature: liturgical poems and \*hymns (*piyyutim*), magical techniques (\**heikhalot*), sermons, and *midrashim*. For this same period, however, in terms of literature, the Western diaspora falls curiously silent.

### Theology

Throughout the vast sweep of biblical narrative, a prime character organizes the action: the Jewish god. Other gods existed, and the Bible attested to them; but tradition asserted that ultimately these gods as well as all other peoples would 'turn' (not 'convert') to the god of Israel (Psalms 97: 7; Isaiah 2: 2–4; Tobit 14: 6–7).

The Jews' insistence that theirs was *the* uniquely universal deity, the supreme or highest God, stood in tension with the canons of philosophical \**paideia*, whose highest god was radically transcendent, ethnically non-specific, acorporeal, and certainly uninvolved in matter, change, and time. Educated Jews, availing themselves especially of the LXX, found various ways to square this circle. Two very ancient cultic peculiarities of Judaism further facilitated the god of Israel's philosophical make-over. The first was cultic aniconism: Jewish tradition forbade making visual representations of their god. The second was cultic specificity: though \*prayer could be offered anywhere, cult was restricted in principle to the Temple in Jerusalem; with the Roman destruction of the Temple in AD 70, Jewish cult ceased. But long before the destruction, Jews distant from Jerusalem did not offer \*sacrifices *in situ* to their god. Even so unsympathetic an outsider as Tacitus, on the basis of the Jews' aniconism and lack of \*sacrifice, was persuaded: by worshipping *sola mente*, without offerings or images, he said, Jews paid homage to the highest God (*Histories*, 5, 4). Both subsequent 'Abrahamic' religions, Christianity and \*Islam, are later refractions of this idiosyncratically Jewish idea.

**Jews in Georgia** The presence of substantial Jewish communities in Late Antique \*Georgia is widely attested by literary, archaeological, and linguistic sources. Georgian tradition, preserved in \**Moktsevai Kartlisa* (*Conversion of Georgia*) and the *Life of S. \*Nino*, claims that a certain Elioiz, a Georgian \*Jew,

witnessed Christ's Crucifixion and brought His tunic to \*Mtskheta. S. Nino stayed for a while with the Jewish community in southern Georgia before arriving at Mtskheta. According to tradition the first to be converted by S. Nino were also Jews—Abiathar, the future Archpriest of \*Iberia, and his daughter Sidonia. Archaeological evidence confirms a strong Jewish presence in Iberia from the end of the 1st century in Urb-nisi, and in Mtskheta a century later. In the 3rd and 4th centuries Christian Jews were also prominent in Iberia.

**Jews in Persian Empire** See PERSIAN EMPIRE, JEWS IN.

**Jews in post-Roman West** The situation of Jews in the barbarian kingdoms varied considerably. Individual states and rulers enforced contrasting policies, and local circumstances, such as the attitudes of \*bishops, also had an effect. Some communities were subject to forcible \*conversion (e.g. \*Minorca in 418) or had \*synagogues burned down, but in many \*cities Jews were a significant economic and political force. Evidence comes almost entirely from Christian sources and codes of \*law. Late Roman restrictions on Jews holding positions in government, on their owning Christian slaves, and on their proselytizing and building new synagogues were usually retained but not always enforced, and sanctions against \*marriage with Christians were sometimes added.

In the \*Visigothic kingdom, a generally tolerant royal attitude ended when King \*Sisebut made Jews liable to compulsory \*baptism or expulsion (613). This was enforced erratically, but church councils continued to impede the practice of Judaism, and in 693 King \*Egica used legislation to cripple the Jews economically. Further attempts at mass enslavement may not have been successful but caused Jewish support for the \*Arab conquest (711).

In \*Italy, Jews under \*Ostrogothic and \*Lombard rule usually had legal autonomy, but were sometimes the object of local attacks. At \*Naples, the Jews took an active role in defending the city in 537 against the \*Byzantine invasion. Pope \*Gregory I generally upheld the rights of Jews to undisturbed existence, as did most popes, and objected to forced baptism on the principle that Jews should be converted by persuasion.

In \*Gaul, church \*councils repeatedly tried to stop Christians from socializing with Jews and celebrating Jewish \*festivals. Most \*Merovingian rulers allowed Jews legal protection, but when royal authority was weak the Jews could suffer, as when the synagogue at

\*Clermont was burned and Bishop \*Avitus ordered them to convert or leave (576). DNo

### Jews in pre-Islamic Arabia and under Islam

Jews settled in \*Arabia in Antiquity, where the largest influx dates from the 2nd century AD following the Roman destruction of the Second Temple (Newby, 14–21, 30–2). Some Arabians also converted to \*Judaism during Late Antiquity. Jewish presence is attested in Arabic literature (and limited archaeological finds) across western Arabia: their most important settlements were in Khaybar, \*Yathrib, \*Najran, and \*Yemen. From the 4th century, Yemeni kings of \*Himyar converted to Judaism. An alabaster bust in the Metropolitan Museum of Art in New York of a high-status figure with a single ringlet on his cheek (1982.317.1), dated 3rd–4th century, attests to the growing power of southern Arabian Jews. The early 6th-century Himyaritic King \*Yusuf Ash'ar forcefully asserted the kingdom's Jewish identity, but his persecution of Christians and alliance with the \*Sasanians aroused East Roman retaliation: a Christian army from \*Ethiopia invaded south \*Arabia in c.525 and occupied Himyar. The later expulsion of Ethiopians from Yemen c.570 does not appear to have accompanied the resurgence of Jewish political power, but Jews remained in Yemen at the dawn of \*Islam and stayed for centuries.

In central Arabia, \*Muhammad established his first Muslim community in Yathrib amongst a substantial Jewish population. Jewish clans did not convert, and though they entered into a pact with Muhammad guaranteeing their freedom, apparent Jewish breaches of the pact resulted in the expulsion of several (but not all) clans. Arabian Jewish populations declined during the Islamic period, but scattered populations survived, perhaps until the 19th century (Newby, 102–3).

The \*Qur'an calls Jews (as well as Christians) '*ahl al-kitāb*' (People of the Book); Islamic law affords them \**dhimmī* status, entitling them to state protection of their religious freedom in return for the payment of \**jizya*. Jewish communities across the \*Abbasid \*caliphate participated in \*trade; Muslim violence against Jews is not widely attested before the 11th century (Stillman, 51, 59, 281–6). PAW

**al-Jibal** (Arabic: 'Mountains') Name given by Muslims to Media, the western part of the Iranian plateau

and the adjoining Zagros mountains. The \*Arab conquest reached these parts in 642 and the \*Umayyads established their province al-Jibal around the former \*Sasanian province of Mah which contained the cities \*Hamadan (its principal Sasanian centre), Dinawar, \*Nihawand, and Qum, as well as many \*tribes practising transhumance.

The province of al-Jibal in the Islamic era often extended south and east as far as the \*cities of \*Isfahan, \*Rayy, and Zanzan (Ibn Hawqal 357–73). With the rise of Seljuk power in the 11th century, al-Jibal became commonly known in \*Arabic as 'Iraq al-'Ajam (Non-Arabic Iraq), to distinguish it from the region immediately to its west, 'Iraq al-'Arab (Arabic Iraq), i.e. the western side of the Zagros and the \*Mesopotamian plain roughly contiguous with modern Iraq (Yaqut, 2: 99).

**John** German \*Primicerius Notariorum who usurped power in \*Italy after \*Honorius died in 423. An army from \*Constantinople under \*Aspar captured him at \*Ravenna in 425 and executed him.

*PLRE* II, Ioannes 6.

**John** Nephew of \*Vitalian, and highly regarded general under \*Justinian I (\*Procopius, *Gothic*, VI, 10). He assisted \*Belisarius in \*Italy, where he served with distinction and was credited with inducing the \*Ostrogoths to raise the \*siege of \*Rome (538). He was later (c.550) \*Magister Militum in \*Illyricum. He exhibited strategic vision and tactical flair, but he also illustrates weaknesses in the Roman high command: other Roman commanders resented him, and he had strained relations with Belisarius, though the \*eunuch general \*Narses was his friend. Definite knowledge of his career ends in 553.

PNB

*PLRE* III, Ioannes 46.

**John I** \*Bishop of \*Rome 523–6. Born in Tuscany, son of Constantius. Two \*letters attributed to John I have been proven to be forgeries. He took part in a

senatorial embassy sent by \*Theoderic, King of the \*Ostrogoths, to \*Constantinople to defend \*Arianism. His cooperation with \*Emperor \*Justin I resulted in his imprisonment in \*Ravenna, where he died (\**Chronicon Theoderici*, 88–93; \**Liber Pontificalis*, 55).

**John VII** \*Bishop of \*Rome 705–7. John declined to amend or accept the canons of the \*Quinisext (Trullan) \*Council (692) which \*Justinian II had sent him. This earned him rebuke in the \**Liber Pontificalis* (rare in this text) for his 'human weakness' (88). During his time as pope, the \*Patrimonium S. Petri in the Cottian Alps was returned by the \*Lombards, and a programme was undertaken of building and restoring churches in Rome (notably \*S. Maria Antiqua).

CTH

*PBE*, Ioannes 228.

**John Athalarich** Bastard son of \*Heraclius, sent as \*hostage to the \*Avars in 622, later accused of conspiring against his father with the Armenian \*Varaztirots' Bagratuni, maimed and exiled to the Princes' Islands in the Sea of \*Marmara.

*PLRE* III, Ioannes 260.

Kaegi, *Heraclius*.

**John bar Aphtonion** (c.480–537) Abbot of the \*Monastery of \*Qenneshre. According to a \*Syriac \*panegyric *Life* (*BHO* 497) written by a monk of the monastery, John was born in \*Edessa, brought up there by his mother Aphtonion, and sent at the age of 15 to the Monastery of S. Thomas in \*Seleucia near \*Antioch. Between 528 and 531, on account of their anti-\*Chalcedonian stance, the monks left Seleucia and established the monastery of Qenneshre on the Euphrates, an important centre of intellectual activity (\*Zacharias Rhetor, *HE* VIII, 5bc). John participated in negotiations between \*Miaphysites and \*Justinian I in

\*Constantinople (Zacharias Rhetor, *HE* IX, 15j). His oeuvre includes \*hymns and a commentary on the Song of Songs. JWW

**John Cassian** (c.365–c.435) Monastic traveller, founder, and author of Latin treatises on the monastic life that proved foundational for Western monasticism.

Biographical details are few and must be inferred from incidental remarks in his writings or from the meagre external evidence. Cassian was most likely born in \*Scythia Minor (mod. Black Sea coast of Romania) and was bilingual in \*Latin and \*Greek from a young age. He went to \*Palestine in his late teens with his companion

Germanus to become a monk, entering a Greek-language *coenobium* in \*Bethlehem. Inspired by the tales of an Egyptian monk, they travelled to \*Egypt, visiting \*monasteries in the Delta region before settling at \*Scetis among monks favourable to the \*biblical interpretation and spiritual theology of \*Origen. They also became acquainted with monks in \*Nitria and \*Kellia, among them \*Evagrius Ponticus (c.345–399), who was the major influence on Cassian's own monastic thought. They left Egypt after the outbreak of the \*Origenist Controversy in 399, finding refuge in \*Constantinople with \*John Chrysostom, who employed and ordained them. Both Cassian and Germanus appear in the list of those sent by Chrysostom to \*Rome to plead on his behalf to Pope Innocent I in 404. The period between the Roman mission and Cassian's appearance in \*Gaul c.415 (without Germanus, who had died) is completely blank. From his new base in Massilia (mod. \*Marseilles), Cassian formed links with the island monastery of \*Lérins and its founder \*Honoratus (c.350–429) and with \*bishops in the region.

By tradition the founder of monasteries for men and women in Massilia, Cassian is best known as the author of a compendium of monastic instruction intended to provide an authoritative basis for the nascent monasticism of southern Gaul. Cassian's explicit appeal to Egyptian models for both the anchoritic and cenobitic life contrasts with the less organized, more charismatic monasticism of S. \*Martin of \*Tours in western Gaul. He originally conceived a work in two parts: twelve books of *Institutes* outlining the fundamental practices of the coenobitic life in terms of \*dress, initiation, liturgical \*prayer, and ascetic discipline. The agenda for the latter is described under the heading of eight principal vices, borrowed from Evagrius' 'eight generic thoughts' of gluttony, lust, avarice, anger, sadness, accidie, vain-glory, and pride. To the *Institutes* Cassian added ten *Conferences* attributed to anchorites of Scetis, which were meant to cover spiritual themes characteristic of the anchoritic life. Two additional sets of *Conferences*, including some attributed to coenobites, brought the final total to 24. Notable topics include discernment, unceasing prayer, chastity, grace and free will, spiritual interpretation of the Bible, and analysis of the distinctive features of the various forms of monastic life. Cassian's list of marks of humility (*Inst.* 4, 39) inspired the 'Ladder of Humility' of the \**Rule of the Master* and *Rule of S. \*Benedict*. Toward the end of his life he also wrote a less successful treatise on Christology, *On the Incarnation of the Lord against Nestorius*, for Pope \*Leo the Great.

Cassian's views on grace and free will, though typical of Greek Christian theology, proved controversial among followers of \*Augustine, notably \*Prosper of \*Aquitaine (c.390–c.455). The accusation of 'semi-Pelagian' clouded his reputation in the West though

his writings remained widely copied and read in monastic circles.

Kaster, *Guardians*, no. 199, 391–2.

**John Chrysostom** (c.350–407) \*Patriarch of \*Constantinople (398–404). A Hellenized Syrian famous for his preaching and the schism that resulted from his \*exile. The epithet *chrysostomos* (Gk. golden mouth) refers to his oratory and dates from the 6th century.

John Chrysostom was born in \*Antioch. His mother, at least, was Christian and his father probably a member of the \*officium of the \*Praefectus Praetorio per Orientem. He was fully trained in \*Greek *paideia* and probably also in \*Latin (Ps.-Martyrius (BHG 871) 50), with the expectation that he would enter a bureaucratic career. Under the influence of the larger of two local Nicene Christian communities he altered course and subsequently trained till c.379 in the \*ascetic life. \*Palladius' claim that he withdrew from the \*city at this point (*Dialogus* (BHG 870), 5) has until now been widely accepted, but that he instead trained in exegesis of the \*Bible, \*prayer, vigils, and \*fasting in an urban ascetical school is equally likely (Ps.-Martyrius, 6–7; Illert). Regardless, his ascetical training had a profound

influence on his subsequent life and pastoral agenda. In light of Ps.-Martyrius, whether his \*baptism took place before or after his ascetical training is now uncertain.

Under Meletius, the Nicene Patriarch of Antioch (360–81), John was appointed \*reader, then ordained \*deacon (381). In 386 he was ordained \*priest by Meletius' successor, Flavian (\*bishop 381–407). Over the next twelve years he gained a widespread reputation for preaching and for treatises (\*Jerome, *Vir. Ill.* 129), while becoming a close aide to his elderly bishop. When the Patriarch of \*Constantinople died in 397, John was elected to the position over the Alexandrian candidate, causing friction. He was a rigorist, who instituted reforms to the clergy and the see's finances, earning hostility in those quarters, while becoming popular for his preaching with many of the laity. The internal politics of the eastern capital were complex and he lasted just five years before being sent into \*exile in late 403 by the \*Emperor \*Arcadius. This occurred not long after the so-called Synod of the \*Oak, a tribunal of Egyptian bishops and their eastern allies held in \*Chalcedon. The popular outcry was substantial and the exile brief. There was controversy over his resumption of the episcopal throne on his return and John was placed under house arrest in early 404, protesting his innocence. At \*Easter 404 there were bloody clashes between his supporters and enemies and in June 404 he was exiled a second time and sent under praetorian guard to Cucusus in \*Armenia. He and his supporters continued to protest that the charges against him were illegal. His supporters, particularly closely allied clergy and senatorial women, were arrested and put on trial. His most prominent \*patron, the \*deaconess \*Olympias, was heavily fined and exiled along with a large number of eastern bishops. The alliances among both enemies and supporters extended into both East and West and the more influential Italian bishops and the Emperor \*Honorius were drawn into the dispute. John's influence continued from exile and he died in 407 while being moved for a third time. The widespread schism took several decades to resolve. In 438 his remains were finally brought back to Constantinople under \*Theodosius II.

John's surviving works are substantial. There is still some dispute over authenticity and genre, but he left more than 820 authentic \*sermons, fifteen treatises (many concerning \*asceticism), four scriptural commentaries, and c.240 \*letters (written in exile). The bulk of his homilies are exegetical, but also contain moral exhortation. Because of the events he lived through and his down-to-earth and outspoken style, his works constitute an important historical source for Antioch and Constantinople in the later 4th to early 5th centuries.

**John Climacus** (late 6th–mid/late 7th cent.) Hegumen (abbot) of the \*monastery at Mount \*Sinai and author of the *Ladder of Divine Ascent* (his cognomen is from Gk. *klimax*, 'ladder'); also called John Scholastikos.

The perhaps near-contemporary *Life* by Daniel of \*Raithu presents key episodes up to the time when John became abbot but provides no means of dating his career, though it is now generally agreed that his abbacy was in the later 7th century (he is not mentioned by \*John Moschus). According to Daniel, John came to the monastery at the age of 16; nothing is said about birthplace or family. After twenty years he withdrew into solitude at the base of Mount Sinai, where he spent 40 years until being called back to the monastery as abbot. Another source reports that he later appointed his brother George to succeed him.

John is most famous for the *Ladder*, written for another abbot, John of Raithu. The work consists of 30 *logoi* organized according to stages in spiritual development: renunciation of the world; elimination of vices and inculcation of virtues; challenges in the \*ascetic life; attaining stillness (*hesychia*), \*prayer, and passionlessness (*apatheia*); abiding in faith, hope, and love. The *Ladder* shows the influence of the classic \*Egyptian monastic authors, especially \*Evagrius Ponticus, and became a staple text of Byzantine monasticism. It is still widely read, especially in Lent. A shorter treatise, *For the Shepherd*, a guide for coenobitic abbots, was also dedicated to John of Raithu and is an important work on \*spiritual direction. Feast: 30 March. CAS BHG 882-3.

**John Colobus** (c.339-c.409) Monastic leader of \*Scetis. His hagiographical *Life* (BHO 509) by \*Zacharias of Sakha (7th-8th cent.) portrays him as an example of humility and obedience, speaker of wisdom, healer, and worker of \*miracles. John appears, more modestly, in around 50 sayings and stories in the \**Apophthegmata Patrum*, about half of which appear in the *Life*, usually in expanded form. About 380/5 John founded his own monastic community. Scetis was sacked in 407/8; John fled to \*Clysma and died there. TV *CoptEnc* 1359b-1362a s.n. John Colobus (L. Regnault and M. van Esbroek).

**John Diacrinomenus** (fl. early 6th cent.) Author of a lost ecclesiastical history covering the period from the \*Council of \*Ephesus (431) to the accession of \*Severus as \*Patriarch of \*Antioch (512). It comprised ten books of which the first five were available to \*Photius (41). Only a later summary of each book's contents is extant. Writing in \*Constantinople, John dedicated his history to his uncle \*Bishop Silvanus, envoy of \*Emperor \*Anastasius I to the \*Himyarites (512). He was a moderate anti-\*Chalcedonian, or 'hesitant' (*diacrinomenos*). BC PLRE II, Ioannes (Diacrinomenus) 52.

Treadgold, *Early Byzantine Historians*, 168-9.

**John Draskhanakerts'i (Yovhannēs Drasxanakertc'i)** (d. c.925) \*Catholicus of \*Armenia (897-c.925), author of a *History of Armenia* from Creation to his own time. John was a key figure in his own era (the late 9th and early 10th cent.), during the re-establishment of the kingdom of Armenia after centuries of \*Arab domination. His *History* is therefore valuable as an account of the time during which he was at the

centre of Armenian politics, but it also has value for Late Antiquity. The primary sources used by John for the Late Antique history of Armenia were the *\*Buzandaran Patmut'iwnk'* and the *History* of *\*Movses Khorenats'i*, but he also evidently had recourse to lost histories and oral tradition, as well as the works of Late Antique Roman authors such as *\*Socrates*. John, writing probably in the 920s, is the first writer to make explicit reference to the work of *\*Khorenats'i*; this piece of evidence is often cited in debates over when *\*Khorenats'i* actually wrote.

John was influential in the establishment of the autonomous medieval Armenian kingdom, but found himself caught between the rival princes of the dominant *\*Bagratuni* house of Shirak and the *Artsruni* house of Vaspurakan, with whom he took refuge at the end of his career. His correspondents included Nicholas Mysticus, Patriarch of *\*Constantinople*, and the Emperor *\*Constantine VII Porphyrogenitus*. TLA Thomson, *BCAL* 219–20, supplement 204.

ET K. H. Maksoudian, *Yovhannēs Draxanakert'ci: History of Armenia* (1987).

**John Gibbus** John the Hunchback, consul 499. Native of *\*Selymbria*. General of *\*Anastasius I* in the *\*Isaurian Revolt* of 492–8 and a victor of the Battle of *\*Cotiaeum*. During this war he allegedly condemned to death the future *\*Emperor Justin I* but reprieved him after warnings in *\*dreams*. OPN

*PLRE* II, Ioannes 93.

Haarer, *Anastasius*, 23–6, 248.

**John Lydus** (b. 490) Civil servant, historian, poet, and antiquarian. The career and writings of John Lydus provide unrivalled insight into the *\*administration* and culture of the 6th-century Empire. John was born into a wealthy family from Philadelphia of *\*Lydia*, a *\*city* commended by students of the *\*philosopher Proclus* as a 'little Athens' for its *\*pagan festivals* and *\*temples* (*Mens.* 4.2). In 511, after a classical education there, he went to *\*Constantinople* to join the civil service. While awaiting a post, he attended lectures by the pagan Platonic *\*philosopher Agapius*.

Through the patronage of his countryman Zoticus, created *\*Praefectus Praetorio* in late 511, he was duly enrolled in the Praetorian Prefecture, where in his first year he earned the enormous sum of 1,000 *\*solidi*. He also married Zoticus' daughter, who brought him a dowry of 100 lb of *\*gold* (= 7,200 *solidi*). After Zoticus left office, John's career was less meteoric. He served in a wide range of posts in the Prefecture, despite seeking at one point to serve in the *\*Palace*. He eventually retired, probably from the most senior grade, after some 40 years, apparently disillusioned with the civil service, but with the

customary rewards and honours. He quotes the decree delivered in his honour by the then *Praefectus Praetorio*, Hephæstus (*Mag.* 3, 30). He then devoted himself to literature.

His literary career had, however, begun earlier, with a *\*panegyric* of his *\*patron*, Zoticus, for which he was paid a *solidus* a line. As his reputation grew, he was commissioned by *\*Justinian I* to deliver a panegyric to visitors from *\*Rome*, and also to write a history of a recent war where the Persians had been defeated at *\*Dara*, a possible reference to *\*Belisarius'* victory in 530 preceding the *\*Eternal Peace* of 532 (*Mag.* 3, 28). Justinian followed this with a decree, again quoted in full (*Mag.* 3, 29), which let John preserve his career in the prefecture while being appointed by the *Praefectus Urbi* to a teaching *\*chair* in Constantinople.

His surviving works comprise *De Mensibus* (*Mens., On the Months*), *De Ostentis* (*Ostent., On Portents*), and *De Magistratibus* (*Mag., On the Magistracies* or *On Powers*). The first two are notable for antiquarian learning, and also for John's respect for the customs and intellectual practices, including *\*divination*, of the pagan classical past. This left *\*Photius*, a 9th-century *\*Patriarch* of Constantinople, uncertain as to whether or not Lydus was a Christian (*Bibl.* 180).

*Mag.*, John's most important work, seeks to present in detail and historical sequence the institutions, rights, and fate of the Roman magistracies from Aeneas to Justinian's reign, along with the continuities between older Roman and contemporary institutions. The treatise falls into three parts: the first covers the institutions of Roman government in the time of the kings and the Republic; the second deals with the Empire; the third, and longest, describes the history of the Praetorian Prefecture, and provides much autobiographical material. Beyond the detail about the workings of government, what is most striking is the way Lydus roots the contemporary institutions of the empire in the remote Roman past and the admiration he expresses for 'wise antiquity' (*Mag.* 3, 11). Indeed Lydus criticized many of Justinian's reforms, less from personal or departmental motives, than because they departed from ancient precedent. He also resented the employment in the Prefecture of men of allegedly inferior education (and social origin) and the ascendancy of *\*John the Cappadocian*, Justinian's dynamic minister and tax-collector, whom he denounced as cruel and depraved. The contrast he draws between John the Cappadocian and John's successor as *Praefectus Praetorio* (after the *\*Nika Riot* in 527), the traditionally minded and generous aristocrat *\*Phocas*, is illuminating, since Phocas committed suicide in 545–6 during a renewed purge of pagans. Notwithstanding his excoriation of John the Cappadocian and the emperor's policies, there is no criticism of Justinian personally in the surviving texts. PNB

**John Malalas** (6th cent.) Author of the earliest surviving Byzantine Christian world chronicle, extending from Adam to 565 (the ms. breaks off in 563) in eighteen books, surviving in a single manuscript (Oxford, Bodleian Baroccianus 182) that is demonstrably lacunose and abbreviated from the original, less annalistic than \*Eusebius' *Chronicle*, and with more narrative. It is also the earliest substantial work in medieval \*Greek to prefer vernacular to literary language. The chronicle was influential, being frequently quoted in \*Constantine Porphyrogenitus *Excerpta*, also becoming the source, directly or indirectly, for later chronicles, not only in Greek but also \*Syriac, Slavonic, and other languages which are useful for reconstructing the text. Malalas' name, linked to Syriac for 'rhetor' and 'scholasticus', suggests a legal training and he may have worked for the \*Comes Orientis in \*Antioch. The chronicle appeared in at least two editions, the first ending around 535 focused on Antioch while the continuation focused on \*Constantinople and may be partly by another author. It is, however, stylistically similar though less discursive, and the structure in eighteen books implies overall planning by a single author with Christ's incarnation being pivotal, the Annunciation occurring in book 9's final sentence and the Incarnation in the opening of book 10. Thus books 1–9 cover pre-Christian history; books 10–18 Christian; likewise a structure in three hexads with history formed around \*Jerusalem (books 1–6), \*Rome (7–12), and Constantinople (13–18) as indicated by individual book titles. Malalas claims he abbreviated earlier chronicles (beginning with Moses) for earlier history. For his own lifetime from \*Zeno's reign (Books 15–18) he does not specify his sources but may have used chronicles, eye-witness accounts, and material obtained in the office of the Comes Orientis. Often dismissed as ignorant, the significance of his earlier material lies in revealing an educated 6th-century view of the distant past, while his account of contemporary events, not limited by genre, provides a valuable alternative to \*Procopius' classicizing

narrative, and though eclectic and superficial is our sole source for various secular and ecclesiastical matters. The Christian framework of the earlier narrative interweaves secular history, including king-lists, \*euhemerized accounts of Greek myths, (e.g. Oedipus, Theseus, and the Minotaur), and physical descriptions of Trojan War heroes, parallel to his later descriptions of \*emperors. He does not recognize the past as other than an extension of the present, applying anachronistic technical terms and assuming rule by an emperor as the basic requirement of statehood, so including Athenian kings but excluding Athenian democracy and virtually all the Roman Republic before concentrating on Roman imperial history. Sporadic examples of mystic \*Gnosticism, often of \*pagan predictions of Christianity, occur across the *Chronicle*. Despite the Christian structure Malalas shows virtually no interest in \*heresies or synods; his chronicle demonstrates the victory of Christianity rather than of Orthodoxy. A rejection of standard Byzantine eschatology underlies frequent date calculations, with *Anno Mundi* 6000 marking the Crucifixion rather than the World's End. Establishing this idiosyncratic chronology (known also to his contemporary \*Hesychius Illustis) may well have provided the motive for writing. Claims that Malalas fraudulently copied \*Eustathius of \*Epiphania are misguided. John Malalas's *Chronicle* is cited in *ODLA* by chapter and section number. *RDS PLRE* III, Ioannes 50.

**John (Yovhan) Mandakuni, *Homilies of*** A collection of 23 homiletic pieces, written in \*Armenian, attributed upon publication to the \*Catholicus Yovhan Mandakuni (r. 478–90). Mandakuni was a contemporary of the \*marzban (governor) Vahan I \*Mamikonian and was important in negotiating the restoration of Armenian autonomy in 484. His life coincided with the Golden Age of Armenian literature, and he was a contemporary of the \*Holy Translators; as such he was influential in the development of the early Armenian \*liturgy as well as in \*translation work. Mandakuni is credited with writing several works including prayers,

services, and \*hymns. Also attributed to him is an encyclical on \*fasting in the \**Book of Letters* (*Girk' T'it'ots'*) and canons preserved in the Armenian \*Canons (*Kanonagirk'*). Already in the late 19th century Mandakuni's authorship of the homiliary was questioned, and it has been proposed that the homilies be credited to the 7th-century *vardapet* and fervent anti-\*Chalcedonian Yovhannes Mayragomets'i, although some scholars do not entirely accept this argument. The collection of homilies is nevertheless an important source for the formation of the early Armenian Church. TLA Thomson, *BCAL* 224–5, supplement 206.

**John Moschus** (c.540/50–619 or 634) Also known as John, son of Moschus, or 'Eucratas', an itinerant monk and spiritual writer. Moschus was born in \*Cilicia and died at the beginning of one of two eighth \*Indictions, probably in \*Rome, but possibly in \*Constantinople. His chief work, the *Λειμῶν* (*The [Spiritual] Meadow*), has a prologue, which a contemporary evidently composed, recording that Moschus lived in and visited various \*monasteries and eremites in Judaea, \*Syria, and \*Egypt; and that in 614, when the Persians took \*Jerusalem, he sailed from \*Alexandria by way of various islands (at least \*Cyprus and \*Samos) to 'the great city of the Rhomaioi', that is, to Constantinople. The prologue states that he wrote up *The Meadow* in 'Rome'. Before his death he entrusted his compendium to his disciple \*Sophronius, who buried his body in Judaea.

The preface dedicates the work to Sophronius and explains the title from the analogy of the lives of holy men and women from which edifying virtues will be picked as flowers from a springtime meadow. The work is an anthology of material from or about chiefly clerics and religious, but some lay people too, that Moschus heard during his travels. It is in the tradition of such works as \*Theodoret's *Historia Religiosa*, \*Palladius' *Lausiac History*, the anonymous \**Historia Monachorum in Aegypto*, and the various collections of the \**Apophthegmata Patrum*, and like them it contains a mixture of edifying tales and utterances. Moschus provides details on such matters as the provenances of people, the exact location of monasteries and churches, and \*prices, that are incidentally illustrative of the social history of the Eastern \*provinces in the period immediately before the \*Arab conquest.

The style of writing is plain and modest. The \*Patriarch \*Photius read it in the mid-9th century and says (199): 'The style of the piece tends to be more debased and ignorant than that of the previous work' (the

Systematic Series of the *Sayings of the Desert Fathers*). The text is of linguistic interest precisely because it has no literary pretensions. In the preface, however, the style is more elevated and allusive.

The size and extent of the work is problematic. It enjoyed considerable popularity and occurs in a large number of manuscripts, which have a complex tradition. Photius says that he read it in versions of 304 and 342 chapters. The form of the work was thus even then already uncertain. The most authoritative tradition now known contains 301 chapters, but other manuscripts have tales not in this corpus and certain of these contain evidence that suggests that they are genuine. The ambiguity in the date of the author's death further complicates the process of determining what belongs in the corpus. Subdivision increases the number of chapters, but *The Meadow* appears to have been treated by copyists as a living text to which they might reasonably add new material from other, sometimes identifiable, sources. Translators rendered the work into several medieval languages and certain of these have a role in establishing the corpus and the text.

Moschus, with Sophronius, also wrote the first fifteen chapters of a *Life* of S. \*John the Almsgiver, Patriarch of Alexandria 610–c.620, completed by \*Leontius of Neapolis after 641. PPat

*PLRE* III, Ioannes 101.

**John of Antioch** Chronicler, 6th or 7th century. Fragments survive of the work of one or more authors, either of a classicizing high-style writer covering the period from Adam to 518 or of a chronicler reaching

to 610, who also makes use of the low style normally associated with chroniclers, with a further continuation to the 640s. The work survives in collections of excerpts, either specifically attributed to a John of Antioch or identified as being his because of parallels in language or subject matter. A division over whether or not a single author could be responsible for both styles in a single work is reflected in the two modern editions. Mariev includes only the former, while Roberto accepts all attributed fragments, claiming there is sufficient similarity in approach to treat them as part of a single work and arguing that the lower style results from their being derived from a non-classicizing epitome of the original.

Though the writer usually copies material verbatim, his treatment is original in that he interweaves material from various sources, seemingly using these sources directly rather than through an intermediary. He is unusual for being more knowledgeable about the Roman Republic than other Byzantine authors. Elsewhere he occasionally provides important information not preserved elsewhere, most notably on the reign of \*Phocas. He was much used by later chroniclers.

### John of Apamea (John the Solitary) (fl. c.430–50)

Syrian monk and spiritual writer. He is not to be confused with John of \*Apamea, or 'the Egyptian', whom \*Philoxenus of Mabbug accused of \*Gnostic heresy. From John the Solitary, several treatises, dialogues, and a wide-ranging correspondence are extant. He established a threefold order of the spiritual life, later very popular in \*Syriac spiritual literature: the lifestyles or orders according to (1) the body, (2) the soul, and (3) the spirit, corresponding to a process from uttered speech, through spiritual \*prayer, to silent, interior prayer; from purity/purification, through limpidity/illumination, to perfection. This threefold structure is reminiscent of both the system of \*Evagrius Ponticus (active life, natural contemplation, and vision of the Trinity) and the later elaboration of \*Dionysius the Pseudo-Areopagite (purification, illumination, perfection). John's unique Christology is hard to situate on the variegated palette of the 5th century.

**John of Biclar** (c.540–c.620) Author of a *Chronicle*, covering events from 568 to 589 in \*Spain and the East, and continuing the *Chronicle* of \*Victor Tonnennensis. The climax of the *Chronicle* is the conversion to Catholic Christianity of the \*Homoean ('Arian') \*Visigoths under King \*Reccared, made official at the Third \*Council of \*Toledo in 589. \*Isidore of \*Seville gives a few details about John's life in chapter 31 of his *De Viris Illustribus*. John was born at Scallabis of \*Lusitania (Santarém, Portugal), and studied seven years in \*Constantinople probably around 570–7. After falling into disfavour with the Visigothic King \*Leovigild he was exiled to \*Barcelona in c.580. He founded a \*monastery at Biclar, an unidentified site in Catalonia, and wrote a monastic rule and other works that are not extant. He became \*Bishop of Girona (c.590/1), but nothing is known about the remainder of his episcopate apart from his attendance at church \*councils.

**John of Dalyatha** (8th cent.) Monk and \*Syriac mystical writer of the \*Church of the East. John was born in a village north-east of \*Mosul and spent seven years as a monk in the \*Monastery of Mar Yozadaq in the Qardu region (\*Corduene, east of \*Tur Abdin and south of the Bohtan Su). He then withdrew further north into the solitude of the mountains of Dalyatha.

Towards the end of his life the brothers of Mar Yoza-daq elected him abbot.

In his writings (\*letters, \*sermons, and 'Chapters of Wisdom') he reflected on the tradition of mystical thought in the light of his own spiritual experience. He has to be identified with John Saba ('the Elder'), condemned by the synod of \*Catholicus Timothy I in 786/7. KP

**John of Damascus** (c.670–c.750) Christian, priest, monk, and theologian.

### Life

Born in \*Damascus, then the seat of the \*Umayyad \*caliphate, as the son of \*Sarjun, a tax official in the \*Umayyad tax \*administration, John received a good education there and initially followed the family tradition in the administration in Damascus. Probably around 706, Mansur b. Sarjun, as he was then called, left the service of the caliphate and moved to \*Palestine to become a monk. Later tradition has him a monk of the \*Monastery of Mar \*Saba in the \*Judaean Wilderness; it is more likely that he joined the monastery of the Church of the Holy Sepulchre (Anastasis) in \*Jerusalem. There he spent the rest of his life. He had a reputation as a fine preacher, and was called John *Chrysorroas* by the chronicler \*Theophanes. He must have been dead by the time of the \*Iconoclast Synod of \*Hiereia in 754, for there he was anathematized as a dead heretic.

### Theology

John's enduring fame rests on his theological work, his prominent opposition to what he believed to be the imposition of Iconoclasm, and, especially in the Orthodox world, his liturgical poetry. John's theological works are mostly polemical, directed against the Christological heresies of those who opposed the Council of Chalcedon (\*Miaphysites, \*Nestorians), as well as against \*Manichaeism. He also composed a century (a work of 100 chapters) on \*heresies. The first 80 chapters are an already existing epitome of \*Epiphanius' *Panarion*; the last twenty are John's own. He also added a lengthy dossier on \*Messalianism to the brief notice of the

\*heresy which ended the epitome. Of most interest is the last chapter of *On Heresies*, chapter 100, on \*Islam. It is the earliest account of Islam and probably reflects knowledge of Islam gained during his time in the service of the Caliph. It is scathing in its attitude to Islam, but John's knowledge fits with the little we know about the development of Islam at the end of the 7th century, and the central Muslim objections to Christianity are clearly delineated; John knew some of the suras of the \*Qur'an, presumably having read them in \*Arabic. There is another work, a dispute between a Christian and a Muslim, associated with John's name, mostly likely a summary of his teaching by another hand.

John also composed a handbook of logic that survives in two forms: a short form in 50 chapters, and a longer form, which seems to be an incomplete revision of it. This belongs to the genre of Christian manuals of logic, prepared to enable theologians to understand the philosophical terminology that had been incorporated in conciliar definitions, and also to assist in the theological debates these had provoked.

John's most influential theological work is his *Exposition of the Orthodox Faith*, another century, which epitomizes the tradition of Greek patristic theology, in many cases using (without acknowledgement) the words of the fathers themselves. It covers the doctrine of the God, the Trinity, creation and the nature of the created order, the Fall and Redemption, which leads into a lengthy discussion of Christology. The treatise ends with a series of chapters on the sacraments, the \*Cross, \*relics, \*icons; there are various suggestions as to what coherence this group of chapters possesses, if any. This work was translated into \*Latin in the 12th century, and became a resource for the Greek patristic tradition, much used by Western theologians until at least the 19th century. (The order given is that of most of the manuscripts; others have a variant order for the chapters: this seems to be later, and the purpose is not clear.) For the most part, John summarizes the tradition, explicitly disavowing any intention of 'adding anything of his own'. Nevertheless, his presentation is often compelling, and his priorities illuminating; the use of *perichoresis* in Trinitarian theology, once thought to be borrowed from a work now assigned to the 14th century, is probably original.

### Iconoclasm

John is also renowned for his theological opposition to Iconoclasm; his three treatises against the Iconoclasts, together with their patristic *florilegia*, present the clearest statement of the Byzantine justification of icons and their veneration. Drawing on arguments honed in the 7th century against \*Jewish objections to the veneration of icons and relics, John argues from the holiness of matter as God's creation, manifested ultimately in

God's assuming a material form in the Incarnation, and the essential place of the image or symbol in any human knowing, that icons are both to be made and venerated. He distinguishes further between veneration implying worship and that expressing honour, the former to be addressed only to God, and he develops a detailed exegesis of the OT passages appealed to by Iconoclasts. He was, however, writing from outside the Empire, and it is unclear what influence his arguments (as opposed to his reputation) had on the controversy itself.

### *Liturgical poetry*

John was one of the first composers of liturgical poetry sung in the monastic office, especially the poetic form called the canon, used at Matins. Many canons are ascribed to him in the manuscript tradition, and some are likely to be genuine, notably the \*Easter canon. His \*sermons, too, are part of his contribution to liturgical worship; of special interest is their witness to the development of veneration of the Virgin \*Mary. AL

**John of Ephesus** (c.507–589) Also styled John of Asia, \*Miaphysite \*Syriac monk, \*bishop, and church historian. Born in northern \*Mesopotamia and dedicated by his parents to a \*monastery as a young child, John came of age during the Chalcedonian persecutions under the \*Emperor \*Justin I of eastern Christians who rejected the Christology of the \*Council of \*Chalcedon. For some years, he travelled in \*exile through the eastern Roman provinces and in \*Egypt. He received ordination as a \*deacon in 529 and subsequently as a \*priest. In 540 he arrived in \*Constantinople among the Miaphysite refugees under the protection of the \*Empress \*Theodora. In 542, the Chalcedonian Emperor \*Justinian I enigmatically chose John for missionary

work among \*pagans and heretics in \*Asia Minor, \*Lydia, \*Phrygia, and \*Caria. With some pride, John claimed to have converted 80,000 pagans and schismatics (notably Montanists), and to have founded 98 churches and 12 monasteries during this effort (*Lives of the Eastern Saints*, 47, PO 18, 681). Around 558, John was ordained titular Bishop of \*Ephesus by \*Jacob Burd'oyo (Baradaeus), though he seems never to have visited the city. Instead, with \*Constantinople as his base, he became an active and highly visible leader for the \*Miaphysites as they worked to establish themselves as an independent church in the wake of fruitless theological negotiations with the imperial \*court. Renewed persecutions under \*Justin II in the 570s brought exile and imprisonment for John, who spent his final years in captivity.

John's importance lies in his extensive (if untidy) historical writings. A number have been lost, but those remaining provide vivid witness to the extraordinarily turbulent times through which he lived. Perhaps most noteworthy is his lengthy *Ecclesiastical History*, composed in three parts. Part I, largely lost, covered the period from Julius Caesar to the death of \*Theodosius II. Significant portions of the second part, continuing to 571, are preserved in later Syriac chronicles. Part III, covering to 588/9, was written and smuggled out of prison during John's final years; it survives intact. Composed under difficult conditions even at its best, John's *History* lacks both literary polish and precision of detail. Yet its flaws are more than compensated by the compelling narratives he provides of religious persecutions under the emperors Justinian and Justin II, the Justinianic \*Plague of 542, intermittent war with the \*Persian Empire, horrendous natural disasters (\*earthquakes, drought, \*famine, \*epidemics) repeatedly suffered in the eastern provinces throughout the 6th century, and the profoundly fraught efforts to establish an independent \*Miaphysite church, the \*Syriac Orthodox Church. To these he added intimate knowledge of the imperial courts of Justinian and Justin II, deep familiarity with provincial \*villages, and extensive contact with religious and political leaders. A source of singular importance for historians, John's *Ecclesiastical History* significantly counterbalances contemporary \*Greek and \*Latin sources.

In the late 560s John composed *The Lives of the Eastern Saints*, accounts of 58 \*ascetics from \*Mesopotamia and \*Syria whom he himself had known or met during his lifetime. Written with strong reliance on hagiographical convention, the work is nonetheless vibrantly personal and engaging. Although John gives attention to some monastic and theological heroes of the Miaphysite movement (notably the \*patriarchs \*Severus of \*Antioch, \*Theodosius of \*Alexandria, and Jacob Burd'oyo), the majority of his subjects are

## John of Epiphania

otherwise little known: local \*holy men and women whose profound commitments earned them the devotion and adulation of others. The first chapters present the \*village life of John's youth and early adulthood, brimming with lively personalities, local feuds, inherited customs, and richly enacted piety. Subsequent chapters are set against the backdrop of ongoing persecution, as John and his fellow monastics lived in itinerant exile. The final chapters, set in Constantinople, include fascinating interactions between the Miaphysite refugees and the imperial couple Justinian and Theodora, both of whom John came to know well. His saints include monks, nuns, \*stylites, hermits, bishops, and laypeople. Some conducted extensive ministry among \*poor and suffering civic populations; some practised idiosyncratic forms of self-mortification. A few were members of the nobility, whose wealth and status lent strength to Miaphysite efforts. The accounts are dramatically varied, offering a rare and poignant window into 6th-century religious life in the Christian East.

**John of Epiphania** Syrian lawyer, kinsman of \*Evargrius Scholasticus, adviser to \*Gregory \*Patriarch of \*Antioch (590), and later honorary \*Praefectus Praetorio. His *History* of the \*Persian–Roman War of 572–92 was probably a source for \*Theophylact Simocatta; one fragment survives. See also EPIPHANIA. PNB PLRE III, Ioannes 162.

ed. Müller, FHG IV, 273–6.

Hunger, *Literatur*, vol. 1, 312.

**John of Gaza** Poet and teacher active in the first half of the 6th century. He wrote a verse \*ecphrasis of a cosmological painting in the \*baths at \*Gaza or perhaps at \*Antioch as well as anacreontic poems. The sole manuscript of the ecphrasis (ms. Paris Suppl. Gr. 384) identifies John as a teacher of \*grammar and poetry (\**grammaticus*). The poem itself, in 703 hexameters in \*epic dialect preceded by a short iambic prologue, represents the transposition into poetic language and form of a rhetorical genre, the encomiastic description (ecphrasis) of \*cities and monuments pronounced at a public occasion. John's evocation of the \*personifications

and \*pagan deities depicted in the baths contains many echoes of the language of \*Nonnus. The anacreontic poems were composed for poetic competitions and for other occasions, in particular the Rose \*Festival celebrated in Gaza and, like the ecphrasis, testify to the continuing tradition of poetic performance in the 6th century.

**John of Hermopolis** Late 6th-century \*Bishop of Hermopolis Magna (al-Ashmunein), mentioned in the *History of the Patriarchs of the Coptic Church of Alexandria* (PO 2/1; 14), and author of two highly stylized \*Coptic encomia praising S. Mark the Evangelist and S. \*Antony the Great. John was a contemporary of the \*Miaphysite \*Patriarch Damianus (r. 569–605), and chose the subjects of his encomia to exalt the status of Egyptian saints in the face of ongoing conflict with the imperial Chalcedonian Church. CJH

*CoptEnc* 4 s.n. John of Shmun, cols. 1369a–1369b (T. Orlandi). ed. (with FT) G. Garitte, 'Panégyrique de Saint Antoine par Jean évêque d'Hermopolis', *OrChristPer* 9 (1943), 100–34, 330–65.

ed. T. Orlandi (with IT), *Studi Copti, 1: un encomio di Marco Evangelista* (Testi e documenti per lo studio dell'antichità 22, 1968).

**John of Litharb** (d. c.737/8) \*Syriac Orthodox \*stylite who lived in northern \*Syria (modern Athārib, near \*Aleppo). John's correspondence with \*Jacob of \*Edessa and \*George of the Arabs reflects a lively intellect which was engaged in a broad variety of subjects, and he seems to have been part of a circle of \*Miaphysite intellectuals living in northern Syria during the \*Umayyad period. A fragment of one of John's \*letters, on Daniel 49: 10, is still extant; John also wrote a \*chronicle which no longer survives, but which \*Michael the Elder used in his great *Chronicle*. There is scholarly disagreement as to whether John, the Stylite of Litharb, should be identified with another John the Stylite, from Mar Z'ura in Sarug, the author of a grammatical treatise and of a dispute with a Muslim. **John of Lycopolis** (d. 394/5). Famed recluse of Asyut in the Egyptian \*Thebaid. Having served his monastic apprenticeship in \*Scetis, John had himself enclosed as a hermit from c.346 but allowed limited visits and communicated with \*emperors, assuring \*Theodosius I of victory over both \*Magnus Maximus and \*Eugenius and persuading him to pardon the city of \*Lycopolis after a period of civil \*disorder. John was visited in 394 by \*Palladius (author of the *Lausiac History*) and by the author of the *\*Historia Monachorum in Aegypto*, both of whom recorded the occasion. MGPe

*CoptEnc* 4 s.v. John of Lycopolis, Saint, cols. 1363b–1366a (P. Devos).

**John of Nikiu** Author of a *Chronicle*, Coptic \*Miaphysite \*Bishop of \*Nikiu in the \*Nile Delta, north-west of \*Fustat, and church administrator c.690. According to the *\*History of the Patriarchs*, his severe punishment of a monk who died of beatings resulted in his being removed as supervisor of the \*monasteries and bishop. His *History* from the Creation to the end of the \*Arab conquest was originally composed in Coptic and translated at an unknown date into \*Arabic. Only the Ethiopic translation of 1602 is preserved (in two manuscripts); an English translation was made in 1916. This long transmission history explains the disorder of part of the text as well as the occurrence of anachronistic formulations and words such as 'Muslims'.

The first part of the *History* consists of a standard version of the (legendary) history of Near Eastern empires and the Roman Empire. John made good use of earlier Greek sources, especially \*John Malalas. He adds details about \*Egypt's history and culture and offers a favourable image of \*emperors more tolerant of the Miaphysites, whose persecutions by the Emperor \*Heraclius are presented as the cause of the \*Arab invasion. John presents details of the repercussions in Egypt of \*Phocas' usurpation and of Heraclius' assumption of power in \*Constantinople. A lacuna in the text for the years 610–39/40 affects his coverage of the \*Persian invasion of Egypt and the Byzantine reconquest of c. 628. His detailed eyewitness account of the \*Arab conquest is especially valuable. John's account attributes more military depth and strategy to \*Amr b. al-'As's military movements than do the Muslim sources. He shows that the invader struck first at \*Oxyrhynchus and the province of \*Arcadia, thereby cutting off Lower Egypt from the rest of the province, and only later took possession of \*Babylon and the area around it. John recounts how the local population reacted to the conquest, some fleeing, others being forced to serve the Arabs, and yet others joining the conquering forces or even converting to \*Islam. Heraclius was forced to concede Arab superiority and granted \*Cyrus al-Muqawqas, \*Patriarch of

\*Alexandria, the power to negotiate peace for the whole of Egypt. PMS

ed. (with FT) H. Zotenberg (1883).

Hoyland, *Seeing Islam*, 152–6.

J. Howard-Johnston, *Witnesses*.

**John of Parallos** (c.540–610/20) Egyptian theologian and controversialist. John was born in Lower \*Egypt and was highly regarded for his early charitable works. He became a monk at the \*Monastery of S. Macarius at \*Scetis and was consecrated as \*Bishop of Parallos at the mouth of the Sebennytic branch of the \*Nile. A staunchly conservative theologian, John opposed both \*Gnostic teachings and heretical folk beliefs. His principal surviving homiletic work, in fragments, denounces various apocryphal books regarding angelic visitations and revelations. John strongly supported the \*Patriarch \*Damianus in his ongoing dispute with \*Peter of \*Callinicum. Other homilies, of less certain attribution, survive in Ethiopic or \*Arabic translation. CHJ

**John of Tella (John bar Qursos)** (482/3–538) \*Miaphysite \*Bishop of \*Constantia-Tella in the Roman \*province of \*Mesopotamia. Born into a noble family of \*Callinicum, John became a soldier and then worked in the Roman civil \*administration. He was converted after reading the *Acts of S. \*Thecla* and joined the \*Monastery of Mar Zakkai. In 519, he was ordained Bishop of Constantia-Tella by \*Jacob of Sarug, but was expelled from his see by the Chalcedonians in 521/2. From then on he lived an itinerant ascetic life, ardently propagating the nascent Miaphysite movement in \*Syria and the area around \*Singara and ordaining many clergy, so acting as a precursor to \*Jacob Burd'oyo. He was captured at Singara in 536 and died at \*Antioch two years later.

An extensive *Life* (*BHO* 524) composed by his travelling companion Elias survives, as does a life by \*John of Ephesus (*Lives of the the Eastern Saints*, 24). John of Tella wrote canons for the clergy, 48 questions on the \*Eucharist, a profession of faith, and a commentary on the \*Trisagion \*Hymn. FJ

**John Philoponus** (c.490–c.570) Prolific \*Alexandrian philosopher and theologian whose work inserted him into many of the most divisive philosophical and theological controversies of the early and mid-6th century. The name 'Philoponus' may refer to his association with the *philoponoi*, an order of Egyptian lay Christians who played specific liturgical roles and were occasionally involved in Alexandrian scholastic life. His interests were broad and his surviving works trace his impressive intellectual development from an Aristotelian commentator whose writings depended upon the teaching of \*Ammonius into a Christian theologian. His development can properly be divided into three phases.

### Follower of Ammonius

Philoponus' first surviving works appear in the mid-510s, a period when he was still associated with the \*school of his teacher Ammonius. Between approximately 510 and 517, Philoponus wrote commentaries on Aristotle's *De Anima*, *De Generatione et Corruptione*, *Categories*, and *Physics* as well as Nicomachus' *Introductio Arithmetica*. All of these followed his teacher's interpretative lead and clearly reflect Ammonius' influence. Notably, they also largely affirmed the eternity of the world. This point had become a source of persistent disagreement between Alexandrian \*Neoplatonists and some of the Christians who studied under them. Philoponus' early adherence to Ammonius' eternalist teachings highlights his fidelity to his teacher.

### The anti-eternalist phase

In the 520s Philoponus' position on the eternity of the world changed and he began work on a series of polemical works designed to counter \*Neoplatonic and Aristotelian arguments to this effect. The first such work, the massive *De Aeternitate Mundi contra Proclum*, was

completed sometime in 529 (*De Aeternitate* 579, 14–17) and offered a thorough refutation of arguments for the world's eternity offered by the \*Athenian Neoplatonist \*Proclus. The second text in this series, the *Contra Aristotelem*, was completed sometime between 534 and 536 and offered a nine-book long refutation of Aristotelian eternalist arguments. A third, non-polemical work explained Philoponus' alternative, anti-eternalist arguments and most likely appeared in the later 530s. The reasons for Philoponus' intellectual shift in this period are somewhat unclear, but his move roughly coincided with the death of Ammonius, the accession of his young and inexperienced pagan successor \*Olympiodorus, and growing imperial attention to the nature of \*pagan philosophical teaching. The similarity of some of John's arguments to those offered previously by Alexandrian Christians criticizing Neoplatonic eternalist teaching further suggests that this doctrinal shift may be part of an attempt to appeal to Christians alienated by Platonic eternalist teachings.

### The Christian theologian

Whatever the reason for Philoponus' shift from loyal exponent of Ammonian eternalist teaching to its leading critic, it is clear that Philoponus' attention had moved elsewhere by the early 550s. In the 550s and 560s his interests shifted to Christian theological questions. Sometime before the \*Council of \*Constantinople in 553, Philoponus wrote the *Arbiter*, a critique of the Council of \*Chalcedon commissioned by Sergius, the future Anti-Chalcedonian \*Patriarch of \*Antioch. When Chalcedonian theologians used some points made in the *Arbiter* to buttress their own positions, Philoponus felt compelled to follow it with a series of clarifications containing ever more vociferous critiques of Chalcedonian positions. In the early 560s, Philoponus waded further into Christian theological controversies when he agreed to write a series of treatises in support of Tritheism, a doctrine that quickly came to be condemned by the wider Church.

### Legacy

Philoponus left a substantial philosophical legacy that proved controversial both in his life and after his death. Both the pagan \*Simplicius and the Christian \*Cosmas Indicopleustes strongly criticized Philoponus during his lifetime. Later \*Arab scholars speculated that Christian pressure must have caused his shift from eternalist to anti-eternalist teachings. His theological work also provoked contention, and his tritheist writings earned him condemnation at the Council of Constantinople in 680. EW

**John Rufus** (fl. c.480) Anti-Chalcedonian ascetic and writer. Rather a shadowy figure, John Rufus was probably born around the middle of the 5th century and probably in \*Arabia, where he had family connections (*Plerophoriae*, 22). He became a \*priest before the end of the usurpation of \*Basiliscus (476) and was then living in \*Antioch (*Vita*, 79 Raabe). In the early 480s, he encountered \*Peter the Iberian, whose faithful and enthusiastic disciple he became (*Vita*, 82 Raabe).

He is the author of three—or perhaps one should say two and a half—works with a monastic flavour and a strong anti-Chalcedonian edge. The *Plerophoriae*, or *Assurances*, is a collection of edifying tales and cautionary anecdotes, rich in everyday detail and psychological interest, relating the perils of adhering to a faith that there were two Natures in Christ and gleefully recounting stories of miraculous conversions to the anti-Chalcedonian cause. The *Life of Peter the Iberian* is (unlike the *Plerophoriae*) without attribution in the manuscript tradition, but its close affinities with the

*Plerophoriae* (it too revolves around tales of Peter the Iberian) make the identification all but certain. Both works are preserved only in \*Syriac, though John in all probability wrote in \*Greek: a detail which \*Evagrius claims to draw from 'the writer of the life of Peter the Iberian' (*HE* II, 8) sounds very like *Vita*, 68 Raabe. A short piece on the death of \*Theodosius of \*Jerusalem forms a sort of codicil to the *Life*. PMP

**John Scythia** \*Magister Militum per \*Orientem under \*Zeno 483–98. He replaced \*Illus, who promptly rebelled against Zeno. John defeated Illus near \*Antioch in September 484 and besieged him for four years at \*Papirus in \*Isauria. In 491–8, John and \*John Gibbus were both commanders for \*Anastasius I against Isaurian rebels, winning the Battle of \*Cotiaeum in 492. As reward, John was made \*consul for 498. OPN

*PLRE* II, Ioannes 34.

Haarer, *Anastasius*, 20, 22–8.

**John Stobaeus** (5th cent.) Author of arguably the most important anthology to have come down from Greek Antiquity. A connection to \*Stobi is indicated by 'Stobaeus', while the name John suggests a Christian background, although he incorporates no explicitly Christian references. His name is supplied to us by \*Photius who gives essential information in *Bibliotheca* (cod. 167) about the structure and contents of the *Anthologion*. The original was in two volumes (Books 1 and 2: *Eclogae*; Books 3 and 4: *Florilegium*), transmitted separately and incompletely in the manuscripts.

Stobaeus compiled the work for his son. It begins with God and ends with \*death, in between ranging over questions of metaphysics, natural philosophy, and the ethical and social 'forms' of \*philosophy through hundreds of thematically arranged excerpts from Greek literature, including authors and works otherwise lost. There are selections from lyric poets such as Sappho,

Archilochus, and others; tragic and comic poets such as Eupolis, and many others; orators, historians, and philosophers (e.g. long extracts from Musonius Rufus). Stobaeus is an important doxographical source (cf. Mansfeld and Runia); he is also an important indirect witness to the transmission of works surviving in independent manuscript traditions, including many classical authors. Although many excerpts may derive directly from the works cited, it is clear that Stobaeus made use of previous compilations. Most scholars have been interested in Stobaeus as a transmitter of fragments of earlier works. A small number of scholars have recently begun to study Stobaeus as a transmitter of a cultural heritage and an influence on subsequent ages (cf. Piccione and contributors in Reydam-Schils). A few have revisited the textual tradition, but the edition by Wachsmuth and Hense has yet to be superseded.

**John the Almsgiver, S.** Chalcedonian \*Patriarch of \*Alexandria (r. 610-19/20). John was a widower and an aristocratic layman from Amathus on \*Cyprus at the time of his appointment to the see of Alexandria by \*Heraclius. His extraordinary deeds of charity in Alexandria endeared him to both \*Chalcedonians and \*Miaphysites. He established numerous \*hostels, infirmaries, and maternity \*hospitals, and supported large numbers of refugee clergy and monastics who had fled the \*Persian invasions of the Levant. Despite his initial political appointment, John displayed over the course of his patriarchate an increasingly independent attitude. John may have tried to broker the peaceful surrender of Alexandria to the advancing Persian armies. He fled prior to the city's capture in June of 619 and died on Cyprus in November 620, where he was buried at the shrine of the \*miracle-worker S. Typhon, concerning whom he had composed a \*panegyric. An early *Life* composed c.620 by \*Sophronius and \*John Moschus was expanded and continued by \*Leontius of Neapolis (c.641-2).

**John the Cappadocian** (before 500-after 548) \*Praefectus Praetorio in \*Oriens (531-2 and 532-41), \*consularis, \*patricius, and \*consul in 538. Despite his provincial origin and lack of higher \*education (*paideia*), John rose rapidly in the civil \*administration under the \*Emperor \*Justinian I. His first prefecture was ended by the \*Nika Riot (532), but he was rapidly restored. As prefect he was responsible for copious reforming legislation. Contemporary sources accuse him of avarice and other vices, but even \*Procopius, who detested him, conceded his outstanding administrative ability. Justinian held him in high regard: he had sufficient standing to oppose the emperor's plans to invade \*Africa. Above all, his ability to raise revenue, often using his personal staff, financed Justinian's expensive policies (Procopius, *Persian*, I, 24-5; *Vandalic*, III, 13, 12). Hence his unpopularity amongst those, of all classes, required to pay more tax or otherwise hurt by his reforms, however sensible, like \*John Lydus (*Mag.* 2, 20; 3, 58), whose legal department was trimmed. He lost office when the \*Empress \*Theodora, his rival for influence over Justinian, with the help of \*Antonina, \*Belisarius' wife, framed him in an alleged plot to make Belisarius emperor. He was exiled to \*Cyzicus and forcibly ordained. Theodora later tried to convict him of the murder of the local \*bishop. This charge led to \*exile in poverty in \*Egypt, although he was later recalled to \*Constantinople, where he died.

**John Troglita** Distinguished Roman general and hero of \*Corippus' \*epic *Iohannis*. He served in the \*Byzantine invasion of \*Africa, and may, under \*Belisarius' successor \*Solomon, have become \*Dux of \*Tripolitania or \*Byzacena (534-7). In \*Mesopotamia from 541, he seems to have successfully defended \*Theodosiopolis

and \*Dara (*Iohannis*, I, 60–75), though his performance at \*Nisibis was more equivocal (\*Procopius, *Persian*, II, 18.). He returned to \*Africa as \*Magister Militum (546–52). After an initial victory over the \*Moors, his army was destroyed by them at Marta (547), but he mounted a counter-offensive which defeated them decisively in 548. He may have been created \*patricius for this. He managed to retake \*Sardinia from the \*Ostrogoths, after its recent capture by \*Totila (552). Nothing is known of his later career. PNB

**Jonas of Bobbio (Jonas of Susa)** (d. after 659) Monk in \*Bobbio, perhaps later Abbot of Marchiennes, renowned author of \*saints' lives. His *Life* of S. \*Columbanus is an important source for \*Merovingian political history, especially regarding the downfall of \*Brunhild and the rise of \*Chlothar II, and also for the early history of the monastic movement led by S. Columbanus. Its second book relates the *Lives* of S. Columbanus' successors \*Athala, \*Bertulf, and \*Eustasius, and stories about \*Burgundofara and the nuns of \*Faremoutiers-en-Brie. His *Life of John of Réôme*, commissioned by the monks of Réôme, is fictional, but an important source for Columbanian monastic ideals. Jonas' authorship of the *Life* of S. Vedast is contested; he may also have been the author of the *Regula Cuiusdam ad Virgines* (PL 88, 1053–70). His work shows remarkable erudition and high literary quality. ADi

*Lives* of Ss. Columbanus (BHL 1898), Iohannes (BHL 4424), and Vedast (BHL 8501); ed. B. Krusch in MGH SS. rer. Germ. 37 (1905) 1–294, 321–44, 295–320 respectively.

**Jordanes** Author of two extant historical works, both in \*Latin and written at \*Constantinople in c. AD 550. His compilation of Roman history, known as the *Romana*, is so highly derivative that it has been little studied. Much more discussed is his shorter work of Gothic history—the *Getica*—which is again at least partly a compilation. Here, the loss of what Jordanes describes as his main model—the *Gothic History* of \*Cassiodorus—makes the degree of dependence more difficult to assess.

This issue is at the heart of one major controversy which dominates the scholarly literature. According to Jordanes' own account, he was able to borrow Cassiodorus' *History* only for three days (from his steward), and, as a result, he could not always recall it in full detail, although he had faithfully followed it in outline. Some have found this account suspicious, especially since Jordanes was writing in Constantinople on the eve of the \*Byzantine invasion of \*Italy which finally destroyed \*Ostrogothic independence. For Momigliano, Jordanes was really an Italian \*bishop and a close acquaintance of Cassiodorus who employed the pretence of distance to add credibility to an attempt to sway \*Justinian I's court towards a negotiated end to the Gothic war. Goffart was equally suspicious, but argued almost the exact reverse: Jordanes was only pretending to be close to Cassiodorus to win over an Italian senatorial audience for his overall argument—laid out in the *Romana* and *Getica* combined—that the Goths ought to be subservient to Roman might. The point was to discourage them from proffering any further support to their Gothic overlords on the eve of the departure of Narses' expedition.

However, history (especially if you had to read all of both works) is a clumsy and lengthy vehicle for propaganda, and it is also hard to imagine Jordanes' everyday \*Latin gaining much purchase among highly educated Italian \*senators or Constantinopolitan \*court grandees. It is much more likely that Jordanes was simply telling the truth. A former military secretary of Gothic origins,

who had moved on to a more religious way of life, he produced a brief account of Gothic history at a moment when \*Justinian's final campaign was substantially set to go. There are also enough correspondences between the *Getica* and what can be reconstructed of Cassiodorus' *Gothic History* from his *Variae*, and enough of a gulf between their levels of Latinity, to give overall credence to Jordanes' assertion that his relationship to the great Italian \*senator was limited.

A second controversy stems from the fact that the *Getica* contains much unique information. It is our only source for three fundamental points about the ancient Gothic past: that the Goths had originated in Scandinavia, that the \*Amal family of \*Theoderic the Ostrogoth had been providing Gothic kings for centuries, and that this family had ruled all Goths in one united kingdom prior to the arrival of the \*Huns (although Jordanes also reports the alternative view, which he attributes to a certain \*Ablabius, that the Goths had already been divided into \*Visigoths and Ostrogoths before 376).

On closer inspection none of these reference points stands up to careful scrutiny. Jordanes himself was clearly suspicious of the supposed Scandinavian origin he posits for the Goths, offering Scandinavia only as his preferred identification of a mysterious northern island homeland, where others had suggested \*Britain or Thule instead. In addition, most commentators find that any attempt to trace back the archaeological trail left by the Goths northwards from north of the Black Sea, where they are securely attested in the later 3rd and 4th centuries, goes cold in northern Poland, with no convincing evidence of any earlier Scandinavian phase. Also, contemporary Roman histories other than Jordanes are episodic in nature, but they demonstrate both that the Goths were far from united prior to the arrival of the \*Huns, and that the political pre-eminence of the Amal family dates only from the collapse of the Hunnic Empire in the third quarter of the 5th century. Whether Jordanes had access to a properly Gothic account of the distant past (which he refers to, but which has itself occasioned scholarly disagreement) fades into relative insignificance next to the basic fact that he was fundamentally ill informed about Gothic history prior to the arrival of the Huns. Ostrogoths, Visigoths, and even Amal pre-eminence all first came into existence in the 5th century as Hunnic conquest and/or the need to survive in the face of hostile Roman power generated a fundamental revolution in the Gothic world. PHe

**Josephus Comes** \*Epiphanius of \*Salamis (*Panarion*, 30, 4-12) heard the story of Josephus from the man himself while staying at Josephus' house in \*Scythopolis. Josephus was a Jew from \*Tiberias, an 'apostle' in the entourage of the Jewish \*Patriarch, whose secret death-bed \*baptism he witnessed. He supervised the upbringing of the Patriarch's son (and designated successor) and exercised considerable influence in the Jewish community. He was however impressed by reading Hebrew versions of the Gospels he found in the Patriarch's treasury, he witnessed the power of the sign of the \*Cross, and Jesus came to him in a \*dream, so he moved gradually towards \*conversion to Christianity, despite understandable Jewish opposition. He was baptized and visited \*Constantine I at \*court, who accorded him the rank of \*comes and gave him leave and funds to build churches, which he did at Tiberias (where he converted a half-finished \*bathhouse) and in Diocaesarea (\*Sepphoris). He was about 70 when Epiphanius visited him late in the reign of \*Constantius II. \*Eusebius, the exiled \*Bishop of Vercelli, who shared his opposition to \*Arianism, was a fellow guest. Grant and Menzies argue that there is no need to associate Josephus with the text known as the *Hypomnesticon* of Josippus. OPN

**Joshua the Stylite (Syr. Yeshu the Stylite)** Name given to the author of a Syriac text entitled 'A Historical Narrative of the Period of Distress which Occurred in Edessa, Amid, and all Mesopotamia'. It is transmitted only as a discrete section within the *\*Chronicle of Zuqnin*, which concludes in AD 775. 'The priest Mar Joshua the Stylite' is mentioned only in a note on a leaf written by a certain Elisha of Zuqnin and substituted for an original (presumably damaged) folio in the unique manuscript of this *Chronicle*. The meaning of the note is disputed, and 'Joshua' has been variously understood as the author or scribe of the shorter or longer work. Irrespective of its interpretation, however, in modern scholarly literature 'Joshua the Stylite' usually refers to the author of the shorter work, sometime denoted as 'Pseudo-Joshua'.

The 'period of distress' in its title covers the years 494 to 506, and the 'distress' is caused, first by *\*plague* and *\*famine* in *\*Edessa* from 494 to 502, and then by the *\*Persian–Roman war* of 502–6. The three main divisions of the work are an account of the internal revolts within both Roman and *\*Persian* empires and the disputes between the two of them in the years preceding the war, a chronicle of the events of the years 494–502 in Edessa, and an account of the war which, although divided by year headings in the manner of chronicles, has more affinity with the genre of a continuous political history. Internal evidence points to the author being an eyewitness of events in Edessa, and to the composition of the work soon after the end of the war. On account of its wealth of detail it is an extraordinarily valuable document of the period, and is also of interest as the earliest extant work of Syriac *\*historiography*.

**Jouarre** (Seine-et-Marne, France) Double *\*monastery* founded around 630, by Abbess Theudechild. The crypt now contains carved *\*sarcophagi*, including those of Theudechild and her brother *\*Agilbert* (*\*Bishop* successively of *\*Dorchester* (Oxfordshire) and *\*Paris*), which are perhaps the finest works of *\*Merovingian sculpture*.

EJ

M. de Maillé, *Les Cryptes de Jouarre* (1971).

**Jovian** Short-lived *\*emperor* (27 June 363–17 February 364), a Christian from *\*Singidunum*. His father was the *\*Comes Domesticorum* Varronian, and his

father-in-law the general Lucillian. Jovian was a *\*protector domesticus* under *\*Constantius II* and became Primicerius Domesticorum under *\*Julian*. He was on Julian's Persian expedition and the *\*army* selected him as *\*emperor* after Julian's death. Jovian's infant son Varronian was his father's consular colleague for 364. *\*Ammianus* blames Jovian for the disadvantageous treaty with the Persians which gave them *\*Nisibis*. Jovian died suddenly (and apparently naturally) on the return journey to *\*Constantinople*, aged 33. SFT PLRE I, Fl. Iovianus 3.

Matthews, *Ammianus*, 183–8.

**Jovinian** (fl. c.390) Roman monk, condemned by synods at *\*Rome* under Pope *\*Siricius* and at *\*Milan* under *\*Ambrose* (393). Jovinian taught that all baptized Christians were equal in God's sight and would receive an equal reward in heaven. Therefore he opposed the notion that sexual continence or *\*fasting* earned a Christian higher status. According to Ambrose, he also held that *\*Mary* could not have remained a virgin while giving birth to Jesus. Jovinian's teaching received a vigorous response from *\*Jerome* in *Adversus Iovinianum*, for which Jerome himself was severely criticized.

### Judaeen Wilderness, monasteries in the

Founded in the 4th–6th centuries in the eastern part of Judaea, in a strip with low rainfall and few \*villages, c. 80 km (50 miles) long from Phasael in the north to Masada in the south, and 20–5 km (c.15 miles) wide from the \*Jordan and the Dead Sea to the Judaeen hills. A number of springs dot the wilderness and collection of rainwater in cisterns provides enough water for drinking and watering gardens all year round. The earliest \*monasteries were founded near springs and \*villages in the first half of the 4th century by S. Chariton (*BHG* 301) from \*Lycaonia; he established the \*lavra of \*Pharan east of \*Jerusalem, Duca in an ancient fort above Jericho, and Suca ('The Old Lavra') near Thecoa. In 411 the next founder, S. \*Euthymius from \*Melitene (377–473; *BHG* 648), established a \*coenobium headed by his companion Theoctistus, where the next generation of monastic founders—among them S. \*Sabas—was trained. Having mastered the technique of collecting rainwater, they no longer needed to locate their monasteries near springs. Euthymius marked the southernmost boundary of the Judaeen monasteries by fixing a temporary abode in Masada, and was instrumental in developing \*Jordan River monasticism through his follower S. \*Gerasimus (d. 475; *BHG* 693–4). At its peak, the Judean Desert contained some 70 monasteries and hermitages. LDS

**Judaeo-Greek** Jewish use of \*Greek developed in the Hellenistic period, both in \*Palestine and elsewhere in the Mediterranean, and the importance of Greek in \*Egypt led to the translation of the \*Bible (the Septuagint, abbreviated as LXX) and to the writing of literature in Greek. While the Jews did not have a distinct dialect, they inevitably developed a religious vocabulary for \*festivals and practices. In the Roman Empire Greek was the prime language of Jews, as seen in the majority of Jewish \*inscriptions being in Greek, and in

the Byzantine world Jews in \*Greece continued to use the language.

Translations of the Bible were made in the 2nd century AD, attributed to \*Aquila of \*Sinope, \*Symmachus the Ebionite, and \*Theodotion, where the influence of the source language is prominent. Aquila was said to be the pre-eminent Jewish translation (\*Origen, *Letter to Africanus*) and a version of it was still in use in the 5th century as seen in a Genizah palimpsest. Judaeo-Greek in the form of Greek written in Hebrew characters becomes characteristic of Jewish writings in the Byzantine Empire and has been preserved in glossaries, commentaries, word lists, and some translations. These are important sources for vernacular Greek of the period, and while they display calques from Hebrew they represent standard Greek of the time. JKA

### Judaism See JEWS AND JUDAISM.

**judices pedanei** Judicial deputies, not necessarily with any legal training, appointed by provincial \*governors. Their use was restricted by \*Diocletian (*CJust* III, 3, 2), and formalized in 539 by \*Justinian I who appointed a permanent panel of twelve experts to deputize for high-ranking officials in \*Constantinople (*NovJust* 82). CMK

Jones, *LRE* 501–2.

**jugatio and jugum** Assessment for \*taxation of land for the \*annona. *Jugatio* was based on a regionally variable unit introduced by \*Diocletian known as the *jugum* ('yoke', Gk. *zyga*). By the early 4th century, the *jugum* was equated with the unit (*caput*) of the poll-tax (*capitatio*). After this, the terms *jugatio* and *capitatio*, and *jugum* and *caput*, are often used interchangeably in the legal sources. In \*Syria, which had the most elaborate system, the *jugum* consisted of varying numbers of *jugera* (acres) of different qualities of land. JND

Jones, *LRE* 63–5, 453–4, 820.

A. H. M. Jones, 'Capitatio and Iugatio', *JRS* 47 (1957), 88–94. Karayannopoulos, *Finanzwesen*, 28–43.

**jugerum and jugum** The *jugerum* (0.2518 ha or 0.62 acres) was the traditional standard Roman measurement of farmland. The *jugum*, made universal under \*Diocletian, was a standard fiscal unit of farmland, of

varying acreage according to the nature and quality of the land, which enabled taxes (*\*jugatio*) to be assessed at a uniform rate per *jugum*. DWR

R. Duncan-Jones, *Structure and Scale in the Roman Economy* (1990), 199–210.

*TLL* VII (1956–79) s.vv. *jugerum* (cols. 627–9) and *iugum* (cols. 639–44).

**Julian 'the Apostate'** \*Caesar under \*Constantius II 355–61, sole \*Augustus 361–3.

Despite the brevity of his reign, Julian is one of the most written about \*emperors of Late Antiquity. This is because Julian was the last pagan Roman emperor, and sought to reverse changes his uncle \*Constantine I, the first Christian emperor, had initiated. Julian's reign thus represents a watershed. His project and its failure have fascinated successive generations, from the composers of the \*Syriac *\*Julian Romance* to English political propagandists in the Exclusion Crisis of the 1680s and the Victorian poet A. C. Swinburne.

Numerous ancient authors provide contrasting views of Julian. He is central to the writings of such pagans as \*Ammianus Marcellinus, \*Libanius, and \*Eunapius. Christian writers, such as \*Gregory of \*Nazianzus and \*Ephrem the Syrian, were vigorous in their denunciation. Many of Julian's own writings also survive. He had benefited from a wide-ranging \*education. A variety of tutors (including the \*eunuch Mardonius) taught him as a boy and he studied in Asia Minor with \*Neoplatonic \*philosophers (such as \*Maximus of \*Ephesus, who is credited with converting Julian to \*paganism), and at \*Athens. He wrote in various genres, including \*panegyric, \*letters, \*hymns, \*invective, religious tracts, satires, and a \*consolation. His most famous works are his *Caesars* (more accurately *Symposium*, which reviews previous emperors as guests at a symposium held by the gods) and the *Misopogon* (more accurately *Antiochikos*, ostensibly a satire on himself in response to the mockery of him by the people of \*Antioch during his stay there in 362–3, but in reality an attack on the values of the Antiochenes themselves).

Despite these extensive sources not much is known about Julian, and the chronology and details of his early life are still debated: even the year of his birth (331 or 332) is uncertain. His father was \*Julius Constantius (the son of \*Constantius I and \*Theodora, and thus the half-brother of Constantine I) and his mother Basilina. Julius Constantius also had children by a previous wife, Galla, so Julian had half-siblings, including his half-brother \*Gallus. Julian's mother died soon after his birth, and in the summer of 337 he lost his father and many other male relatives in the massacres which followed the demise of Constantine, as Constantine's sons, most lastingly Constantius II, asserted their possession of the Empire.

For much of his life Julian was under the control of Constantius. He was sent to Macellum in \*Cappadocia for six years (probably 342–8), and was appointed Caesar in 355 after the execution, in 354, of the previous Caesar, Gallus. Julian was married to his cousin Helena and sent to \*Gaul. There he proved an effective commander and a capable administrator. He won a celebrated victory over the \*Alamanni in 357 at the Battle of \*Strasbourg, concerning which Julian wrote an account (now lost), and put Gaul on a secure and more prosperous footing. In 360 he was acclaimed Augustus by his troops in \*Paris, following a request from Constantius II for a transfer of men to the eastern \*frontier. Civil war was halted by the sudden death of Constantius in November 361, the emperor reputedly nominating Julian his heir on his deathbed.

As sole emperor Julian sought to promote paganism and diminish the place of Christianity. Some of his most famous measures have been called into question in recent scholarship. The idea that he aimed to create a 'pagan church' has been challenged by van Nuffelen (2002) who argues that the crucial evidence (a letter to Evagrius) is a 5th-century Christian forgery (*contra* Bouffartigue). Julian banned Christians from teaching classical literature. McLynn has represented this as more a provocative challenge than a law of general application. Some pagan contemporaries thought Julian's attempts to revive traditional religion were flawed since his brand of paganism was too esoteric, too affected by his \*Neoplatonic interests, especially \*theurgy: Ammianus Marcellinus criticized his excessive sacrificing and the influence over him of his philosopher friends. The question remains as to whether Julian's project could have succeeded had he lived longer, or whether it was too alienating or simply too late.

Julian had concerns beyond religion, including the continuing functioning of \*city councils, and the reduction of waste at \*court; he dispensed with the use of \*eunuchs as well as other superfluous personnel. In particular, he reduced the imposing \*ceremony of the court, presenting himself more as an accessible citizen ruler, although this was a source of criticism by some of his contemporaries, accustomed to the Late Roman representations of imperial power. He also changed the \*coinage, introducing two new billon and \*bronze coins and reducing the number of \*officinae at several imperial mints. His coinage included pagan symbols, including the unique image of a bull, which were apparently ridiculed at Antioch (*Misopogon* 355 D).

The largest enterprise of Julian's reign was his attack on the \*Persian Empire. The response of his predecessor Constantius II to the aggression of \*Shapur II had been essentially defensive. Julian proceeded on the principle that the most effective defence was attack. His invasion of Persian \*Mesopotamia down the River

## Julian

Euphrates was punctuated by devotional detours to such pagan shrines as \*Harran, and, according to the eyewitness account of Ammianus, by adverse omens which were serially misinterpreted by the theurgical philosophers and accurately by traditional experts learned in the traditions of Etruscan \*divination. The campaign culminated in the fatal wound Julian sustained by an unknown hand in a skirmish on the journey out of Persia.

Julian had no son to succeed him, and seems to have nominated no heir, though it was rumoured that he had advised his kinsman \*Procopius to take power, which Procopius eventually attempted to do in 365. The immediate consequence of Julian's death was the treaty concluded by his short-lived successor \*Jovian, by which the Roman Empire lost strategically important territory, including much won in the campaign of \*Galerius in 298, and which set the conditions of \*diplomacy between the Roman and \*Persian empires for nearly a century and a half.

ET R. Van Dam, *Saints and their Miracles in Late Antique Gaul* (1993), and 162–98.

**Julian of Eclanum** \*Pelagian polemicist and \*Bishop of Eclanum in southern \*Italy. Son of a bishop (Memor), Julian was married to the daughter of a bishop (Aemilius) (c.405), an event commemorated in an epithalamium of \*Paulinus of Nola (*Carmen*, 25). In 417 Pope Zosimus issued his *Tractoria* condemning the teaching of Pelagius. When Julian refused to subscribe, he was condemned and exiled along with eighteen other Italian bishops (418). Julian sought refuge in the East, first with \*Theodore of \*Mopsuestia and later with \*Nestorius. From this point on he engaged in literary controversy with \*Augustine, especially regarding the latter's notions of original sin and sexual concupiscence. In addition to several letters, Julian composed four books, *Ad Turbantium* (to which Augustine responded in his six books *Contra Iulianum*), and eight books, *Ad Florum* (to which Augustine responded in his *Opus Imperfectum contra Iulianum*). Julian defended the natural created goodness of the sexual drive and argued that Augustine's view of sexual concupiscence was \*Manichaean. Julian composed his own commentaries on the \*Bible, as well as a \*Latin translation of Theodore's commentary on the Psalms. DGH

**Julian of Egypt** Poet and former Prefect, active in the mid-6th century. Several of his poems were

included in the *Cycle* of \*Agathias. He wrote epigrams on the deaths of prominent contemporaries, including Flavius \*Hypatius, while other poems celebrate performers and notables. They are collected in the \**Greek Anthology*. RW

PLRE III, Julianus 11.

Averil Cameron and Alan Cameron, 'The Cycle of Agathias', *JHS* 86 (1966), 6–25.

**Julian of Halicarnassus** (d. c.527) An early anti-\*Chalcedonian collaborator of the monk \*Severus (later \*Patriarch of \*Antioch), Julian helped depose Macedonius, the Chalcedonian Patriarch of \*Constantinople, in AD 510. When the \*Emperor \*Justin I (518) restored Chalcedonian Christology, Julian and Severus were exiled to \*Egypt, where they engaged in debates about the corruptibility of Christ's body, Julian maintaining that it had always been immune to corruption, suffering, and death. None of Julian's works survives, but much of them can be reconstructed as orthodox from quotations by Severus. Dubbed Aphthartodocetae (incorruptible), or Gainanites (after Gaianus, Patriarch of \*Alexandria), Julian and his followers were influential particularly in Egypt and \*Armenia. PAI

R. Draguet, *Julien d'Halicarnasse et sa controverse avec Sévère d'Antioche: étude d'histoire littéraire et doctrinale* (1924) includes edition of the fragments.

Grillmeier, 2/2 (tr. J. Cawte and P. Allen, 1995; German original, 1989), 79–111.

**Julian of Toledo** (c.640–c.680s) One of the most illustrious writers of 7th-century \*Visigothic \*Spain, Julian's life is known principally from a eulogy written by Felix, \*Bishop of \*Toledo, which lauds his \*asceticism and literary erudition. In 680 he was made Bishop of Toledo by King \*Wamba, and under Julian's leadership at the Twelfth \*Council of Toledo (680/1) the See of Toledo was granted primacy over all the Church in Spain. He wrote a eulogy of King Wamba entitled *Historia Wambae* that covers the early part of his reign but not the calamitous events that led to his eventual abdication and refuge in a \*monastery. Another work dedicated to King \*Ervig written in 686, *On the Proof of the Sixth Age*, rebuts arguments advanced by \*Jews against \*Jesus being the Messiah and proposes an apocalyptic interpretation of human history. His works were deeply influenced by the church fathers, in particular \*Augustine. Julian presided as Bishop of Toledo over four councils of Toledo, the twelfth (680/81), thirteenth (683), fourteenth (684), and fifteenth (688), and wielded great influence at them. AF

**Julian Romance** Christian polemical work of historical fiction directed against the \*Emperor \*Julian (361–3), important in forming a negative image of Julian. It consists of three parts. The first, short and fragmentarily preserved, describes Julian taking over the government from \*Constantine I and his son. The second part, set in \*Rome, relates Julian's attempts to have Eusebius, \*Bishop of Rome, renounce Christianity. The third and longest part, set in the East, recounts Julian's war with \*Shapur II and his \*persecution of Christianity. His counterpart is the Christian \*Jovian, Julian's successor, presented as a New Constantine and saviour of Christendom.

The text survives in a London manuscript (BL Add. 14,641). It was composed in \*Syriac by an unknown author, probably in \*Edessa c.500. A 'second' *Julian Romance* is preserved in another London manuscript (BL Rich Add. 7192) and is dated to the 7th or 8th century.

**Julius Nepos** (d. 480) Western \*emperor 474–5. Nephew of the general \*Marcellinus, he in turn became general in \*Dalmatia, from where he invaded \*Italy in 474 to depose and replace the Emperor \*Glycerius. He strengthened his position by negotiating a peace treaty with the \*Gothic King \*Euric in southern \*Gaul, but thirteen months after his accession, Nepos' general in Gaul, \*Orestes, attacked Nepos himself, who fled back to Dalmatia. He unsuccessfully sought aid from \*Constantinople to regain the throne (477/8) and was killed by some of his own retainers at \*Salona (480). ADL  
*PLRE* II, Nepos 3.

**Julius of Aqfahs (Julius of Kbehs)** Author of Coptic legendary 'epic' \*martyr passions (e.g. Ss. \*Paese and Thecla, Shenoufe and his Brethren). He is said to have been a Roman army officer whose convictions led him to care for the \*martyrs and oversee the collection of their physical remains for burial. He allegedly saw to it that scribes were placed in \*courts throughout \*Egypt so that they could prepare records of saints' trials, which he collected and edited into an ongoing collection in \*Latin (e.g. Shenoufe and his Brethren). Eventually he became a Christian martyr himself, tortured to death and resurrected twice, before fulfilling his martyrdom on 22 Thoth (19/20 September), an event which is said to have caused a mass \*conversion followed by a mass execution. GS

**Jumièges** (départ. Seine-Maritime, France) In 654 \*Clovis II and Queen \*Balthild gave S. \*Filibert land beside the Seine, 20 km (12.5 miles) west of \*Rouen, for the founding of a \*monastery. Filibert was forced to leave after coming into conflict with \*Ebroin in the mid-670s, but the monastery remained an important centre of religious life until its destruction by Vikings in 841. EJ  
*LexMA* 5, 'Jumièges', 806–7 (H. Donnat).

J. Le Maho, 'Le Monastère de Jumièges (France) aux temps Mérovingiens (VIIe–VIIIe siècle): les témoignages des textes et de l'archéologie', *Hortus Artium Medievalium* 9 (2003), 315–22.

**jund (plur. ajnad)** A \*Qur'anic term of Iranian origin denoting an armed troop, which came to refer to the administrative districts of Islamic \*Syria during the 630s or 640s. The soldiers constituting each *jund* were maintained by the proceeds of local revenues. The *jund* system was probably an adaptation of existing Roman administrative practices. The first *junds* were \*Damascus, \*Homs, \*Jordan, and \*Palestine; a restructuring of the system under the \*Caliph \*Yazid I (r. 680–3) created \*Qinnasrin, a *jund* detached from Homs. MCE; AM  
*ET* 2 vol. 2 (1965) s.v. Djund, 601–2 (Sourdel).

**Junillus** (d. 549) Successor to \*Tribonian as \*Quaestor Sacri Palatii c.542, serving \*Justinian I for seven years until his death. He in turn was succeeded by \*Constantinus. During his term in office, at the request of \*Primasius, \*Bishop of \*Hadrumetum, he wrote in \*Latin an introduction to the \*Bible called *Handbook of the Basic Principles of Divine Law (Instituta Regularia Divinae Legis)*, adapting and presenting in question-and-answer form a \*Greek text by one \*Paul, a Persian who had studied interpretation of the \*Bible at \*Nisibis. Junillus' *Instituta* was known to \*Cassiodorus and circulated in the Middle Ages. Junillus came from \*Africa and corresponded with \*Ferrandus of \*Carthage. He wrote during the \*Three Chapters controversy, supporting the Chalcedonian position of Justinian. \*Procopius (*Anecd.* 20, 17) reviles him as ignorant of the \*law, ignorant of \*Greek, and unabashedly venal. JND  
*PLRE* III, Iunillus.

*CPL* 872: ed. J. Kihn (1880), repr. with ET in M. Maas and E. G. Mathews, *Exegesis and Empire in the Early Mediterranean: Junillus Africanus and the Instituta Regularia Divinae Legis* (2003).

**Junius Bassus** Leading Roman \*senator of the early 4th century, \*Praefectus Praetorio in 318–32 and \*consul for 331. Several superb \*opus sectile \*mosaics are preserved from the \*basilica he built on the Esquiline Hill at Rome; one shows a consul riding in his chariot, scattering a \*sparsio and escorted by horsemen in the colours of the four \*circus \*factions. His Christian son of the same name was buried in the \*sarcophagus of \*Junius Bassus. DMG

PLRE I, Bassus 14.

NEDC 104, 129.

CLRE 196–7.

Richardson, *Topographical Dictionary*, 53.

**Junius Bassus signo Theotecnius** (317–59)

\*Senator and son of \*Junius Bassus (a Christian and \*consul 331), Bassus was himself \*Praefectus Urbi at \*Rome in 359, but died in office (\*Ammianus, XVII, 11, 5). He was buried in a monumental \*marble \*sarcophagus in the Vatican necropolis. The epitaph on the lid specifies that he was baptized on his deathbed: 'neofitus iit ad deum'. Bas-reliefs in two superimposed registers decorate three faces, *putti* harvesting and vintaging on the sides and ten Old and New Testament scenes framed by colonnettes on the front. The subjects and the \*typology of their arrangement suggest a sophisticated visual exegesis. SMS

RCAS I, *Rom und Ostia*, no. 680.

**Jupiter Dolichenus** The cult of Jupiter Dolichenus, centred on Doliche (mod. Dülük, north of Gaziantep, Turkey), was extremely popular in the 2nd and 3rd centuries AD, particularly among soldiers as far afield as \*Britain, the \*Balkans, and \*Africa. Doliche was sacked by \*Shapur I in 252 (\**Res Gestae Divi Saporis*, 17) and the city had a Christian \*bishop by the time of the \*Council of \*Nicaea in 325. The last dedication to Jupiter Dolichenus is from c.300 at \*Ratiaria of \*Moesia Superior. ACFC; OPN

**Jura fathers** (fl. c.435–514) Collective term for three early abbots of a group of \*monasteries which grew up in the 5th century around Condat (now S. Claude) in

the Jura mountains of eastern \*Gaul. They were Romanus, who founded the first monastery c.435 and died c.455, his brother Lupicinus (d. c.480), and Eugendus (d. 512/14), who reorganized the community along more coenobitic lines. Shortly after Eugendus' death, at the behest of ascetics at \*Agaune, the three were commemorated in the *Lives of the Jura Fathers* by an anonymous monk from one of the monasteries. \*Gregory of \*Tours gives a somewhat different account of Romanus and Lupicinus (*Lives of the Fathers*, 1). **jurists** Experts on \*law who constituted a specialized professional group, and produced a considerable body of legal literature. Papinian, Ulpian, and Paul from the High Roman Empire were the most famous. In accordance with the various \*Laws of Citations promulgated in 321, 322, and 426, the works of these and other jurists were cited as authoritative in \*courts of law during Late Antiquity. Their writings are excerpted in the \*Digest compiled under \*Justinian I.

The law schools of \*Beirut, \*Rome, and \*Constantinople were from the late 3rd century onwards the most important places for training jurists. The state generally controlled the legal profession, and in 425 \*Theodosius II reorganized legal \*education. Having qualified, jurists usually gained practical experience as \*advocati and then entered public service. In the later Empire the number of jurists in official posts increased, especially perhaps in the East from the late 4th century onwards.

Jurists working for the imperial bureaux were the most influential. They were responsible for imperial constitutions and were the inspiration behind, and eventually the compilers of, the large codifications. The jurist \*Antiochus Chuzon played an essential part in composing the \*Theodosian Code. \*Tribonian, a jurist who held office as \*Magister Officiorum and \*Quaestor Sacri Palatii, was the principal contributor to \*Justinian's Code.

The \*Barbarian Migrations of the 5th century unsettled the legal profession in the West. Romans in the successor communities did, however, continue to some extent to arrange their legal affairs. RvdB

**Justasas** (5th cent.) Leader of the \*Samaritan revolt under the \*Emperor \*Zeno. \*John Malalas (XV, 8 = *Excerpta de insidiis*, 162) and the \**Chronicon Paschale* (AD 484) call him a 'brigand chief'. To the Samaritans he was probably a king, as his presiding over chariot races in \*Caesarea and his wearing of a \*crown indicate. The Romans defeated and executed him. Although Samaritan chronicles describe the persecution under Zeno, they mention neither a rebellion nor Justasas. \*Procopius of Caesarea mentions the uprising, but not Justasas (*Aed.* V, 7, 5–9). RP

*PLRE* II, Iustasas.

R. Pummer, *Early Christian Authors on Samaritans and Samaritanism* (2002).

**Justin** Son of \*Germanus and kinsman of the \*emperors \*Justinian I and \*Justin II. He was \*consul (540), while still young. Cleared of conspiring against Justinian (549), he was later \*Magister Utriusque Militum in \*Armenia (557) and on the Danube (561–6), where he thwarted an \*Avar invasion (566). Justin II recalled him and banished him to \*Alexandria, where he was murdered (568), possibly as a perceived rival to the emperor. PNB

*PLRE* III, Justinus 4.

**Justin I** (c.450–527) \*Emperor 518–27 after a long career as a Roman general. Born in a village near \*Naissus he sought military employment at \*Constantinople and was involved in wars with \*Isaurians (490s) and \*Persians (502–5). Later he became \*Comes of the \**excubitores* and led Roman forces against the \*usurper \*Vitalian in 515. Although vilified by \*Procopius, Justin was engaged and successful as emperor, despite his age and the political insecurity of his \*accession when the nephews of his predecessor \*Anastasius I (491–518) were outmanoeuvred. With his wife \*Euphemia he was actively involved in settling the \*Acacian Schism with Pope \*John I at Rome in 518–19, thereby strengthening links with the West and potentially destabilizing the regime of the \*Ostrogothic \*King \*Theodoric, who was a \*Homoean ('Arian'). Justin sponsored the \*conversion to Christianity of the King of \*Lazica in 522, he refused to adopt the son of the Persian king (the future \*Khosrow I) in 525, and he detached the King of \*Iberia from his traditional Persian alliance. All this led to war with the Persians in the \*Caucasus by 526. Justin also expanded diplomatic relations with \*Saracens in \*Arabia, with \*Himyarites in \*Yemen, and with \*Aksum (\*Ethiopia) through personal envoys. He further provided military

support for the Christian Aksumite king by intervening in southern \*Arabia on behalf of persecuted Christians in 525. His nephew \*Justinian I (527–65) was not the power behind the throne but only progressively acquired increased status and authority until crowned \*Augustus by a weakening Justin on 1 April 527. BC

Vasiliev, *Justin*.

B. Croke, 'Justinian under Justin: Reconfiguring a Reign', *BZ* 100 (2007), 13–56.

**Justin II** \*Emperor 565–78. The son of \*Justinian I's sister Vigilantia, Justin was married to \*Sophia, niece of the \*Empress \*Theodora. He was created \**consularis* in 552/3, and held the high-ranking post of \**Curopolates* in 552–65. Justinian entrusted him, sometimes with others, with such tasks as trying to persuade Pope \*Vigilius to rejoin the Second \*Council of \*Constantinople in 553, escorting \*Hun invaders back across the Danube in 559, or suppressing factional violence in \*Constantinople in 562–3.

The poet \*Corippus describes in his *In Laudem Justiniani Minoris* how, on Justinian's death, Justin became emperor in a peaceful aristocratic coup, with the support of the \*patriarch. He denounced Justinian's financial policies, which had allegedly exhausted the treasury and damaged military effectiveness. He nevertheless waived taxes and repaid Justinian's debts to \*bankers (*NovJust* 148 of 566). He also provided that provincial \*governors were to be appointed by local magnates and \*bishops (*NovJust* 149 of 569). In his religious policies, where he followed his predecessor, he came close to reconciling the conflicting factions of Chalcedonians and \*Miaphysites (\*Evagrius, *HE* V, 4), but the schism proved too entrenched. He continued the trend towards the sacralization of the imperial office.

Abroad, he stopped subsidizing barbarians. The \*Avars and \*Arab client states were early victims of this policy change. In the West, his handling of the Avars and \*Gepids only facilitated the eventual \*Lombard conquest of much of \*Italy. In the East, the \*Fifty Years Peace laboriously negotiated with the \*Persian Empire by Justinian in 561–2 'was destroyed and cut short by the great folly' of Justin (\*Theophylact Simocatta, III, 9, 5). He refused to continue to pay the negotiated subsidy to the Persians, and in 572 he ordered attacks on \*Arzanene and \*Nisibis. The Persian counter-attack reached the \*Antioch area and led in 573 to the disastrous loss of \*Dara. The loss made Justin insane (Theophylact, III, 11, 1–4). Faced with his continuing mental debility, he accepted Sophia's advice to appoint the \*Comes of the \**excubitores*, \*Tiberius, as \*Caesar (574). He, with Sophia, then ran the Empire until Justin's death in 578 when he in turn became emperor. PNB

**Justina** (d. 387) \*Empress and possibly a member of the Constantinian dynasty. She was married to the \*usurper \*Magnentius in 351/2–3 and after his death became in 369 the second wife of \*Valentinian I. With him she had three daughters and one son, \*Valentinian II. She had a strong influence on the young Valentinian, and brought him into conflict with \*Ambrose in the 380s over the co-optation of church buildings in Milan by \*Homoeans ('Arians'). Ambrose compared her treatment of him to the persecution of Elisha by Jezebel (*ep.* 20, 18). SJL-R

PLRE I, Iustina.

McLynn, *Ambrose of Milan*, 158–219.

### **Justinian I (Flavius Petrus Sabbatius Iustinianus)**

(c.482–565) One of the most renowned and controversial of Eastern Roman \*emperors (527–65), nephew and successor of \*Justin I (517–27), under whom he served as \*Comes et \*Magister Militum Praesentalis (520–7).

#### *Career before accession (c.482–527)*

Justinian was born in Tauresium, in the \*Balkan \*province of \*Dardania, the son of Sabbatius. Before 518 he served in \*Constantinople among the Scholares and was proposed for the throne upon \*Anastasius I's death, but refused. Although \*Procopius (*Anecd.* 6, 11; 9, 50) insists that Justinian was the dominant figure of his uncle's reign, his career advanced only gradually; not until 1 April 527 was he promoted to the rank of \*Augustus, ensuring an easy transition to sole rulership following the death of Justin on 1 August 527. He had earlier, probably in 525, married \*Theodora, a former actress, despite opposition from Justin's wife \*Euphemia.

#### *Early years of the reign (527–40)*

The opening of Justinian's reign was marked by an astonishing burst of activity. The new military commanders he appointed, notably \*Belisarius and \*Sittas, enjoyed several successes in the war with the \*Persian Empire, which had flared up in the late 520s. The emperor was therefore able to agree the \*Everlasting Peace with the \*Sasanians in 532, which allowed him to redeploy substantial forces to the West, where they were able first to reconquer North \*Africa (533–4) from the \*Vandals and then to retake \*Italy (535–40) from the \*Ostrogoths (see BYZANTINE INVASION AND OCCUPATION OF AFRICA, ITALY).

Justinian chose similarly talented collaborators, notably the \*Quaestor Sacri Palatii \*Tribonian, for his grandiose project of systematizing Roman \*law. The first edition of the *Codex Justinianus* appeared already in April 529, while the \*Digest appeared in 533, a yet more ambitious undertaking (see JUSTINIAN'S CODE). The emperor saw it as his duty constantly to eliminate corruption, \*paganism, and \*heresy. This led naturally to the introduction of many administrative measures; even after the publication of the second edition of the *Codex Justinianus* in 534, Justinian continued to issue an abundant stream of laws, known as *Novellae* (*NovJust*; see NOVELS OF JUSTINIAN). In these reforms his leading collaborator was the \*Praefectus Praetorio \*John the Cappadocian; like Justinian's other ministers, John was of humble origin.

Justinian's reforming zeal inevitably sparked resistance among the imperial \*aristocracy, while his attempts to clamp down on factional violence also met opposition. The \*Nika Riot of January 532, which brought together these elements, nearly toppled the emperor and laid waste much of Constantinople. Justinian therefore had the opportunity to draw on the skill of further collaborators, the \*architects \*Anthemius and \*Isidore, to rebuild (*inter alia*) the Great Church of the \*Holy Wisdom, Hagia Sophia, which was consecrated on 27 December 537. Throughout his reign Justinian undertook numerous building projects, especially the construction of churches and of defensive works, as Procopius relates in *De Aedificiis*.

Like his uncle Justin, Justinian firmly supported the \*Council of \*Chalcedon. Already during Justin's reign he took an active role in negotiations with the papacy, constantly seeking solutions to the longstanding differences between supporters and opponents of the council. Once established as sole ruler, he redoubled his efforts to bring about reconciliation with those of \*Miaphysite views, culminating in negotiations in Constantinople in 532. The anti-Chalcedonian stance of his wife Theodora was an asset in this process. But although Justinian tried to accommodate the Miaphysites, he met with increasing resistance from the newly reconquered western territories and therefore explicitly condemned the anti-Chalcedonian \*Patriarch \*Severus of Antioch in 536.

#### *The period of crisis (540–51)*

Justinian's western conquests in Africa and Italy left the eastern \*frontier vulnerable. The Sasanian King \*Khosrow I took the opportunity to break the Everlasting Peace and overrun the eastern provinces, sacking \*Antioch in June 540. Justinian dispatched Belisarius to the East in 541, who stabilized the situation. Neither side gained a decisive victory; most of the fighting took

place in \*Lazica and \*Armenia, as the Persians sought to restore control of the \*Caucasus Passes. For much of the 540s North Africa was in revolt, while in Italy the Ostrogothic leader \*Totila retook almost the whole peninsula; Roman forces were inadequate and poorly led.

The Empire was gravely weakened in this period by the appearance of the Early Medieval Pandemic (EMP) or Justinianic \*Plague in 541, which spread from central Africa to all parts of the Empire, striking \*Alexandria in September 541 and Constantinople in March or April. This first outbreak of bubonic plague had a wide-ranging impact. It eliminated a sizeable proportion of the population, particularly in the \*cities, not only in the Empire but beyond it; and it continued to resurface for two centuries thereafter. Justinian himself contracted the plague, but recovered.

### Final years (551–65)

Another longstanding collaborator of Justinian, the \*eunuch general \*Narses, defeated Totila and reconquered Italy. The emperor was able also to conclude a \*Fifty Year Peace with Persia in 561 through negotiations led by his faithful \*Magister Officiorum, \*Peter the Patrician. Roman armies even occupied parts of southern \*Spain, exploiting \*Visigothic divisions. But Justinian's energies were consumed largely in seeking to resolve the doctrinal differences that still plagued his Empire, leading to the Second \*Council of \*Constantinople of 553, at which an attempt was made to mollify opponents of the Council of Chalcedon by condemning certain works associated with it, the \*'Three Chapters'. Although Pope \*Vigilius was browbeaten into assenting, the Council's decisions met with vigorous opposition in the West and failed to reconcile the Miaphysites. The end of Justinian's reign was marked by unrest in Constantinople and \*court conspiracies, the result probably of his failure till the very end to designate a successor. GBG

### Justinian I in art and coinage

The only secure surviving portrait of Justinian I is the standing figure in the wall \*mosaic at S. Vitale \*Ravenna (c.546). Fragments of a \*bronze cuirassed statue have been found at \*Caričin Grad (Justiniana Prima, mod. Serbia) and statue bases survive from northern \*Greece, \*Anatolia, and northern \*Syria. Two standing statues are known from Constantinople. The high-relief equestrian figure on the \*Barberini \*diptych (now in the Louvre) may be Anastasius I (as the treatment resembles that of the \*Ariadne \*ivories) but is more probably Justinian. Three equestrian statues are known to have stood at Constantinople. The colossal statue on a column in the Augustaeum of c.543 (Procopius, *Aed.* I, 2, 5) is depicted on a 15th-century drawing in Budapest University Library, and was

perhaps a reused statue of \*Theodosius or \*Arcadius. The two others, both from the \*Hippodrome, are known from dedicatory \*inscriptions (*Anth. Plan.* 62, 63). Justinian is represented similarly on a \*gold 36-*solidi* medallion, probably of 534, which is now lost, though electrotypes survive. Justinian I opened twice as many mints as were opened under Justin I. Brief production of lightweight \**solidi* (c.3.7 g/0.13 ounces) probably reflects financial strain. RKL; RRD

**Justinian I** (as theologian) Like many Byzantine emperors, Justinian took an interest in theology. His main concern was to heal the divisions in the Church (especially the East) caused by the definition of the Nature of Christ promulgated at the \*Council of \*Chalcedon of 451. His first involvement, concerning the Theopaschite controversy of 518/19, was indecisive. Its central concern, to make clear the unity of Christ by affirming that 'one of the Trinity' suffered in the flesh, is, however, a central contention of the so-called Neo-Chalcedonianism that Justinian supported in his (vain) hopes of reuniting the Church and reconciling those of \*Miaphysite views. Linked with this was his condemnation of the \*Three Chapters, which together with the condemnation of \*Origenism in his Letter to Menas, \*Patriarch of \*Constantinople, were the concerns of the Fifth Ecumenical \*Council (the Second Council of \*Constantinople of 553). In his final years, Justinian seems to have embraced some form of Aphthartodocetism. AL

Grillmeier, 2/2 (1995), 317–475.

**Justinian II** (c.669–711) \*Emperor 685–95 and 705–11. The son of \*Constantine IV, Justinian became sole emperor in July or September 685. Capitalizing on \*Arab civil war, in c.686 Justinian forced \*'Abd al-Malik to buy peace through a huge \*tribute and shared sovereignty over \*Cyprus, \*Armenia, and \*Iberia. In return, Justinian evacuated the troublesome Mardaitees from the Lebanon.

The East secured, in 687/8 Justinian himself led an expedition to \*Thessalonica, capturing numerous \*Slavs who were transferred to depopulated areas of \*Anatolia and enrolled in the army. Justinian also transferred many Cypriots, in violation of the treaty with the Arabs, settling them to defend the \*Bosporus in a new \*city christened Nea Iustinianoupolis. Meanwhile, in \*Constantinople Justinian constructed a new ceremonial hall at the \*palace.

Justinian also sought to extend the success of the \*Second Council of Constantinople (the Sixth Ecumenical Council) convoked by his father, by convening in 691/2 the \*Quinisext Council (also called the Council in Trullo), thereby burnishing his Orthodox credentials and securing divine support. However, the papacy rejected Quinisext, and when Justinian ordered the pope's arrest, imperial troops in \*Italy mutinied.

In c.690/2, Justinian placed Christ's image on the \*solidus for the first time, in a move perhaps linked to the Quinisext Council and contemporaneous reforms by \*'Abd al-Malik.

Justinian's advances in the East were decisively reversed in 692/3 when the reunited Caliphate renewed hostilities, and defeated a Roman army at \*Sebastopolis after the defection of the recently enlisted Slavs. Transcaucasia swiftly slipped from imperial control, and Arab raids into \*Anatolia resumed.

His prestige critically damaged, Justinian was increasingly unpopular, especially due to his harsh fiscal policies. In 695 a coup overthrew him, crowning \*Leontius emperor. Justinian had his nose slit, hence his nickname *Rhinotmetos*, and was banished to \*Cherson. In exile, Justinian married the daughter of the \*Khazar \*Khagan, \*Theodora. However, due to imperially sponsored plots, Justinian was compelled to flee to the \*Bulgar ruler \*Tervel. With his aid, in 705 Justinian managed to retake Constantinople, and executed Leontius and \*Tiberius III Apsimar. Theodora and their young son \*Tiberius were recalled and crowned. Justinian then unleashed a reign of terror, though he did manage to restore friendly relations with the papacy. Finally, in 711 a mutiny by an expedition dispatched against Cherson led to Justinian's flight, capture, and murder. MTGH

A \*wall painting in S. \*Demetrius, \*Thessalonica may commemorate Justinian II's \*adventus there in 688. Two statues in \*Constantinople were identified as

Justinian II in the \**Parastaseis Syntomoai Chronikai* (37) and the \**Patria* (III 79), the latter because of its damaged nose. The attribution is implausible; the practice of erecting statues ceased after c.600, even in Constantinople. RKL

**Justiniana Prima** See CARIČIN GRAD.

**Justinian's Code (Codex Iustinianus)** A codification of imperial constitutions from the time of Hadrian down to \*Justinian I arranged in twelve books. Justinian's *Code* both inaugurated and concluded the great project of codifying Roman \*law which the \*Emperor Justinian (527–65) instigated soon after his \*accession. The version that survives is not the original. The *Code* was first conceived in 528, nearly 100 years after \*Theodosius II had proposed to unite in one code all imperial legislation, with works of \*jurists attached to it (*CTh* I, 1, 5). Justinian ordered a commission of ten men to execute the project. Seven high officials, among them the great legal scholar and future \*Quaestor Sacri Palatii \*Tribonian, two \*advocati, and \*Theophilus, professor of law in Constantinople, completed the *Code* in just fourteen months. It was promulgated on 7 April 529. Justinian's *Code* was the first part of a much ampler codification project that was entrusted to Tribonian in 530, which resulted in the \**Digest* and the \**Institutiones* of Justinian (*InstJust*). Justinian's ambition was to combine all valid imperial legislation in one codex in harmonized form, permitting no redundancy or contradiction (*Constitutio Haec*). The work would stand alongside the *Digest* of Roman jurisprudence. A collection of later legislation (\**Novels*) was envisaged but not realized. A true synthesis of all these works was not achieved until the *Basilica* compiled initially by Leo VI.

Justinian continued to legislate after the promulgation of the *Codex Vetus* or first *Code*. Among the most important enactments were the 50 *Decisions* (*Quinquaginta Decisiones*) in 531/2, with which he sought to

resolve longstanding juristic controversies. Thus, when the *Digest* and the *Institutiones* were complete, the first *Code* already required extensive revision. Justinian ordered the creation of a second edition (*Codex Repetitae Praelectionis*), which was undertaken again by Tribonian and a commission of experts. The second *Code* was published on 16 November 534 and is the version that survives. A \*papyrus (P.Oxy. XV 1814) indicates the contents of some titles of the first book of the first *Code*. From this evidence the deletion and insertion of constitutions in the second *Code* may be observed.

Justinian's *Code* relied on a variety of sources: the \**Theodosian Code* and the imperial \*novels of emperors subsequent to Theodosius II, later legislation including Justinian's own, and the codes compiled under the \*Tetrarchy but excluded from the *Theodosian Code*: the \**Gregorian* and \**Hermogenianic Codes*. Justinian's *Code*, in contrast to the *Theodosian Code*, thus ignores the different nature of the constitutions these collections contained, presenting in harmonized form both private \*rescripts (from the *Gregorian* and *Hermogenianic Codes*) and official \*letters and \*edicts (from the *Theodosian Code* and later legislation). It was enough that an emperor had written the words. Justinian's *Code* is in fact the primary source for the reconstruction of both the *Gregorian* and *Hermogenianic Codes*. All past collections of imperial legislation and any stray constitutions not received in the *Code* were formally superseded after Justinian's *Code* came into effect and were henceforth inadmissible in \*courts of law. It is for this reason that most of these earlier codes, with the exception of (most of) the *Theodosian Code* itself and of the post-Theodosian imperial novels, have been lost.

Justinian's goal was to facilitate the citation of imperial legislation by uniting all of it in one convenient codex and by eliminating obsolete law. The result, theoretically, would be a law code free of contradiction and redundancy. A Roman seeking clarification would need to consult only a single source. Tribonian and his commission were free to divide constitutions into several parts and distribute them throughout the *Code* under appropriate titles. They were also authorized to make the texts consistent with current law by changing their wording. These alterations are known as interpolations. As in the case of the *Digest*, though somewhat less urgently, the interpolations in the *Code* have been more or less carefully identified and catalogued. Thanks to the independent tradition of the *Theodosian Code* it is possible to compare many constitutions in Justinian's *Code* with the originals directly.

The structure of Justinian's *Code* mainly follows that of its predecessors, particularly the *Theodosian Code*, but with some significant differences. Legislation pertaining to Christianity and the Church had been collected

in the last book of the *Theodosian Code*. In Justinian's *Code*, it stands ostentatiously in the first book before the titles dedicated to the sources of law and the imperial \*administration. Books 2 to 8 are dedicated to private law. Book 9, as in the *Theodosian Code*, is dedicated to criminal law. The final three books, books 10 to 12, are dedicated to the imperial administration, particularly \*taxation and civic liturgies and the ranks and privileges of imperial officials.

When Justinian confirmed the *Code*, he allowed for future legislation, which would be promulgated piecemeal as the *Novels* (*NovJust*). Otherwise, litigants were compelled by law to cite imperial legislation exclusively in the new *Code*. Justinian reasoned (*Constitutio Cordi*) that the consultation of his *Code* and potentially the *Digest* should suffice. As in the case of the *Digest* and *Institutiones*, Justinian sought to guarantee the reliability of the work by criminalizing the use of abbreviations. His wishes would not be fulfilled: abbreviated versions proliferated after his death; Western copies omitted the \*Greek constitutions, and yet other later copies omitted the whole of the last three books, the quickest to become obsolete. The \*Latin of most of the *Code* required interpretation and translation in the \*Greek-speaking East. Justinian's *Code* was eventually incorporated in the later Byzantine collections the \**Ecloga* of \*Leo III and the *Basilica*.

**Justinianus** (b. c.525/530) Great-nephew of \*Justinian I. As \**patricius* (572), and \*Magister Utriusque Militum in \*Oriens (575–7), he emphasized military training and led several campaigns against Persia, but was defeated in 577 and replaced with \*Maurice. PNB *PLRE* III, Iustinianus 3.

**Jutes** Germanic \*tribe from the eponymous Jutland in Denmark, possibly the Eudoses mentioned in Tacitus's *Germania*. They are said by \*Bede to have settled in Kent, the Isle of Wight, and Hampshire (*HE* I, 15). It has been suggested that certain types of \*metalwork

## Juvenal, Patriarch of Jerusalem

and funerary traditions are 'Jutish' but the evidence is equivocal. JFG

A. Richardson, 'The Third Way: Thoughts on Non-Saxon Identity South of the Thames AD 450–600', in S. Brookes, S. Harrington, and A. Reynolds, eds., *Studies in Anglo-Saxon Antiquities and Archaeology: Papers in Honour of Martin G. Welch* (2011), 49–54.

B. Yorke, *Wessex in the Early Middle Ages* (1995).

**Juvenal, Patriarch of Jerusalem** (probably 422–58) Having previously supported \*Cyril, \*Patriarch of \*Alexandria, Juvenal supported \*Dioscorus of Alexandria at the 'Robber' \*Council of \*Ephesus in 449, but abandoned him at the Council of \*Chalcedon in 451. He was rewarded by having the title of Patriarch accorded to the \*bishops of Jerusalem. His return to \*Jerusalem was blocked for twenty months by militant anti-Chalcedonian monks. PMP

E. Honigsmann, 'Juvenal of Jerusalem', *DOP* 5 (1950), 209–79.

**Juvencus** (fl. 329) Gaius Vettius Aquilinus Juvencus, a Spanish \*priest of \*senatorial family, probably from \*Elvira, is the author of the earliest biblical \*epic, the *Evangeliorum Libri Quattuor*, a hexameter version of the Gospels following mainly S. Matthew. He generally paraphrases closely the biblical text, but will amplify or abbreviate the original and on occasions omit some details. Recent scholarship has detected the influence of Christian exegesis on Juvencus' work, especially of \*Origen, although the exegesis is rarely overt, and in most cases exegetically uninformed readers, who made up the bulk of his audience, were unlikely to be aware of its presence. Juvencus' poem shows the strong influence

of \*Vergil, and to a lesser extent Ovid, Lucan, and Statius. The prestigious idiom of epic was well suited to attract an educated audience who might find the style of the Old Latin \*Bible unappealing. Juvencus' poem begins with an important preface, the first formulation of a Christian poetics; it concludes with a dedication to the \*Emperor \*Constantine I. MJR

# K

**Ka'ba** In Islamic tradition, the cube-shaped shrine at \*Mecca is believed to be the place that Abraham was asked by God to sacrifice Ishmael, his son by the slave woman Hagar (\*Qur'ān 37: 99–109) or, in some reports, Isaac, his son by his wife Sarah (cf. Genesis 22, 1–19). When an angel stopped his hand, Ishmael survived to become the father of the \*Arabs. The Prophet \*Muhammad designated the Ka'ba the holiest place on earth and enjoined every Muslim to make a pilgrimage there.

It is difficult for scholars to reconstruct how the shrine operated in the time of the Prophet and his followers, but early Islamic sources claim that the sanctuary was home to a series of idols during the \**Jahiliyya* (period of ignorance; the time before the coming of \*Islam). It has been argued that the cult initially centred on the pagan god Hubal, but by the time of the Prophet it was dedicated to the 'Great God' known as Allah. The worshippers would circumambulate the Ka'ba and kiss the black stone in the eastern corner of the cube, which is thought to be a meteorite. The Prophet is said to have destroyed the idols on the site in 629–30 but to have maintained similar ritual practices in and around the sanctuary. EL

**Kairouan (al-Qayrawān)** Military post and capital of \*Ifriqiya, 184 km (114 miles) south of modern Tunis. The name of the town refers to its foundation as a military camp at the time of the \*Arab Conquest. In the mid-7th century, several generals were attracted to the site's inland elevation and the Roman building materials there available for reuse. Medieval sources describe twin foundations some distance apart, one due to Mu'āwiya b. Hudaydi, the other to 'Uqba b. Nāfi'. The settlement by the famous conqueror Sīdī 'Uqba began with the domination of a wild landscape and included a Great \*Mosque and \*palace. Extensive

remains of \*irrigation systems, buildings, and perhaps even a church are attested by Arab geographers and archaeology. CJG

**Kaiseraugst and Kaiseraugst Treasure** Castrum Rauracense (mod. Kaiseraugst, nr. Basel, Switzerland) lies at a strategic Rhine crossing, adjoining an earlier Roman fortress, Augusta Raurica. Fortification probably occurred under \*Diocletian, and sections of the walls and ramparts survive. The \*Alamanni invaded c.350, though local settlement continued into the 8th century.

A hoard of over 270 early 4th-century coins and \*silverware, including two plates with elaborate central medallions (featuring the Achilles cycle, \*hunting, and \*sea scenes), discovered inside the ramparts during building work in 1961–2, is now in the Römermuseum in Augst. Initially considered a single table service, it is now understood to constitute the amassed wealth of several army officers. HAHC

Kent and Painter, *Wealth of the Roman World*, 40–3.

**Kaisergeschichte of Enmann** A hypothetical *breuiarium*, also known as KG or EKG, describing the lives of the Roman \*emperors from Augustus, whose existence was posited by A. Enmann in 1884. In its first edition it seems to have finished around 359,

though there is some internal evidence that it may have concluded with the death of \*Constantine I (337), but it was continued (perhaps by other authors) at various dates down to at least 378. It was an important source for Aurelius \*Victor, \*Festus, and the authors of the \**Historia Augusta* and the \**Epitome de Caesaribus*, as well as for \*Polemius Silvius in the 5th century, and, in combination with an epitome of Livy, for \*Eutropius and \*Jerome. There is some anecdotal evidence, not yet fully analysed, to suggest that there may have been a \*Greek translation in circulation in the Byzantine period. Although its existence was controversial for almost a century following the first proof by Enmann, its existence is now universally accepted by scholars. RWB

**Kalb** A tribal group occupying the Syrian Desert in Late Roman and early Islamic times who converted to

Christianity and allied with the East Roman Empire. After the \*Arab conquests, Kalb developed close ties with the \*Umayyad branch of the ruling family of \*Quraysh. \*Uthman b. 'Affan (r. 644–56) married a Kalbi woman, as did \*Mu'awiya b. Abu Sufyan (r. 661–80), who moved the capital of the \*caliphate to \*Syria. Mu'awiya's son by his Kalbi wife, \*Yazid I (r. 680–3), also married into the \*tribe. A Kalbi chief was instrumental in the success in the Second \*Arab Civil War (683–92) of \*Marwan I (r. 683–4), progenitor of the Marwanid branch of the Umayyads.

After the Second Civil War, the Kalb, at the head of the federation of Quda'a, were engaged in a long-running \*feud with \*Qays, who had backed the Zubayrid opponents of the Umayyads. The former traced their ancestry to the 'southern' tribes descended from Qah-tan, the latter to the 'northern' tribes descended from Ishmael. This feud was crucial in destabilizing Umayyad power in Syria in the 740s. RJL; AM

Phillipson, *Foundations of an African Civilisation*, 82–6, 189–92, 202–6.

**Kalends of January** 1 January, which opened the festival of Janus, god of doors and gates, had political importance from 153 BC as the day when \*consuls and other annually appointed magistrates in \*Rome took office, and so was celebrated in \*cities which had the status of *colonia*. Such celebration, including games and gift-giving (*strenae*), spread across the Roman world (\*Symmachus, *ep.* X, 28; \*Gregory of \*Nazianzus, *ep.* 14, 1–3 to \*Libanius). \*Emperors both gave and received *strenae* (Ausonius, *ep.* 10 Green = 13 Peiper; *CTh* VII, 24). Despite its non-Greek origin, Libanius

(*Oration*, IX) praised this \*festival, and in the 4th century it was widely enjoyed as a 'secular' celebration, though \*bishops from \*Ambrose to \*Caesarius of \*Arles spoke against it. MTG

M. Meslin, *La Fête des kalendes de janvier dans l'empire romain* (Collection Latomus 115, 1970).

R. A. Markus, *The End of Ancient Christianity* (1990).

**Kalila and Dimna** A widely dispersed collection of \*animal fables of Indian origin. Two \*Syriac versions survive, the earlier translated from the lost 6th-century \*Pahlavi version of Burzōe, the second, made in the 10th or 11th century, from the 8th-century \*Arabic version of Ibn al-Muqaffa' (the source of most subsequent versions). The stories, often nested within one another, are cast as a kind of wisdom literature to teach manners and shrewdness in the manner of a mirror for princes. Kalila and Dimna, the book's main characters, are two jackals. The later Syriac version shows that the work had been expanded. ACMc

*GEDSH* s.v. Kalila and Dimna, 241–2 (Brock).

**Kaper Koraon Treasure** A large hoard of Christian liturgical \*silver discovered in 1908 in Stuma, Syria. In the years following the Treasure's discovery, its 56 components were divided and sold as four separate treasures purportedly originating from different nearby sites—a ruse deployed to avoid government seizure and to elevate the pieces' commercial value. American museums were largely the beneficiaries (or dupes) of this arrangement. Though a few pieces from the so-called \*Stuma Treasure were sent to the Archaeological Museum of Istanbul, the most significant works attributed to the \*Riha, \*Hama, and \*Antioch Treasures are now housed at Dumbarton Oaks (Washington, DC), the Walters Art Museum (Baltimore), and the Metropolitan Museum (New York) respectively. Some stray components have ended up elsewhere, including Bern, Paris, and Jerusalem. Scholarly detective work in the 1980s determined that all these works were probably unearthed together and assigned them to the Church of S. \*Sergius in the \*village of Kaper Koraon (modern Kurin) on the basis of inscriptions that appear on several of the Baltimore pieces.

The hoard included multiple examples of liturgical wares, all dating from AD 540–640: patens, chalices, flabella (fans), \*lampstands, spoons, ewers, and wine

strainers. All are technically and compositionally similar, and most are adorned with engraved and *repoussé* decoration. Some bear official \*silver stamps, while others do not. The average weight of the pieces was one Roman pound; the silver in each would therefore have cost about four \*solidi. As a whole the Treasure demonstrates a complex pattern of \*patronage in an east Mediterranean village church: dedicatory inscriptions appear on most of the objects, giving the names of some 50 individuals. They identify one archbishop and three local lay officials—Megas, Sergios, and Symeonios—and offer enough information to trace four or five important local families who made donations over several generations.

There is no indication of what event or events might have precipitated the Treasure's burial. Perhaps the church was a casualty of the \*Arab conquests of the 7th century or of later military campaigns conducted in the region.

Mango, *Silver from Early Byzantium*.

Boyd and Mango *Ecclesiastical Silver Plate*.

**Karabel** (mod. Asarcık, Turkey) Located in the *territorium* of \*Myra (\*Lycia), Karabel is the site of a \*monastery complex consisting of two enclosed settlements, one arranged around a domed \*basilica with a \*triconch \*apse, the other composed of cells around a tripartite basilica, both dated to the 6th century. This complex was identified by Harrison as the monastery of Sion, mentioned in the *Vita* of S. \*Nicholas of Sion. Ševčenko raised doubts, and *TIB* now identifies Karabel as the monastery of S. John of Akalissos, locating Sion at nearby Alacahisar. PTa

*TIB* 8: 422–5.

R. M. Harrison, 'Churches and Chapels in Early Byzantine Lycia', *AS* 13 (1963), 131–5.

**Karanis** Town on the north-eastern edge of the Fayyum (\*Arsiniote \*Nome) in \*Egypt. Settlement of importance since Hellenistic times and centre of the pagan cult of the crocodile god, Karanis had been a thriving agricultural centre (several Roman granaries have been uncovered) where canals and \*cisterns made the land fertile. Hit by intermittent waves of economic decline and growth, Late Antique Karanis suffered progressive desertification which caused the final abandonment of the site, though not before the 6th century.

Numerous \*Greek \*papyri have been found in Karanis, but few \*Coptic texts. However, Karanis had a lively Coptic-speaking community: Christian names are recorded in papyri as early as the 3rd century, as attested in the \*archive of the landowner Aurelius \*Isidoros

(cf. P.Cair.Isid. and P.Col. VII). The first attestation of the term 'monk' appears in these papers (P.Col. VII, 171, AD 324): it is possible that the monk in question belonged to a church in Karanis and was not a hermit.

The Church played an important role in village society and owned land, which was put in charge of the clergy: \*priests and \*deacons appear in good number in papyri involved in land management (cf. P.Haun. III 58, AD 439). Remains of the Late Antique settlement are rather scanty. Noteworthy is the recently excavated large cemetery to the north-west of the urban centre: several rows of tombs in the shape of mud-brick *mas-tabas* have been uncovered, with Christian \*inscriptions and carvings (often cryptographic), a funerary stele, and a few \*mummified corpses, in different levels of burial. The necropolis was probably in use for more than a century, from the end of the 4th century. MCDP

**Karbala** A town 100 km (c. 62 miles) south-west of modern Baghdad and about 80 km (c. 50 miles) north of the garrison of \*Kufa, where in 680 the troops of \*Muhammad's grandson \*Husayn were defeated and killed by the \*Umayyad army. When the Umayyad \*Yazid I became caliph in 680, Husayn held up his rival ancestral claims to the \*caliphate and marched from west \*Arabia with a small group of followers towards Kufa. They were besieged at Karbala and killed by an army loyal to Yazid. \*Shi'i Muslims regard Husayn as one of their imams, his followers as \*martyrs, and commemorate the event on the Day of Ashura (10 Muharram). A mausoleum for Husayn was set up in Karbala, but both Umayyad and \*Abbasid caliphs banned \*pilgrimage to it. The shrine was repeatedly destroyed and re-erected.

**Karka d-Beth Slokh, History of** Local history of the church at Karka d-Beth Slokh in Beth Garmai (mod. \*Kirkuk, French Kerkouk, Iraq), written in \*Syriac in the 6th century. The oldest manuscript is of the 6/7th century (Diyarbakir ms. 96). It recounts briefly the ancient history of the city, its conversion and the \*heresies which arose in it, and its \*martyrs in the persecutions under \*Shapur II and in 455 under \*Yazdegerd

II. In about 470 the \*bishop founded a \*monastery honouring the martyrs, with an annual festival attended by all the bishops of Beth Garmai, the province of which Kirkuk is the centre. RD

**Karnak** See THEBAIS PRIMA AND SECUNDA.

**Karnamag-e Ardashir-e Pabagan (The Book of Deeds of Ardashir son of Pabag)** A 7th-century

Pahlavi historical romance dealing with the founding of the \*Sasanian dynasty. The surviving text is a 9th-century digest of the lost prose work. Apart from a few historically verifiable facts, it is composed of fanciful stories. Reminiscent of the Cyrus legend, the *Karnamag* claims that \*Ardashir I was the adopted son of \*Pabag, a vassal of Ardawan (the last Parthian King Artabanus V), and the real son of the shepherd Sasan, who was descended from the last of the Achaemenid kings. After many adventures, Ardashir defeats Ardawan and, by wresting sovereignty from the usurping Parthians, restores legitimate Persian rule. There is a long dragon-slaying episode followed by short tales about Ardashir's son (!) \*Khosrow I and grandson \*Hormizd I. WWM

**Kartlis Cxovreba (The Life of Georgia)** Collection of

\*Georgian historical texts. The title *Life of Georgia* is late and dates probably to the 15th century, when the medieval Georgian historical narratives were re-edited. It includes the *Lives of the Kings*, *Life of \*Vakhtang Gorgasali*, *Martyrdom of King Arshil*, *History of Kartli*, and later medieval chronicles. It is also preserved as a 13th-century Armenian translation. NA

Rapp, *Studies in Medieval Georgian Historiography*.

**Karun** See THEODOSIOPOLIS (ERZERUM).

**Kashgar** (Shule, Kasia, Kashi) City in Chinese Turkestan, located on the western edge of the \*Tarim

basin, at the intersection of several branches of the \*Silk Road, occurring as *Kasia chora* in \*Ptolemy (VI, 15, 3) and as *Shule* in Chinese sources. Chinese rule in Kashgar alternated with local dynasties influenced by the steppe nomads, including the \*Hephthalites and the Eastern \*Türks. Initially populated by Iranian-speakers, Kashgar was an important \*Buddhist site from the 2nd century on. The Buddhist traveller \*Xuanzang (II, 306–7) mentions several hundred monasteries and 10,000 monks. The putative raid on Kashgar by \*Qutayba b. Muslim in 715 is undoubtedly legendary. Turkification increased after its absorption c.750 by the Qarluq Turks, the ancestors of the Qarakhanids, under whom most of the population converted to Islam in the 10th century. MLD

P. Pelliot, *Notes on Marco Polo*, I (1959), 196–214.

**Katalymmata ton Plakoton** Monumental ecclesiastical complex on Akrotiri peninsula, \*Cyprus, excavated from 2007 onwards. Two three-aisled \*basilicas were linked by a peristyle atrium. The west-oriented church, probably a \*martyrium, which had transepts with five \*apses and an unusual processional arrangement, is dated 616–19. It may be associated with S. \*John the Almsgiver, who returned to his native Cyprus c.617–20, but it was abandoned in the mid-7th century. The walls were lavishly decorated. There was \*marble from \*Proconnesus, \*glass \*mosaic, \*opus sectile, and mother of pearl. The floor mosaics incorporate a liturgical \*inscription in a medallion. \*Heraclius is personified as Alexander the Great in a pilaster bust. RKL

R. Maguire, *Late Antique Basilicas on Cyprus: Sources, Contexts, Histories* (diss. East Anglia, 2012), 176–210 and gazetteer no. 3.

**katholikos** \*Greek term equivalent to \*Latin \**ratio-nalis*, denoting a financial official. Under \*Diocletian the Catholicus replaced the \*Dioiketes as chief financial official in the government of \*Egypt, and so appears frequently in documentary \*papyri.

For the ecclesiastical offices, see CATHOLICUS (ARMENIAN) and CATHOLICUS (CHURCH OF THE EAST). OPN

**Kavadh I** See QOBAD I.

**Kavadh II** See QOBAD II.

**Kebrā Negast (Glory of Kings)** \*Ge'ez text apparently first committed to writing from an \*Arabic version in the early 14th century. Containing numerous biblical—particularly Old Testament—references, it presents a history of Ethiopian kingship from the time of the visit by Makeda, Queen of the South, to Solomon, King

of Israel, describing the birth of their son Menelik (I) who in due course returned to \*Jerusalem and brought the Ark of the Covenant to \*Ethiopia. Remarkably omitting all mention of early \*Aksumite history and the adoption of \*Christianity there, it emphasizes the greatness of King \*Kaleb in comparison with his Roman counterpart, \*Justin. There can be little doubt that the work incorporates material that long pre-dates the form in which it has been preserved. Whether this earlier content had been transmitted orally, or in a written form that no longer survives, cannot be determined. In its present form, the work was accorded high importance by Ethiopian rulers of the 19th and 20th centuries. Several recent translations into English and French have been supported by Rastafarian interests. DWP ed. C. Bezold, *Kebrā Negast: Die Herrlichkeit der Könige* (Abh. (Bayr.) 32/1, 1905).

ET (with introd.) E. A. W. Budge, *The Queen of Sheba and her only son Menyelek: being the history of the departure of God & His Ark of the covenant from Jerusalem to Ethiopia, and the establishment of the religion of the Hebrews & the Solomonic line of kings in that country* (1922).

I. Shahid, 'The *Kebrā Negast* in the Light of Recent Research', *Le Muséon* 89 (1976), 133–78.

**keles** Fast, oared galley, used principally for the quick transport of messages or passengers, not cargo, like the larger and similarly named *celsa* and *celox*. All three types of ship are known from Late Antiquity from their depiction on a \*mosaic of the 3rd/4th century at Althiburus in \*Africa. ALB; AG

Casson, *Ships and Seamanship*, 160–2 and fig. 137 for an illustration of the Althiburus mosaic.

Pryor and Jeffreys, *Age of the Dromon*.

**Kellia** ('The Cells'; founded mid-4th cent.) One of the principal monastic settlements of Lower \*Egypt, an offshoot of the \*monastery of \*Nitria, intended for advanced monks seeking a more solitary way of life. \*Rufinus of \*Aquileia, who visited the site in the 370s, reports that it was in the 'interior desert... a vast wasteland'. According to legend, it was co-founded by \*Amoun and \*Antony the Great, chosen to be a day's walk (roughly, 19 km or 12 miles) from Nitria (\**Sayings of the Desert Fathers*, Antony, 34). From Monday to Friday, the monks lived as hermits; at weekends, they gathered for the \*Eucharist and common meals. The monastic superior in the late 4th century was \*Macarius of \*Alexandria. According to \*Palladius, a resident in the 390s, over 600 monks lived at Kellia (*Lausiac History*, 7). \*Evagrius Ponticus and his circle of intellectual monks were active there 385–99 (*Lausiac History*, 38).

In 1964, Antoine Guillaumont discovered the ruins of Kellia. Archaeological teams from France and

Switzerland eventually uncovered hermitages scattered over 127 km<sup>2</sup> (49 square miles). Typically, hermitages were large rectangular compounds, enclosed with mud-brick walls. Within each, there was the *abba's* cell, which included several rooms: an oratory, kitchen, bedroom, as well as storage areas. Interior walls were often covered with a whitewash glaze and decorated with drawings and \*crosses. Many compounds have remains of a well and irrigation channels, presumably for watering a garden. Some have a second smaller cell, presumably for a disciple, as well as a gatehouse which controlled access to the compound. Most hermitages date from the mid-6th century. JWH

**Kellis** (mod. Ismant el-Kharab, Egypt) Large \*village in the central part of the Dakleh \*Oasis in the Western Desert. It is under excavation by an Australian team as one component in the larger Dakleh Oasis Project begun in 1978. Kellis has been the most productive Roman-period site in recent times. Remains include a \*temple dedicated to Tutu with wall paintings, some dating to the 1st century, and three 4th-century churches; a Christian cemetery; and numerous houses. In these have been found \*papyrus \*letters and religious texts in \*Greek, \*Coptic (of \*Manichaean content, e.g. P.Kell. V, Copt. 15), and \*Syriac; also many \*ostraca. Of unusual interest are a 4th-century codex made from acacia wood with three speeches of Isocrates (P.Kell. III, Gr. 95) and an extensive 4th-century agricultural account, also inscribed on an acacia wood codex (P.Kell. IV, Gr. 96). It is a rare chance when written discoveries like these are associated so precisely with their archaeological contexts. JGK

Bagnall and Rathbone, *Egypt*, 265–6.

P. Kellis: The Papyri from Kellis are published in the series of Dakleh Oasis Project monographs I (monograph 3, 1995), II (4, 1996), III (5, 1997), IV (7, 1997), V (9, 1999), VI (15, 2007).

**Kenchriae (Kenchreai, Kechries)** Port on the Saronic Gulf (Greece), one of two serving the \*city of \*Corinth. Its main trading connections were with the Aegean islands, Asia Minor, and the Near East. Settlement was concentrated around a crescent-shaped \*harbour protected by sea-walls. Excavations have exposed port installations and monumental buildings, a Christian \*basilica and graveyard, and a residential quarter which indicates a maritime settlement of considerable wealth. Over 100 \*glass panels in \*opus sectile

from c.370 found in their original delivery cases seem to have been destined for the \*Temple of Isis at the harbour. The finds in general indicate the impressive resources available to Corinth. Two \*earthquakes, in 365 and 375, and an attack by \*Alaric in 396, diminished the prosperity of Kenchriae. A late 6th-century coin \*hoard has been associated with \*Slav incursions. By the 7th century maritime activity had dwindled, as had the extent of the port. PA

R. L. Hohlfelder, 'A Sixth Century Hoard from Kenchreai', *Hesperia* 42 (1973), 89–101.

**Kenchriae windows** Over 100 \*glass \*opus sectile panels of c.370, found in their original packaging on the dockside at \*Kenchriae. They illustrate the River \*Nile and were possibly destined for the nearby \*Temple of Isis. PA

L. Ibrahim, R. Scranton, and R. Brill, *Kenchreai, Eastern Port of Corinth, Results of Investigations by the University of Chicago and Indiana University for the American School of Classical Studies at Athens*, II. *The Panels of Opus Sectile in Glass* (1978).

**keration** See CARAT.

**Kerch** Roman \*city of Panticapaeum and capital of the kingdom on the \*Crimean Bosphorus which declined in the 4th century. \*Justinian I fortified the city in c.530 (\*Procopius, *Aed.* III, 7,12), but the Turks took it in c.580. ABA

I. Kruglikova, *Bospor v pozdneantičnōe vremja (The Bosphorus in Late Antiquity)* (1966).

**Kerch Plate** \*Silver dish, 25 cm (10 inches) in diameter, of the mid-4th century, now in the State Hermitage Museum, St Petersburg. A diademed, nimbate \*emperor (possibly \*Constantius II) is shown on horseback riding to the right, where a \*Victory raises a wreath; to the left, a guard carries a shield bearing a chi-rho \*monogram. JB

Leader-Newby, *Silver*, 22–3, 36–9.

Kent and Painter, *Wealth of the Roman World*, 25.

**Kerdir (Kartīr, Kartēr)** Name of a powerful \*Zoroastrian priest (\**mowbed*) during the reigns of four \*Sasanian kings in the 3rd century AD. He is mentioned in \*inscriptions of \*Shapur I (including the \**Res Gestae Divi Saporis*: ŠKZ) and \*Narseh I (\*Paikuli), as well as in \*Manichaean texts. The most extensive sources for Kerdir are his own inscriptions carved near the royal \*rock reliefs at \*Sar Mashhad, \*Naqsh-e Rujab, and

\*Naqsh-e Rostam (where there is also a profile bust depicting him carved onto the cliff face), and below the *Res Gestae Divis Saporis*. Composed toward the end of the reign of \*Bahram (Warahrān) II (r. 276–93), they chronicle Kerdir's rise in ecclesiastical power beginning during the reign of \*Shapur I (r. c.239–c.272) and continuing through the reigns of \*Hormizd (Ohrmazd) I (r. c.272–3), \*Bahram I (r. 273–6), and Bahram II. He boasts of the many \*fires and rituals he instituted throughout the Empire, how he promoted the priesthood, and how he persecuted Christians, \*Jews, and \*Manichaeans (he had a hand in the execution of \*Mani). He also records ajourney to heaven and hell, by which he establishes the veracity of Mazdaism (Zoroastrianism). WWM

*Enclran* XV/6 (2011) s.v. Kartir, 608–28 (P. O. Skjærv–).

The inscriptions are in *CII* III, vol. 2: Private inscriptions of the classical period.

**keys and locks** See SECURITY.

**Khadija bt. Khuwaylid** A wealthy widow who lived in \*Mecca in the 6th and early 7th century, Khadija engaged the future Prophet of \*Islam, \*Muhammad b. 'Abd Allah's services as a \*merchant and then married him. Several years later, Muhammad received the first revelation of the \*Qur'ān, a frightening experience he then related to his wife. Believing in Muhammad's message, Khadija is known as the first female convert to Islam, if not the first convert. NK

W. M. Watt, *Muhammad at Mecca* (1953).

W. M. Watt, *Muhammad at Medina* (1956).

**khagan** (qaghan, khaghan, khaqan) Title (of uncertain origin) of the supreme ruler in a steppe nomad

polity, used first c.265 by the Altaic Xianbei (Hsien-pei), followed by the Rouran (Juan-juan, 5th cent.) and the \*Türks (6th cent.). Under the latter, it was used exclusively by the ruling Ashina clan; Türk antagonism towards the \*Avars was fuelled by Avar use of the title. Other Turkic polities which succeeded the First and Second Türk Empires (\*Khazars, \*Türgesh, \*Uighurs, and Qarluqs) also had khagans, suggesting a strong sense of imperial succession or *translatio imperii* in the Turkic world. When Turkic polities split into eastern and western halves, the ruler of each half was styled a khagan; the term was also applied to the non-Turkic rulers of \*China, Tibet, and the Rus. The later title khan (qa'an) is probably related to khagan. The khagan's wife was called khatun (qatun), a \*Sogdian word meaning 'wife of the ruler'.

The khagan and khatun were understood to rule by the 'favour of heaven' (Turkic *qut*); their dual political and religious role involved rituals related to the welfare of the state, but military and natural disasters could lead to their downfall and execution. Amongst the Ashina-led Türks, khaganal succession was elder to younger brother, father to son, or uncle to nephew. The Khazars developed a dual kingship, with the khagan responsible for palace rituals and the Khagan Beg in charge of state governance. Chinese sources also mention subordinate khagans in the First and Second Türk Empires. The title occurs frequently both in the \*Orkhon inscriptions (261–92, *passim*) and in East Roman writers from the late 6th century onwards, for example \*Menander Protector (frs. 5, 3; 10, 3; 12, 5; 15, 1; 25, 1–2; 27, 3; 38); \*Theophylact Simocatta (I, 3–8; II, 10–12 and 15; VI, 2–6 and 11; VII, 4 and 7–15; VIII, 1–6), \*Nicephorus (10, 21–2, 42, and 45) and \*Theophanes (AM 6075–6, 6079, 6083–5, 6087, 6089–94, 6096, 6110–13, 6117, 6169, 6171, 6196, 6198, 6203, 6220–1, 6224, and 6241). MLD

**khamriyya** (from Ar. *khamr* 'wine', Arabic wine poetry) \*Arabic \*poetry on the theme of wine can be traced back to the cultural milieu of the pre-Islamic principality of al-\*Hira in southern \*Mesopotamia and its Islamic successor, the city of \*Kufa. Among the first Arab poets to introduce the theme of wine into the polythematic ode (\**qasida*) were authors closely acquainted with Christianity: 'Adi b. Zayd (d. c.600), al-A'sha (d. c.625), and al-\*Akhtal (d. c.710). During the \*Umayyad and early \*Abbasid periods the *khamriyya* genre was established by such great masters of the wine song as al-\*Walid II b. Yazid (d. 744) and Abu Nuwas

(d. c.813–15) and took its place as a prominent poetic genre, often associated with social and cultural protest.

*EI* 2, vol. 4 (1978) s.v. 'Kharāj', 1030–4 (Cahen).

**Kharg Island** A small island (7.5 × 5 km; c.5 × 3 miles) 52 km (32 miles) north-west of Bushehr (Bushire) on the Persian side of the Gulf. In addition to several dozen cairn burials and rock-cut \*tombs of probable Arsacid date, its most important monument is a monastic complex within a walled enclosure (96 × 85 m; 315 × 279 feet) consisting of a church with a \*martyr's chapel, monks' cells, refectory, and \*library. \*Stucco \*crosses resemble those from the churches at al-\*Hira (Iraq) and al-Qousour (Failaka island, Kuwait).

**Kharga** See OASIS.

**Kharijites** A Muslim sect, important mainly in \*Islam's formative period. They were characterized by fierce opposition to other, non-Kharijite Muslims, whom most Kharijites classified as unbelievers, subject to \*warfare and killing unless they accepted the Kharijite form of Islam. Consisting of many mutually hostile sub-groups, Kharijites rejected the \*caliphate and sought to establish communities under their own imams, chosen for their religious knowledge and piety. The name Kharijite, related to an \*Arabic verb meaning 'to go out', has been variously explained.

Their roots are in the First \*Arab Civil War (656–61), when a fraction of \*'Ali's army opposed his decision to stop fighting \*Mu'awiya. That was, according to the Kharijites, a sin, and gave rise to their characteristic slogan, 'No judgment but God's!' In spite of heavy losses in battle against \*'Ali, groups descended from those who had fought him continued to develop in

Iraq, and they raised serious rebellions against the \*Umayyads when caliphal power weakened. The consolidation of caliphal rule eliminated them from the central Islamic lands by the end of the 8th century, but they survived in remote areas and more moderate forms, such as the \*Ibadites in \*Oman and North \*Africa. GRH

W. M. Watt, *The Formative Period of Islamic Thought* (2000).  
P. Crone and F. Zimmerman, *The Epistle of Salim ibn Dhakwan* (2001).

**khatchkar** (*khach'k'ar*, *xač'k'ar*) The term *khatchkar*, or 'cross-stone' refers to a type of carved stone slab produced in \*Armenia from at least the 9th century onward. Sometimes quite tall (over 8 feet), *khatchkars* bear surface design in bas-relief featuring a large, centrally placed \*cross, often above a medallion or stylized \*foliage. In some cases, figural decoration, polychrome, and epigraphy appear. *Khatchkars* served many different functions: they often mark graves, but they were also erected in commemoration of important events or places. They attest to the importance of the cross in the context of Armenian worship. CM

P. Donabédian, 'Le Khatchkar', in *Armenia Sacra: mémoire chrétienne des arméniens (IVe–XVIIIe siècle)*, ed. J. Durand and I. Rapti, exhibition catalogue (2007), 153–61.

**Khawarnaq** \*Tabari (V) claims that the \*palace of Khawarnaq was built by the \*Sasanian King \*Bahram V Gur (AD 420–38). Others state it was built by the \*Lakhimid ruler Nu'man b. Imru' al-Qays. Khawarnaq appears often in Arabic and Persian \*poetry as the location where \*Abd al-Malik supposedly celebrated the capture of \*Kufa. EL

**Khazars (Qazars)** Tribal confederation led by the Turkic Ashina clan which inherited power on the western steppe from the First \*Türk Empire (defeated by the Chinese in 659) and established a khaganate which eventually reached from the Middle Volga to the Caucasus, from the Dnieper to the Aral Sea, and lasted until c. AD 965. Although their origins are unclear, the Khazars were seemingly a multi-ethnic federation of various nomadic groups previously resident in the north Caucasus, Pontic Steppe, and Volga Delta, including \*Huns, \*Sabirs, \*Oghurs, \*Bulgars, \*Türks, Iranian-speakers, Finno-Ugrians, and \*Slavs.

Too little remains of the Khazar language to determine if they spoke a Common Turkic or Oghur-Bulgar dialect. The Khazar royal house preserved many traditions of the First Türk Empire, including the khaganate, which eventually evolved into a system of two

khagans, one for palace rituals and one to govern the state. The Khazar economy depended on pastoralism, fishing, agriculture, and, above all, \*trade. Textual sources mention several cities in Khazar territory and the Khazars profited greatly from their geographic location on the Lower Volga, through which trade routes passed to north, east, south, and west.

The name Khazar first appears when the Roman \*Emperor \*Heraclius initiated an alliance with them in 626 against the Persians. Their leader \*Jebu Xak'an (Ziebel) led the Khazars south in 627 to meet Heraclius and to cooperate with him in besieging \*Tbisi. Conflict with Magna Bulgaria to the north in the 670s resulted in some Bulgars moving westward under \*Asparukh c.679. Clashes in the Caucasus with the \*Arabs began in 642 and continued until 737, when the Muslims invaded Khazar territory in the Lower Volga and forced the khagan to convert (temporarily) to \*Islam. Throughout these events, the Khazars were key allies of the East Roman Empire, preventing the Arabs from moving north of Derbend and deflecting other steppe nomads from attacking \*Constantinople; an important Khazar victory was \*Barjik's defeat of the Arab general Jarrah. \*Constantine V married \*Chichek, a Khazar princess, in 732; their son was Leo IV the Khazar (750–80; r. 775–80). Although initially followers of the traditional Turkic religion, the ruling elite began to adopt \*Judaism in the mid- or late 8th century (but retained their nomadic traditions, including migration between summer and winter quarters); the general population contained Jews, Christians, Muslims, and pagans.

Reflecting their contact with multiple surrounding civilizations, there are references to the Khazars in sources in \*Arabic (Ibn Khurdadhib, 93–5, 115–17; al-\*Baladhuri, *Futūh al-Buldān*, I, 305–9, 322–9; Ibn al-Faqih, 342–57; Ibn Rusta, 156–7; Qudama, 200–2; al-\*Muqaddasi, 317–19), \*Armenian (*Geography* of \*Ananias of Shirak II, 7; III, 10; V, 18 and 34; \*Levond, §4–5, 12, 18, 31; \*Movses Kaghankatvatsi, II, 1, 4, 11–12, 14, 16, 23, 26–7, 36, 39–45; III, 16), \*Greek (\*Nicephorus 12, 18, 35, 42, 45; \*Theophanes, AM 6117, 6118, 6171, 6196, 6198, 6203, 6220, 6221, 6224, 6241, 6255, 6256), Chinese, \*Georgian, Hebrew, \*Persian (*Hudud al-Alam*, 161–2), Slavonic, \*Syriac (\*Theophilus, 73–5, 196–8, 228–30, 305; \*Chronicle of Zuqnin, 159–60, 174, 206), and Turkic. These writers frequently term them \*Scythians, Massagetae, \*Huns, or Turks. MLD

**Khorasan** (lit. Land of the Rising Sun) Vast region covering what is now eastern Iran and parts of \*Central

Asia. Its principal cities were \*Merv, \*Nishapur, \*Herat. Attested in the *bullae* (\*sealings) of its military commander (Middle \*Persian \*spāhbed), it was one of the four great administrative divisions of the \*Persian Empire created in the 6th century. It represented the 'Quadrant of the Northeast' (MP *kust ī xwarāsān*). Conquered by Muslims in 651, it retained economic and strategic importance as the centre of government for the Far East lands of the \*caliphate. The people of Khorasan and Arab settlers there played the decisive part in overthrowing the \*Umayyads and founding the \*Abbasid \*caliphate so that thereafter, families of the Khorasan \*aristocracy, converted to \*Islam, enjoyed great power, influence, and wealth. **Khosrow, Cup of** Alternative name for the Tasse de Salomon, now in the Bibliothèque Nationale de France. Formerly held in the treasury of S. Denis, it consists of a gold frame (with a Pahlavi \*inscription recording its weight); the frame holds red and green cut \*glass medallions and a central \*crystal medallion engraved with a king wearing the crown of \*Qobad or \*Khosrow I. Medieval tradition held that Harun al-Rashid gave it to Charlemagne and that Charles the Bald gave it to the treasury. Tantalizingly, Ibn Zafar (1104–70) describes a crystal drinking bowl decorated with a portrait of a \*Sasanian king in \*gold, \*silver, and glass, which he places in the treasury of the Great Palace of \*Constantinople. This would suggest that it entered the treasury through gift exchange, and the sack of Constantinople by the Fourth Crusade in 1204 brought it to France. Ibn Jubayr applies this name to a cup suspended over the \*mihrab of \*Medina's \*Mosque of the Prophet. MPC

**Khosrow I Anoshirvan (NP; MP Husraw; Gk. Chosroes; Ar. Kīsrā)** (r. 531–79) One of the most powerful and famous kings of the \*Sasanian dynasty.

## Sources

Several post-conquest sources, such as \*Tabari (AD 839–923) and the medieval epic poem of Ferdowsi (d. AD 1020) the *Shahnama* or *Book of Kings*, provide detailed accounts of Khosrow's reforms which are probably ultimately derived from the \*Xwādāy-nāmāg (*Book of Lords*) while others survive independently, such as the *Sīrat Anuṣīrwan*, a supposed autobiography by

Khosrow, which is embedded in the Arabic chronicle of Miskawayh (AD 932–1030). Contemporary \*Greek historians, including \*Procopius, \*Agathias, and \*Menander Protector, provide substantial information about Khosrow's conduct of the \*Persian–Roman wars, and contemporary \*Syriac writers, including \*John of Ephesus and Ps.-\*Zacharias Rhetor, give a sense of the effect of these military operations on the people who lived in the Roman \*frontier areas.

### Internal reforms

Khosrow continued reforms begun by his father \*Qobad (Kawad) I. These encompassed the \*army, the \*economy, the \*administration, and the \*law and were designed to stabilize the \*Persian Empire's finances and military power as well as to reduce the wealth, influence, and power of the \*aristocracy. Sasanian armies had previously been commanded by a single general, but in order to confront the Romans, Huns, and steppe nomads, Khosrow divided command among four generals (MP \**spāhbed*), one for each quarter of his Empire.

Khosrow I's tax reforms reduced the burden on the peasantry, introducing a fixed rate of taxation based on a land survey, as well as on a means-based poll-tax. Khosrow I's agricultural reforms provided land to dispossessed farmers and financial assistance in the case of disaster. In addition to rehabilitating the empire's agricultural production it was intended to foster small, easily taxable farms and frustrate the operation of large tax-exempt plantations dominated by the aristocracy.

The administrative \*seals for such offices as the accountant (*amargar*), governor (*shahrab*), priest (*mow*), high priest (*mowbed*), generals, and many more became standardized. Khosrow empowered the \**dehqan* (landed gentry) to serve as the backbone of his economic reforms and is celebrated for putting down the heresy of the Zoroastrian priest \*Mazdak. Because of his legal reforms and his administration of justice, Khosrow was given the title of *Dadgar*, 'Dispenser of Justice'. He gained his better-known honorific, Anoshirvan (NP 'of the Immortal Soul'), for strengthening \*Zoroastrianism and preserving the well-being of the Iranian Empire.

### External relations

Middle \*Persian sources credit Khosrow I with building the Gorgan \*Wall, which stretched from the eastern shore of the Caspian Sea to stop nomadic inroads into the Sasanian Empire. The \*Derbent Wall from the west coast of the Caspian to the Derbent Pass was built partially with financial aid from the Romans, given for the defence of the \*Caucasus Passes, and was constructed at least in part during Khosrow's reign.

Khosrow I inherited the conflict with the Romans which his father Qobad had renewed in 530, but in the summer of 532 made the \*Everlasting Peace, receiving a

subvention of 11,000 lbs of \*gold from the Emperor \*Justinian I. In 540, urged on by emissaries from the \*Ostrogoths in \*Italy (Procopius, *Persian*, II, 2), he unilaterally breached this agreement and invaded \*Syria (Procopius, *Persian*, II, 2–13); he sacked \*Antioch, bathed in the Mediterranean at \*Seleucia Pieria (Procopius, *Persian*, II, 11, 1), and held chariot races in the \*circus at \*Apamea where he insisted that the horses of the Blue Faction, that favoured by Justinian, should lose (Procopius, *Persian*, II, 11, 31–5). The citizens of Antioch he captured he transported to Persian territory where he used them to populate a new city he founded south of \*Ctesiphon called \*Weh-andiōghusraw, the Better-Antioch-of-Khosrow. In 545 the two empires agreed to cease hostilities in Mesopotamia and Syria.

However, in 541 Khosrow had invaded \*Lazica, at the eastern end of the Black Sea, so inaugurating a persistent conflict at the northern end of the Roman–Persian frontier. This fighting is described in detail by Procopius (up to 552) and then Agathias (552–8); it was to last until a general truce was arranged in 557. This was consolidated in 562 by a \*Fifty Years Peace, negotiated only after colossal expenditure by the Romans.

The Fifty Years Peace lasted only a decade. In 572, \*Justin II, the successor of Justinian, sent Roman troops to raid the Persian border region of \*Arzanene—it is characteristic of most Roman attacks in these wars that they seldom penetrated very far into Persian territory. The following year the Romans laid siege to \*Nisibis, but left when Khosrow arrived with an army. Khosrow then proceeded to besiege, capture, and hold the key Roman fortress-city of \*Dara, a loss which caused Justin II to go out of his mind (\*Theophylact Simocatta, III, 10–11). After a series of brief truces, Khosrow invaded \*Armenia unsuccessfully in 576 (John of Ephesus, *HE* III, 6, 8–9); his failure apparently prompted him to resolve that it was unseemly for a King of Persia to take part in military campaigns (Theophylact Simocatta, III, 14, 11). After several more years of fruitless peace negotiations, in 578 Khosrow violated a truce by sending troops to ravage the environs of \*Constantia-Tella and \*Resaina (Theodosiopolis), while an army under the command of the general \*Tamkhosrow marched south through \*Armenia Quarta to threaten \*Amida. The future Emperor \*Maurice retaliated by invading Arzanene and then attacking Nisibis and \*Singara, but early in 579 Khosrow died, leaving the conflict unresolved (\*Theophylact Simocatta, III, 15, 11–16, 7).

### Patron of philosophy and art

Although his status as philosopher prince was viewed with scepticism by Agathias, Khosrow I was a significant patron of science, \*philosophy, and the arts. He sponsored a campaign to translate Sanskrit and

Greek texts into Middle Persian and even briefly housed Greek \*philosophers who had left \*Athens after Justinian I disendowed the \*Academy there. Khosrow I was involved with the construction of the \*Taq-e Kisra near \*Ctesiphon, which represents one of the Empire's greatest architectural achievements. Under Khosrow \*Persian coinage underwent a narrowing of the denominational spectrum, with only gold dinars, \*silver drachms, and small coppers minted, as well as a thinning of the flans and a stylistic movement towards extreme abstraction. He was remembered throughout the Islamic medieval and early modern periods not only as a promoter of justice but also as an ideal king who was interested in philosophy and literature. His name *Kisra* in \*Arabic and New Persian has remained synonymous with the glory of Sasanian kingship throughout the Islamic period.

**Khosrow II Aparwez (MP Husraw II)** (AD 590–628) The last great king of the \*Sasanian dynasty to rule the \*Persian Empire before the \*Arab conquest.

Khosrow was the son of \*Hormizd (Ohrmazd) IV. As a young man he had been a successful governor in \*Iberia. In February 590 his father was deposed and Khosrow was crowned in his place, but his right to the throne was challenged by the general \*Bahram (Wahram) Chobin, who felt that his successes on the north-eastern \*frontier had not received proper recognition. Khosrow took refuge in the Roman Empire and in the course of 591, with considerable military and monetary aid from the \*Emperor \*Maurice, returned to recapture the Persian throne, and set about punishing those who had a hand in deposing and blinding his father. Bahram VI Chobin fled to the north-east and was killed at Khosrow's instigation, while \*Bistam (Wistahm), his uncle who had also proclaimed himself king, held out for a while in the north, by the Caspian Sea.

The Emperor Maurice had proclaimed Khosrow his adopted son, so when in 602 \*Phocas usurped power at \*Constantinople and assassinated Maurice and his \*family, Khosrow invaded the Roman Empire. This invasion was not a matter of raid and withdrawal, as practised by Khosrow's grandfather \*Khosrow I, nor was it a border war of attrition like that of the years 572 to 589; it aimed at the full-scale occupation of Roman territory. Between 604 and 619 the two generals, \*Shahin and \*Shahrwaraz (Shahrbaraz), succeeded in conquering \*Syria, \*Palestine, and \*Egypt

(604–19), before turning to \*Anatolia, which was overrun between AD 619 and 622, till eventually in 626 a Persian army, allied with 80,000 \*Avars, laid siege to \*Constantinople itself.

In the meantime, in 610 Phocas had been overthrown by the Emperor \*Heraclius. Three ambassadors were sent to \*Khosrow to sue for peace, but Khosrow maintained that the rightful Roman emperor was \*Theodosius, son of Maurice, a young man Khosrow claimed was residing at the Persian court, so Heraclius' overtures were rebuffed and his three ambassadors executed. Heraclius proceeded to stage a great counter-invasion that would set in motion the final collapse of the Sasanian Empire. Proceeding southwards from the Caucasus, Heraclius devastated Sasanian territory, even sacking the great \*Zoroastrian \*fire temple of Adur Gushnasp at \*Takht-e Solayman. In 628 the victorious Heraclius withdrew but only after Khosrow II was deposed and killed by the Persian \*aristocracy and the Zoroastrian priesthood.

Despite his hubris and catastrophic end, Khosrow II was celebrated in literature written after the \*Arab conquest of \*Iranshahr for his opulence and the magnificence of his \*court. Many famous poets and singers (MP *gosan*) are associated with his rule, the most famous of whom is \*Barbad, who composed a song for each day of the year. Khosrow is celebrated in \*poetry for the love he had for \*Shirin, his beautiful Christian wife, and for possessing seven wondrous treasures, including the \*Taq-e Kisra, an enormous throne (the Takht-e Taqdis), and a \*crown that was so heavy that it had to be suspended from the ceiling above his head when he sat enthroned with his sword between his knees.

His \*coinage introduced new artistic and propagandistic forms and messages, elements of which were later copied both in early \*Islamic coinage and on the Arab-Sasanian coinage of Tabaristan. The inclusion of the word \**Xwarrah* (MP: glory, fortune) on the coin legends of Khosrow represents the ancient Persian and Zoroastrian imperial ideology that he revived. He also placed the old Persian title of King of Kings on his special issue coinage. He issued millions of \*silver coins (MP \**dirham*), which were used to pay for his campaigns against the Roman Empire.

Khosrow II is portrayed in the large \**ayvan* at \*Taq-e Bostan near Kermanshah, standing between the Zoroastrian great god \*Ohrmazd and the goddess \*Anahid. He appears taller and more majestic than both deities; the fully armoured horseman carved below the three standing figures is thought also to represent the king. The side panels of the *ayvan* depict royal \*hunting, a rare representation of life at the Sasanian court; the detail resembles that worked into Sasanian \*textiles. Numerous other sites are tentatively associated with him, including the unfinished \*rock relief at Terash-e

Farhad and the hunting park at Bisotun, the palace at Kangavar, and the walled garden which forms part of the estate attached to the palace at \*Qasr-e Shirin. TD *EnclIran* (2010) s.n. Kōsrow II (J. D. Howard-Johnston).

J. D. Howard-Johnston, *Witnesses to a World Crisis: Historians and Histories of the Middle East in the Seventh Century* (2010) is a comprehensive and detailed analysis of the complex sources.

Daryaei, *Sasanian Persia*.

Canepa, *Two Eyes*.

Pourshariati, *Decline and Fall of the Sasanian Empire*, 130–60.

**Khosrow III** (r. c. 630) According to \*Tabari (V), Khosrow was a usurper from \*Khuzestan who exercised provincial control briefly during the reign of Queen Azarmidokht. A certain Khorrazadh Khosrow succeeded him but never exercised effective power. Some cite inconclusive numismatic evidence that might attest to a separate provincial claimant to the Persian throne. This Khosrow would have held sway in \*Khorasan briefly during the reign of \*Shahrwaraz. TD *PLRE* III, Chosroes III.

N. Schindel, 'Sasanian Coinage', in D. Potts, *Oxford Handbook of Ancient Iran* (2013), 814–39.

**Khotan (Yutian)** City in Chinese Turkestan, located on the southern edge of the \*Tarim basin, east of \*Kashgar. The origins of the kingdom of Khotan are unclear, appearing in Chinese annals first in the 2nd century BC (*Zhou-shu*, 10–11). After submitting to the Chinese in AD 73, it regained its independence c.150, until the \*Hephthalites invaded in the mid-5th century, controlling the area until the mid-6th century. The Khotanese were Iranian-speaking \*Buddhists and the city was visited by various Buddhist travellers, including \*Faxian (8–13; 179–81), Song Yun, and \*Xuanzang (II, 309–24), who describe Khotanese language, music, customs, and religious life, including the many monasteries and monks. After Khotan came under Chinese rule again in 648, it was designated one of the 'Four Garrisons' of Anxi, along with Kashgar. The Persian *Hudud al-'Alam* of 982/3 includes Khotan in its description of \*China (85–6). Khotanese documents (5th–10th cent.) provide valuable information on Khotanese relations with Chinese, Tibetans, and \*Uighurs. The 11th-century Muslim conquest under the Qarakhanids spelled the end of both Buddhism and the Khotanese language in the area. MLD

**Khotanese language and literature** Eastern Middle Iranian language spoken in the Saka Kingdom of \*Khotan (on the \*Tarim Basin), extant in two dialects: Khotanese and Tumshuqese. The extant texts found in the Tarim basin cities of Khotan, \*Dunhuang, Tumshuq, and Maralbashi (5th–10th cent.), are mostly written on paper (manuscripts and rolls) in several varieties of the Brahmi script. Although non-religious texts (letters, eulogies, poems, medical texts, and official reports) have been found, most Khotanese manuscripts are \*Buddhist, primarily translations from Sanskrit or Prakrit, but also 'folk religious' texts (\*amulets and omen texts). Bilingual manuals and vocabularies indicate the multilingual contacts that Khotanese had with speakers of Sanskrit, Chinese, Tibetan, and Turkic. Metrical verse is a common literary form, including in letters. MLD

**Khuzestan** South-west Iranian province bordered by Iraq to the west, Luristan to the north, the Persian Gulf to the south, and \*Fars to the east. Important \*Sasanian settlements included \*Susa, \*Gondeshapur, and Eran-xwarrah-Shapur-shahrestan (mod. Ivan-e Kerkha; Syr. Karka d'Ledan). The province (Beth Khuzaye) had a large Christian population, attested from 410 onwards, with four bishoprics (Hormizd-Ardashir, Shushtar, \*Susa, Ram-Hormuz) and an archbishop at \*Gondeshapur; many of their activities are recorded in the 7th-century \**Chronicle of Khuzestan*. The province was conquered by the \*Arabs in the 640s. DTP

**Khwarezm (Khwarazm, Chorasmia)** Region of \*Transoxiana on the lower course of the \*Oxus River, comprising a large delta flanked by the Aral Sea to the north, the Qizilqum desert to the east, the Qaraqum desert to the south, and the Ustyurt Plateau to the west (\*Xuanzang, I, 35; Markwart, *Catalogue*, 11; *Hudud*, 121; *Muqaddasi*, 253–4). Initially under Achaemenid rule, the Khwarezmians are mentioned by Strabo (XI, 8, 8) and \*Ptolemy (VI, 12, 4). Following a period of Parthian rule, the emergence of a distinctive regional identity—reflected

in the \*Khwarezmian script, coinage, and calendar—suggests independent rule in the 1st century.

Al-Biruni (c. AD 1000), a Khwarezmian patriot, describes the rule of the Afrighid dynasty (305–995), Khwarezmian months and festivals, and local religious traditions, both \*Zoroastrian and Christian (al-Biruni, 40–2, 57–8, 223–30, 282–98, 306–20), although his dates are not always reliable. Khwarezm's economy was based on agriculture and trade, especially with the northern steppe and the Volga basin. Although conquered by the \*Arabs under \*Qutayba b. Muslim (AD 712), native Khwarezmian culture persisted and the Khwarezmshahs adopted \*Islam only in the 9th century. Khwarezm supplied many troops to the armies of the \*Abbasid \*caliphate (al-\*Ya'qubi, 27). MLD

### **Khwarezmian (Chorasmian) language and literature**

Eastern Middle Iranian language formerly spoken in \*Khwarezm (Chorasmia). The Middle Khwarezmian script, based on Aramaic, is preserved on coins, pottery and \*silver vessels, wood and leather documents, and ossuaries (c. AD 200–700). After the \*Arab conquest, Late Khwarezmian was written in modified \*Arabic script, preserved in the calendrical and astronomical works of al-Biruni and lexical and legal works of other Khwarezmian scholars, all writing in \*Arabic (AD 1000–1354). Khwarezmian vocabulary includes many words from the \*Avesta, perhaps evidence of ancient ties between the region and the \*Zoroastrian scriptures; the language ultimately died out due to Turkification. **Kidarites** A ruling dynasty of the Kidarite \*Huns/\*Chionites who took over \*Bactria from the Kushans and possibly governed from \*Balkh. Their ruler Grumbates supported the \*Sasanians against the Romans; the death of his son at the siege of \*Amida in 359 is described by \*Ammianus Marcellinus (XIX, 1, 7–11). By the 410s, the Kidarites had conquered Gandhara, but the Guptas successfully blocked their expansion into \*India in the 450s. The Sasanians attacked Kidarite Bactria in 442,

and the Persian Shah \*Peroz (r. 459–84) conquered Bactria in 467. Peroz's \*Hephthalite allies conquered Kidarite Gandhara soon afterwards. ABA

**Kinda** See HUIRIDS.

**Kindi** See HUIRIDS.

**King Arthur** See ARTHUR, KING.

**kingship, Germanic barbarian** Romans labelled leaders of adjoining tribes or political entities 'kings', *reges* (e.g. \*Pliny, *Historia Naturalis*, VI, 183; *reges Aethiopum*; \*Jordanes, *Getica*, 55, 282: Babai *Sarmatarum rex*). In general from the 1st century AD barbarian societies were dependent on and formed by Roman economic and military needs, politics, and structures, and Roman terminology dominates the sources. This makes it nearly impossible to distinguish between older and more recent structures; we can trace change only in societies at the periphery of the Empire. It is therefore doubtful whether specifically 'Germanic' kingship ever existed. At least the problem has been overloaded with presuppositions since the 16th century.

Older research postulated that in pre-Roman times there was a sacral kingship exercised by a people's king (*Volkskönigtum*), and that this was followed by a military leadership (*Heerkönigtum*) which took shape during the

Migration Period. Both prototypes were embedded into a Germanic past as found in Tacitus, *Germania*, 7 'reges ex nobilitate, duces ex virtute summunt'—'they choose kings from the nobility and leaders from strength'. The \*Ostrogothic and \*Greuthungic warriors had a prominent leader with extensive powers, namely \*Ermaneric. \*Ammianus Marcellinus, XXXI, 3, 1–2 labels him a *bellicosissimus rex*, a most warlike king. In contrast a *iudex* ('judge') led the \*Tervingi as long as they were farmers. Only after they had entered the Empire, and a generation of specialized soldiers had taken over, was the Terving \*Alaric labelled *rex* (king), while being at the same time a high-ranking Roman officer.

**kingship, Persian** The \*Sasanian dynasty fashioned a new image of divinely inspired kingship that encompassed or superseded all previous Iranian traditions, especially those of the Arsacid dynasty which they sought to delegitimize. They incorporated eastern Iranian ideas, such as the \**xwarrah* (Avestan *xvarənah-*), a somatic glow and marker of divine fortune which inhabited the king during his reign, and thus linked him to every rightful Iranian ruler since the first king of humanity, Yima. As manifested in what can be reconstructed of their official epic the \**Xwāday-nāmag*, which inspired the epic *Shahnameh* (*Book of Kings*) of the medieval poet Ferdowsi, they forged a continuous royal genealogy that traced their dynasty through the half-remembered Achaemenids back to the mythological Kayanid dynasty. Only a member of the Sasanian bloodline could be king. Any physical deformity or blindness disqualified a candidate, inviting mutilations as a way to eliminate rivals.

Like the Late Roman \*emperors, the Sasanian kings were sacred and inspired, and discharged a divinely ordained purpose, but were not themselves gods. The clearest expression of early Sasanian kingship in a primary source comes from \*coin legends and \*inscriptions; the standard coin legend stabilized under \*Shapur I as 'the Mazda-worshipping Lord Shapur, King of Kings of Iran and non-Iran, of divine nature' (MP *mazdēsn bay šāhbūhr šāhān šāh ī Ērān ud Anērān kē čībr az yazdān*). Sasanian kings began incorporating Kayanid titles in the 4th century, eventually overtly calling themselves *Kay*

('Kayanids'). Simultaneously, Sasanian titles and royal iconographies begin to emphasize the king's astral nature and functional similarity with the heavenly luminaries (MP *xūb rōšnān*): the Sun, Moon, and fixed stars. The \*court adapted this in diplomatic usage to characterize the relationship between the Sasanian and Roman sovereigns as the two eyes of the earth, the two great lights (Lat. *lumina*, Gk. *photos*: e.g. \*Peter the Patrician, fr. 13).

Originally the Sasanian monarch was truly a King of Kings (*Shahanshah*), but as early as the 3rd century the Sasanians began replacing the subsidiary kings (*shah*) of all the major provinces with members of the Sasanian family. By the 6th century, military \*governors (\**marzban*) had replaced provincial kings, as power became increasingly centralized. In their court \*architecture and ceremonial, the late Sasanian kings portrayed themselves as chiefs of all earthly kings, ruling at the centre of the world. The images, ideologies, and court culture of Sasanian kingship were immensely influential in Late Antiquity, affecting, not least through \*diplomacy, the evolution of Late Roman ruler representation, the iconography of Central Asian kingship and \*Buddhism, and the tastes of the Tang court in \*China. **Kirkuk** (Syr. Karka d-Beth-Slokh, in 'Citadel of the House of Seleucus') was a Seleucid foundation built on the Assyrian city of Arrapha, between the Upper and Lower Zab rivers. Karka's Parthian ruler allied himself with \*Ardashir I, the first \*Sasanian King, to overthrow the Arsacids. In \*Shapur I's twentieth regnal year, \*Mani's disciples, Addai and Abzakiya, began to convert some of Karka's inhabitants to Manichaeism.

The *History of \*Karka d-Beth Slokh*, a 6th-century \*Syriac text, mentions a Christian community established there from the 2nd century. The \*martyr passions of those who suffered in \*persecutions of the Christians preserve the names of the city's martyrs put to death under \*Shapur II and \*Yazdegerd II. In the 4th century, Karka became the \*metropolitan see of the \*Church of

the East for Beth-Garmai (the Sasanian province of Garmegan). A church built in the 8th/9th century was dedicated to Tahm-Yazedgerd, a Mazdaean \*governor who was converted to Christianity, and was crucified c.445.

**Kirman (Kerman)** Province of south-east Persia between \*Fars and \*Sistan, ancient Carmania (Strabo, XV, 2). The province was known for \*silk and cotton manufacture. Its main Late Antique \*cities were Sirjan, Bardasir, Bam, and the Gulf port of Hormuz. The \*Arab conquest took place here between 638 and 650.

PAW

*EI* 2 vol. 5 (1986) s.v. Kirmān, 147–66 (A. K. S. Lambton).

**Kish** Late \*Sasanian settlement (Mound H), to the east of the former Sumerian city in Iraq (Tell Ingharra), abandoned in the late 6th century. Wealthy houses or \*palaces were excavated at Kish in the early 1930s. Some of these had \**ayvans*, sunken pools, or \*baths and elaborate \*stucco ornamentation, with geometric, \*foliage, animal, and heraldic designs (cf. \*Ctesiphon, Tepe Hissar), as well as several male and female busts. The \*crown on one of the busts may be identifiable as \*Bahram V. Jewish \*Aramaic \*incantation bowls were found in the uppermost deposit on the site.

**kishwar** See CLIMES, PERSIAN.

**kiss** In the Late Roman world kissing might express intimacy, loyalty, \*patronage, submission, respect, veneration, or worship. \*Servius, the commentator on \*Vergil, distinguishes three varieties of kiss: the *osculum* given to sons, the *basium* given to one's wife, and the *suavium* or *savium* ('sweet one') given to a \*prostitute (*Commentary on the Aeneid*, 1, 260). \*Origen's father kissed his son's breast while he was sleeping 'as if a divine spirit were enshrined in it' (\*Eusebius, *HE* VI, 2, 11). The kiss of betrothal had a certain force in Roman \*law (*CTh* III, 5, 6 = *CJust* V, 3, 16 of 335).

The kissing which occurred in public life was not familial or erotic; \*Ammianus, for one, had not

forgotten the story of the \*senator who was disgraced by Cato for kissing (*osculari*) his wife in front of their own daughter (XXVIII, 4, 9). But an admirer might kiss the feet of a \*rhetorician in appreciation of a good speech (\*Eunapius, *Lives*, 489 on \*Proaereius). A \*patron might expect to be kissed on the cheek by his client; Ammianus found offensive proud senators who offered instead their \*hands to be kissed, or even (as if receiving a suppliant) their knee (XXVIII, 4, 10). A kiss could confer honour, as when \*Constantine I kissed the empty eye sockets of a Christian blinded in the \*persecutions (\*Socrates, I, 11), or it could give offence, as when \*Julian ran out of the \*Senate of \*Constantinople to kiss one of his \*philosopher friends (Ammianus, XXII, 7, 3).

Kissing was also an act essential to political life. The \*Comes Orientis was obliged to kiss the members of the \*city council at \*Antioch on the \*Kalends of January, says \*Libanius, but in 385 Icarius the Comes had given offence by kissing only one of them (*Oration* XXVII, 12). Those who had served in the \**protectores* and \**domestici* enjoyed the same right of osculation (*jus osculandi*); indeed for a \*Vicarius to withhold it was a sacrilege (*CTh* VI, 24, 4 of 387).

The reason that *protectores* and *domestici* had the *jus osculandi* from a Vicarius was that they had previously kissed the \*purple robe of the \*Emperor (\**adoratio purpureae*). The right to adore the imperial purple was the perquisite of high officials in the imperial \*administration. Indeed it was the ceremony by which they were admitted to imperial favour; Ammianus describes his old chief \*Ursicinus being readmitted to the favour of \*Constantius II by being offered the purple 'much more gently than before' (XV, 5, 18). Legislation specifically excluded lower-level officials from attempting to exercise this right (*CTh* VIII, 1, 3 of 382; VIII, 7, 4 of 354; VIII, 7, 16 of 385). Till \*Justinian I, so \*Procopius claimed, \**patricii* had enjoyed the right to kiss the emperor's right breast while the emperor kissed the patrician's head. Justinian insisted all had to kiss his feet—and those of the \*Empress \*Theodora (*Anecd.* 30, 34; cf. \*Corippus, *In Laudem Justini Minoris*, 158; *Johannidos*, I, 155).

Kissing was commonplace as a religious gesture. A person passing the statue of a pagan god would commonly kiss his hand to it (Minucius Felix, 2, 4). For Christians, kissing had particular resonance. From the earliest times they greeted each other with a holy kiss (1 Thessalonians 5: 26)—but only one (\*Athenagoras, *Legatio*, 32). It was the custom to kiss the hand of a \*bishop (\*Paulinus, *Life of Ambrose*, 4) and the kiss of peace formed part of the \*Eucharist (e.g. Justin Martyr, *Apology*, I, 65; \*Council of \*Laodicea, 19), though it was exchanged at different points in the \*liturgy in different places. \*Egeria describes the ritual of kissing the Relic of the True \*Cross at \*Jerusalem on Good

Friday (37, 2–3; cf. \*Piacenza Pilgrim, 20). Origen solemnly and courageously kissed his pupils from the Catechetical School of \*Alexandria as they were led away to \*martyrdom (\*Eusebius, *HE* VI, 3, 4; cf. *Mart. Pal.* S&L 2, 20). OPN

M. Penn, *Kissing Christians: Ritual, Community, and the Late Ancient Church* (2005).

M. B. Pharr, 'The Kiss in Roman Law', *CJ* 42 (1947), 393–7.

**Kiti** The 11th-century domed cruciform church of the Panagia Angeloktistos incorporates an earlier \*apse with late 6th-/early 7th-century \*mosaic decoration, the best preserved of the three apse mosaics in \*Cyprus pre-dating the \*Iconoclast Controversy (cf. \*Lythrangomi). It depicts a standing Virgin \*Mary, identified as 'Hagia Maria', holding Christ in the Hodegetria posture, flanked by archangels, and a fountain of life border decoration with ducks, parrots, and \*deer (recalling Psalm 42 (41): 1). RKL

A. Foulias, *Die Kirche Panagia Angeloktisti in Kiti bei Larnaka* (2004).

A. H. S. Megaw, 'Mosaici parietali paleobizantini di Cipro', in *XXXII Corsi di Cultura sull'Arte Ravennate e Bizantina* (1985), 173–98.

**Kitros** (near Makrygialos, Greece) Coastal \*city, successor to classical Pydna in \*Macedonia Prima. \*Goths were allowed to settle in the area in 479 (\*Jordanes, *Getica*, 288). Archaeology has located a small fort with \*basilica on the acropolis of Pydna inhabited into the late Middle Ages. In the neighbouring locality of Louloudies, a fort and a separately fortified ecclesiastical complex of the 5th to 6th century have been located by excavation and survey. The name Kitros prevailed after the 6th century. ER

Ćurčić, *Architecture in the Balkans*, 138–9.

A. G. Poulter et al., 'Field Survey at Louloudies', *ABSAthens* 93 (1998), 463–511.

**kleros** See SORS.

**Kokhe** \*Sasanian city founded opposite \*Ctesiphon on the west bank of the Tigris. Located to the east of the dead city of \*Seleucia ad Tigrim and across the former course of the Tigris, the site had been occupied in Parthian times. The name (Coche: \*Ammianus Marcellinus, XXIV, 5, 3; Sabaic *kwk*) possibly derived from Aramaic *kōkā* ('reed hut').

Kokhe was expanded, fortified, and refounded as (MP) Weh-Ardashir ('good' or 'noble' city of Ardashir; Talmudic Be Ardashir, Ar. Behrasir) c.230 by \*Ardashir I. It may have been the city \*Carus captured in 283

(\*Eutropius, IX, 18; \*Festus, *Breviarium*, 24). \*Gregory of Nazianzus, in his *psogos* against \*Julian the Apostate, refers to the 'fortress' at Kokhe located across from the 'fortress of Ctesiphon', that 'makes Ctesiphon even stronger' (*Oration*, 5, 10). The city held the Dungeon of Oblivion, one of the Empire's most feared prisons, from which \*Qobad I escaped after being confined there following his deposition (\*Procopius, *Persian*, I, 5, 7–6, 9) and where George \*Bishop of Mount \*Izla was imprisoned during the reign of \*Khosrow II.

The church at Kokhe was the seat of the \*metropolitan of \*Seleucia-Ctesiphon, whose cathedral was possibly one and the same as the church discovered at Qasr Bint al-Qadi. An important seminary was founded in the city in the 5th century. Sasanian East Syriac sources—particularly when referring to the councils of the \*Church of the East held there—often refer to Kokhe as Seloq (from Seleucia), the name of the first (but by then defunct) city of the conurbation of Seleucia-Ctesiphon. DTP; MPC

**Köl Tegin** (d. 731) Son of \*Elterish, first \*Khagan (Qaghan) of the Second \*Türk Empire, and younger brother of the third Khagan Bilga (r. 716–34). When the second khagan, their uncle Kapghan, died, Köl Tegin carried out a coup, killing Kapghan's son, and installing Bilga as khagan. Together with his brother, he led many military campaigns to consolidate the empire, into the northern steppe, north-east \*China, the \*Tarim basin, and \*Sogdiana. The \*Orkhon inscriptions present him as a brave and tireless warrior. Although he defeated the \*Türgesh in 712, the latter reasserted their power under their new Khaghan \*Suluk in 716, after which the Western Türks were again independent from the Eastern Türks. MLD

**kontakion** Christian \*Greek hymn sung to a metrical tune. *Kontakia* elaborate on the theology of biblical readings proper to liturgical feasts, and therefore resemble \*sermons in verse. Their distinctive structure comprises a short thematic prelude followed by long stanzas sung by a \*cantor, interspersed with an unvarying congregational refrain. The initial letter of each stanza forms an \*acrostic. The principal composer of *kontakia* was \*Romanus the Melodist (fl. 540), who either invented the genre or adapted \*Syriac poetic forms to the Greek language. Its original liturgical context was not monastic but the vigil service attended by the laity.

**Koriwn** (c.390–447) The youngest pupil of \*Mashtots' (Maštoc'), the inventor of the \*Armenian alphabet. Koriwn belonged to the circle of translators who helped create an Armenian sacred library in the years after the invention of the alphabet in 406. Along with another student, \*Levond, he joined a group of Armenians including \*Eznik who were perfecting their command of the \*Greek language in \*Constantinople. According to Koriwn's own testimony, they made \*translations together into Armenian of the books of the \*Bible, patristic works, and the canons of the Councils of \*Nicaea and \*Ephesus (Koriwn, *Life of Mashtots'*, 19). Koriwn is credited with the translation of the three Books of Maccabees. After the death of Mashtots' in 439, he was tasked by another former student of Mashtots' who was at the time spiritual leader of the Armenian Church (Yovsēp Vayoc'jorec'i, *locum tenens* 440–52), to compose a *Life* of his master (Koriwn, *Life of Mashtots'*, 1). The work, which documents Mashtots's invention of the alphabet and the activities of the early translation movement, is the first known

original composition to have been written in Armenian. The name 'Koriwn' means 'lion cub'. SVLa

**Kostolac** See VIMINACIUM.

**Kourion** Coastal clifftop \*city in \*Cyprus between \*Paphos and Amathus, with a walled acropolis and extra-mural sanctuary of Apollo Hylates to the west and a necropolis to the east. Kourion suffered severely in the massive \*earthquake of 365 and was never fully restored. The theatre and \*Temple of Apollo were abandoned and the stadium was out of use c.400. There was some rebuilding in the early 5th century, perhaps associated with the \*Bishop Zeno, known from the \*Council of \*Ephesus of 431.

The important series of Roman \*inscriptions includes lead \*curse tablets, *defixiones*, of the 3rd century, many featuring legal disputes, and exhibiting valuable social and economic details such as quarrels over domesticated \*animals, the popularity of particular names, and the presence of a \*Jewish community (BM inv. no. 91.04–18, 1–17). Wealthy houses excavated close to the city \*gate include the House of \*Gladiators of the later 3rd century, damaged in the 365 earthquake, with a courtyard \*mosaic showing rare scenes of gladiatorial combat, and the House of Achilles of the first half of the 4th century, with a possible *apanteterion* for visiting officials and a mosaic depicting the discovery of Achilles on Skyros.

The early 5th-century Episcopal \*Basilica, probably on the site of the Constantinian civil basilica, has three aisles with outer corridors, probably for catechumens, and was reworked in the 6th century with a new east end and \*synthronon; fragments of mosaic wall from a side chapel show two church fathers and an archangel. A processional \*baptistery stood on the north side of the church.

Three other basilicas have been identified. The extra-mural basilica north-west of the city of the late 5th/mid-7th century, with a tomb in the north \*apse, possibly housed a \*martyr cult. The Limeniotissa Basilica, with a *mensa martyris* in its south apse, was possibly related to the cult of S. Hermogenes. The Nymphaeum Basilica, on the site of Roman public \*baths, was abandoned after the earthquake.

The House of Eustolios, of the early 5th century, the only fully excavated secular building from the Early Christian period in Cyprus, has mosaic floors, predominantly geometric, with \*fish and numerous \*birds. The representation of Ktisis in the frigidarium of the baths is the only such mosaic personification found in Cyprus,

though common in nearby \*Antioch. Inscriptions refer to the native-born but absent \*patron Eustolios, and both Apollo and Christ.

The Episcopal Basilica was intentionally dismantled sometime after 670, perhaps because the \*water supply failed. The settlement was relocated to lower-lying Episkopi.

### Krefeld-Gellep (Nordrhein-Westfalen, Germany)

The *castellum* of Gelduba on the lower Rhine \*frontier was rebuilt in wood within a stone rampart, probably under the \*Tetrarchy, and enlarged early in the 4th century. It was destroyed during the reign of \*Magen-tius, but totally rebuilt under \*Valentinian I, when barracks were anchored to the fortification wall. Pro-jecting semicircular towers were added c.380, along with a system of advanced defensive ditches. Occupa-tion continued in the 5th century.

The adjacent \*cemetery, in use from the days of Nero through to the \*Merovingian period, is among the largest known in the region, with over 6,000 graves (both cremations and burials). It was used by the local population as well as the garrison of the fort, who included Germanic auxiliaries with distinctive grave-goods in the Late Empire, and people of all classes in Merovingian times. Within this context of unbroken occupation two zones with contrasting orientations may be distinguished. During the earlier 4th century very many inhumations took place in well-aligned rows, oriented north-south, and including abundant funerary deposits of \*pottery and \*glassware. In the later 4th century the orientation shifts to west-east, with grave-goods much reduced, except in distinctively Germanic graves with weapons. From the mid-5th century the funerary assemblages assume a typically Merovingian character (\*arms, personal ornament, biconic vase) that persists for two centuries. A new funerary zone devel-oped at the western margin of the older necropolis. It probably began with a princely burial under a tumulus, which included a helmet, a sword, \*gold and gold-\*cloisonée personal ornaments (a horse-bit among them), glass and \*bronze vessels, and an imitation gold \*solidus of \*Anastasius I among the grave-goods. Other high-status male and female burials then devel-oped around this founder grave.

*Tagung des West- und Süddeutschen Verbandes der Altertums-forschung, Kempten, 1995* (BAR IntSer 704, 1998), 23–33.

The excavations were published by R. Pirling in six volumes of the series *Germanische Denkmäler der Völkerwanderungs-zeit* under the title *Das römisch-fränkische Gräberfeld von Krefeld-Gellep* (B2, 1966), excavations of 1960–3 (B8, 1974), of 1964–5 (B 10, 1979), of 1966–74 (B 13, 1989), of 1975–82 (B 17, 1997) and, with M. Siepen, *Die Funde aus den Römischen Gräbern von Krefeld-Gellep. Katalog der Gräber 6348–6361* (B 20, 2006).

**Ksar Lemsā** (ancient Limisa) A well-preserved fort located on the south-eastern side of the Tunisian Dorsal, on the Oued Maarouf. Its location is ascribed to the presence of a spring-fed cistern. Rectangular in plan. Its defences included four corner towers and walls 2.20–2.25 m (7 foot 4 inches to 7 foot 5 inches) thick, built with \*spolia from Roman Limisa, above which it is situated on the Djebel Serdj. Construction of the fort has been dated variously to the reigns of \*Justinian I and \*Maurice, with the later date supported by an \*inscription found near the site, referring to the building of a tower between 585 and c.600. SSF Pringle, *Byzantine Africa*, 212–14, 330, and 565.

**ktema** \*Greek term for a piece of land, esp. walled plots such as \*gardens, orchards, and vineyards. It later denoted land worked 'in hand' by members of a large \*estate's \*epoikion or leased to nearby villagers. For the \*Apion \*family the term denoted fields for \*grain, vines, and flax grown on a scale for estate consumption, as opposed to fields sown for fodder (*autourgia*) which seem to have been worked by \*wage-labour and destined for the estate's \*cattle. P. Sarris, however, argues that *ktemata* provided sustenance for the people of the estate while land worked as *autourgia* formed the basis for the family's wealth through market sales, although cash crops may not have been produced in quantity. **Kubrat** (Gk. Kobratos, called Kurt in the Slavo-Turko-Bulgar *Imennik* or *Name-List of Khans*, 20, derived from Turkic *quvrat* 'to bring together') Ruler of the \*Onoghurs (Ononghundur) \*Bulgars (c.605–42/65?). \*John of \*Nikiu (120, 47) reports that he became a Christian in \*Constantinople in 619 under the auspices of the \*Emperor \*Heraclius and remained a Roman ally.

In 635, exploiting internal strife among the \*Avars and western \*Türks, he expelled his Avar overlords, establishing 'Magna Bulgaria'. His divided sons fell under \*Khazar rule or migrated to the \*Balkans, Avar \*Pannonia, and north-eastern \*Italy (\*Nicephoros: 70–1, 86–9; \*Theophanes, 356–8). His burial site is believed to be in \*Malaia Pereschepina (Poltava Oblast', Ukraine).

**Kufa** Garrison founded in \*Mesopotamia after the \*Arab conquest of al-\*Mada'in (\*Ctesiphon) in c.638. Initially settled by Sa'd b. Abi Waqqas during the \*caliphate of \*Umar I (r. 634–44), Kufa supplied many of the soldiers who participated in the conquest of \*Khorasan. Kufa was a principal support base for the cause of \*'Ali b. Abi Talib during the \*Arab Civil War (\**Fitna*) of 656–61 and was the site of his assassination in 661. The city was a mobilization centre for the early Muslim armies, the birthplace of Shi'ism and epicentre of a number of \*Shi'ite revolts during the \*Umayyad period, and an early centre of Arab culture and civilization. The centre of Kufa contained the congregational \*mosque, in which the first \*'Abbasid caliph was given allegiance in 750, and the adjacent governor's \*palace—a combination that characterized many early Islamic political centres.

**Kuh-e Khwaja** One of the most important archaeological sites of Parthian and \*Sasanian Iran, located on an island in Lake Hamun, \*Sistan, eastern Iran. The grand mud-brick complex was heavily rebuilt by the \*Sasanian dynasty to serve as a \*Zoroastrian priestly college (\**herbedestān*). It guarded Lake Kayānsih (the now nearly dry Lake Hamun), which held Zoroaster's semen and would produce the Saviour (Saoshyant) at the \*apocalypse. Radiocarbon dating indicates the standing remains preserve at least two phases, c. AD 80–240 and c. AD 540–640.

**Kumluca and Kumluca Treasure** Kumluca is identified by an \*inscription (*TitAsMin* II, 3, 360, no. 939) as ancient Korydalla of \*Lycia and mentioned in episcopal lists until the 12th century. In 1962 about 75 \*silver liturgical and ecclesiastical furnishings, many fragmentary, were found there. They are currently divided between Dumbarton Oaks, Washington, DC (55 pieces), Antalya Museum (17), and private collections in London and Geneva (4).

The silver takes many forms. Multiple types of lighting devices include polycandela, standing \*lamps, and openwork suspension lamps. \*Altar table revetments bear lengthy donor and votive inscriptions. Twenty-nine silver nails used for fastening survive, also a \*copper coin of \*Leo I or \*Zeno, silver-plated \*bronze pincers, a silver ring with carnelian intaglio, and a \*gold sceptre.

\*Silver stamps were found on 30 items, all but one imperial; the stamps covered the tenure of the office of three men as \*Comes Sacrarum Largitionum: Eusebius, Addeus, Ioannis, (c.550–65) The presence of pairs of stamped and unstamped pieces suggests a process of local copying. All the stamped objects, and some others, were presented by Eutychianos the \*bishop. Eight bear inscriptions referring to 'Holy Sion', perhaps the \*monastery of the 6th-century *Life* of S. \*Nicholas of Sion, although this has been identified with ruins south of Ernez, 40 km (25 miles) from the find spot.

**Kuttrighurs** (Kuturgurs, Kotragêrs < Oghuric-Turkic \*\**Qoturoghur* < \*\**Toquroghur* 'Nine Oghurs' late 5th–6th cent.) People derived from the Oghuro-Turkic tribes that had entered the Pontic steppes by 463. Their precise relationship to the early \*Bulgar union (whether they were a constituent grouping or a closely related people) remains unclear. \*Procopius (*Persian*, II, 4, 7–10; *Gothic*, VIII, 5, 1–6), who is the earliest surviving written source to name them, blends various accounts and places them, together with their kinsmen the \*Utrigurs (< Turk. *Oturoghur* 'Thirty Oghurs'), among the 'Hunnish' peoples of the Kuban–Azov–Don River steppe zone. In the early–mid-6th century, the Kuttrighurs and Utrigurs, having evicted the Tetraxitae \*Goths, occupied their lands and moved westward to the area between the Don and the lower

Danube, while the Utrigurs returned to their earlier abode (Procopius, *Gothic*, VIII, 5, 1–23; \*Agathias, V, 11, 1–3). \*Zacharias Rhetor (XII, v–ix), in 555, places them among the nomads of the Ponto-Caspian steppes. In 558/9, Kuttrighur raids induced the \*Emperor \*Justinian I (527–65) to foment Utrighur–Kuttrighur strife leading to their mutual slaughter (Procopius, *Gothic*, VIII, 18, 1–24; VIII, 19, 1–22; Agathias, V, 11, 5–7; V, 12, 1–7; V, 13, 1 and V, 23–5; \*Menander Protector, fr. 2). The brief hegemony of the \*Avars in the Pontic steppes altered the situation. When the Türks drove the Avars to \*Pannonia, Kuttrighur groupings joined them, becoming part of, or the core of, the Bulgars of Pannonia under Avar rule (Menander frs. 12, 5; 6). PBG

# L

**labarum** A military \*standard apparently designed by \*Constantine I, and represented on coins. This was a *vexillum* with a spear shaft topped by a chi-rho in a wreath. A square, \*purple, gem-encrusted \*textile, bearing three imperial *imagines*, was suspended from a cross-bar (\*Eusebius, *VCon* 1, 30–1). After the defeat of \*Licinius the standard on Constantine's coins is shown piercing a snake. The textual description by Eusebius is entirely consistent with Late Roman design and decoration. Used as a personal standard by the \*Emperor, the form apparently also spread to other Roman forces. JCNC

P. Stephenson, *Constantine: Unconquered Emperor, Christian Victor* (2009), 182–7, Pl. 41.

**labour service, private** One way landowners structured their \*estates in Late Antiquity and the early Middle Ages was to divide them into a directly managed ('in hand') portion on the one hand and, on the other, carve out allotments or parcels of land which were then leased to labourers, in return for their agreeing to perform labour services with respect to the directly managed part of the estate. Such services typically consisted of sowing and planting, cropping and harvesting, or assisting with the carriage of goods and supplies. The intensity of such labour services necessarily varied, but such arrangements are attested in Late Antiquity in the documentary evidence from \*Egypt, \*Africa, and \*Ravenna, and with respect to papal estates in \*Sicily. In the late \*Merovingian and Carolingian periods such 'bipartite' or 'bilateral' arrangements would characterize large estates. PS

Wickham, *Framing the Early Middle Ages* (2005).

**Lactantius** (c.250–c.325) \*Latin rhetorician, Christian apologist, and courtier, known since Pico della Mirandola as the 'Christian Cicero' (cf. \*Jerome, *ep.* 58, 10). Lactantius is the first Christian from the world of practical imperial politics whose writings have survived. All that is known of him comes from

his own works and from a few notices in the works of Jerome (particularly, *Chron.* 230e Helm; *Vir. Ill.* 80).

Lactantius came from \*Africa, where \*Arnobius taught him, though nothing in either man's writings suggests that they were acquainted. \*Diocletian summoned him to the imperial residence at \*Nicomedia of \*Bithynia to teach Latin \*rhetoric, presumably to educate aspirants to the \*emperor's enlarged \*administration (cf. *Mort.* 7, 4). Lactantius will have lost his job along with other Christian courtiers when the Great \*Persecution began in February 303. He was still in Bithynia in 305 (*Inst.* V, 11, 15) and in his extreme old age \*Constantine I made him tutor for his son, the ill-fated \*Caesar \*Crispus, in \*Gaul. There is disagreement concerning his movements after 305, in the years which saw the Great Persecution continuing in the eastern half of the Roman Empire and the expansion of Constantine's power in the western half. He may have stayed in Bithynia till 311 and then moved to Gaul (Heck and Wlosok) or have moved west during the persecution, taught Crispus, and then moved back to Bithynia and his old job once the persecution had ended in 313 (Barnes and Nicholson).

Lactantius' greatest work, written during the Great Persecution, was the seven books of his *Divine Institutes*, a comprehensive account of basic Christianity written not for \*Greek \*Neoplatonists but for Latin-speaking middle-brow men like Lactantius' former pupils, and indeed like the Emperor Constantine, many of whose utterances (e.g. in his *Oration to the Saints*) have similarities to Lactantius' theology, and to whom was dedicated a second edition, unfinished at the author's death. The central contention of the *Institutes* is that *religio*, religious practice, and *sapientia*, serious thinking, should inform one another, and that they do so only in Christianity, making it unique in being both practical philosophy and rational religion (IV, 3–4). The first three books expose the silliness (*stultitia*) of Roman civic *religio* and the inconclusive and therefore unpractical character of Graeco-Roman philosophy; the

latter four books expound the implications of the 'new facts' of Christianity for the understanding of world history, for public *justitia* and personal duty, and for the fundamental ends of human life, both for the individual and for the world at large. The seven books make no concessions to \*paganism, whether monotheistic or otherwise; they simply appropriate whatever in Latin literary culture is useful for the explication of Christianity. Later in life, Lactantius produced an *Epitome of the Divine Institutes*.

Before the *Divine Institutes*, Lactantius wrote specifically for fellow Christians a work on human anatomy *On the Workmanship of God*, which, while asserting that the body is God's handiwork, at the same time suggests how a Christian life may be lived in it. His *On the Anger of God*, written after the *Divine Institutes*, argues that those of a philosophical bent who deny that the Most High God can be angry must needs also deny that He is benevolent.

The thesis of *On the Anger of God* is illustrated by 'great and wonderful examples' in Lactantius' fiery pamphlet *On the Deaths of the Persecutors*. This is a highly circumstantial eyewitness account of the years of the Great Persecution, written in 313/15, shortly after the persecution ended in the East, and demonstrating a simple truth, that God gets revenge on emperors who persecute His Christians. The work is like an inverted \*panegyric, spreading blame rather than \*praise. Though highly tendentious, and dedicated to a Christian comrade who had been through nine bouts of \*torture in a Nicomedia \*prison (*Mort.* 16, 3–10), it is replete with valuable contemporary information.

A poem in elegiac couplets *On the Phoenix* is generally held to be by Lactantius. It has been argued by A. Friedrich that the *Symposium* which Jerome says Lactantius wrote in youth survives as the 143 epigrams of the *Symposium XII Sapientum* (\**Anthologia Latina*, 495–638 R). Only tiny fragments of the voluminous \*letters mentioned by Jerome are extant and the *Hodoeporicum* Lactantius wrote about his journey from Africa to Nicomedia is wholly lost. OPN

Drinkwater, *Gallic Empire*, 34–5, 90.

**laeti** Barbarian and provincial troops recruited into the Roman army and commanded by government-appointed *praefecti*, unlike \**foederati* who served under their native leaders.

Twelve *praefecti laetorum* are listed in the \**Notitia Dignitatum*, located in the Gallic provinces (*Not. Dig. occ.* 42). They include *nationes* from both within (Batavi,

Lingones, Nervi, etc.) and outside (\*Franks, \*Suebes) the Empire, representing a centuries-long tradition of drawing on Germanic manpower across northern Europe. Related to these *praefecti* are the 23 *praefecti Sarmatarum gentilium*, listed in the *Notitia* for \*Italy and \*Gaul; they presumably commanded formations of \*nomad \*cavalry from the \*Central Asian steppe. Much modern scholarly energy has been devoted to locating these units and their attendant communities on the ground by analysing \*Alanic place names, and cemeteries in northern France where 'weapons-graves' have been excavated. Such work has enjoyed limited specific success because of the difficulties inherent in identifying ethnicity through material culture. The extension of such studies to \*Britain and elsewhere, their application also to the interpretation of the distribution of military artefacts, has even less plausibility. JCNC

**Lamentations Rabba (Eikha Rabbati)** A hermeneutic rabbinic work, a Midrash, on biblical Lamentations in Hebrew and Aramaic, usually dated to 4th–5th-century AD Palestine. In the popular recension it consists of two formally distinguished parts: (1) A juxtaposition of 34 introductory discourses (Petihot, see LEVITICUS RABBA) which approach mostly Lamentations 1: 1 by first quoting another, apparently unconnected verse from elsewhere in Scripture; this part is missing from the other main recension. (2) A sequential commentary quoting and interpreting the verses of Lamentations in their sequence (see MIDRASH, 2), which often involves also quoting other biblical verses. The interpretation units tend to be merely juxtaposed to each other and are found alongside narrative vignettes (often with folk-story character) and hermeneutic parables. The commentary coverage is very detailed for Lam. 1: 1 and Lam. 1 in general, but becomes noticeably less dense thereafter, in particular for the final chapter on Lamentations 5. Most interpretation units are ascribed to rabbis as utterances, often as disputes; many furthermore overlap with units also found in the Palestinian \*Talmud, \*Genesis Rabba, and the \*Tosefta. AS

Alan Cameron, 'The Origin, Context and Function of Consular Diptychs', *JRS* 103 (2013), 174–207, at nn. 49–51.

Cameron, *Pagans*, 731–6.

**Lampridius, Aelius** Alleged author of four lives in the \**Historia Augusta* covering Commodus, Diadumenianus, Heliogabalus, and Severus Alexander. OPN

**lamps** In the Late Antique Mediterranean world, lamps mostly burned \*olive oil, though candles were also used, including the Paschal Candle made of beeswax, and the candles which \*Gregory of \*Nazianzus (*Oration*, 40) says were carried by the newly baptized after emerging from the font.

Domestic \*pottery lamps were produced in bulk. \*Glass lamps were used in both houses and churches. A metal polycandelon of the sort which hung in grand houses and churches (like that of 577 in the \*Lampsacus Treasure and the slightly earlier examples in the \*Kumluca Treasure) might hold more than a dozen small glass lamps.

Aelius Aristides in the 2nd century mentions the ceremonial lighting of the lamps in the evening at the Temple of Aesculapius at \*Pergamum. Daily evening service was held in Christian churches at least as early as the 3rd century and was known as *Lucernare*, as it was the time of the lighting of the lamps; \*Basil of \*Caesarea indicates that the \*hymn \**Phos hilaron* ('Hail, gladdening light') sung at the lighting of the lamps was ancient already in his day (*On the Holy Spirit*, 29, 73). The estates which provided the oil for the numerous lamps and chandeliers of the Constantinian (Lateran) \*Basilica

at \*Rome had a combined revenue of over 4,000 *solidi* (*Liber Pontificalis*, 34).

Great \*cities had street lighting. The lights of Antioch by night were as bright as in daylight (\**Amianus*, XIV, 1, 9). At \*Constantinople lighting in the workshops in the evenings and at night was an innovation of \*Cyrus, \*Praefectus Urbi in the 5th century (\**Chronicon Paschale* ad ann 450). The colonnades of the Arcadiane, the grand street which ran down to the harbour at \*Ephesus, were illuminated at night with 50 lamps. OPN

**lamps, ceramic** Small closed vessels containing fuel to provide \*light, with a typical diameter of around 10 cm (nearly 4 inches). The simplest and most common type of Late Antique lamp is a disc with a handle on one side and one single nozzle on the opposite side. Fuel is poured inside through a small hole in the disc. Bigger lamps with more than one nozzle were produced as well, with some exceptional examples showing more than twenty, all around the central body. These latter are in most cases imitating more valuable \*bronze lamps.

Lamps were made using moulds, for the top and bottom parts. This made it easy to add moulded decoration on the top, as was frequently done. Lamps were not always painted or slipped, but the clay body was generally very fine, first of all to make moulding easier.

Decoration almost always had a geometric or \*foliage element, sometimes accompanied by figural images of \*pagan derivation, written decoration, or religious symbols, including Jewish or Christian symbols. Christian symbols including the \*fish and the Christogram started appearing in the 4th century and became common in the 5th.

Lamps were made in many different workshops: \*African Red Slip Ware was very widespread during Late Antiquity, and the most common shape has a shallow disc with an elongated nozzle. Lead Glazed Ware, found in \*Italy, was another common type.

From the 6th century, there were several changes in \*pottery lamps. Archaeological evidence suggests that total production levels decreased, possibly due to economic contraction, but also due to increased use of candles and \*glass lamps. The round-shaped disc was also slowly replaced in the Eastern Roman Empire by small flasks and in northern Europe by plain small bowls, either wheel-thrown or hand-modelled. The open form was linked to a change in fuel, from vegetable oils (\*olive oil, castor oil, or other) widespread in the Roman Empire, to denser animal fats. SC

L. Anselmino and C. Pavolini, 'Terra sigillata: lucerne', in *Enciclopedia dell'arte antica classica e orientale: Atlante delle forme ceramiche*, I (1981), 184–207.

**lamps, glass** The use of \*glass lamps became widespread in the eastern Mediterranean in the second half of the 4th century, and is attested in both literary and archaeological evidence. It occurred in connection with the development of religious ceremonies, the building and renovation of \*synagogues and churches, and the veneration of \*relics. Glass lamps are also often found in domestic contexts. Conical goblets and shallow bowls (4th and 5th century) and goblets on a stemmed foot (from the 5th century) could serve as drinking vessels as well as lamps. Lamps with bowls in the form of spheres or truncated cones, and small handles and tubular feet (from the 6th century) are more specifically lighting devices. Lamps could stand alone or on a movable support, but most of the time they were grouped in a metal chandelier or hung from chains. They were filled with water and the oil and the wick floated on the surface. The wick was steadied by a wick-holder, built-in or movable (ceramic pierced cones, metallic ribbons twisted to form a cylinder or widening in the middle and pierced, metallic tripod cylinders). Glass lamps burned longer and offered a brighter light than ceramic lamps, as the water intensified the light of the flame.

D. Foy, 'Les Porte-mèche des lampes en verre de l'Antiquité tardive', *Provence Historique* 61 (2011), 207–38.

**lamps, metal** Metal lamps were typically made of \*bronze or brass, with a spherical receptacle, tall foot, long spout, lidded pouring hole, and handle of sprouting tendrils. Their ornamentation was elaborate, featuring \*foliage, \*crosses, shells, and zoomorphic griffins, \*birds, or \*fish. Used for domestic and liturgical purposes and also in \*ceremonies and at funerals, they were fuelled by a wick suspended in olive or castor oil, and set on tall-stemmed tripod stands, or suspended from chains. Production and use was concentrated in the 4th–7th centuries in \*Greece, \*Anatolia, \*Syria, and \*Egypt.

**landscape and landscape change** Advances in understanding Late Antique landscapes have been achieved by integrating knowledge drawn from texts, excavation, and other physical evidence with such techniques as remote sensing, aerial photography, satellite imaging, and geological study of what C. Vita-Finzi has named the Younger Fill, as well as with interpretation and modelling through Geographic Information Systems (GIS) software. This enables practitioners of landscape study to understand patterns of rural organization based on field boundaries, centuriation patterns, or catchment models and hypothesized settlement boundaries.

The landscapes of Late Antiquity were highly varied, ranging from the Welsh mountains in \*Britain to the Sahara, from the Rhine to the Tigris. What these landscapes had in common was a human approach to their management. The Romans viewed landscapes anthropocentrically; unmanaged nature was not generally looked upon favourably, and nature was to be managed for the morally productive goals of the inhabitants of the Empire. Roman landowners organized the landscape primarily through the \*villa, especially in \*Spain, Britain, \*Gaul, and North \*Africa, where the large estates called *latifundia* were common, and where streams, fields, \*village (*vicus*), and forest were incorporated under the management of a central *domus*. Landscapes were to be carefully planned and managed and maintained through the constant intervention of the Roman worker under the guidance of the estate owner and his manager. In the eastern portions of the Empire, where \*cities were more frequent and often larger than their western equivalents, the civic \*aristocracy and farmers managed a more fragmented countryside. This was true of both the tenurial and the physical aspects of country life, as holdings tended to be smaller overall and with generally variable topographies. The rather compartmentalized geography of densely populated portions of much of \*Italy, of \*Greece, of \*Anatolia, and of the Levantine coast encouraged the development of terracing, small fields, and hillside farming, with fewer broad plains open to farming and grazing.

Material factors were significant in the shaping of the landscape. The levying of tax in \*grain, \*wine, \*olive oil, and pork no doubt influenced the management of estates, whose surpluses had to be sufficient to cover these levies as well as to produce marketable surpluses of these and other items. In southern Italy there was an expansion of \*swine breeding at the end of the Roman period, in large part due to tax requirements, but also in order to supply \*meat (e.g. the Lucanian sausage) to large urban settlements, including Rome. In the East, the levying of \*taxation in kind in \*Egypt provided a direct incentive to estate owners to produce crops that could flourish beyond vital grain-producing lands.

Beyond fiscal and market conditions, a number of demographic and environmental agents combined to create entirely new landscapes by the end of Late Antiquity. While the Late Roman West and northern \*Balkans had numerous urban centres in the Roman period, by the 5th century many cities were failing and those that remained had generally shrunk. Post-Roman landowners often preferred new, often rural residences from which to exercise their power, and these shifts led gradually to changes in local \*settlement patterns in the West. Over much of the post-Roman West, the disappearance of Roman state authority and the lessening importance of cities shifted market centres and caused

demand for certain products to slacken. The arrival in the Empire of newcomers, notably Germanic settlers during the \*Barbarian Migrations, caused established systems of land tenure to be reconfigured and the physical layout of field systems and the crops grown on them to be altered.

In the eastern Mediterranean, the introduction of the \*gold standard of currency, the rise in influence of the imperial \*aristocracy and \**honorati* at the expense of the civic \*aristocracy of the classical period, together with an increase in population favoured the employment of \*wage-labour and the cultivation of cash crops like flax and \*wine. In contrast to the west, the eastern Mediterranean basin of the 5th and 6th centuries witnessed a period of agricultural growth, with settlement expansion into marginal land in deserts and highland areas of the Levant and Anatolia, such as the \*Limestone Plateau of northern \*Syria, and leading to the creation of new \*villages and towns.

These landscape changes were also contingent upon environmental conditions. Southern Syria was warmer and wetter until around AD 500, when conditions gradually became cooler and drier. In the western Mediterranean basin, episodes of heavy rainfall caused increased erosion and flooding which led to abandonment of some lowland areas and their return to marshland. Investment and maintenance of landscapes weakened in some areas which had formerly been farmed in such a way as to serve market and centralized tax demands, as in the Guadalquivir Valley and in parts of North Africa. Overall, landscapes of the post-Roman West were less intensively exploited and managed with fundamentally different aims from those occurring under Roman rule.

**land tenure, post-Roman** No documentary sources illuminate the landholding practices of 5th-century north-west Europe. In their absence scholars rely on material remains and later written sources to understand the origins of \*law and custom. For example, the archaeological evidence of settlements and \*burials in the regions around the North Sea suggests relatively non-hierarchical societies organized around kin-based groups. Small-scale communities were made up of extended family units working the land together from

settlements of large, shared timber buildings. The occupants of the land owed their labour services to the community; land was not owned absolutely but instead held communally.

The customary arrangements of these small-scale societies may be reflected in institutions recorded later. For example, the kings of \*Anglo-Saxon England do not seem to have had the power to grant their core inherited \*estates to people outside their own families. A similar custom may lie behind the stipulation in the \**Lex Salica* of the early 6th century, the first written \*Frankish \*law code, that women could not inherit Frankish land. However, the situation in \*Gaul was complicated by the mixed character of the post-Roman \*aristocracy which comprised both Frankish and Roman elements.

There was no such survival of Late Roman \*aristocracies or \*law in Anglo-Saxon England; this makes it a particular case worth examination. The archaeological evidence from England suggests increasing social complexity from the later 6th century. For example, methods used for disposal of the \*dead are characterized by growing distance (both literally and in terms of the rich objects used in burials) between ordinary people and an emerging aristocracy. The form of settlements also tended towards differentiation, with subdivisions into individual plots marked out by boundaries (suggesting ownership of land). The \**Beowulf* poet's mythic hall at Heorot, and real royal sites such as \*Yeavering, alike suggest that kings were able to wield extensive control over both people and land. An increasingly hierarchical society facilitated the development of larger-scale kingdoms amongst the Anglo-Saxons.

These changes pre-dated the \*conversion of the Anglo-Saxons to Christianity and the consequent re-introduction of elements of Roman land law. Conversion made possible the radical innovation of 'bookland' (*bocland*), or land granted through a written diploma (commonly known as a \*charter). 'Bookland' had two important qualities that distinguished it from 'folkland' (the old customary form of landholding with communal occupation by kin): 'bookland' could be held in perpetuity by a particular institution, such as a \*minster, or an individual's family, and it could subsequently be granted to whomever the beneficiary chose. Such grants included not only territory but also the \*labour services of the people who already lived there. The earliest grants of 'bookland' are from the 7th century and were made to churches but they benefited kings and noblemen by providing possibilities to extend their power, especially because of the close relations between members of ecclesiastical and royal elites. From the 8th century, Anglo-Saxon charters for leases ('loanland') provided another type of grant, usually on condition

that the land returned to the donor after a limited term (often three lives, i.e. those of the beneficiary and two heirs). Such grants frequently led to disputes and the fragmentation of earlier estates when occupiers succeeded in retaining their land.

**land tenure, Roman** In the Roman world, the ways in which land was held, used, or transferred could be conceptually complicated (or may appear so to us), by virtue of the fact that Roman \*law distinguished between ownership (*dominium*) and possession (*possessio*) and permitted individuals and institutions rights in the lands or properties of others (*iura in re aliena*) such as those granted by right of usufruct or varieties of lease (especially those of \**emphyteusis* or *superficies*—see also LEASE).

In general terms, the difference between ownership and possession (which later Byzantine \*jurists attempted to elide) can be understood as the difference between being entitled to a piece of property and actually having it. More specifically, ownership consisted of the ultimate residual right in a piece of property such as remained when all other rights (such as those granted by lease) had expired. In that sense, ownership was a right, whereas possession was a fact. Given this distinction, ownership of land in the Roman sense of the word could only be provable or enforceable if there existed either a system whereby title to land could be officially registered, or a practice of prescription that allowed possession to become ownership after a certain length of time. This helps to explain both the significance in Late Roman society of the administrative institution of the civic \*archive (*gestum municipalium*) at which land-ownership could be registered, and the legal institution of *longissimi temporis prescriptio* (as ratified by \*Justinian I) whereby after 30 years' possession of a piece of land or any other property one acquired full title to it.

By contrast with concepts of ownership, modes of conveyance of landed and other property were, by the time of Justinian at least, relatively straightforward, the only form of conveyance which survived Justinian's codification of Roman law being that of simple delivery (*traditio*) which could be expressed symbolically (such as by handing over a set of keys). All private property

held by individuals could be sold or otherwise dispensed with, although in terms of \*wills a testator was obliged to leave a certain proportion of his estate to his legitimate heirs. Certain types of institutional property, however, such as lands belonging to the Church, were deemed to be inalienable, bearing the legal designation of *res extra commercium* (property which could be neither bought nor sold).

Roman land tenure as legally defined by \*emperors and jurists in Late Antiquity thus provided a highly sophisticated conceptual framework with which to describe relations of ownership and non-ownership with respect to land. Inevitably, however, at the provincial grassroots of Late Roman society, many of the legal niceties were either sweated away or were subsumed within pre-existing regional traditions of land tenure. This dialectical relationship between codified law and local custom would shape the development of tenurial relations in post-Roman conditions and the way in which the transmission of Roman law was socially negotiated.

**Langobardi** See LOMBARDS.

**Lantfrid** \*Dux of \*Alamans (c.710–730). Emerged as Dux in Alamannia, probably with \*Pippinid backing, after the death of his father Gotfrid. He was involved in the compilation of the *Lex Alamannorum* and the founding in 724 of the \*monastery at Reichenau.

HF

RG12 s.v. Lantfrid, XVIII (2001), 103–4 (D. Geuenich).

J. Jarnut, 'Untersuchungen zu den fränkisch-alemannische Beziehungen in der ersten Hälfte des 8 Jahrhunderts', *Schweizerische Zeitschrift für Geschichte* 30 (1980), 7–28.

**Laodicea ad Lycum** (mod. Eski Hisar, between Denizli and the warm springs of Pamukkale, Turkey) Principal \*city of \*Phrygia Pacatiana, on important \*roads between the Aegean and the \*Anatolian Plateau, made prosperous (says Strabo, XII, 16) by its fertility and by \*textiles, especially the local raven-black wool. This business persisted into Late Antiquity; Laodicea is one of the few places named as associated with textiles in the Tetrarchic \*Prices Edict (25).

\*Inscriptions indicate a significant \*Jewish community. Christianity arrived early. S. Paul greeted the church at Laodicea (Col. 4: 12 and 15–16); it was one of the Seven Churches of Asia, famed for being neither hot nor cold (Rev. 3: 14–22). There was dispute about the date of \*Easter in the mid-2nd century at the time when \*Bishop

Sagaris was \*martyred (\*Eusebius, *HE* IV, 16, 3 and V, 24, 5). The canons promulgated by the Council of \*Laodicea illuminate late 4th-century church life.

Extensive excavations since 2003 have revealed a colonnaded \*street over half a mile long ending in an east \*city gate rebuilt in the late 4th/early 5th century. Half-way along it stood \*Temple A, with inscriptions honouring \*Diocletian and \*Maximian; this was equipped with a Christian chapel in the 4th century and further altered after an \*earthquake in 494; an \*ivory plaque of c. AD 500 depicting S. \*Thecla has been found there.

The city's \*aqueduct, which served three \*baths, incorporated an inverted syphon. There were numerous churches (one with a \*baptistry with a cruciform font), a large stadium, a council house, and two theatres, one of which could hold 8,000 people. The theatres were restored under the Tetrarchy; in the early 5th century they were incorporated into the city's defensive walls, they were restored after the 494 earthquake, and the seats are decorated with \*crosses characteristic of the 6th/7th century. Local \*sculpture in a distinctive style includes a portrait head of Flavius Palmatus, acting \*Vicarius of \*Asiana of the late 5th/early 6th century, and architectural \*sculpture of the 5th/6th century.

The site was apparently abandoned following an \*earthquake in the reign of \*Phocas, confirming Strabo's warning that the place was extremely prone to earthquakes.

**Laodicea ad Lycum, Council of** Church \*council probably of the late 4th century, held at \*Laodicea, principal \*city of \*Phrygia Pacatiana. Collections of \*canon law preserve 60 canons, between those of the Council of \*Antioch of 341 and the Council of \*Constantinople of 381. Canon 60 lists the biblical books to be regarded as canonical \*scripture; it omits Revelation from the New Testament. Most of the canons, however, are concerned with miscellaneous practical regulation. They instruct Christians to avoid \*Jews, \*pagans, and heretics, especially their \*festivals (29 and 37–9). \*Novatianists, Quartodecimans, and Photinians may be received into the Church after instruction and chrismation; Montanists must undergo careful instruction before \*baptism. Christian clergy are to eschew usury and \*taverns (24), and though they may attend wedding banquets must not stay for the ensuing entertainment (54). The injunction that they may not share \*baths with women (30) was to be reiterated three centuries later by canon 77 of the \*Quinisext Council of 691/2.

## Laodicea of Syria

CPG 8607:

ed. Turner, *EccIOccMonIurAnt* II, 321–400.

ed. (with FT and study) Hefe/Leclercq, II, 989–1028 [746–77].

ed. Mansi, II (1759), 563–614.

**Laodicea of Syria** (mod. Lattakia) \*City with an important \*harbour in \*Syria Prima, and from 528 the principal city of the small \*province of \*Theodorias. \*Theodosius I punished \*Antioch for the \*Antioch Statue Riots of 387 by making Antioch (temporarily) subject to Laodicea; the two cities enjoyed a long-standing rivalry. \*Apollinarius the Younger (\*bishop c.360–c.390) upheld a distinctive anti-Arian Christology.

KETB; OPN

R. Burns, *Monuments of Syria: An Historical Guide* (1999), 149–51.

**lapis lazuli** A rock type primarily composed of the blue mineral lazurite, also known as ultramarine, traded from the Neolithic period onwards over long distances to Mesopotamia and Egypt from mines such as Sar-i-Sang in the Kokcha Valley in the Badakhshan province of Afghanistan, until the mid-5th century a part of the \*Persian Empire.

Lapis lazuli is rare and the process of purifying it is complex and costly. It occurs in Greek and Roman \*jewellery and as Sasanian \*seals, but its use as a gemstone declined during the early Middle Ages. It was used to decorate the sword-guard of a 5th-century *spatha* excavated at Altusheim near Mainz (Germany) and in a 6th/7th-century necklace from \*Caesarea of Palestine. It has been detected as a pigment in the \*Vienna Dioscorides and the \*Rossano Gospels, as well as in 6th/7th-century wall paintings at \*Bamiyan in Afghanistan. Its earliest known use in Western wall painting is from the early 8th century at the Church of S. Saba in \*Rome, where it was mixed with Egyptian Blue (synthetic copper silicate), the usual blue pigment of the Roman period.

Schafer, *Golden Peaches*, 230–2.

**largitio** Roman \*emperors and others of high rank made gifts to their inferiors on \*ceremonial occasions. These ranged from the sprinkling (\**sparsio*) of coins by a new \*consul (e.g. *NovJust* 105, 2, 1) to distributions by emperors to mark their \*accession or \*anniversaries.

Emperors gave coins to their subjects (as in the *largitio* scene on the Arch of \*Constantine at \*Rome) and made \*donatives to soldiers of \*gold \**solidi*, \*rings, ingots, \*fibulae, and \*belt buckles of specific weights. Senior figures in the imperial \*administration, both military and civil, were given medallions (as in the \*Arras Hoard) and '*largitio* dishes', also of specific weights, and often decorated to reflect the occasion of their manufacture with imperial \*portraits or \*inscriptions, as on the \*Munich Treasure. The heaviest of these to survive, the \*Missorium of Theodosius, weighed 50 Roman pounds (15 kg). *Largitio* dishes were the responsibility of the \*Sacrae Largitiones, under the \*Comes Sacrarum Largitionum. They were widely distributed and traded.

I. M. Johansen, 'Rings, Fibulae and Buckles with Imperial Portraits and Inscriptions', *JRA* 7 (1994), 223–42.

**Largitiones, Sacrae** One of two main departments of the imperial treasury. It was under the control of the \*Comes Sacrae Largitionum. According to the \**Theodosian Code* (VI, 30, 7, 384; slightly modified in *Cjust* XII, 23, 7, 534), the *Sacrae Largitiones* was subdivided into ten departments (\**Scrinia*), each headed by a \**Primicerius*. The *Scrinium Exceptorum* (general secretariat), the *Scrinium Canonum* (responsible for revenues), and the *Scrinium Tabulariorum* (general accountancy) also shared responsibility for supervising the state \*mills and \*dye works. The *Scrinium Numerorum* probably had oversight of \*donative payments. The *Scrinium Mittendariorum* organized \**palatini* sent as messengers of the central bureaux to the \*provinces. Two departments dealt with \*gold: the \**Scrinium Auri Massae* (gold bullion) included the *aurifices specierum* (goldsmiths), *aurifices solidorum* (who minted gold coins), and engravers or other craftsmen (*sculptores et artifices*). The *Scrinium Auri ad Responsum* probably checked incoming gold recovered through taxes. One *scrinium* was responsible for \*bronze coin (*Scrinium a Pecuniis*), and two for \*silver: the *Scrinium Miliarensibus* (\*silver coin), and the *Scrinium Argenti* (silver bullion); the latter probably supervised the silversmiths of the court (*argentarii comitatenses*) and the *barbaricarii* (deluxe armourers). Officials of the *Largitiones* also supervised the hallmarking of silver plate with \*silver stamps. Finally, the *Scrinium Vestis*, comprising the *officiales sacrae vestis* and the *deputati sacrae vestis*, was responsible for the imperial wardrobe. There were also a

number of *thesauri* (depots) in the provinces. The patchy record in the *\*Notitia Dignitatum* lists three in *\*Illyricum*, four each in *\*Italy* and *\*Gaul*, and one in *\*Britain*. Each was staffed by *thesaurense* supervised by *Praepositi/Comites Thesaurorum*. At the same time, many officials worked in the *diocesis* (e.g. *Comites Largitionum* (East) or *Rationales Summarum* (West)), in the *\*provinces* and perhaps in the *\*cities* (*largitionales ciuitatum/urbium*, recorded in the 4th century). In the 6th century, some provincial departments were transferred to the *\*Praefectus Praetorio Orientis*, and in the 7th century part of the bureaux assaying silver was attached to the *\*Praefectus Urbi Constantinopolitanae*. MMos Jones, *LRE* 427–9.

W. Brandes, *Finanzverwaltung in Krisenzeiten. Untersuchungen zur byzantinischen Administration im 6.–9. Jahrhundert* (2002), 18–32.

Delmaire, *Largesses sacrées*.

**Larina** (Hières-sur-Amby, dép. Isère, France) Archaeological site of over 20 ha (c.50 acres) on a hilltop promontory 40 km (25 miles) east of *\*Lyons*, where extensive excavations have revealed a 4th–5th-century rural production centre and its associated *\*cemetery*, superseded in the *\*Merovingian* period by a fortified settlement with substantial stone-built residence, church, high-status burials, and other finds indicative of an aristocratic estate-centre. It appears to have been abandoned in the 8th century. STL

*CAGaule* 38/2 (2011).

P. Porte, *Larina de l'Antiquité au Moyen Âge*, 2 vols. (2011).

**Larisa** (mod. Larissa, *\*Greece*) Principal *\*city* of the *\*province* of *\*Thessalia*, on the River *Peneios* 55 km (34 miles) north-west of *Volos*. There were apparently Christians at Larisa in the mid-2nd century (*\*Eusebius*, *HE* IV, 26, 10), a *\*bishop* certainly attended the *\*Council* of *\*Serdica* in 341, and a successor, *Basil*, was deposed as a supporter of *\*Nestorius* at the Council of *\*Ephesus* of 431.

The city was sacked by the *\*Ostrogoths* in 474 (*\*Jordanes*, *Getica*, 286). *\*Procopius* says *\*Justinian* I repaired the defences (*Aed.* IV, 3, 7–10); these do not survive. Excavations have revealed houses, part of a *\*street*, and two Late Antique churches. One, in the ancient city centre, probably of the late 4th/early 5th century, is a *\*basilica* with floor *\*mosaics* (showing peacocks), *\*opus sectile*, and wall paintings. The other is a three-aisled basilica, built with many *\*spolia*, with mosaic floors, perhaps of the 6th century, and numerous graves (including two vaulted tombs) surrounding it. The *\*relics* of S. Achilleus, described in later legendary lives as a 4th-century bishop (*BHG* 1202–3), were removed from Larisa to Prespa in 986. PA; OPN *TIB* 1 (1976), 198–9.

*DHGE* 30/176, cols. 643–5 (D. Stiernon).

W. E. Crum and G. Steindorff, *Koptische Rechtsurkunden des achten Jahrhunderts aus Djeme* (1912).

**Lateran Council of 313** Summoned by *\*Bishop* Miltiades of *\*Rome* in October 313 at *\*Constantine* I's request to hear *\*Donatist* accusations against Bishop Caecilian of *\*Carthage* (*\*Eusebius*, *HE* X, 5, 18–20). Miltiades and fifteen Italian bishops decided in Caecilian's favour, but Donatist appeals led Constantine to summon the *\*Council* of *\*Arles* in 314. DMG

Hefele and Leclercq, *I/2*, 272–4.

Barnes, *CE*, 57.

**Lateran Council of 649** This synod was convoked on 5–31 October 649 by Pope *\*Martin* I (649–53) in the *\*Basilica* of S. John Lateran at *\*Rome*. It sought to condemn the doctrines of Monoenergism and Monothelism, promoted by the *\*Emperor* *\*Heraclius* (610–41) at the bidding of Sergius, *\*Patriarch* of *\*Constantinople*, and enshrined in the *\*Ecthesis* of 638. The theological impetus for the council came not from the Pope but from the eastern monks who were present, as exiles from the *\*Arab* conquest and from imperial *\*persecution*. A hundred and five or 150 bishops, mostly from *\*Italy*, *\*Libya*, and *\*Africa*, subscribed to the *Acta* of the synod (the number given in the *\*Greek* version of the *Acta* was 104). Riedinger has conclusively demonstrated that these *Acta* were composed first in *\*Greek* by *\*Maximus* Confessor and his associates, and then translated into *\*Latin*. The council sparked a quick and violent reaction from *\*Constantinople*, which resulted in the arrest and condemnation of Pope Martin and Maximus Confessor. BN

**Late Roman C ware** See POTTERY, ROMAN AND POST-ROMAN; PHOCEAN RED SLIP WARE.

**latifundia** \*Latin term used in Roman imperial sources to indicate \*estates of extensive size. The precise size for qualifying an estate as a *latifundium* is, however, debated. Due to the scattered nature of Late Antique large estates, in current scholarship the use of the term is problematic. RM

P. Garnsey, *The Roman Empire: Economy, Society and Culture* (1987), 67.

**Latin language** Indo-European language originally spoken in the Latium region of central \*Italy. It spread with the expansion of Roman rule: first, by the mid-3rd century BC, in the Italian peninsula; then around the Mediterranean, and finally, by the early 1st century AD, across Western Europe, in Asia, and in North \*Africa. Although Latin eventually developed into different Romance languages, in Europe it was also maintained as an international written medium until the 18th century AD. The term 'Latin' therefore covers a very considerable spatial, chronological, and social spectrum, and somewhat obscures considerable variations.

**Classical Latin**

Latin was most closely related to other, but shorter-lived, Italic languages, such as Oscan, Umbrian, and esp. Faliscan and less closely to other Indo-European languages such as \*Greek, Sanskrit, and Slavic, Celtic, and \*Germanic languages.

Attested from the 7th century BC, Latin had a continuous literature from the mid-3rd century BC. The educated (and, for the most part, quite artificial) written Latin of the late Republican and early imperial

period—typically exemplified by authors such as Cicero—came to be regarded prescriptively as the correct form, and is still known as classical Latin.

As Roman rule extended, Latin spread and gained influence and prestige, first across Italy, then in large parts of Central and Western Europe (notably today's Portugal, \*Spain, France, Belgium, Netherlands, southern and central \*Britain, former Yugoslavia). It reached also \*Anatolia, and the northern coast of Africa.

Unstudied spoken Latin (often termed 'Vulgar Latin') diverged considerably from the written standard, and had local variants; but how the vernacular Latin of the classical period differed from the literary language is known only slightly; it can be occasionally glimpsed in informal (but still literary) passages in authors such as Petronius, and in \**graffiti* and low-level \*inscriptions.

### Late Latin

From the 5th century AD, the Latin-speaking area in Europe was considerably reduced by the spread of \*Germanic and Slavic languages; but the varieties of Latin carried by Roman colonists and soldiers to northern Italy, \*Gaul, and Spain took root, and evolved into distinct dialects, drawing also (to variable extents) from indigenous languages. Such varieties of Latin continued to be regarded as Latin. Only at the end of the Late Antique period, around the 9th century, do we find indications that these localized forms (the incipient Romance languages), although still mutually intelligible, were identified as entities distinct from Latin. Latin, nonetheless, continued to be used both in writing and as a spoken language of prestige and international communication among the educated.

Extant documents in Latin dating from the Late Roman Empire to the end of the Middle Ages are plentiful, but their style usually strives after classical models (a situation similar to that of Greek); some late authors are linguistically more archaic than their predecessors. Furthermore, texts show far fewer local peculiarities than there must have been. The influence of the written tradition and the employment of Latin in religious functions made writers highly conservative, if with the occasional lapse and conscious or subconscious innovation. There was also a rich tradition of grammatical treatises that further strengthened classical norms. Writers, however, unlike most Latin students in the modern era, looked also to post-classical models such as the Vulgate version of the \*Bible and the writings of the Latin fathers of the Church. By 400 AD, written Latin had become more noticeably different.

Specifically, whereas the morphology of late Latin (i.e. the endings of nouns and verbs) continued to reproduce classical usage, the syntax made evident departures from it. The main novelties are in the

vocabulary: loanwords, neologisms, and new meanings given to older terms—changes necessary also to convey Christian concepts such as *ecclesia*, *baptizo*, *benedico*, or *passio* (given the extensive presence of such terms, the label of 'Christian Latin' has been advocated, but with decreasing frequency).

The few texts that partly reflect the colloquial usage of the time evince, as one would expect, marked variations according to place, and often present changes that we find well established in the Romance languages—mostly indicating a general drift of the language from synthetic to analytic, and with striking parallels with the evolution of post-classical Greek. Thus, in the Late Antique period, spoken Latin lost vowel length distinctions; it increased coordinated sentences (parataxis), diminutives, and the use of prepositions instead of plain case forms (e.g. expressing the indirect object with *ad* + accusative instead of the plain dative); it accepted locative expressions with verbs of motion to a place, subclauses introduced by overt complementizers, esp. for reported speech (e.g. *quod* + finite verb rather than accusative and infinitive). It also lost deponent verbs and developed periphrastic passive verbs, adopted verb-object and even verb-subject word order (in contrast to the verb-final tendency of classical Latin) and, by and large, dismantled the case system. It also reduced the use of the neuter gender, and discarded several words (*urbs* > *ciuitas*). These changes occurred at different points in time, and many have traceable roots in the classical era, esp. in the informal register, or even before; scholars therefore find it difficult to pin down features that are strictly unique to 'late Latin'. But despite their origin in the colloquial of classical times, 'late Latin' innovations were normally regarded by ancient grammarians—and by modern scholars, until recently—as signs of decline or ignorance.

After the demise of the Roman Empire, the imperial \*administration dissolved in the West, but Latin, benefiting from a written form and tradition, continued to be used as the language of bureaucracy. Above all, it remained the language of the Church and of philosophical, legal, and literary discourse, and later of science, with a prestige that ensured its use as a *lingua franca* of the learned even beyond the areas previously under Roman rule. **Laudes Domini** (Lat. *Praises of the Lord*) An anonymous \*Latin poem of 148 verses, written between AD 317 and 323, the earliest Christian hexameter work to have survived from Antiquity. The title may well not be authentic. The poem appears to have originated in \*Autun in \*Gaul, where a \*miracle is said to have taken place—the body of his long dead wife reaches out to her husband on his entombment. The poem then goes on to include Christian \*cosmology and eschatology, a \*biography of Christ, and a closing appeal to Christ to protect the \*Emperor \*Constantine. It features some conventional rhetorical form and poetic flourishes, and alludes to canonical pagan texts, notably Lucretius and \*Vergil. As an occasional piece, it is a bold and curious hybrid. RDR

HLL 5, section 560, CPL 1386.

ed. (with IT, introd., and comm.) A. Salzano (2001).

ed. (with DT and comm.) P. Van der Weijden (1967).

**Laurentius** (d. after 507) Archpriest and antipope (498–9 and 502–7), elected contemporaneously with \*Symmachus (498–514; \**Liber Pontificalis*, 53). Following the judgement of the \*Ostrogothic King \*Theoderic and a synod at \*Rome in 499, his pontificate was declared invalid and he was granted the see of Nuceria in \*Campania. Support for Laurentius persisted, however, and in 502 he returned to Rome, occupying the \*Lateran and ruling as antipope until Theoderic intervened in 506/7. He was deposed and retired to a country \*estate, where he died an ascetic. JJA

**lavra** (Gk. *laura* = lane) A \*monastery whose members (unlike those of a \**coenobium*) lived in detached cells under the direction of a spiritual father, but meeting weekly for the \*Eucharist and to obtain supplies for work. The term is used in the \**Apophthegmata Patrum*, but originated in \*Palestine. OPN

Chitty, *Desert a City*, 14–16.

**law, Germanic and post-Roman** In Late Antiquity the conception of 'law' was malleable. To Romans, law (*lex*, plur. *leges*) had a relatively straightforward meaning similar to that current in the modern West: law (*lex*) was a binding norm (*ius*) issued in writing by an authority that claimed to be able to enforce it. In the centuries following the \*fall of the Western Roman Empire, *leges* were still defined as written statutes. However, they became intertwined with and dependent on unwritten custom or usage (*consuetudo*, *mos*, *usus*) in such a way that under some circumstances the latter too could be called *lex*.

#### **Late imperial law**

Two factors shaped the character of Late Antique law: first, the grant in 212 of Roman citizenship to almost all free inhabitants of the Empire, and second the autocratic nature of late imperial government. The former broke down the distinction between a unified law meant to apply only to Roman citizens and the legal customs of localities that had governed non-citizens. \*Constantine I (r. 306–37) recognized such local custom (*consuetudo*) and normative usage (*usus*) as valid so long as it did not conflict with written law (*lex*). These local practices became the basis for what has been termed 'vulgar' Roman law.

The existence of 'vulgar' law made the \*emperors a natural target for legal questions from judges who needed authoritative written statements to guide them through the cross-currents of law and custom. By the 4th century, both the profusion of imperial responses (\*rescripts) and the continuing flood of questions prompted the \*Emperor \*Theodosius II (r. 408–50) to set up a commission charged with assembling a definitive compilation of imperial law. The result, the \**Theodosian Code*, treats imperial legislation as *lex*, while the writings of

jurists on the law were deemed *ius*. It was accepted in both the Eastern and the Western part of the Empire.

In the mid-6th century the East Roman Emperor \*Justinian I (r. 527–65) ordered a new legal compilation to be made that would also include imperial \*novels, legislation issued after the *Theodosian Code*. \*Justinian's *Code*, known as the *Corpus Iuris Civilis*, became authoritative in the East. It was brought to the West as well, but then quickly forgotten. A few copies languished in church and monastic archives in \*Italy until they were rediscovered, in an entirely different context, in the 11th century.

### Law in the barbarian West

Law in the West in the 5th and 6th centuries was developing in a post-Roman world dominated by barbarian kings. These kings imitated the Roman emperors by issuing written law codes. Some of these codes were designed for the Romanized populations living under barbarian rule. They all drew on the *Theodosian Code*. The most prominent and influential was the *Breviarium* of \*Alaric (*Lex Romana Visigothorum*), issued by the \*Visigothic King \*Alaric II (r. 484–507). Here *lex* denoted official legislation and *ius* referred to pre-Theodosian private collections of Roman law. The *Breviarium* was by far the most widely copied and circulated of the barbarian Roman law codes, not just in the Visigothic kingdom but throughout barbarian Europe. It applied also to Christian churches and \*monasteries, which through their copies or epitomes of the *Breviarium* became the main custodians of the Roman legal tradition in the West.

At roughly the same time, barbarian rulers began to promulgate law codes that applied more directly to their barbarian subjects as well as to Romans living under their rule. Conventional wisdom holds that these codes, though they were written in \*Latin by Roman scribes familiar with the principles of Roman law, enshrined formerly orally transmitted barbarian customs. More recent scholarship, however, emphasizes their Roman character and argues that they show barbarian leaders and their followers coming to grips with living in Late Roman societies. In the 460s or 470s the Visigothic King \*Euric produced what is now called the Code of \*Euric (*Codex Euricianus*). In the early 6th century the \*Burgundian King \*Sigismund issued the \**Lex Burgundiorum* (*Liber Constitutionum*)—often, and probably erroneously, attributed to Sigismund's predecessor \*Gundobad and hence also referred to as the *Lex Gundobada*.

In \*Gaul, the \*Frankish King \*Clovis (r. 481–c.511) issued the first version of what became known as the \**Lex Salica*, or Laws of the Salian Franks. This code was not comprehensive. Records of actual disputes indicate that a much larger world of unwritten legal custom

helped to regulate Frankish life, custom that was nevertheless referred to as *lex*. It has been argued that Clovis' code was never intended to be comprehensive, but was rather designed to present Clovis as doing what Roman rulers did, namely issue collections of law. Nevertheless, the profusion of later copies and versions of the Salic law (supplemented by \*edicts issued by Clovis' successors), as well as physical evidence for its use in late 8th- and 9th-century manuscripts, suggest that at least by the Carolingian period, if not earlier, Salic law was actually referred to by judges in the field.

Under Frankish influence, law codes for other barbarian peoples north of the Alps developed, possibly as early as the 6th but more likely in the 7th and 8th centuries: for the \*Alamans first the \**Pactus Alamannorum* and then the *Lex Alamannorum* (*Pact and Law of the Alamans*); for the \*Baiuvari in Bavaria the *Lex Baiuvariorum* (*Law of the Bavarians*). Among the Franks themselves the \**Lex Ribuaria* (*Law of the Riparian Franks*) reflected the regional subdivision between the western and the eastern Franks.

In mid-6th century \*Italy, the \*Lombard King \*Rothari began a tradition of Lombard \*laws handed down by kings which continued into the mid-8th century. The fact that successive Lombard kings regularly issued laws indicates that despite the ideological element in royal lawgiving, there was a continuing demand in Italy for practical legal rulings in a post-Roman, urban society in which a system of local courts, judges, and scribes survived.

In \*Anglo-Saxon England, the practice of writing down law was reimported from the Roman world in the wake of the Roman Christian mission at the end of the 6th century. The earliest Anglo-Saxon laws were those issued by King \*Ethelbert of Kent at the turn of the 7th century; like the laws of \*Ine, King of Wessex in the late 7th century, they are much concerned with compensation for acts of violence. The Anglo-Saxon laws reflected the influence of Roman tradition insofar as they too were seen as an element of royal activity. However, they were written not in \*Latin but in the vernacular.

Scholarship has long assumed that the western barbarians regarded law as personal rather than territorial. This assumption has been challenged. Some evidence suggests that the barbarian codes were in fact territorial, or determined by place of birth, or laid down by rulers for members of their followings regardless of their personal identity. The Lombard laws indicate that in practice, at least from the 8th century on, people could choose whether to appeal to Lombard or Roman law. By the 9th century, however, the numerous manuscripts containing several barbarian law codes alongside copies or abridgements of the *Breviarium of Alaric* suggest that

by this point law may have been viewed at least in part as a personal attribute. WCB

**law, Irish** Most early Irish law-texts date from the 7th and 8th centuries AD, but native law survived in parts of Gaelic \*Ireland until the final subjugation of the Irish lords by the English monarch in the early 17th century. About 50 law-texts survive in late copies, mainly in manuscripts of the 14th to 16th centuries. There are also many fragments of other lost law-texts.

The subject matter ranges from general topics such as injury, \*theft, suretyship, \*marriage, contracts, etc. to specialized treatments of legal aspects of \*bee-keeping or ownership of water \*mills. Throughout the law-texts there is much emphasis on rank. A person's rank is reflected in his 'honour-price', the sum payable to him (or to his relatives) for an offence against his \*honour, ranging from insult to murder. The honour-price of dependants is a proportion of that of their legal superior. In general, the evidence of high-ranking persons

outweighs that of those of lower rank. The texts stress the legal obligations attached to membership of the kin-group. An offender could be ejected from the kin, thereby losing his rights in society.

Crime was normally punishable by a fine, usually of \*cattle. If the culprit was unable to pay the fine, he could be enslaved. The death penalty was only employed as a last resort. No case law has survived from the early period, but it seems that law cases were commonly heard in open-air courts. The advocate for each party made his plea, and evidence was heard from witnesses. The judgement was pronounced by one or more judges. An appeal could be made to a superior court, but if rejected, the appellant had to pay a heavy fine to the original judge.

The basic character of early Irish law can be traced back into the prehistory of the Celtic-speaking peoples, as there is substantial agreement in the terminology employed in early Irish, Welsh, and Breton legal material. However, there was also strong influence from Canon Law, and the law-texts recognized the central position of the Church in early Irish society. FSK  
Fergus Kelly, *A Guide to Early Irish Law* (1988).

**law, Islamic** A term used to refer to the diversity of institutions, ideas, and laws that constitute the sum of various Islamic legal traditions. Historically, Muslims have tended to use the word *shari'a* to refer to these institutions, laws, and practices, which are understood to have been instituted for the community of Muslims through the revelation of the \*Qur'an and the paradigmatic example of the Prophet \*Muhammad and the early Muslim community. The term *ahkam* (rulings) is used to refer specifically to the commandments and prohibitions of the *shari'a*.

The Qur'an states that prior to the foundation of Muhammad's community, other religious communities existed, such as those established by Moses and Jesus, each with its own respective divinely revealed *shari'a*. Newer revelations abrogate or annul previous ones, and ultimately, the Muhammadan *shari'a*, as the final revelation before Judgement Day, abrogates all pre-existing revelations and their *shari'as*.

Although the Qur'an explicitly annulled many pre-Islamic laws and customs that were seen as tainted by barbarism (\**jabiliyya*) or idolatry (*shirk*), it does not seem that the early Muslims understood the establishment of the new *shari'a* as necessitating a complete rejection of all pre-existing local customs and tradition, and to this day, local custom (*'adat*) is considered as a source of law, albeit a subsidiary one. Modern studies have suggested that early Muslim legal tradition might have also incorporated elements from the legal traditions of territories conquered during the first century of the \*Era of the Hijra (7th and 8th cents. AD). In

addition, distinct legal traditions developed in different regions settled by the Muslim conquerors. The importance of law in religious and everyday Muslim life led to the consolidation of the intellectual discipline of legal studies, known as *fiqh*, as the primary intellectual discipline, and also as an important cornerstone in the administration and legitimacy of Muslim government.

Such attempts as there were to formulate a uniform Muslim law code ultimately failed in the face of dissatisfaction with the political establishment. Instead, the call for uniformity succeeded to some degree through the efforts of the jurist al-Shafi'i (d. 820) and his circle, who called for an approach to *fiqh* that based itself more closely on the paradigmatic ideal of prophetic example, as established through the reports transmitted through the study of *\*hadith*. By the 10th century, all regional legal traditions had been absorbed into schools of law (*madhāhib*, sing. *madhhab*) which traced themselves back to an eponymous great 'founder', all influenced to some degree by the growing importance of prophetic *hadith* as well as the development of jurisprudential theory (*usul al-fiqh*). After this period, most legal activity among Sunnis was conducted within the framework of such institutions. *\*Shi'i* communities also formed legal institutions influenced by similar developments, although the direction *Shi'i* law took was influenced by their distinct definition of spiritual and political authority.

C. Melchert, *The Formation of the Sunni Schools of Law: 9th and 10th Centuries C.E.* (1997).

**law, Lombard** The period of Lombard domination in *\*Italy* produced two major compilations of laws, one composed by *\*Rothari* (636–51) and the other by *\*Liutprand* (712–44). These were supplemented by laws made by *\*Grimoald* (662–71), *\*Ratchis* (744–9) and *\*Aistulf* (749–56). Lombard law illuminates the concerns and symbioses of a mixed society of Lombards and Italo-Romans.

Rothari's *Edictum* (643) was concerned to ensure that 'everyone may lead a secure life in accordance with law and justice'. It exhibits a hierarchical response to *\*homicide*, injury, and offence associated with different social levels, i.e. free, *\*aldii*, and slave. Thus composition is set at 16 *\*solidi* for the removal of a freeman's big toe and 4 *solidi* for that of an *aldius* or household slave. Women, however, had no independent legal competence and their *mundium* (legal guardianship) was exercised by male relatives or even the king.

Whereas Rothari's *Edictum* reveals the interests of a primarily agricultural society, Liutprand's significant additions (153 provisions issued on sixteen separate occasions) demonstrate the increasing complexity and

self-confidence of Lombard society in the 8th century. Liutprand's laws deal with complex issues of *\*inheritance* and *\*contracts*, and also with more immediate issues such as 'how a man shall recover a lost *\*horse*' and what should happen when 'a man sends *\*pigs* into another man's defended forest'.

**law, Persian** The *\*Sasanian* judicial system was one and the same as the *\*Zoroastrian* priestly hierarchy, representatives of which were co-located at provincial administrative centres and/or *\*fire* temples. The only extant Late Sasanian treatise on jurisprudence (*dādestān-nāmag*) is the *\*Madayan-i Hazar Dādestan* (*A Thousand Judgements*; also known as the *Sasanian Law Book*), an early 7th-century compilation of actual and hypothetical case histories (written by Farroxmard-i Wahraman). Other Avestan texts with Pahlavi translation and commentary as well as Pahlavi sources from the Late Sasanian and Early Islamic periods survive, as does secondary material in other languages, especially *\*Armenian*, *\*Syriac*, Persian, and *\*Arabic*.

However, in contrast to other evidence stemming from the Sasanian legal system the *Madayan-i Hazar Dādestan* does not mingle theological and legal material, but concentrates entirely on legal matters, without offering explanations. It provides evidence not only about household and family matters of the time, but also about legal procedures and social, economic, and criminal activities. Members of a household were bound by a plethora of regulations and obligations, control of which was the prerogative of the *kadag-xwādāy* ('head of the household'). Detailed provisions also existed for torts, *\*marriage*, inheritance, property, and familial obligations.

**law, Roman** The principal characteristics of Roman law during Late Antiquity were the way that the *\*emperor* became the sole source of law and the increasingly separate development of law in East and West from the late 4th century onwards. Some scholars have considered Late Antiquity a period of legal decline and vulgarization, but such views are no longer generally

accepted. One may rather speak of an intellectual shift or evolution of Roman law, from the 'classical' law of the early 3rd century towards the later law of the 6th century.

From the end of the 4th century onwards, Roman law developed differently in the East and the West, despite attempts at harmonization. Scholars generally agree that intellectual standards in the East were higher and the legal tradition stronger. In the late 5th century there was a classicizing revival in the eastern law schools that eventually culminated in the codification under \*Justinian I.

In the early 3rd century, citizenship was extended to almost all free people of the Empire. Citizens had better access to legal advice and \*courts of law. The quality of judicial decisions improved because judges often had legally trained assessors to advise them, and by the late 3rd century \*governors of \*provinces were working primarily as judges and administrators. In the next generation \*Constantine I in the course of favouring Christianity formalized an alternative system of dispute resolution through \*bishops' courts (*episcopalis audientia*). The law became more technical and was managed by skilled officials. This led to a programme of law reform and prepared the way for the compilation of the \**Theodosian Code* in the 5th century and \*Justinian's *Code* in the 6th century.

#### Private law

Independent legal writing came to an end under \*Constantine I, and most new law emanated from the emperor. Classical private law continued to be applied over a large area, with only small modifications. Constantine and his successors did not introduce many changes into the field of private law, but \*constitutions issued in the name of the emperor did, on occasion, institute new provisions dealing with private law. Many of these constitutions were included in the codifications.

In the East there was a tradition of legal \*education, and classical Roman law texts were analysed in the law schools, especially in \*Beirut and \*Constantinople. Many teachers, as well as officials and practising lawyers, were consequently available when Justinian codified the law. These compilers had been trained in classical law and it was inevitable that they would move back to classical Roman private law as it had been modified in the post-classical period. Further, Justinian was a reformer and he favoured fair solutions. He removed many discarded institutions and sophisticated distinctions, and also settled points which had been in dispute between the classical lawyers. This can be seen clearly in the case of \*contracts. In addition, many new provisions dealing with private law were issued by Justinian and published in his \**Novels* (*Nov-Just*), in particular in the fields of \*family law and the law of succession (\*inheritance).

#### Civil law and 'criminal' law

In the Later Roman Empire new law emanated from the Emperor. Constitutions were issued in his name by the various official imperial bureaux. 'Criminal' legislation was concerned more with penalties than with the academic definition of offences. The new categories of 'crimes' created during this period all related to abduction and to offences against the Christian religion. Justinian's commission compiled existing 'criminal' law into a systematic whole. Books 47–9 of the \**Digest* and Book 9 of the *Codex* describe criminal law, procedure, and penalties. The Roman distinction between public and private offences had important consequences for procedure and penalties. A distinction was made between private delicts, extraordinary crimes, and public delicts.

Late Antiquity's modern reputation as a period of \*torture and terror is largely based on the application of 'criminal' law. The function of terror was to discourage the wicked and secure justice, and the most important motives for inflicting punishment were retribution and deterrence. Roman 'criminal' cases were heard before a judge and although the right of appeal was widely available, access to appeals was restricted. In the area of punishment, changes introduced during this period suggest that more humane values had a real impact.

#### Legal sources

Apart from the codes, legal sources from Late Antiquity are relatively scarce. From the late 5th century onwards the \*Germanic kings who had come to reign in the West as a result of the \*Barbarian Migrations saw a serious need for law to be restated for both their Germanic and their Roman subjects (*see* LAW, GERMANIC AND POST-ROMAN).

In the Eastern Roman Empire classical jurisprudential literature was still in use, as is demonstrated by \*Theodosius II's \*Law of Citations. Two codifications, the \**Gregorian Code* and the \**Hermogenianic Code*, were undertaken, perhaps semi-officially, by officials of the \*Tetrarchy, but survive only in fragments and insofar as they are incorporated into the two later and official codifications, the *Theodosian Code* and Justinian's Code (the *Codex Juris Civilis*). The aim of Justinian's commission was to transform the masses of Roman law into a system that could be used for the academic teaching of law and legal practice. However a system of law published in \*Latin raised difficulties where \*Greek was increasingly the current language and translations became necessary, as well as commentaries and epitomes to enable lawyers to read the law.

An outstanding feature of the surviving legal literature of this period is that it consists of anonymous abridgements, demonstrating various receptions, reuses and re-formulations of classical material. Most of the

surviving legal literature derives from the West, and is known through its use in Germanic codes. Eastern works have largely disappeared; probably because the compilations of Justinian made them obsolete. RvdB Corcoran, *Tetrarchs*.

**law in Egypt** With the Roman conquest of 30 BC, \*Egypt became subject to three distinct layers of legal traditions: native Egyptian, Hellenistic Greek, and classical Roman, with corresponding documentary records in demotic Egyptian (the language as presented in a highly cursive \*script), \*Greek, and \*Latin (with Greek translations from the Latin). Egyptian ceased to be a language of law early in the Roman period, but re-emerged in Late Antiquity in its Coptic form, that is, Egyptian written in a (mostly) Greek alphabet.

Early Coptic legal documents date from the 6th century, but it is not until the 7th and, especially, the 8th century, as Greek evidence disappears, that Coptic became a widely used language of law. Coptic documents replicate many forms found in their Greek predecessors and contemporaries while also being indebted to Greek for their technical vocabulary. Some Coptic documents on \*papyrus match the Greek ones for their grand prolixity, their 'Byzantine Urkundenstil'. Simpler agreements will be found, for instance those on \*ostraca (inscribed potsherds) from the \*archive of the woman moneylender Koloje. Late Antique documentation includes dispute resolutions featuring \*bishops and \*monks and a new type of \*contract, the 'child donation'.

**Law of Citations** An imperial constitution of 426 issued by \*Theodosius II, limiting legally citable juristic

authority to the works of five pre-eminent jurists, namely Papinian, Paulus, Gaius, Ulpian, Modestinus. Edited into the \**Theodosian Code* (*CTh* I, 4, 3), it was superseded on the publication of the \**Digest* in 533. SJJC

Matthews, *Laying Down the Law*, 24–6.

**Lawrence, S.** Christian venerated as a \*martyr and \*deacon at \*Rome when Xystus (Sixtus) II was \*bishop (AD 257–8). \*Cyprian had news of the execution on 6 August 258 of Xystus and four Roman deacons (*ep.* 80, 1, 4). Lawrence is named in the \**Calendar of 354* under 10 August and the \**Liber Pontificalis* (25, 3) lists \*Lawrence among clerics martyred on 10 August. \*Ambrose praised S. Lawrence's exemplary care for the \*poor, and tells the story of how while being burned alive on a gridiron Lawrence said, 'I am done on this side, turn me over and taste me' (*De Officiis*, II, 28, 140–1; I, 41, 214–16). \*Augustine preached on his festival (\*Sermon 302) and \*Prudentius elaborated his story in iambic dimeters (*Peristephanon*, 2).

The Constantinian church over S. Lawrence's tomb (*Liber Pontificalis*, 34, 24–5), at the site of the present \*S. Lorenzo in Agro Verano, was rebuilt by \*Damasus in the later 4th century (*Liber Pontificalis*, 39, 2), and by Xystus (Sixtus) III in the 5th (*Liber Pontificalis*, 46, 5). Pelagius II built a new church in the late 6th century (*ILCV* 1770; *Liber Pontificalis*, 65, 2). A \*mosaic in the building known as the Mausoleum of Galla Placidia at \*Ravenna, often thought to show S. Lawrence, may in fact depict S. Vincent of Saragossa, another deacon venerated as a martyr. KMS; OPN

*BHL* 4752–89.

H. Delehaye, 'Recherches sur le légendier romain: la passion de S. Polychronius', *AnBoll* 51 (1933), 34–98.

**Lazar P'arpets'i (Ghazar)** (fl. after 484) Author of a history of 5th-century \*Armenia, covering the years 387–484. The work, sponsored by the governor of Armenia Vahan \*Mamikonean (r. 485–c.506), was probably written at the end of the 5th century or the very beginning of the 6th. The main focus of Lazar's work is the fate of Armenia after the fall of the last \*Arshakuni king. His is the earliest surviving account of the 451 revolt of \*Vardan Mamikonean, later the subject of the better-known work of \*Elishe Vardapet.

In contrast to most Armenian authors of this period, a few biographical details about Lazar are known from his *History* and from a letter addressed to Vahan Mamikonean. He was from the village of P'arp, c.24 km (15 miles) north-east of modern Yerevan, and may himself have been a member of the Mamikonean clan. He was an ordained cleric and had received some education in the Roman Empire; sometime after 486 he became abbot of the \*monastery of \*Valarshapat, possibly at the request of Vahan, who was a childhood

friend. He was later expelled from the monastery and spent some time exiled in \*Amida, but was recalled by Vahan and given the task of writing his *History*.

Lazar names three sources for his information: \*Agat'-angelos, the \**Buzandaran Patmut'iwnk'*, and the life of \*Mashtots', by \*Koriwn. Here he is consciously placing his work within a developing chain of Armenian \*historiography; although he disputes certain information contained in the *Buzandaran*, his purpose is not to rewrite the history of that period but to cover the years after its end. In so doing, Lazar also gives a great deal of information about Iranian life in the 5th century.

TLA Thomson, *BCAL* 146–9, supplement 192.

ODB s.n. Lazar of P'arpi'.

ET (annotated) R. W. Thomson (1991).

**Lazar of Pharp** See LAZAR P'ARPETS'I.

**Lazica (Egrisi)** The territory of western \*Georgia, whose main rivers are the Phasis (Rioni) and the Chokhi. In classical times it was known as Colchis with its capital at \*Archaeopolis. Writing in the 6th century, \*Agathias praises the natural resources and high standard of civilization in Lazica (3, 5, 2–4).

Roman garrisons were stationed in several towns and forts in Lazica from the 2nd century; Arrian states that the king was appointed by Trajan (*Periplus*, 11). In the mid-3rd century the coastal cities of Lazica were devastated by \*Gothic invasions; a Roman presence in the forts was restored in the 280s, but Lazica was overrun by the \*Sarmatian \*Borani a decade later (\*Zosimus, 1, 31).

In the 5th–6th centuries Lazica became a point of contention between the Roman and \*Persian Empire, who wanted access to the Black Sea and a buffer to keep northern people from their lands (\*Procopius, *Persian*, II, 15, 3). The Lazi changed their allegiance from Rome to Persia and back again, and in the mid-6th century Lazica was at the centre of a twenty-year war between the two great powers. In 555 King \*Gubaz II was killed by Roman generals and the Public Council demanded that the Emperor \*Justinian I punish them (Agathias, III, 24, 1–3). After 561/2 Lazica remained a Roman vassal state, and was directly ruled by Roman governors from the 7th century. Between 697 and 711 the \*Arabs occupied Archaeopolis and Kodori Gorge.

**league** (Lat. *leuga*, often abbreviated as l.) Measurement of linear distance, commonly used in \*Gaul. It was equivalent to 1.5 *milia passuum* (Roman miles, often

abbreviated m.p.), approximately 2,200 m or 2,427 yards. The \*Bordeaux Pilgrim changes his enumeration from leagues to *milia passuum* on leaving \*Toulouse, and \*Ammianus (XV, 11, 17) notes that beyond the confluence of the Rhône and the Saône (at \*Lyons) 'journeys are measured in leagues'. AHM

**Leander of Seville** (c.540–600) \*Bishop of \*Seville from c.579. Entrusted with Prince \*Reccared when \*Leovigild the \*Homoean ('Arian') King of the \*Visigoths repented on his deathbed, he presided as Bishop of Seville over the Third \*Council of \*Toledo in 589, proclaiming the official conversion of the Visigoths from Arianism to Nicene orthodoxy, and delivering a triumphant \*sermon (*CPL* 1184). Leander had previously been exiled to \*Constantinople, where he befriended \*Gregory the Great. His principal surviving work, *On the Training of Nuns*, is a monastic rule for his sister Florentina (*CPL* 1183). He was succeeded as bishop by his brother \*Isidore of Seville, who summarized his life in *De Viris Illustribus* 41.

**lease** Roman law recognized and bequeathed three different types of lease. The first came under the title of *locatio conductio*—essentially a \*contract of hire deployed in a wide variety of contexts, ranging from the leasing of land to a contract of employment. Indeed, later jurists distinguished these aspects by differentiating between hire of a piece of moveable or immovable property (*locatio conductio rei*) and the hiring of services (*locatio conductio operis*). This type of lease was the most appropriate for short-term contracts. Second, there was the \**emphyteusis* whereby a \*tenant was granted a long-term or perpetual right to a piece of land in return for the payment of an annual rent. Third, there was the *superficies*, which, like the *emphyteusis*, was inheritable, and which granted a long-term or perpetual right to a building but not to the land on which it stood.

PS Nicholas, *Introduction to Roman Law*.

**leather and tanning** Leather was one of the most important materials in Late Antiquity. Hides were obtained from \*camels, \*sheep, \*goats, and \*cattle, especially the latter two, and prepared by tanning, the process of treating animal hides to render them chemically stable leather, which is a durable material fundamentally different from the untreated skin. Raw hides were first cured by smoking, applying fat, or other materials to prevent decomposition and then steeped in vegetable products, usually oak or other barks whose tannins bind with the collagen in the hides to render it leather. In much of Europe, and even in places with a

leatherworking tradition such as \*Egypt, leather products were relatively rare until the Roman period, at which time specialist producers applied Roman technical knowledge and skills, leading to a growth in tanning and leatherworking.

Leather had many uses, especially for boots, shoes, and sandals, and for such clothing as \*belts, cloaks, and other articles. The 2nd/3rd-century jurist Paulus records the presence of specialist tanners and leatherworkers on large \*estates (III, 6, 37) where they produced and mended clothing and such equipment as waterskins and wineskins, buckets, \*harness, and rope. Tents used by the Romans as well as by their \*Arab and steppe-dwelling neighbours were made from leather. Imports of leather from the \*Persian Empire are attested in the \*Digest (39, 4, 16, 7) and Babylonian hides are the most expensive mentioned in the Tetrarchic \*Prices Edict (8, 1a), which also refers to tanning and leather work in Phoenicia and \*Tralles in \*Anatolia. At \*Corycus in \*Cilicia, no fewer than thirteen boot makers (*kaligarioi*) are listed in \*inscriptions. Immense demand for leather in the Roman \*army has led P. Crone to theorize that it was an important item of exchange between pre-Islamic Arabs and Romans and the source of much of the wealth of the \*Quraysh at \*Mecca. After the collapse of Roman authority in the West, many tanning techniques were lost and reappear only in the late Middle Ages.

**lectio divina** (Lat. 'sacred reading') The monastic practice of prayerful reading of the \*Bible, emphasized in S. \*Benedict's *Rule for Monks*. Monastic literacy was promoted for the sake of reading the Bible and biblical commentaries, both for private devotion and in support of liturgical observances. The earliest \*Latin sources refer to time set apart each day for *medite* or *meditatio* (cf. Gk. *medomai*, *meletē*), understood to be the slow reading and repetition of biblical texts to foster memorization. Later monastic texts use *lectio* ('reading') as a synonym, understood in the sense of slow, deliberate reading. S. Benedict's *Rule* specifies times for manual labour and for *lectio divina*, the latter reserved for two to three hours of the morning and whenever permitted by the daily horarium (*Rule of S. Benedict*, 48–9). The *Rule* also uses *meditatio/meditari* (RB 8, 3; cf. 48, 23; 58, 5). S. Benedict provides no details of how it is to be done; such was unnecessary in a culture in which reading was always vocalized and memorization was prized. CAS

**legal education** Forensic education in the Roman Empire grew out of the study of \*rhetoric (the third tier of schooling after the primary and grammar stages). Legal education was considered a specialist branch of higher study. During the Principate several law schools (in particular the Sabinians and Proculians) existed in the \*City of \*Rome. Other cities also had law schools where students read juristic works. \*Gregory the Wonderworker in the first half of the 3rd century was on his way to study \*law at the Roman *colonia* of \*Beirut when he was sidetracked by the theological teaching of \*Origen. The career of \*Augustine's friend Alypius illustrates legal training in the 4th century: having studied rhetoric in \*Carthage, he left \*Africa for the law schools of Rome (*Confessions*, VI, 7–10) and went on to be the \*Assessor of the \*Comes Largitionum Italianarum (VI, 10, 16). \*Libanius (*Oration*, 1, 154; *Oration*, 2, 43–4) complained that many students terminated their study of rhetoric early to concentrate on studying \*Latin \*jurists in law school.

\*Justinian I ordered a new systemization of legal training (*Constitutio Omnem*, 533). In a typical previous curriculum first-year students read Gaius' *Institutes* and moved on to selections from other jurists such as Papinian; it seems to have lasted four years. After Justinian's revision of this standard curriculum, students started with the \*Institutiones of Justinian (*InstJust*) as their first-year text (a reworking of Gaius by \*Tribonian, \*Theophilus, and \*Dorotheus) followed by study of various legal topics in the second year. The third year still focused on Papinian (and third-year students were known as 'Papinianists'), the fourth focused on the *Sententiae* of \*Paul, and the fifth examined valid imperial constitutions. \*Agathias and some friends offered an \*icon of the Archangel Michael at S. Michael's shrine at \*Sosthenion at the end of their fourth year of legal study, asking the \*angel to shape their future hopes (*AnthGr* I, 35). Justinian allowed only the law schools in Rome, \*Constantinople, and Beirut to operate (*Constitutio Omnem*, 7 of AD 533). \*Severus of \*Antioch

studied rhetoric at \*Alexandria before studying law at Beirut. RMF

**Leges Vizigothorum** See BOOK OF THE JUDGES.

**legions** The characteristic infantry formations of the Roman armies. The history of some individual *legiones*, or elements derived from them, may be traced from the Late Republic to the reign of Heraclius. The 33 *legiones* of the era of Septimius Severus (193–211) consisted of 5,000–6,000 soldiers each, organized in ten *cohortes*. Static posting on the \*frontiers from the 2nd century AD required that \**vexillationes* be dispatched away for specific tasks, sometimes permanently. In the 3rd century individual *legiones* (e.g. *II Parthica*) were used as a more mobile imperial reserve.

The '*antiqua legio*' advocated by \*Vegetius is best represented in this period by its weapons specialists (*De Re Militari*, II, 2–25). Specialists integrated into legions, such as \*archers (*sagittarii*), artillerymen (*ballistarii*), light infantry (\**lancearii*), and \*cavalry (*promoti*), were progressively separated out into independent formations, a development reflected in \*papyri and in the \**Notitia Dignitatum*. The latter listed more than 200 formations amongst the \**palatini* (25), \**comitatenses* (71), \**pseudocomitatenses* (48), and \**limitanei* which were the rumps or *vexillationes* of old frontier *legiones*, or *legiones* newly raised in the 3rd–4th centuries, or the separated specialists. Seventeen frontier *legiones* appear in the *Notitia Dignitatum* detached in up to six posts. Such new legionary installations were very small; e.g. al-\*Lejjun, Jordan, housing IV Martia was only 4.6 ha (11.4 acres), compared with earlier bases enclosing 20 ha (c.50 acres). Thus, it is likely that Late Roman *legiones* normally comprised 1,000–1,200 infantry, although their internal organization is obscure.

Elements of the titulature of Late Roman legions derived from the Late Republic and Early Empire, or reflected creation under the \*Tetrarchy (*Ioviani*, *Herculiani*: Vegetius, *De Re Militari*, I, 17; *Not. Dig. occ.* 5, 145–6), or preserved the place names of \*provinces or bases. Despite their reduction in size and narrower range of functions, some of the old legionary *kudos* still lingered. Field army *legiones* were listed in senior positions in the *Notitia*, and even frontier *legiones* fought with vigour, such as the seven which fiercely defended \*Amida against \*Shapur II in AD 359

(\*Ammianus, XIX, 5, 2–6, 12). Some legionary formations continued to exist down to the wars of Heraclius, being finally lost in the \*Arab conquests of \*Syria and North \*Africa. JCNC

**al-Lejjun and district** The site of al-Lejjun in Jordan is a well-preserved Late Roman 'legionary' fortress, called Betthorus/um, and Betthoro in the \**Notitia Dignitatum* (or. XXXVII, 22), and lying 40 km (25 miles) east of the Dead Sea and 20 km (12 miles) north-east of Kerak. The fortress measures 242 × 190 m, enclosing 4.7 ha (11.6 acres), and was constructed c.300, probably for the Legio IV Martia, from a subdivided Legio III Cyrenaica then based at \*Bosra. An extramural settlement, with a \*temple and *mansio*, subsequently appeared. Both fortress and settlement were largely destroyed by an \*earthquake in 363 but soon repaired and the facilities of the settlement were partly redesigned. In c.500 a church was added within its defences. The fortress, like much of the \*frontier of which it was the principal component in this region, was further damaged by earthquakes in 502 and 551. By this time the frontier had been abandoned (c.530) under \*Justinian I's policy effectively to demobilize the \**limitanei* who defended it.

The district of al-Lejjun incorporated the Kerak plateau region of west-central modern Jordan, in part including the biblical land of Moab. It lies between the Wadi al-Mujib to the north and Wadi al-Hasa in the south. Part of the \*province of \*Arabia under the \*Tetrarchy, it either remained part of Arabia or was transferred to Syria Palaestina. By the 6th century, it had been transferred to \*Palaestina Tertia. Several sites in the area whose exact locations remain unresolved are mentioned in \*Eusebius' *Onomasticon*. The region passed into \*Arab control by 640, but is largely absent from contemporary sources until the late 9th century. The archaeology of the region has been extensively explored. Most recently a multi-period field survey has revealed (from datable sites) an intensively populated landscape of the Late Roman to early and mid-Islamic periods. PWMF

J. Maxwell Miller, ed., *Archaeological Survey of the Kerak Plateau* (ASOR ArchRep 1, 1991).

Parker et al., *Roman Frontier in Central Jordan*.

**lembos** An open-decked galley developed along the Illyrian coast around the 3rd century BC and referred to in Late Antique sources (e.g. \*Procopius, *Gothic*, VII, 19, 19). Larger than the \**keles* and the \**akatos*, *lembos* saw service as merchant vessels, naval auxiliaries, riverboats, and \*pirate ships. The Romans adapted them as

light warships to replace the *triaconter*, and later replaced them with the *\*dromon*. They were essentially single-decked versions of the *\*liburna*. ALB; AG Casson, *Ships and Seamanship*, 125–7, 162–3.

**Leo I** \*Bishop of \*Rome 440–61. Through his contribution to the outcome of the \*Council of \*Chalcedon (451) Leo I's theological and political influence extended beyond his own see to the Christian East. From his 21-year pontificate, 143 \*letters of genuine attribution survive, and 96 \*sermons. These are addressed to some of the most influential figures of his time, including the imperial families, and \*patriarchs of \*Constantinople. His most famous work, the *\*Tome of Leo*, addressed to Flavian, \*Patriarch of Constantinople, was pivotal in the Christological disputes of the mid-5th century, and led to him being acclaimed at the Council of Chalcedon as the voice of S. Peter. His efforts to promote civic pride in the city of Rome and its bishopric, mostly evident from his sermons, paved the way for \*Gelasius I's claim for papal primacy at the end of the century.

Little is known of his life before he became bishop on 29 September 440. The *\*Liber Pontificalis* (47) relates that Leo was born in Tuscia, the son of a Quintianus who is otherwise unknown. It seems that Leo served as archdeacon under Sixtus III (432–40), in which office he would have received valuable training for the office of bishop. Indeed this was a common career path in the papal service.

From Sixtus III he inherited a considerable building programme within the \*city, and also divisions within the urban population that stemmed from the time of Celestine (422–32). When Leo ascended the papal throne, the Church and the city were facing an uncertain future, with \*Vandals encroaching on \*Africa and \*Sicily to the south, and \*Hun invasions threatening from the north. The Huns and Vandals were to make two expeditions against the city during Leo's reign. In 452, \*Attila approached from the Veneto, and \*Prosper of \*Aquitaine relates how Leo led a diplomatic mission outside the city walls to buy him off. Leo was less successful in repelling \*Geiseric's forces in 455, and the subsequent siege taxed the city's already scanty resources. Leo died on 11 October 461 and was buried in the \*Vatican \*Basilica on 10 November. BN

**Leo I** (d. 474) Eastern \*emperor 457–74. A soldier of Thracian origin, Leo was tribune in command of an elite unit from one of the praesental \*armies based near \*Constantinople at the time of the Emperor \*Marcian's death in 457. He had previously been manager of the \*estates of the powerful general \*Aspar, who as a heterodox \*Homoean ('Arian') Christian would have struggled to gain acceptance as an imperial candidate himself. Aspar, though, is credited with orchestrating Leo's succession to the childless Marcian, as a way of maintaining his own dominance of imperial politics. Leo's accession on 9 February 457 was accompanied by elaborate \*ceremonies (\*Constantine Porphyrogenitus, *De Caerimoniis*, 1, 91), perhaps to compensate for his lack of connections to the dynasty of \*Theodosius I.

Aspar's influence persisted until 465/6 when Leo dismissed Aspar's son \*Ardabur from a senior military post on grounds of treasonable correspondence with the \*Persian Empire and began favouring \*Zeno, an officer from \*Isauria, who married Leo's elder daughter \*Ariadne. Aspar subsequently pressured Leo into proclaiming as \*Caesar his son Julius \*Patricius and into agreeing to Patricius marrying Leo's younger daughter \*Leontia (470–1), thereby effectively designating him as his heir. Later in 471, however, Leo had Aspar and his son Ardabur murdered in the imperial \*palace, thereby earning himself the nickname of 'the butcher'; Patricius was stripped of his rank. This brought a reaction from Gothic *\*foederati* whose loyalty Aspar had cultivated, and in 473 Leo was forced to make concessions to their leader \*Theoderic Strabo.

Leo's reign was also notable for his attempt to solve the \*Vandal problem. Having organized for the Eastern aristocrat \*Anthemius to become Western emperor in 467 and play a supporting role, Leo dispatched a large \*fleet to \*Africa in 468, commanded by his brother-in-law \*Basiliscus. However, through a combination of diplomatic delay and fire ships, the Vandals destroyed the eastern fleet and inflicted a demoralizing and expensive defeat on the Empire. Having made his young grandson co-emperor as \*Leo II the previous year, Leo I died in Constantinople, perhaps of dysentery, on 18 January 474. ADL

*PLRE* II, Leo 6.

B. Croke, 'Dynasty and Ethnicity: Emperor Leo I and the Eclipse of Aspar', *Chiron* 35 (2005), 147–203.

**Leo II** (467–74) Eastern \*emperor 473–4. Son of the general \*Zeno and \*Leo I's daughter \*Ariadne, he represented Leo I's best hope of dynastic continuity after his own baby son had died in 463. Despite his youth, Leo II was proclaimed \*Caesar in 472, then, when Leo I fell ill, co-emperor in 473. He was briefly sole emperor following Leo's death on 18 January 474, until his father Zeno was made co-emperor (perhaps as early as 29 January). Leo himself fell ill and died in November 474. ADL *PLRE* II, Leo 7.

B. Croke, 'The Imperial Reigns of Leo II', *BZ* 96 (2003), 559–75.

**Leo III** (c.685–741) \*Emperor 717–41. Founder of the Isaurian dynasty, Leo III's origins and early career are obscure, but he was \*Strategos of the \*Anatolic \*Theme when in 715 \*Theodosius III deposed \*Anastasius II. Leo refused to acknowledge Theodosius and, allied with his son-in-law \*Artavasdus, Strategos of the \*Armeniac Theme, marched on \*Constantinople. Theodosius abdicated, and Leo was crowned emperor on 25 March 717.

Leo's immediate task was the defence of Constantinople against the approaching \*Arab armies. The \*siege of 717–18 proved a major Roman victory, yet the Arabs remained a significant military threat throughout Leo's reign, raiding deep into imperial territory, the border only stabilizing in the 730s and 740s.

As a \*usurper Leo faced a degree of internal opposition and a need to render his rule legitimate. Successful military leadership permitted the relatively easy suppression c.717–19 of a plot by the former emperor Anastasius II and a revolt in \*Sicily. Leo's alliance with Artavasdus generally assured internal peace after this period, but Leo also cemented his dynasty's position by crowning his infant son \*Constantine V in 720, and broadcasting this on imperial \*coinage which included a new \*silver coin, the *miliaresion*. Leo also undertook several administrative and legal reforms, including the promulgation of the \**Ecloga* in 741. This served to reform the Empire within its shrunken borders and proclaim an imperial ideology heavily drawn from the Old Testament.

It is as part of this process that Leo's supposed \*Iconoclasm should be seen. Iconoclasm is a controversial topic, and recent scholarship casts serious doubt on previous accounts. For instance, in recent interpretations revolts by the \*Helladic Theme and the See of \*Rome in the 720s are associated with imperial fiscal policy, not with Iconoclasm. Nor is it thought that there was any formal \*edict against \*icons nor widespread destruction of icons. However, in 730 Leo did convene a \*Silentium that condemned image worship as idolatry, leading to the resignation of Germanus, \*Patriarch of Constantinople.

A serious \*earthquake in 740 caused significant damage in Constantinople, leading Leo to levy an auxiliary tax to fund the rebuilding of the \*walls. Leo died on 18 June 741, and was succeeded by Constantine V.

Haarer, *Anastasius*, 17, 19.

**Leontia** Daughter of the \**patricius* Sergius, and wife of the \*Emperor \*Phocas, who crowned her \*Augusta after his own \*coronation (602). Pope \*Gregory I (*ep.* 13) congratulated her on her \*accession.

PNB *PLRE* III, Leontia.

**Leonti Mroveli** \*Bishop of Ruisi, \*Georgia, and historian, traditionally considered as the author of three books of the \**Kartlis Cxovreba*: the *Life of the Kings*, the \**Conversion of Iberia*, and the *Martyrdom of King Archil*. The *Life of the Kings* is conventionally dated to the 8th century, based on the historical and geographical data provided, but modern scholarship prefers a later (11th-century) date. The conclusion that Leonti is an 11th-century editor, rather than the original author of these narratives, is today considered most plausible. NA Rapp, *Studies in Medieval Georgian Historiography*.

**Leontius** Eastern \*usurper (484–8). An \*Isaurian who had risen to the senior military post of \*Magister Militum per \*Thracias, he was sent east by the \*Emperor \*Zeno against the Isaurian rebel \*Illus. Once there, however, he was persuaded to join Illus, and was proclaimed \*emperor at \*Tarsus by the dowager \*Empress \*Verina in July 484. To consolidate his position, he moved with Illus to \*Antioch, where he was favourably received, not least by the \*Chalcedonian \*Patriarch Calandion, who was strongly opposed to Zeno's recently issued \**Henotikon*. However, the rebel forces were roundly defeated by Zeno's general \*John Scytha near Antioch in September 484. He escaped with Illus to Isauria where they took refuge in the impregnable fortress of Cherris. \*Papius and withstood a siege for the next four years until betrayal resulted in their capture by Zeno's forces. He was executed with Illus and their heads displayed in \*Constantinople. One of his advisers was the Egyptian teacher and poet \*Pamprepius whose interest in \*magic gave the rebellion a \*pagan edge. ADL

**Leontius** \**Scholasticus* (lawyer) and poet active in the mid-6th century. Several of his poems, composed in the epic dialect, were included in the *Cycle* of \*Agathias and survive in the \**Greek Anthology*. They include \*epitaphs for contemporary men and women and \*epigrams on portraits, including a series depicting female pantomime dancers. Other epigrams celebrate \*bath buildings and the victories of the charioteer \*Porphyrius.

RW

Averil Cameron and Alan Cameron, 'The Cycle of Agathias', *JHS* 86 (1966), 6–25.

**Leontius** A \*usurper who ruled officially as Leo (695–8). His career began in the \*army. As \*Strategos of the \*Anatolikon \*Theme, he campaigned successfully against the \*Arabs in \*Georgia and \*Armenia, but rebellions in the Roman \*fleet undermined him, and the \*Emperor \*Justinian II imprisoned him in 692. However, his expertise was soon needed, and he was appointed Strategos of the \*Helladic Theme in 695. \*Factions at \*Constantinople and the \*Patriarch Callinicus I (693–705) plotted successfully against Justinian II and made Leontius emperor. To disqualify Justinian from rule, Leontius slit his nose and exiled him to \*Cherson in the \*Crimea. In 697, Leontius lost \*Lazica and Armenia, and the Arabs took \*Carthage. Leontius promptly sent a fleet under the patrician John, which recovered the city, but it

was lost again in 698. The same year \*Tiberius III overthrew Leontius, imprisoned him, and slit his nose. In 705, Justinian II recovered the throne and in February 706 executed both Leontius and Tiberius at the Hippodrome in \*Constantinople.

**Leontius of Bordeaux** \*Bishop of \*Bordeaux from before 558 to after 568. He is known primarily from \*Venantius Fortunatus, who wrote several poems in \*praise of the bishop and his wife Placidina, his many ecclesiastical building projects, and his restoration of three \*villas, as well as a metrical \*epitaph. \*Gregory of \*Tours also reports how he was heavily fined by \*Charibert I for looking to set his \*metropolitan rights over against the royal will.

PCBE IV/2, Leontius 16.

Roberts, *Humblest Sparrow*, 61–82.

**Leontius of Byzantium** One of several 6th-century Leontii, in the past often confused. Leontius of Byzantium is probably to be identified with the Leontius mentioned by \*Cyril of \*Scythopolis in his *VSab* as an \*'Origenist', though it is obscure what this signifies. There is no evidence that he was Origenist in Christology; rather he was a staunch upholder of the doctrines of \*Chalcedon, a 'strict Chalcedonian' in contrast to Neo-Chalcedonianism, though his notion that the humanity of Christ was *enypostatos*, that is, real, not abstract, was developed by Neo-Chalcedonians. His theological oeuvre is mostly concerned to clarify, by drawing on contemporary philosophy (as found in the contemporary Aristotelian commentators), the Chalcedonian definition, and defend it against the opponents of Chalcedon (whom he called 'Monophysites') and followers of \*Nestorius and \*Theodore of \*Mopsuestia. AL

Grillmeier, 2/2 (1995), 181–229 (with literature cited).

**Leontius of Jerusalem** One of several 6th-century men called Leontius, in the past often confused. Nothing is known of his life. Two works of his survive—*Against the Monophysites* and *Against the Nestorians* (CPG 6917–18), the former consisting of two parts: *Testimonies of the Saints* and *Aporiae*. Leontius defends the \*Chalcedonian Definition against its detractors, and in doing so develops its Christology in the light of the theology of \*Cyril of \*Alexandria, that is, in a Neo-Chalcedonian direction. He identifies the Person of Christ with the second person of the Trinity, endorses the Cyrilline formula, 'One Incarnate Nature of God the Word', and accepts a form of Theopaschism. His theological method is imaginative, rather than scholarly, his citations from the fathers being notoriously inexact. He had a great influence on later Byzantine Christology. AL

*Against the Monophysites* (CPG 6917), ed. (with ET)

P. T. R. Gray (OECT, 2006).

Grillmeier, 2/2 (1995), 271–312.

**Leontius of Neapolis** (fl. 635–50) Greek hagiographer and \*Bishop of Neapolis (Limassol) on \*Cyprus, Leontius was an ardent supporter of the Chalcedonian cause, and wrote \*saints' lives to champion the virtues of doctrinal purity, charity, and humility. He is chiefly known for his *Lives* of S. John of Cyprus, also called S. \*John the Almsgiver, the Chalcedonian \*Patriarch of \*Alexandria from 610 to 619/20 (BHG 886), S. \*Symeon of \*Emesa, the 'fool for Christ' of the 6th century (BHG 1677), and for a now lost life of S. \*Spyridon, Bishop of Tremithus, 4th century. His *Against the Jews*, now fragmentary, became an important resource for later theologians (e.g. \*John of \*Damascus) as they articulated a case for the defence of \*icons. In October 649, Leontius attended the \*Lateran \*Council along with \*Maximus the Confessor in order to support Pope \*Martin I's condemnation of the imperially favoured doctrines of \*Monotheletism and Monergetism. **Leovigild** \*Visigothic King (r. 568–86) Leovigild was the brother of Liuva I, the father (by his first wife) of \*Hermenigild and \*Reccared I, and the husband, after his accession, of \*Goiswinth, widow of \*Athana-gild. Initially he was co-ruler with Liuva, who reigned in \*Septimania, but ruled alone from 571/2, appointing his sons co-regents in 573 (\*Gregory of Tours, *HF* IV, 38).

Leovigild's reign saw dramatic expansion (according to \*John of Biclar, restoration) of the Visigothic kingdom through annual campaigns from 570 to 578: he defeated imperial forces around Malaga, suppressed rebels at \*Cordoba, invaded the lands of the (unknown) Sappi, captured Amaya and incorporated Cantabria, campaigned in \*Gallaecia, forcing the \*Suebic King \*Miro to sue for a truce, and overran the area surrounding Orospe-da. In 579, he had his son \*Hermenigild married to \*Ingund, daughter of the \*Frankish King \*Childebert II, but Hermenigild then rebelled in the south of Spain, with Suebic and imperial assistance, and converted to Catholicism in 582. In that year, Leovigild marched against his son, capturing \*Merida (Emerita) before besieging \*Seville and taking the nearby city of Italica, finally apprehending him at Cordoba in 584 (*HF* V, 38; VI, 18 and 29 and 33). Leovigild then exiled Hermenigild to Valencia (*HF* VI, 43) and later had him murdered (\*Gregory the Great, *Dialogues*, III, 31).

Meanwhile, Leovigild had invaded the \*Basque territory in 581, founding the city of Victoriacum to control it. He defeated the Suebes in 583, and received \*oaths of loyalty from Miro, and then from his successor Eboric, but after Audeca usurped the throne in 585, he deposed him and absorbed the Suebic kingdom of Galicia (\*Isidore, *History of the Sueves*, 92; *HF* VI, 43). Relations with the Franks were also tense. The years 580 to 584 witnessed complex negotiations over a potential \*marriage between Reccared and Rigunth, daughter of \*Chilperic, which came to nothing (*HF* VI, 34 and 45; VII, 9; IX, 24). Meanwhile the flight of Ingund to imperial territory after the defeat of

Hermenigild created bad blood (*HF* VI, 40), and several confrontations ensued between the Visigoths and the Frankish King \*Guntram in Septimania (*HF* VIII, 28–30, and 35 and 38 and 45; IX, 1).

Leovigild was an important legislator, producing a *Codex Revisus* of Visigothic \*law which survives, incorporated into the (later) \**Book of Judges*. He ruled in Roman style, founding in 578 a new capital at \*Reccopolis named after his son, and imitating imperial \*coinage. He confiscated the property of many Visigothic nobles, and as a committed \*Homoean ('Arian') actively persecuted Catholics, particularly after the rebellion of Hermenigild. In 580, he held a Homoean (Arian) Church council at \*Toledo, which proposed re-baptism for heretics. He died there in 586, and was succeeded by his son Reccared (*HF* VIII, 46), who convened the Third Council of Toledo to repudiate his Homoean ('Arian') faith.

The central sections of the *Chronicle* of John of Biclar and \*Isidore of Seville's *History of the Goths* (48–52) provide contemporary coverage of Leovigild's reign and the *Lives of the Fathers* of \*Merida denounce resoundingly his ill-treatment of Christians who did not share his Homoean convictions.

GDB

*PLRE* III B, Leovigildus.

Collins, *Early Medieval Spain*, 41–58.

**Lepcis Magna** Coastal \*city, capital of \*Tripolitania. \*Inscriptions document the city's major families in the 4th century, including the Volusii and Aemilii. Under \*Constantine I, the \*city council and the \*Curator Rei Publicae restored the Forum Vetus and its \*basilica. Lepcis was raided in 363–5 by the Austuriani (cf. \*Laguatan), causing rural destruction, a siege, and a dispute with Romanus, the \*Comes Africae, that led to several citizens being executed (\*Ammianus, XXVIII, 6, 1–30). Under \*Justinian I the Severan Forum and basilica were converted into a fort and church. Three other churches are known, one constructed over a \*temple in the Forum Vetus. Walls encompassing part of the city (44 ha/109 acres) were built following the \*Byzantine invasion, but were subsequently reduced.

**Leptiminus** \*City in \*Byzacena, located 27 km (16 miles) south-west of \*Hadrumetum. Excavations have identified several cemeteries including a Christian catacomb of the mid-4th to early 7th centuries located next to an earlier cemetery of the late 2nd to 3rd centuries.

There is a possible church in the centre of Leptiminus and another at Henchir Soukrine to the south-east. Several \*baths are known. Two were abandoned by the \*Vandal period with industrial production housed in the East Baths from the 6th century onwards. Other Late Roman sites demonstrate industrial processes including \*metalwork and \*pottery production. By the 6th–7th centuries suburban zones were being abandoned and occupation was concentrated nearer the coast. The northern \*aqueduct was partially blocked in the mid-7th century and its waters diverted from the city centre into a \*cistern. A bishop, Criscentius, is known from 646.

**Lérins (Lerinum)** \*Monastery, founded c.400–10 by the Roman aristocrat \*Honoratus (later \*Bishop of \*Arles, d. 429) on two islands in the Mediterranean, about 5 km (3 miles) from the city of Cannes. The monastery can be regarded as the first outpost of desert \*monasticism in the Latin West. It had a strong impact on the rise of Western monasticism and became a place of eminent theological productivity, inspiring works by the allegedly 'semi-\*Pelagian' theologians \*Vincent of Lérins (d. after 435) and \*Faustus, Bishop of Riez (d. before 500), and also those of \*Eucherius, Bishop of \*Lyons (d. 449), \*Salvian (d. after 470), \*Lupus, Bishop of Troyes (d. 478), and \*Caesarius, Bishop of Arles (d. 542). F. Prinz called Lérins the 'Pflanzstätte' (nursery) of the episcopate of southern \*Gaul. Several monastic foundations of the 5th and 6th centuries were founded by monks from Lérins or inspired by Lérins, e.g. Grigny, Île Barbe, S.-Jean in Arles, and S.-Maurice d'Againe. The four oldest Latin monastic rules (*Regulae Patrum*, \**Rules of the Fathers*) were probably written for Lérins. S. \*Patrick may have stayed in Lérins before moving to \*Ireland; S. \*Augustine of \*Canterbury (d. 604) visited Lérins before taking Roman Christianity to the \*Anglo-Saxons in England. The monastery was destroyed in 732, rebuilt and destroyed several times during the Middle Ages, and abandoned in 1787. Today it is a Cistercian monastery.

**letter, imperial** Imperial letters (*epistulae*) were issued by the palatine bureau *ab epistulis*. In the Late Roman period these letters were primarily addressed to officials; they gave imperial answers to specific queries, in addition to responding more generally to judicial and administrative issues. The \*Letter of \*Licinius, addressed to provincial \*governors in 313, is an example. Late Roman imperial letters issued as responses to questions and petitions from private individuals (see RESCRIPTS) also survive, in particular in ecclesiastical sources. RvdB; CH

W. Kunkel, *An Introduction to Roman Legal and Constitutional History*, tr. J. M. Kelly (1975).

Millar, *Greek Roman Empire*.

**Letter of Licinius** Imperial \*letter of instruction to \*governors of eastern \*provinces issued on 13 June 313, at \*Nicomedia, by the \*Emperor \*Licinius in the joint names of \*Constantine I and himself bringing to an end the \*persecution of Christians carried on by \*Maximinus Daza, whom Licinius had just defeated. It was applicable only to the East; persecution had ended in the realms of Constantine and \*Maxentius already in 306.

Licinius' letter permitted Christians to follow their religion and ordered the restoration of Christian property confiscated during the Great Persecution, without Christians having to pay those who had acquired it in the meantime (who might however request government compensation). The terms had been agreed between Licinius and Constantine when they met at \*Milan

the previous January and Licinius had married Constantine's sister \*Constantia.

The text is preserved by both \*Lactantius (*Mort.* 48, 2–12) and \*Eusebius (*HE* X, 5, 2–14). Lactantius reproduces the \*Latin text sent to the provincial \*governor of \*Bithynia. The \*Greek version preserved by Eusebius presumably depends on the copy sent to the governor of \*Palestine. They are closely similar, except that Eusebius alone preserves the preamble. OPN

**Letter of Tansar (Tosar)** \*Letter ascribed to a \*Zoroastrian high priest, thought to have been active under \*Ardashir I (224–42), which survives in a New Persian translation made by Ibn Isfandiyyar in the 13th century AD of a lost \*Arabic version, translated by Ibn Muqaffa in the 9th century of a presumably Middle \*Persian letter. Ibn Isfandiyyar includes the letter in his *History of Tabaristan*, and scholars have variously viewed the letter as a late redaction of an original dating from the time of Ardashir, or as a text composed in the 6th century during the reign of \*Khosrow I (531–79). The name Tansar, also read as Tosar, occurs in a number of \**Denkard* passages (Books 3, 4, and 7), referring to a priest who reportedly compiled an authoritative version of the Zoroastrian canon during the reign of Ardashir I.

The text constitutes Tansar's detailed response to objections raised by King Goshnasp of Tabaristan against various deeds of Ardashir. It starts with a short and legendary history of Iran. Tansar promotes the ideal of an inseparable and twin-like unity between a centralized religious and political power. Seeking to persuade Goshnasp to submit to Ardashir's rule, he depicts the \*Sasanian sovereign as a just ruler, a restorer but also a renovator of ancient traditions, deserving the unconditional obedience of his subjects. Tansar advances the idea of a united Iran, presumably in contrast to the fragmented rule exercised by the Seleucids and Parthians, and evokes strong nationalistic feelings comparing Ardashir with the legendary kings who protected the \*Persian Empire and the Land of Iran (\*Eranshahr) against enemy onslaught. The letter incorporates two lightly moralizing fables of Indian origin in its narrative. AZ ed. M. Boyce (with ET), *The Letter of Tansar* (1968).

**letters and letter writing** Throughout Antiquity and the Middle Ages letters were both an essential means of communication and a form of art. They might have a practical purpose, as when in 258 \*Cyprian, \*Bishop of \*Carthage, warned a fellow bishop

about fresh developments in the \*persecution of Christians under the \*Emperor \*Valerian (*ep.* 80). \*Patriarchs of Alexandria long sent out a \*festal letter informing churches of the date of \*Easter as calculated by Alexandrian scholars. More detailed practical messages were often entrusted to the bearer of the letter—in the case of bishops often a \*deacon—rather than being written into the text (e.g. \*Gregory the Great, *ep.* II, 24). Imperial \*letters sent to officials in the \*administration had the force of \*law. A letter was not expected to be a private document; emperors were not alone in having their letters read aloud to them (\*Lactantius, *Mort.* 9, 8).

Whether in prose or verse, personal letters were shared as literature; a letter of \*Libanius to \*Gregory of \*Nazianzus 'as it passed through the hands of all, became the private wealth of each, some by memorizing the words through repeated reading, others by taking a copy of them upon tablets' (Gregory, *ep.* 14, 4). Such letters were often accompanied by presents, for instance of food (e.g. \*Ausonius, 1; 14; 19 Green = 18; 15; 25 Peiper); sometimes the letter is spoken of as itself the present. Letters might be written on \*papyrus (preferred by \*Jerome) or parchment (preferred by \*Augustine). They promoted \*patronage, articulated courtesies, and sustained \*friendships. They were copied as exemplars of the art of the letter. The authors might follow the example of Pliny the Younger and with an affectation of artlessness assemble their letters into collections, where the texts could represent the character of the writer, demonstrate his social and political connections, and provide delight at the sight of his wit and learning.

OPN

C. Sogno, B. K. Storin, and E. J. Watts, eds., *Late Antique Letter Collections: A Critical Introduction and Reference Guide* (2016).

**letters and letter writing, Arabic** The \*Arabic word *risala* (plur. *rasa'il*) is pre-Islamic, denoting an unwritten, oral message. It very early attains the meaning of a written epistle and, by the mid-8th century, treatise. The word *kitab* usually denotes written correspondence in the early centuries.

The extent to which letter (or any) writing was practised in pre-Islamic \*Arabia is much debated, but Arabic's cursive script seems to serve writing more than inscriptional purposes. A small number of 7th-century \*papyri from \*Egypt recording brief business and personal transactions testify to simple letter writing in Arabic from the moment of the \*Arab conquests. Later chronicles such as \*Tabari's *History*, written in the early 10th century, frequently cite sometimes lengthy letters from early Islamic figures, including the Prophet \*Muhammad, but many of these are obviously inauthentic.

The epistolary tradition in Arabic effectively began when the \*Umayyad \*Caliph \*Abd al-Malik

(r. 685–705; unopposed 692–705) inaugurated systematically Arabized state record keeping, which up till then had often been conducted in local languages. Early secretaries in the chancery (\**diwan al-rasa'il*), such as \*Salim Abu al-'Ala' and \*Abd al-Hamid al-Katib, crafted an enduring epistolary format and prose style.

Although Salim purportedly translated \*Greek texts, the early style of Arabic letter writing is in many respects similar to that used in an Arabic public address (*khutba*). Every letter begins with an invocation of God's name (*basmala*), and \*praise of God and blessings on the Prophet (*tahmid*). The early style is marked by a loose rhythm (occasionally fitting into a recognizable poetic metre), adorned sparsely with rhyme, favouring parallelism and other simple rhetorical devices. In government documents, the language is direct, but florid literary descriptions, e.g. of \*hunting, are also extant. \*Petitions, instructions, and lengthy advice literature all appear in Umayyad letters, alongside personal letters.

The *risala* format later evolved to encompass learned treatises on almost any subject.

NAM

*EI* 2 vol. 8 (1993) s.v. *Risala*, 532–9 (Arazi and Ben-Shammy).

E. Grob, *Documentary Arabic Private and Business Letters on Papyrus: Form and Function, Content and Context* (2010).

Z. Safwat, *Jamharat rasa'il al-'Arab fi 'usur al-'arabiyyah al-zahira*, 4 vols. (1971).

**letters and letter writing, Armenian** The earliest \*Armenian texts refer to the biblical epistles and also to current correspondence. \*Koriwn mentions the exchange of letters in his *Life of \*Mashtots'* (c.440); and the *Epic Histories* (\**Buzandaran Patmut'wank'*) of c.470 notes official correspondence. Other early texts, such as the *Histories* of \*Agat'angelos (c.460) and \*Elishe Vardapet (late 5th cent.), provide examples of letter writing. While these letters may be literary forgeries, they undoubtedly reflect contemporary expectations of the epistolary genre. \*Lazar's *Letter* (c.490) to his \*patron, Vahan \*Mamikonean, however, preserves the author's authentic complaint of maltreatment by his monastic brethren. The *\*Book of Letters* (*Girk' T'lt'ots'*) comprises the most significant collection of ecclesiastical letters dating from the 4th to the 13th centuries in Armenian. The *Letters* of Grigor Magistros (11th cent.) furnish an intriguing glimpse into one of the most learned minds of the period. Among apocryphal letters should be mentioned the *Letter of Love and Concord* (c.1200), supposedly sent from the Emperor \*Constantine I to King \*Trdat.

SVLa

Thomson, *BCAL* 104–5, 127–8, 147; supplement 182, 186–7, 192.

**letters and letter writing, Greek** A great variety of letters and letter types have survived from Late

Antiquity in simple or more high-flown styles. It is uncertain whether \*Greek letter writing was taught in schools. It does not seem part of an elementary curriculum (unlike what happened in Coptic \*education) but teachers of \*rhetoric may have taught it informally. Most handbooks of ancient epistolary theory date from the 4th and 5th century and all insist on brevity and clarity as prerequisites. A work *On Letter Form*, which distinguishes 41 letter types, survives in two versions attributed to both \*Libanius and \*Proclus, but should date from between the 4th and 6th centuries.

Thousand of letters on \*papyri and ostraca have resurfaced from the Egyptian desert but most of them do not have literary ambitions and convey only daily information, requests, and salutations. The senders were not only men. The extant papyri show that while only a few women penned their own letters, many more dictated them to others, especially scribes. This fact does not reflect necessarily on the sender's \*literacy or illiteracy. For both men and women in Late Antiquity, writing letters was a more formal activity than in the Roman period. It required the knowledge of complex formulaic expressions and the use of ornate characters, so people employed specialists.

Several collections of literary letters are extant from the 4th century from both pagan and Christian writers. The \*Emperor \*Julian (331–63) may have wanted to publish a collection of his letters but was prevented by his death. Among his extant correspondence (over 200 letters) there are not only messages to \*friends and acquaintances but also official letters and rescripts. The sophist Libanius (314–c.393) was famous as an epistolographer. Over 1,500 of his letters survive, even though there is a gap between the years 365 and 388 that cannot be explained satisfactorily. Besides messages to friends, his correspondence includes letters to prominent people, public officials, and parents of his students. A generation later, 156 letters of \*Synesius of \*Cyrene are extant from c.395 to 413 addressed to about 40 correspondents. Their length varies from a few lines to several pages.

Many letter collections from Christian writers remain. Among the most important are those of \*Athanasius, \*Patriarch of \*Alexandria, especially his \*festal letters, of which epistle 39 lists the canonical books of the New Testament. The correspondence of \*Gregory of \*Nazianzus, \*Gregory of \*Nyssa, and \*Basil of \*Caesarea shows great literary polish. The 375 letters of Basil follow the events of his life until he became \*bishop. Gregory of Nazianus made a collection of his own letters, of which 249 survive.

Epistolography continued to flourish in the 5th, 6th, and 7th centuries. Sophists of the school of \*Gaza left letter collections. \*Aeneas of Gaza (25 letters) and his successor as head of the school \*Procopius (169 letters) corresponded with Christian and pagan intellectuals

from Gaza and Alexandria. Over 100 letters are extant of \*Cyril, \*Patriarch of Alexandria (c.355–454), including 29 festal letters. Letters from the early 7th century are extant from \*Maximus the Confessor and \*Theophylact Simocatta.

**letters and letter writing, Latin** Documentary \*papyri preserve very few \*Latin letters from Late Antique \*Egypt: the best examples are the model letters (in \*Greek and Latin) in P.Bon. 5, from the 3rd or 4th century AD, and the letter to a cleric which comprises the 5th- or 6th-century P.Lond. V, 1792. The 4th-century *Ars Rhetorica* of Julius Victor also includes a brief appendix on epistolography (ed. C. Halm, *Rhetores Latini Minores* [1863], 447–80), notable chiefly for its interest in hierarchical relations and its straightforward division of letters into official and personal.

The worlds of imperial government and senatorial influence in the Latin West coalesce in the voluminous letters and *Relationes* ('dispatches') of the \*senator \*Symmachus the orator (\*Praefectus Urbi, 384). \*Bishops, like \*Ambrose of Milan, as well as secular officials were also involved in administration, so much so that \*Sidonius Apollinaris, like Symmachus, imitated Pliny the Younger by leaving behind a letter collection with a tenth and final book devoted to \*court correspondence. Like Pliny, these men considered their letters small works of literary art. They wrote them to promote \*friendship, to provide \*patronage, and to intervene in political developments, whether as senator or as bishop. They collected them to articulate their social position and to demonstrate their place at the ostensible centre of a network of influential political and social connections. The literary could show their cultural *savoir-faire* in verse letters, such as those exchanged between \*Ausonius and \*Paulinus of Nola or those of \*Venantius Fortunatus.

Classicism both combined and clashed with commitment to a new Christian culture. The informal, flowing, often paratactic style of \*rhetoric associated with classical letter writing was not incompatible with Christian

notions about literary propriety. Christian and classical features are combined most insistently and influentially in the correspondence of Paulinus of Nola, whose sedulously cultivated contacts ranged from \*Sulpicius Severus to \*Rufinus of \*Aquila and \*Augustine of \*Hippo. Augustine in particular idealized his correspondence as intimate friendship, in which letters and letter-carriers embodied the original author. For Augustine this entailed the freedom to correct and chastise his correspondents, both through his interventions in the \*Donatist and \*Pelagian controversies, and also in general exchanges with physically distant friends and allies. This created tensions in particular with \*Jerome, whose letters show him an effective polemicist and an energetic advocate of the \*ascetic life of Christian \*virgins and \*widows and of Christian civilization in general.

Letters encouraged those who exchanged them, those who read them (aloud) to one other, and those who forwarded them to other friends to form networks, to define their ideas and to promote what they considered to be at the centre of Christian commitment—it is no coincidence that the earliest Christian documents are letters (those of S. Paul). There were informal exchanges, as in the Gallic circle surrounding \*Ruricius of Limoges, though even correspondence between friends had an etiquette—Paulinus of Nola had friends with whom he thought it normal to exchange an annual letter (*ep.* 23, 2). More formal communications were issued by church \*councils or by \*patriarchs, popes, and other bishops, who like emperors and kings received \*petitions and circulated judgements. Papal correspondence is best exemplified by the letter collection of \*Leo I and the *Registrum* of \*Gregory I, and its interpenetration with secular \*administration by the miscellaneous documents of the \**Collectio Avellana* and the diverse *Variae* of \*Cassiodorus. MSW

#### ANCIENT LETTER COLLECTIONS

- Augustine of Hippo, *Epistulae*: PL 33, reprinting the Maurist Fathers (1685); ed. A. Goldbacher (CSEL 34, 44, 57, 58, 1895–1923), ed. J. Divjak (CSEL 88, 1981), ed. K.-D. Daur (CCSL 31, 2004–).
- ET J. E. Rotelle, R. J. Teske, and B. Ramsey, 4 vols. (WSA II, 2001–5); Sister Wilfrid Parson (FC 12 [1951]; 18 [1953]; 20 [1953]; 30 [1955]; 32 [1956]); 'Divjak' Letters 1\*–29\*: ET R. Eno (FC 81 [1989]).
- Cassiodorus, *Variae*: PL 69, reprinting J. Garet (1679), ed. T. Mommsen (MGH Auct. Ant. 12, 1894).
- ET T. Hodgkin, *The Letters of Cassiodorus* (1886), S. Barnish (selection, TTH 12, 1992).

**letters and letter writing, Syriac** Letters can take on several different forms in \*Syriac. Owing to the rarity of Syriac \*papyri, only one fragmentary letter on papyrus is known. Surviving occasional letters take on a much more literary form, an early example being the short Letter of \*Mara bar Serapion to his son (of disputed date). Many letters respond to particular occasions or needs: this applies to the various 6th-century letter collections, such as those of \*Jacob of Sarug, \*Philoxenus of Mabbog, and \*Severus of \*Antioch (only a small part of whose voluminous correspondence survives in Syriac translation), and to the 106 letters of \*Isho'yahb III (d. 659), \*Catholicus of the \*Church of the East. Longer letters often take the form of replies to requests for specific information; this applies in particular to the letters of \*Jacob of \*Edessa and \*George, \*Bishop of the \*Arab tribes in the late 7th/early 8th centuries. In some cases discourses on particular subjects (often theological) are presented in the literary form of letters (e.g. \*Ephrem's Letter to Hypatius and the spiritual letters of \*John of \*Apamea); in such cases the opening sections may take on an elaborate and florid form. Purely fictitious is the provision of letters in pseudographic literature, such as the correspondence between King \*Abgar and Christ in the *Teaching of \*Addai*, or the

Letter of Julian in the *\*Julian Romance* (ET: H. Gollancz, 82–5). Letter imagery is extremely common in Syriac literature, especially in poetry (where Gabriel is often described as presenting Mary with a 'letter'). SB

**Leudast** (d. 583) \*Comes of \*Tours under \*Charibert I and \*Chilperic I. He frequently clashed with its \*bishop \*Gregory of Tours, who portrayed him as a low-born villain (*HF* V, 47–9). When Chilperic dismissed him in 580, he plotted unsuccessfully against Gregory, and was eventually \*tortured to death on \*Fredegund's orders in 583 (*HF* VI, 32). EJ

PCBE IV/2, Leudastis.

PLRE IIIB, Leudastes.

**leudes** Magnates with military retinues who were bound by oath to \*Merovingian kings. They assume prominence in times of disputed \*succession or rebellion, when bribes and \*gifts proved necessary to retain their loyalty. EM

RGa2 s.v. Leudes, XVIII (2001), 292–8 (G. von Olberg-Haverkate and H. Reichert).

B. Bachrach, *Merovingian Military Organization*, 481–751 (1972).

**Leviticus Rabba (Vayyiqra Rabba)** An anonymous work of \*Midrash juxtaposing 37 formally independent texts, which constitute so-called rabbinic 'homilies'. Most scholars date the work, which exhibits significant manuscript variations, to c.5th-century AD Palestine. Each 'homily' links most of its statements to a specific verse or group of verses in Leviticus. The order of 'homilies' mirrors the biblical sequence of these anchor verses (called 'Inyan'), which cover only a small proportion of Leviticus. Within each homily, a cluster of individual sequential interpretations dealing with the 'Inyan' verse(s) is framed by several preceding Petiḥah-units and one succeeding Ḥatimah-unit. (1) The formally distinct Petiḥah ('opening') begins by quoting a verse from elsewhere in scripture and interprets it in a manner that leads to the anchor verse in

Leviticus or its topic. Usually several Petiḥah-units are juxtaposed. (2) Next comes a cluster of interpretation units dealing with the 'Inyan' verse(s) or theme(s). (3) Finally, a Ḥatimah ('seal') leads to a concluding verse or theme of comfort or eschatological hope; but only about half of the 'homilies' end in a Ḥatimah. (4) A format which links the 'Inyan' verse to a preceding passage in Leviticus is sometimes found after the Petiḥah-units. Quotation-comment units, mostly concerning verses from outside Leviticus, dominate the textual fabric (see MIDRASH, 2); they are often attributed to a named rabbi, and found alongside narrative units and hermeneutic parables. Many interpretation units and other passages overlap tacitly with the Palestinian \*Talmud, \*Genesis Rabba, and \*Pesiqta de-Rav Kahana. AS

**Levond** Author of an Armenian history covering the years c.632–789. It is usually assumed that he was an eyewitness to the events of the 780s, but otherwise nothing is known of him. His *History* follows on from that attributed to \*Sebeos, covering the subjugation of \*Armenia to the \*Umayyad caliphate after its submission in 652. It also contains information about Umayyad wars with Byzantium. The *History* was commissioned by Shapuh \*Bagratuni, governor of \*Armenia 761–75. The author aimed to examine how Christian Armenia had come under Muslim domination. Where Sebeos believed the Muslims to be acting with divine

favour, Lewond wished to show that they had forfeited divine favour by breaking their \*oaths to protect the Christians and through their own sinful conduct, so that their domination of Armenia would perforce be short-lived. TLA

Thomson, *BCAL* 149–50, supplement 192.

ed. K. Ezean (1887).

ed. with ET and comm. Z. Arzoumanian (1982).

**Lex Burgundionum (Liber Constitutionum, Lex Gundobada)** A collection of \*Burgundian royal \*edicts, probably compiled under King \*Sigismund in 516–17, although some manuscripts attribute it to \*Gundobad. Some manuscripts also provide additions from the reign of Gundomar. Once thought to apply to Burgundians, but not to Romans, who were governed by the *Lex Romana Burgundionum*, the two texts are now believed to have had a complementary use, both applying to both peoples.

Like the \*Frankish *Lex Salica*, it sets out \*compensation payments for \*homicides and injuries, but is more comprehensive, treating law of property, slaves, \*inheritance, and \*marriage in greater detail. TWGF ed. L. R. de Salis in MGH LL nat. Germ. 2, 1 (1892), 29–122. ET K. Fisher Drew, *The Burgundian Code* (1949).

M. Innes, 'Land, Freedom and the Making of the Medieval West', *TRHS*, 6th series, 16 (2006), 39–74.

**Lex Gundobada** See *LEX BURGUNDIONUM*.

**Lex Ribuaria (Lex Ripuaria, Lex Ribuariorum)** A Frankish legal text, probably compiled in the 7th century, in the \*Austrasian kingdom, although difficult to date or locate precisely. Two loose textual families have been identified: A (\*Merovingian) and B (Carolingian). The text contains material derived from \**Lex Salica*, and shows the influence of Roman \*laws. Some of its provisions may also be derived from Frankish royal \*edicts. It is more sophisticated than *Lex Salica*, and includes material relating to the Church, as well as detailed instructions on using \*charters in legal business, for alienating land and freeing slaves. The text refers to those subject to the law as 'Ribuarians', and has often been understood as the law of the 'Ripuarian \*Franks' of the East, as opposed to the 'Salian Franks' of the West. This is now questioned, since there is no evidence outside the text itself for a clear 'Ribuarian' ethnic identity in the Merovingian period. TWGF ed. F. Beyerle and R. Buchner in MGH LL nat. Germ. III, 2 (1954).

**Lex Romana Burgundionum** A collection of abbreviated and modified Roman laws associated with the \*Burgundian kingdom. It was probably composed in the early 6th century, but bears no date or attribution in its manuscripts. *Lex Romana Burgundionum* and \*Sigismund's \**Lex Burgundionum (Liber Constitutionum)* are influenced by each other and possibly refer to each other. They are now generally understood to have been used as complementary texts, valid for those identifying as both Roman or and Burgundian. Its sources are the \**Theodosian Code*, the *Institutes of Gaius*, and the \**Gregorian and \*Hermogenianic Codes*. It is considerably shorter than the *Lex Romana Visigothorum (Breviarum of \*Alaric)*, which uses similar texts. It has been an important source for studying late Late Roman 'Vulgar \*Law'. TWGF

ed. L. R. de Salis in MGH LL nat. Germ. 2, 1 (1892), 123–70. ed. in *FIRA* 2, 714–50.

**Lex Romana Visigothorum** See *ALARIC, BREVIARIUM OF*.

**Lex Salica (Pactus Legis Salicae)** The earliest legal text associated with the \*Franks, probably constructed before 511 under King \*Clovis. It purports to describe the customs of the Franks as dictated by four wise men from beyond the Rhine. Its textual history is complex, with six redactions (A–E, K), the first three of which are plausibly from the \*Merovingian period. It has been considered the law of the Western branch of the Franks, the 'Salian Franks', although a splitting of Frankish identity is now not universally accepted for the period of composition.

The text contains a catalogue of compensations for injuries and \*homicides of men of different social ranks and ethnic identifications. It also treats inheritance and transfer of property, with elaborate descriptions of rituals, but makes no mention of the Christian Church, nor of the use of writing in disputes. Compared to all other Germanic \*law, it shows the least influence of Roman \*law in style and substance. The \*Latin text contains many words of Germanic origin, and some manuscripts preserve corrupted glosses written in a \*Germanic language, and known as the \*Malberg Glosses. TWGF ed. K. A. Eckhardt in MGH LL nat. Germ. 1: 4, 1 (1962) and 4, 2 (1969).

**Libanius** (314–c.393) Pre-eminent sophist and man of letters from \*Antioch. He is the chief spokesman in our sources for the views and aspirations of the Greek civic \*aristocracy in the 4th century, both a passionate defender of traditional \*city life and a sharp critic of the increasing Romanization of eastern society in his day.

Born into one of the city's most distinguished families, Libanius was educated in Antioch and later at \*Athens (336–40), after which he spent his early teaching years (340–54) in \*Nicaea, \*Nicomedia, and \*Constantinople. In spring 354 he returned home, established himself as city \*rhetorician and taught in his native city for four decades. His school is the best documented from Antiquity. Some 500 surviving \*letters and numerous orations are concerned with his pupils and school life. He successfully recruited students from nearly all the \*provinces of the East, and a number of distinguished contemporaries are said to have been his students: \*John Chrysostom and \*Theodore of \*Mopsuestia (very likely), \*Basil of \*Caesarea and \*Gregory of \*Nazianzus (probably), and \*Amianus Marcellinus (possibly).

The \*Emperor \*Julian's nine-month stay in Antioch in 362–3 was the defining moment of Libanius' life as a public figure. Prized by Julian for his oratory, Libanius was welcomed into the imperial \*palace for the only time in his life. Bad relations between Julian and the Antiochenes meant that his services as intercessor and mediator were much needed. However, the emperor's death on campaign against Persia undid Libanius' bright hopes and ushered in a period of danger and political eclipse. He remained deeply loyal to Julian's memory and defended him in a series of speeches. Politically marginalized under \*Valens, Libanius became more publicly active under \*Theodosius I and produced an astonishing number of speeches in old age. His later years were troubled by tensions with the \*city council of Antioch, which questioned his immunity from curial duties and his efforts to keep close associates, including his son Cimon, free of curial duties. It is telling that he should feel obliged to compose speeches such as *To Those Who Called Him Tiresome* (Oration 2) and *Against the Critics of his Educational System* (Oration 62).

Libanius' knowledge of Classical literature was unrivalled in his day. He was Late Antiquity's purest 'Atticizer', modelling his style on the Attic orators

of the 4th century BC, especially Demosthenes. The Byzantines admired him greatly and called him a 'Second Demosthenes'. His rigorous adherence to Classical \*Greek usage and rejection of technical terminology from his own era can make him difficult for the modern reader. In effect, he uses the Greek of the Classical Athenian city state to address the political and cultural complexities of an early Byzantine world. His charm and verbal wit reward the patient reader.

Libanius has left 64 orations of diverse types. Of particular importance are his *Autobiography* (Oration 1), his speech in praise of Antioch, the *Antiochikos* (Oration 11), the Funeral Oration or *Epitaphios* on Julian (Oration 18), and the remarkable series of speeches on religious and social issues of the Theodosian age: *For the Temples* (Oration 30), *On the Prisoners* (Oration 45), *On Protection Systems* (Oration 47), *For the City Councils* (Orations 48–9), *About Forced Labour* (Oration 50), *On the Statues* (Orations 19–23). His corpus also preserves assorted declamations (imaginary speeches on historical/mythical topics) and school exercises. The 1,544 surviving letters comprise the largest corpus to survive from Antiquity, divided into two distinct groups: 1,269 from the decade AD 355–6 and 273 from the five-year period AD 388–93. Some 700 people, including scores of important officials, appear in the letter collection. After the *Theodosian Code*, he is the most important source for the prosopography of the Eastern Empire in the 4th century. SAB

**Liberal Arts, Seven** A canon of academic disciplines associated with \*Martianus Capella and his encyclopedic *De Nuptiis Philologiae et Mercurii* (*On the Marriage of Philology and Mercury*), a \*Latin text of the 5th century. After two books of introductory \*allegory, in which the marriage of Mercury and Philologia is arranged, each of the subsequent seven books is dedicated to a liberal art. The first three liberal arts, those concerned with language, \*Grammar, Dialectic, and Rhetoric, came to be known as the 'trivium', and the following four, those concerned with \*mathematics, \*Geometry, Arithmetic, \*Astronomy, and Harmonics (including \*Music), the 'quadrivium'. In each case, a female \*personification of the particular liberal art describes the area of knowledge she represents. It is a highly derivative work—Capella's literary sources include Varro, \*Pliny the Elder, and Solinus. His direct familiarity with \*Greek texts has been challenged.

The canon of liberal arts was a Roman adaptation of and equivalent to the Greek *enkyklios paideia*, which had its origins in classical sophism; the role of Varro in shaping the Roman canon is incompletely understood. \*Augustine, \*Cassiodorus, and \*Isidore of \*Seville accommodated the liberal arts for Christian

use. Capella's liberal arts influenced medieval education, where it became a curriculum for study before more specialized focus, such as on law; his text also spawned a rich manuscript and commentary tradition.

**Liberatus of Carthage** \*Deacon of \*Carthage, author of *Breviarium Causae Nestorianorum et Eutychianorum*, an account of the Christological controversy from the election of \*Nestorius as \*Patriarch of \*Constantinople (428) to the publication of \*Justinian I's decree condemning the \*Three Chapters (544). Liberatus was opposed to the condemnation of the Three Chapters, and laments bitterly the weakness of many of the \*bishops of \*Africa who, corrupted by bribes, accepted the decree. Earlier he had visited \*Rome as an emissary of the Church of Carthage. AL

Wood, *Chronicle of Seert*, 150–3.

***Liber Generationis* (Συναγωγή χρόνων καὶ ἐτῶν ἀπὸ κτίσεως κόσμου ἕως τῆς ἐνεστώσης ἡμέρας)**

A \*Greek guide to the chronology of the Old Testament originally compiled before 235, which exists in three independent \*Latin translations of 334, 359 (later reworked in 365), and the 780s; a partial 10th-/11th-century Greek text, as well as a number of partial Greek (and one \*Arabic) witnesses in other sources; and a partial \*Armenian translation. This chronograph is referred to as the *Chronicle of Hippolytus*, but there is no agreement as to the identity of 'Hippolytus', no good evidence that \*Hippolytus ever wrote such a work, and nothing in the *Liber Generationis* that would link it to him (apart from the date), even if he had. Unfortunately the many faults of Helm's study and all extant editions necessitate a new study and edition. RWB

***Liber Graduum (Book of Steps)*** Late 4th-century collection of 30 \*Syriac discourses (\**memre*) by an anonymous author in the \*Persian Empire. The discourses depict a two-tiered pre-monastic Christian society, consisting of the upright (*kine*) who are married, work, and use their wealth for active ministry, and the perfect (*gmire*) who are celibate, do not work, and have no possessions; they teach and mediate in \*disputes. The author expresses disappointment at the spiritual decline of the perfect, but affirms the surprising progress of the upright. RAKi

***Liber Historiae Francorum*** A history of the Franks from their supposedly Trojan origins to the present, written from the perspective of \*Neustria by

an anonymous author in 726/7, possibly at \*Soissons. Its last eleven chapters (43–53) offer a succinct but indispensable account of \*Merovingian politics in the period 639–727, the only such historical narrative. Its earlier parts condense and substantially rework the six-book version of \*Gregory of \*Tours's *Historia Francorum*, into which the author weaves epic tales similar to but independent of those offered by the \*Fredegar Chronicle, whose Carolingian reviser soon appropriated its closing chapters for his own narrative of Frankish history. **Liberius** (bp. \*Rome 352 until his death in 366) Liberius espoused the Nicene \*Creed and was exiled to \*Thrace after the Council of \*Milan (355) for refusing to condemn \*Athanasius. Two years later, he capitulated to \*Constantius II, accepted the \*Homoean creed, and was allowed to return to Rome, where he coexisted with the newly appointed \*bishop, Felix. Following the death of Constantius II, Liberius restated his Nicene faith, but adopted a conciliatory position towards former Homoean bishops. A popular bishop in life, he veiled \*Ambrose's sister Marcellina, and built the Liberian Basilica (\*S. Maria Maggiore). After his death, dispute over the \*succession led to violent disorders in Rome, and his reputation was immersed in controversy (\**Liber Pontificalis*, 37). DN

**Liberius** Petrus Marcellinus Felix (after 465–after 554) Correspondent of \*Ennodius and Roman aristocrat, admired by \*Procopius (*Gothic*, V, 4, 24). As \*Theoderic's \*Praefectus Praetorio \*Italiae (493–500), he settled

\*Ostrogothic soldiers on confiscated land peacefully and prosperously. He served successfully as Praefectus Praetorio Galliarum from 510 to 534, when he exemplified the volatile loyalties of the senatorial \*aristocracy by defecting to \*Justinian I while on an embassy from \*Theodahad. Under Justinian, he served as \*Praefectus Augustalis (538/9–42), held commands in \*Sicily (550) and \*Spain (552), and negotiated with \*Vigilius of Rome in Constantinople in 553. In old age he returned to \*Italy and was buried at \*Ariminum. PNB

PLRE II, Liberius 3.

Sarris, *Empires of Faith*.

**Liber Pontificalis** A serial collection of biographies of the \*bishops of \*Rome, whose writing began sometime in the 530s and was brought up to date with interruptions until the 870s.

The collection has a complex textual history. Authorship is usually associated with clergy of the church administration at Rome who had access to archives. The author of two forged \*letters which form a preface to the *Liber Pontificalis* intended it to be seen as the work of \*Damasus (bp. Rome, 366–84) composed at the request of \*Jerome. Two distinct manuscript traditions attest the origin of the text: one edition contains papal lives up to 530 (ending with Felix IV), while the second edition, produced in the 540s, revised lives of the first edition and then continued to Silverius (d. 537). Sometime around 640, an author brought the second edition up to date, which was then maintained more or less continuously until the late 9th century.

Lives in the first edition may have originated with a late 5th-century tradition of papal biographies that were subsequently used to compile the so-called Laurentian Fragment connected to a posthumous attempt to rehabilitate the reputation of \*Symmachus (bp. 498–514). Symmachus' election had involved violence at Rome and the intervention of political authority from \*Ravenna. This places the *Liber Pontificalis* in the wider context of the Laurentian Schism (498–506) and disputes concerning theological *rapprochement* with the East. \*Bede is the first author to cite the *Liber Pontificalis*, thereby indicating renewed use of the text as a source of papal history in the 7th century.

Much of the *Liber Pontificalis* bears the imprint of church \*archives and each biography follows a relatively consistent format, including the origin of the bishop, the length of his episcopacy, the number of episcopal ordinations over which he presided, and circumstances of his death. Nonetheless, the criteria followed to portray particular bishops appear more individualistic. Fuller lives include contributions made by bishops to church doctrine and liturgical practices, texts composed by the bishop, and interaction with secular rulers. The *Liber Pontificalis* has a prescriptive concern for the

activities and behaviour appropriate to popes. The founding of new churches, rigorous action against \*heresy, and the management of gifts to and from the church are common themes. Lists of church property, such as in the life of \*Silvester (bp. 314–35), offer valuable insights into the wealth of the Church, the role of the bishop as steward of properties, and the influence of \*patrons. The *Liber Pontificalis* is an excellent source for understanding the \*titulus churches, although attention to the history of churches at Rome is not consistent. Nonetheless, the *Liber Pontificalis* offers a vivid supplement to the Christian topography of Rome. The text also illuminates various schisms and the survival of \*Manichaeism and Christian heresies.

**Libertinus** As Praetor of \*Sicily 593–5, he corresponded with \*Gregory the Great about a \*Jew who owned Christian slaves (*ep.* III, 38). Later he was accused of embezzlement, beaten, and imprisoned; Gregory wrote to comfort him (*ep.* X, 31).

PLRE III, Libertinus.

**Libius Severus** (d. 465) Western \*emperor (461–5). A native of \*Lucania whose background is otherwise unknown, he was made emperor by the powerful general \*Ricimer in 461, following Ricimer's elimination of the Emperor \*Majorian. Ricimer remained the controlling force during his reign, which was never officially recognized by \*Constantinople. Concern to win support in \*Gaul may have led Severus to cede Narbo to the \*Visigoths, but he faced resolute opposition from the general \*Aegidius, a former associate of Majorian, who defeated Severus' Visigothic allies at \*Orléans in 465. Severus died at \*Rome in November 465; \*Cassiodorus, writing later, claims he was poisoned by Ricimer (*Chronicle s.a.* 464), but this has found little support against \*Sidonius' allusion to his death from natural causes (*Carmen*, II, 317–18). A few of his laws survive (*NovSev*). ADL

**libraries** The earliest surviving use of the \*Greek term *bibliothēke* (literally 'book-container') is from the

Hellenistic period and alludes to the Royal \*Library of \*Alexandria. Other great Roman \*cities had public libraries. Some of these were free-standing institutions, such as the twin libraries which flanked Trajan's Column in \*Rome or the Library of Celsus at \*Ephesus, damaged probably in an \*earthquake in the 3rd century and transformed into an architectural water feature c. AD 400. Others were associated with \*temples, such as those at the \*Serapeum, Claudianum, and Caesarium in Alexandria, or with \*bathhouses, including the Baths of \*Diocletian at \*Rome.

\*Constantinople had a public library from at least the reign of \*Constantius II. \*Zosimus states that \*Julian deposited all his books there (III, 11, 3); these may or may not have included the substantial library of \*George of \*Cappadocia, \*Patriarch of Alexandria, which Julian claimed as his own after George was lynched by an Alexandria mob (Julian, *ep.* 22 Wright 378C). In 372 \*Valens ordered that the Constantinople library should be staffed by four Greek and three \*Latin copyists as well as conservators and custodians (*CTh* XIV, 9, 2). It was said to have contained 120,000 volumes when it was destroyed by a fire in 475 (\*George Cedrenus, I, 616; \*Zonaras, XIV, 2). A second fire in 726 under \*Leo III the Isaurian allegedly caused an additional loss of 36,500 books (Constantine Manasses, *Compendium chronicon*, 4262–3).

There were large private libraries in senatorial \*houses, though \*Ammianus complained that those in Roman mansions were kept for ostentation rather than for use (XIV, 6, 18). That could not be said of the learned \*senator \*Boethius (c.480–524), who, summoned by the Lady Philosophy to search for her in his heart, not in his book cupboards, describes his own library as surrounded by walls ornamented with \*ivory and \*glass (*Consolation of Philosophy*, I, 5, 6).

Evidence from \*Egypt about private libraries (as distinct from \*archives) recorded in finds of \*papyri includes a substantial number of book-lists, each pointing to private collections of varying dimensions. The largest of them (listed in P.Oxy. 2659, 2nd cent.) must have numbered several thousands of Greek volumes. Two lists from the not less lively 4th–5th-century Hermopolis (P.Turner 9; P.Berl. inv. 21849), mostly containing rhetorical papyri, may be inventories of private collections of scholars or lawyers. In the Greek East, no major Greek library has been found *in situ* to compare with that found in the Villa of the Papyri at Herculaneum in \*Italy—which possibly belonged to the \*philosopher Philodemus and was abandoned after his death (c.35 BC).

\*Book production was expensive, and the \*price of books was high. Neither papyrus nor parchment was cheap, and neither lasts for ever. Parchment appears to have been thought (not necessarily correctly) to be more

durable than papyrus, and both were more permanent than wax \*tablets, but natural decay was a surer threat to the preservation of texts than the chances of violence or fire. The process of copying also posed difficulties. Scholars might lend one another books to copy for the fair love they had of learning, but, as \*Longinus complained to \*Porphyry, good copyists were hard to find—even in \*Athens (Porphyry, *VPlot* 19). \*Augustine admired the integrity of his former pupil Alypius because even though he had a good job in the imperial \*administration he did not make use of government scribes to copy literary texts for his own use (*Conf.* VI, 10, 16).

It was indeed the availability of copyists which made possible the creation of one of the most impressive private libraries of Late Antiquity. \*Origen at \*Caesarea of \*Palestine was provided by his \*patron Ambrosius with at least seven \*shorthand writers and the same number of copyists as well as girls trained in \*writing (\*Eusebius, *HE* VI, 23). Late Roman *codices* were stored lying on their sides in book cupboards (*armaria*), sometimes numbered (\**HA Tacitus*, 8, 1), like those depicted holding Gospel books on the \*mosaics of the building at \*Ravenna known as the Mausoleum of \*Galla Placidia. The manuscripts in the cupboards of Caesarea made possible the scholarly work of Origen, of his pupil \*Pamphilus, and of Pamphilus' pupil Eusebius. At the same time that Origen's library was being assembled, a similar library, also used by Eusebius, was being put together for the church at \*Jerusalem by Alexander the bishop (*HE* VI, 20).

Churchmen in the \*Latin-speaking world continued to take such initiatives into the Middle Ages. A library gathering and indexing the works of \*Augustine was assembled by \*Eugippius (c.460–535) at the Castellum Lucullanum at \*Naples. The monastic school called \*Vivarium founded at Squillace by \*Cassiodorus (*Inst.* 1, 29), which included a scriptorium as well as a library, helped perpetuate classical culture long after his death in c.585, and may have served as a model for the library of \*Isidore of Seville. In the kingdom of Northumbria, a devout \*Anglo-Saxon called Benedict Biscop assembled a large library at the double \*monastery he founded at \*Wearmouth-Jarrow which comprised the broad range of scientific, historical, and theological works which made possible the work of the Venerable \*Bede.

Monasteries in Egypt also had libraries. The most important discovery associated with them has been the collection of early Christian \*Gnostic treatises found in 1945 in a jar at the foot of a cliff by the \*Nile near the town of \*Nag-Hammadi. According to J. M. Robertson, these 3rd-/4th-century codices along with the \*Bodmer and the \*Chester Beatty papyri all come from a single monastic library established by Apa \*Pachomius (c.292–348) at \*Phbow (mod. Faw al-Qibli). In the Sohag region, some 100 km (c.62 miles) north-east of

Phbow, a large collection of Coptic manuscripts stored in the cells of the \*White Monastery of \*Shenoute escaped the attacks of the Mamluks in the 14th century and were acquired by the Bibliothèque nationale de France in 1885–7.

From the Fayyum area (\*Arsinoite Nome) came the \*Hamouli codices, which most probably belonged to the library of the Monastery of the Archangel Michael at Phantou. Seven codices from Medinet Madi, also in the Fayyum, dating from the late 3rd to the 5th century AD contain \*Manichaean texts, including \*letters and liturgical works attributed to \*Mani and his disciples. The latter suggest the presence of a Coptic library belonging to a 4th-century Manichaean centre on the south-west edge of the Fayyum.

The library of the Syrian Monastery in Egypt, \*Deir as-Suriani, contained numerous important manuscripts, largely now in London, but the original core of this collection was itself brought to Egypt from \*Mesopotamia in the early 10th century. Information about libraries in the \*Syriac-speaking world itself is sparser than it is for those in Egypt. There must have been extensive collections at the learned 6th-/7th-century Syrian \*Miaphysite monasteries of \*Qenneshre, Eusebona, and Tel 'Ada, though it is possible that some of these were more personal than institutional property; when \*Jacob of \*Edessa resumed his episcopal see at Edessa in 708 he apparently planned to take his books with him from the monastery of Tel 'Ada. Similarly in the \*Church of the East, there was a library at the \*School of \*Nisibis, and \*Thomas of Marga makes frequent allusions to the libraries of the monastery of Beth 'Abhe and of the Great Monastery of Mar \*Abraham of Kashkar on Mount 'Izla. But books were also personal; when the scholar \*Narsai migrated from Edessa to Nisibis he travelled light, but he insisted on taking his books with him, for they were 'his whole treasure'.

**libraries, monastic, Eastern** Libraries in \*monasteries are attested in literary, documentary, and archaeological sources from \*Egypt, \*Palestine, \*Syria, \*Anatolia, and \*Constantinople. They were established already in the 4th century AD and some, for example in the \*Wadi an-Natrun in Egypt and the library of Mar Mattai in \*Mesopotamia referred to by \*Thomas of Marga, have survived continuously until the present. Much of the library of Deir al-Suryani in Egypt, large parts of which are now in the British Library, was collected in Mesopotamia in the 10th century.

Monastic libraries contained \*papyri, ostraca, and \*inscriptions primarily by Christian writers but also by Classical authors. Inventories of monastic property illuminate the wide variety of topics covered, while the archaeological remains of extensive wall niches indicate that the libraries of major monasteries owned hundreds of books each. The Rules of S. \*Pachomius refer to the library of his community and to monks borrowing books on a daily basis. There are, though, stories in the \**Apophthegmata Patrum* (e.g. Serapion, 2) which suggest that books represented an unwarranted expense for monks.

The \*price of books on the open market was high. Colophons in surviving manuscripts reveal that \*patronage of the clergy and of both laymen and laywomen promoted the development of monastic libraries. Commissioning a manuscript was often an act associated with the salvation of the soul of the \*patron or the patron's family. Monastic scribes frequently copied, illuminated, and bound commissioned manuscripts. On other occasions, monastic communities exchanged manuscripts and copied each other's books. CK *CoptEnc* 1447b–1450a s.v. libraries (M. Krause).

J. T. Walker, 'Ascetic Literacy: Books and Readers in the East-Syrian Monastic Tradition', in H. Börm and J. Wiesehöfer, eds., *Commutatio et Contentio; Studies in the Late Roman, Sasanian, and Early Islamic Near East in Memory of Zeev Rubin* (2010), 306–45.

**libraries, monastic, Western** \*Augustine's \*monastery at \*Hippo Regius had a complete set of his writings. The *Rule* of S. \*Benedict and the \**Rule of the Master* required readings during the night office and also at mealtimes, and the monks were to read after lunch. Similarly, the *Rules* of \*Aurelian of \*Arles (AD 547, for nuns) and of \*Isidore of \*Seville (before 636) enjoin daily reading in the monastery. \*Cassiodorus described the library at his monastery of \*Vivarium, and the works he commissioned for it. S. Benedict recommended reading \*John Cassian's *Conferences*, his

*Institutes*, the Lives of the Fathers, and the Rule of S. \*Basil (*Rule* 42 and 73). There were important monastic libraries in \*Rome. Malmesbury under \*Aldhelm contained works of antiquity now lost, and \*Bede quotes over 250 titles from the \*Wearmouth-Jarrow library. Manuscripts copied in the monastery of \*Eugippius in \*Naples, and from the libraries of \*Bobbio (founded 615), \*Luxeuil (found 590), and \*Corbie (founded 661) dating to the 7th century still survive. K. Christ and A. Kern, *The Handbook of Medieval Library History*, tr. T. M. Otto (1984).

**Library of Alexandria** Founded alongside the place of study called the Museum (Gk. *Mouseion*) by Demetrius of Phalerum, most likely under Ptolemy I (323–83 BC), the Library was established with the aim of creating a universal collection of the extant literary and scientific works from the Greek, Egyptian, Jewish, and Near Eastern worlds. Ancient sources credit the Ptolemies with the collection of hundreds of thousands of scrolls (Aristeas Judaeus, 9–10; Gellius, VII, 17, 3; Tzetzes, *Prolegomena de Comedia*, p. 32.2–12 Koster). The actual figure, however, should settle at around 10,000 to 15,000.

Myths about the Library abound. Aristotle is alleged to have been responsible for its design and arrangement, Ptolemy is credited with inheriting Aristotle's private \*library, and Cleopatra is said to have acquired for \*Alexandria the rival library of the kings of \*Pergamum. The Royal Library is said to have been damaged in 48 BC during the Alexandrian War between Julius Caesar and Ptolemy XIII (Plutarch, *Caesar*, 49, cf. Strabo, II, 1, 5); \*Ammianus deems the number of books then destroyed to be 700,000 (XXII, 16, 13), \*Orosius (not unproblematically) says 400,000 (VI, 15, 31–2). The disappearance of the Library and Museum have been connected with sieges of Alexandria by the \*Emperor \*Aurelian fighting Palmyrene forces in 273 and by the Emperor \*Diocletian fighting the \*usurper \*Achilleus in 298, though references to the Museum in the 5th century suggest that it may have been re-established elsewhere in the city.

The Royal Library was not the only \*library in \*Alexandria. There were important libraries at the Caesarium and Claudianum. \*Epiphanius of \*Salamis refers to the Library at the \*Serapeum, itself a Hellenistic foundation, as 'the daughter library' (*On Weights and Measures*, 11); this may or may not be identical with the Outer Library mentioned by Tzetzes. The tale that libraries at Alexandria were destroyed on the orders of the \*Caliph \*Umar during the \*Arab invasion cannot be traced further back than \*Bar 'Ebroyo in the 13th century. MPE; OPN

### Libya Inferior, Libya Superior (Libya Pentapolis)

These two \*provinces, formed from territory of the former province of Cyrenaica et Creta after 293, both appear in the \*Verona List. Libya Inferior is also attested by \*inscriptions as early as 309. Both were included in the \*Dioecesis \*Oriens, but c.367/71 they became constituents of the newly created \*Dioecesis of \*Aegyptus, where \*Justinian I retained them. The \*governors both had the title \*Praeses. Most of the \*cities lay on the Mediterranean coast. \*George of \*Cyprus (*Description*, 787b, cf. \*Hierocles, *Synecdemus*, 734, 3) identifies the capital of Libya Inferior as Darnis. The metropolis of Libya Superior (Pentapolis) is uncertain, perhaps Ptolemais. JGK; AHM

**Licinius** \*Augustus 308–24. Valerius Licinianus Licinius, an old comrade-in-arms of \*Galerius from the Persian war of 298 (\*Eutropius, X, 4, 1), was invested as Augustus at the conference of \*emperors held at \*Carnuntum in November 308. He was meant to make up the numbers of the \*Tetrarchy after the death of \*Severus the Tetrarch, as the usurpation of \*Maxentius at \*Rome in 306 was not recognized.

Licinius was based in the \*Balkans, and after the death of \*Galerius in 311, followed by a brief

confrontation with his eastern neighbour \*Maximinus Daza at the \*Bosporus, he was the sole emperor defending the Danube \*frontier. When \*Constantine I eliminated \*Maxentius at \*Rome on 28 October 312 Licinius found himself encircled and so had to choose between alliance with \*Constantine I, the only emperor to the West, and Maximinus Daza, the only surviving emperor to the East. He chose Constantine, crossed the Alps in the depths of a cold winter (his \*horses developed tetanus), and married Constantine's sister \*Constantia at \*Milan in February 313. He then turned East and defeated Maximinus Daza, an enthusiastic persecutor of Christians, who committed \*suicide at \*Tarsus. On 13 June 313 at \*Nicomedia Licinius issued the \*Letter of Licinius, which brought to an end the Great \*Persecution in \*Anatolia and \*Oriens (including \*Egypt), Maximinus Daza's former dominions, ordered the restitution of confiscated Christian property, and permitted the resumption of Christian worship. Licinius did not share Constantine's level of personal commitment to Christianity; an \*inscription from \*Salsovia records his ordering worship of the \*Sun in the army (*ILS* 8940). But church buildings such as that at \*Tyre praised by \*Eusebius (*HE* X, 4) were erected, and Christians were permitted to revenge themselves on those whose \*oracles had promoted the persecution (Eusebius, *Praeparatio Evangelica*, IV, 2, 10–11 = 135CD; *HE* IX, 11, 5–8).

The alliance between Constantine and Licinius did not last. In 316 Constantine attacked his brother-in-law, defeating him at \*Cibalae and again at Campus Ardiensis near \*Adrianople. In the peace which ended the \*Cibalensean War on 1 March 317, Licinius' infant son \*Licinius and Constantine's sons \*Crispus and the infant \*Constantine II became \*Caesars and Constantine annexed all Licinius' Balkan territory except the \*Diocesis \*Thraciae.

In 324 Constantine attacked again. Eusebius' accounts of Constantine's aggression (*VCon* I, 49–II, 5; *HE* X, 8–9) tendentiously suggest that Licinius deployed ever-increasing hostility towards the Christians in his domains till, so Eusebius claims, he 'began finally to think about launching a general persecution' (*VCon* II, 2, 3), and Constantine stepped in. The most important implication is that Licinius launched no general persecution. The name of one \*martyr is known, Basil, \*Bishop of \*Amaseia, but his execution may have resulted from local initiative in \*Pontus (\*Jerome, *Chron.* 230g Helm; cf. *VCon* II, 1, 2); any association of the \*Forty Martyrs of \*Sebasteia (even if they are historical) with Licinius is tenuous.

Constantine's attack in 324 was two-pronged. A \*fleet commanded by the Caesar Crispus sailed to the Dardanelles while Constantine advanced across Thrace. Licinius was besieged at Byzantium, and then

retreated to \*Nicomedia where he surrendered. He was sent to \*Thessalonica, where he was executed the following spring on suspicion of plotting. This left Constantine in sole control of the entire Empire.

\*Silver bowls bearing images of Licinius' bust and a crushed silver portrait head are now in the \*Munich Treasure, and colossal \*marble heads of Licinius have been found at \*Ephesus (now in Vienna) and \*Smyrna. \*Libanius remembered him as a ruler who infused fresh life into the \*cities (*Oratio* XXX, 6). **light in architecture** Late Antique architecture used light in three significant ways, practical, dramatic and metaphysical. At a prosaic level it was necessary to be able to see inside a building. Natural light was also considered important to quality of life, so much so that legal provision was made to ensure that when new building was planned, existing residences still received sufficient natural light. Moreover, light was also used to create drama in the architecture and to reflect the importance of the owner. \*Window \*glass was commonplace, but artificial light and lighting devices were carefully used, especially within \*villas, to illuminate particular areas, drawing the eye of the visitor to works of art which in turn indicated the standing of the owner of the villa. \*Lamps, polycandela, and candle holders shed light; they were were also imbued with symbolism, reflected power and glory, and invited \*praise.

In churches, light combined with art to create a radiant \*aesthetic which pointed to the Divine in ways praised at the \*Church of the Holy Wisdom in \*Constantinople by \*Procopius (*Aed.* I, 1, 30) and \*Paul the \*Silentiary. It became increasingly important in worship during the transition during Late Antiquity to early Byzantine liturgical styles. Church architecture in particular changed its natural lighting scheme to darken the interiors of buildings so that artificial light might be better managed to enhance the drama of the \*liturgy. This was achieved by reducing the size of \*window apertures; these changed from square grid-style openings to panels with smaller pierced openings that would accommodate small roundels of \*glass. **limes** See FRONTIER, ROMAN MILITARY.

**Limestone Massif of northern Syria** The north-western corner of \*Syria features fertile plains of *terra rosa* soil and also limestone highlands less favourable to \*farming. Yet on the highlands, particularly in the region between \*Antioch, \*Aleppo, and \*Apamea, are the remains of more than 700 ancient settlements, ranging from a few buildings to extensive agglomerations with \*houses, churches, \*monasteries, and oil \*presses. These settlements are commonly called the 'Dead Cities' ('villes mortes'), but none of them had civic status and all were \*villages in the territories of \*cities such as Antioch and Apamea. Although there is some evidence of occupation in earlier periods, the main phase of settlement was in the 4th–6th centuries AD. The region declined from the 7th century onwards and was virtually abandoned after the 9th/10th centuries, which explains why so much Late Antique evidence has survived.

During the 20th century, the apparent prosperity of the region in Late Antiquity was seen (especially in the exhaustive study of G. Tchalenko) as an anomaly when set against the prevailing model of decline. The proposed explanation, that the region was developed for the processing of \*olive oil for export, seemed to be confirmed by finds of a particular type of \*amphora, Late Roman 1, thought to be associated with this industry, at sites in the western part of the Empire. Some buildings were identified as market halls connected with the export of oil, and a thriving economy based on olive monoculture was posited for the Dead Cities.

More recent assessments (e.g. by G. Tate) suggest that the region was not anomalous, but it is only the accident of their survival that makes the Dead Cities appear unusual. Survey of the region has shown diverse agricultural practices, rather than a concentration on

olive oil. The buildings identified as market halls have been reclassified as houses, and it appears that the Late Roman 1 amphorae are not to be associated with the oil industry. Surplus agriculture produce was destined for markets in neighbouring cities rather than export overseas, and it now seems that the Dead Cities are evidence for the extensive development of \*marginal land that is typical of Late Antique \*Syria. **Limisa** See KSAR LEMSA.

**limitanei** First attested in the mid-4th century (*CTh* XII, 1, 56 [363]) and previously known as *ripenses*, the term designated military units serving in \*frontier \*provinces (*limites*), as distinct from units assigned to central \*field \*armies. *Limitanei* had a lower status than field army units, reflected in fewer privileges, but this did not mean, as sometimes assumed, that they were significantly inferior in fighting capability or little better than a part-time militia. The units in each province were commanded by a \*Dux, and the *\*Notitia Dignitatum* includes lists of units and their bases for the late 4th and early 5th century. Although they required reform in the mid-5th century (*NovTh* 24) and \*Justinian I is said by a hostile source to have abolished them in the 6th century (\*Procopius, *Anecd.* 24, 12–14), other evidence attests their continued existence and value. ADL Jones, *LRE* 649–54, 661–3.

B. Isaac, 'The Meaning of the Terms Limes and Limitanei', *JRS* 78 (1988), 139–47.

**Lin** A \*triconch church overlooking Lake \*Ohrid (Albania), with a linked \*martyrium chapel to the north-west and a \*narthex flanked by annexes including a \*baptistry. The church is decorated throughout with elaborate \*mosaics. WB

*TIR* K 34 (1976) s.v. Lini, 79.

**Lincoln** (Lincolnshire, England) The Roman *colonia* of Lindum, founded in the AD 80s, probably became the

capital of \*Flavia Caesariensis in the early 4th century. It apparently remained an important political and religious centre in the post-Roman period and regained prominence in Viking times. Excavations at S. Paul-in-the-Bail suggest a continuous history of Christian burial from the 5th to the 11th century. ACR

M. Jones, *Roman Lincoln* (2002).

**Lindisfarne** The site of an early \*monastery on Holy Island, a tidal island off the north-east coast of England. Inhabited since prehistory, in 635 the island was given by \*Oswald, King of \*Anglo-Saxon Bernicia (northern Northumbria), to Irish monks from S. \*Columba's \*Iona. S. \*Aidan established a monastery there, renowned for its asceticism (\*Bede *HE* III, 3 and 5). One of his successors as bishop, S. \*Cuthbert (d. 687), was a renowned hermit and his important cult grew from 698, when his \*relics were translated to Lindisfarne's high altar. Cuthbert's incorrupt body was enshrined in a wooden coffin, adorned with images and filled with relics (probably including the S. Cuthbert Gospel in its tooled \*leather \*book cover). The \*Lindisfarne Gospels (made by Bishop Eadfrith, c.715–20) probably served as the cult-book. Other Lindisfarne manuscripts may include the Durham Gospels, Cambridge–London Gospels, and Vatican Paulinus. The community was raided by Vikings in 793 and, subsequently marginalized, relocated to Chester-le-Street and then Durham. MPB

G. Bonner et al., eds., *St Cuthbert, his Cult and his Community* (1989).

M. P. Brown, *The Lindisfarne Gospels and the Early Medieval World* (2011).

**Lindisfarne Gospels** A supreme expression of \*Insular manuscript illumination and (with \*Codex Amiatinus) the best representative of the text of \*Jerome's \*Latin Vulgate version of the \*Bible. It was written in half-uncials by a gifted artist-scribe, probably Bishop Eadfrith, \*Bishop of \*Lindisfarne (698–721), around 715–20 for the shrine of S. \*Cuthbert made at Lindisfarne in 698. Its gloss by Aldred, c.950, is the oldest extant English translation of the Gospels. It is now in the British Library (Cotton MS Nero D.iv). MPB

**lions** \*Ammianus complained of wild \*lions as a pest in \*Mesopotamia (XVIII, 7, 4–5). They ranged round much of the eastern Mediterranean world. A law of 414 (*CTh* XV, 11, 1) provided that control of lions for

public protection took precedence over collecting them for use in civic spectacles, where they were employed (among other animals) in \*entertainment and the \*execution of criminals including obstinate Christians (Tertullian, *Apology*, 40, 2). Daniel in the lions' den appears often in \*catacomb painting. Killing a lion might however portend a royal death (Ammianus, XXIII, 5, 3–11). In art and literature (such as the fables of Babrius) lions symbolized pride, ferocity, and royalty (e.g. \*Philostratus' *Life of Apollonius*, 5, 42). Christian portrayal of Christ as a lion demonstrated his wrath and supremacy over sin, while the lion-headed demiurge of the \*Gnostic *Apocryphon of John* (§22) signified the bestial nature of the material world. In \*Zoroastrianism lions were considered creations of the Evil Spirit, following a model evolved by the Benevolent Spirit; Sasanian \*silver often shows the Shah \*hunting lions. MD; OPN

I. S. Gilhus, *Animals, Gods, and Humans: Changing Attitudes to Animals in Greek, Roman and Early Christian Ideas* (2006).

**litany** (Gk. *litaneia*, from *litē*, 'supplication') A form of Christian \*prayer typically consisting of several verses of \*acclamation or petition, each followed by a refrain, e.g. *Kyrie, eleison*, 'Lord, have mercy'. Litanies were sung at key points in the \*liturgy, most notably after the Gospel and \*sermon at the \*Eucharist, and at the end of the major offices of the \*Liturgy of the Hours. Their extensible form and inclusion of popular participation also made them useful for \*processions, e.g. in \*stational liturgies in \*Rome and \*Constantinople, or the Roman Major and Minor \*Rogations. Only in the medieval and later period did their content become more standardized, as in the Byzantine Great and Small *ekeneiai* (literally, 'intentness') of the \*Liturgy of \*John Chrysostom, or the Latin Litany of the Saints. CAS

*DACL* 9/2 s.v. litanies, cols. 1540–71 (Cabrol).

**literacy** There were two major developments in literacy during Late Antiquity: the decline of the Late Roman imperial \*administration, which employed men with a literary education, and the rise of Christianity, which extended its audience while narrowing its content.

#### *Greek and Latin literacy*

Literacy in the Later Roman Empire was limited, to the educated. By the 4th century, the classical educational ideal of *paideia* focused on the *trivium* of \*grammar, \*rhetoric, and dialectic. The \**grammaticus* and then the *rhotor*, supervised the learning by heart of a fixed canon, including in \*Latin the \**Quadrige Messii* of \*Vergil,

Terence, Sallust, and Cicero, and in \*Greek \*Homer and Demosthenes and the performance of specimen speeches of various kinds (Gk. \**progymnasmata*) modelled on the style and manner of what had been learned. This created a literary frame of reference for influential men in \*cities, for those who spoke in \*courts of law and for the increasing numbers achieving positions of considerable emolument in the imperial \*administration, following its enlargement under \*Diocletian (\**Lactantius Mort.* 7, 4).

The Late Roman \*taxation system was fundamentally documentary, but in the post-imperial West, \*armies were supported by landowning, with less need for \*administration. Literate personnel were still involved in diplomatic correspondence and justice, but the connection between literary education and political life was sundered. Records continued to be kept, however, as the \*Visigothic slates demonstrate; functional literacy remained standard to landowning and management.

The same applies to familiarity with written \*law. Roman law was systematized, culminating in the \**Theodosian Code* of 438 and \*Justinian's *Code* of 529–34. The Late Roman legacy to post-imperial law codes was its promotion of documentation as supreme proof in matters of property; when \*Justinian I legislated that \*oaths be taken on the Gospels, he created an enduring tension between oral testimony and written evidence.

Christianity in turn promoted literacy because knowledge of the Bible promoted holiness. It was to the advantage of Christians to learn to read Scripture. There was, though, a tension, dramatized in the \*dream of \*Jerome when Christ accused him of being a Cicero-nian not a Christian. The practice of \**sermo humilis* provided a compromise, bringing the written word to a wider audience, as the Psalter became the new elementary textbook, while Christian polemic against \*rhetoric and what \*Augustine called the 'school of pride' (*Conf.* IX, 4, 7) undermined the secular classical education. In the East, Classical literature was adopted by such 4th-century church fathers as \*Basil into the Greek Christian culture of Byzantium. In the West it was substantially redirected by Augustine (e.g. in *De Doctrina Christiana*) to Christian ends, and as secular schools became fewer, in the absence of the incentives provided by the Late Roman state, \*bishops provided for the education of the clergy. Even so a problem remained, that many canonical works of the liberal arts, especially of \*philosophy, were in Greek, and in the 5th century, knowledge of Greek was declining in the West; the translation and transmission of Greek learning by \*Boethius and \*Cassiodorus were therefore crucial. In the East Latin remained the language of the \*army, law, and administration until the 6th century, after which it became marginalized.

The Christian book used greater word spacing and punctuation to aid legibility, while the switch from

the papyrus roll to the codex had reduced the \*price of books and facilitated non-sequential reading. It made \*Origen and \*Eusebius of Caesarea able to devise tables and columns for studying Scripture, while \*Jerome introduced schematic layout in his *Chronicle*, and Cassiodorus explained his programme of silent and private monastic reading with diagrams.

Christianity also encouraged women as authors, while the process of \*conversion promoted the writing of such vernacular languages as \*Armenian. The exception was continental Western Europe, where written Latin remained in diglossia with spoken early Romance.

### Coptic literacy

The \*Coptic alphabet was created in the Roman period by adding six letters from demotic Egyptian to a modified Greek alphabet, in order to write down the Bible. It also borrowed Greek vocabulary. Quickly adopted for religious literature, literary Coptic was canonized by \*Shenoute, abbot of the \*White Monastery. The administration of \*Egypt was bilingual: \*Dioscorus of \*Aphrodito wrote both Coptic charters and Greek poetry, and owned a Greek–Coptic glossary. GDB; OPN

**Litorius** \*Comes Rei Militaris in \*Gaul in 435–7, when, with the aid of \*Hun auxiliaries, he defeated the Armoricans before relieving the \*Visigothic siege of \*Narbonne in 437. As second in command to \*Aëtius (perhaps \*Magister Militum), he rejected a peaceful settlement with the Visigoths and in 439 rashly engaged them in battle with his Huns near \*Toulouse, only to be crushed, captured, and killed soon afterwards. CD; STL

PCBE 4/2, Litorius 2.

PLRE II, Litorius.

**liturgies, public** See SERVICES, COMPULSORY PUBLIC.

**liturgy and liturgical books, Armenian** The liturgical books used for worship and rituals in the Armenian Church date back to the early period of Armenian literature. Over the centuries they have been supplemented and enriched until the Armenian tradition came to be fixed and 'canonized'.

The compilation includes several books. The *Zhamagirk'* (Breviary, equivalent of the Gk. *Horologion*) contains the seven-daily cycle of the Hours, and was compiled probably over the course of the 5th century. The *Sharaknots'* (Hymnal) reached its final fixed state in 1346–1409 (see also SHARAKAN AND SHARAKNOTS').

The *Chashots'*, also known as *Tonamak* or *Tonanamak* (\*Bible Lectionary), lists the types of readings for the liturgical year covering the Old and New Testaments, and also contains the rubrics of the liturgical calendar. The Lectionary also contains some readings from the Fathers of the Church for certain major feast days such as \*Epiphany, Last Supper, Pentecost, Transfiguration, and so on.

The name of the *Yaysmawurk'* (Lives of Saints, Gk. *Menologium*) derives from the root word 'yaysm arwur' meaning 'on this day'. It contains the \*saints' lives, lists of saints to be commemorated, and \*sermons for the Dominical Feast Days. The *Talaran-Gandzaran* (Book of Chants and Canticles) has two recensions. The date of the earliest version is unknown, and very few manuscript copies have survived. The second recension dates to 1426.

The *Tonats'oyts'* (Gk. *Typikon*) is a perpetual calendar for the liturgical year, computed according to the Julian calendar although it can simultaneously serve as a perpetual calendar for the Gregorian calendar. The *Khorbrdatetr-Pataragamatoyts'* (Divine Liturgy) as celebrated today is principally based on the liturgies of the \*Cappadocian Fathers. The *Mashtots'* (Book of Rituals, or *Sacramentary*) is attributed by \*Koriwn to \*Catholicius \*Sahak I Part'ew; it contains the canons of the principal sacraments, special \*prayers, and blessings. Legend associates the name with Mesrop \*Mashtots', the inventor of the \*Armenian alphabet, but more accepted is the view of the 13th-century historian Kirakos Gandzakets'i, according to whom the final form should be credited to Mashtots' I Elivardets'i (897–8). **liturgy and liturgical books, Coptic** The original language of the \*Patriarchate of \*Alexandria was \*Greek, which is the language of the earliest Egyptian liturgical book, the *Euchologion* of \*Serapion, \*Bishop of

## liturgy and liturgical books, Greek and Latin

Thmuis, of the mid-4th century. Greek continued as a liturgical language until c.900, though the liturgical use of \*Coptic gradually increased; it is, in fact, very difficult to construct the history of the Coptic liturgy before AD 900. Amidst the considerable liturgical diversity in the Church of this period, the liturgies of S. \*Gregory (the Theologian) and S. Mark are distinctive to the Copts, and the Coptic *\*Liturgy of S. Basil* has special features. The rite of preparation, in Arabic the *hamal* ('lamb' or 'offertory'), is common to all these liturgies, and has been argued to contain the most primitive prayers of the Coptic Church.

AL  
O. H. E. Burmeister, *The Egyptian or Coptic Church: A Detailed Description of her Liturgical Services and the Rites and Ceremonies Observed in the Administration of her Sacraments* (1967)

### liturgy and liturgical books, Greek and Latin

The term liturgy (Gk. *leitōs*, public, *ourgōs*, work) is not in general used of Christian worship in the early Church.

#### Liturgy

At the core of early Christianity was the celebration of the \*Eucharist (1 Corinthians 11: 23–9) and the practice of daily \*prayer. By the mid-3rd century at \*Carthage, the Eucharist was celebrated daily (\*Cyprian, *ep.* 54, 3 and 56, 1) and various traditions are recorded concerning the frequency of other prayer. There is evidence from the 2nd century of a vigil being kept at \*Easter; Melito of Sardis (c.180) goes to considerable lengths to differentiate this from the Jewish Passover. However, some customs were inherited by Christians from Jewish practice and there was certainly local variation.

The practice of \*stational liturgy and \*processions through the \*streets became possible in the 4th century and the building of grand \*basilicas provided for bigger congregations and larger-scale ceremony, as well as for rites associated with \*pilgrimage and the cult of the \*martyrs. The Eucharist remained central, divided, as before, into two parts, the Liturgy of the Word, which incorporated readings from the \*Bible, \*music, and a \*sermon preached generally by the \*bishop, and the Liturgy of the Sacrament, from which the unbaptized (catechumens) were excluded. As \*pilgrimage to the \*Holy Land grew in popularity, practices which had evolved in \*Jerusalem spread westwards; these included the three-day observance of Christ's Passion, Death, and Resurrection (the Triduum), described by the pilgrim \*Egeria who was in the East in 381–4. Local practices also persisted, notably those represented by the \*Ambrosian rite at \*Milan and the \*Mozarabic rite in \*Spain.

Set socially apart from the cultures in which they were situated, \*monasteries carried on the practice of daily prayer from the early Church. Monks in \**coenobia*, the common form of monastery in the West, assembled numerous times each day for the communal recitation of \*Psalms. Less often each day at cathedrals in \*cities, worshippers assembled for daily prayer, in the morning (*Matins*) and evening (*Vespers*), with the psalms being chosen to suit the times of day and the seasons of the liturgical year rather than read right through, as many monastic rules required.

By the end of Late Antiquity, liturgies in the West were more uniform than they had been earlier. With the increasing authority of the see of \*Rome from the late 5th century onwards, Roman liturgical traditions influenced and eventually overrode many local customs, which were condemned or discouraged in regions of \*Italy away from Rome, in \*Gaul, and on the Spanish peninsula. Greater liturgical variety in Eastern liturgical traditions resulted from a different model of church authority, a greater variety of languages for worship, and licence for unique customs within each tradition.

#### Liturgical books

\*Church orders survive from the East which present vibrant testimony *about* the liturgy, but they do not on the whole record in detail what was said or sung. Only one Eastern manuscript exists from Late Antiquity itself. This is Codex Barberini 336 (in the Vatican Library), the earliest Euchologion of the Byzantine tradition. It was written in 8th-century Italy, and mostly contains rites of Constantinople, including Eucharistic prayers, prayers for the \*Liturgy of the Hours, and a large collection of blessings and prayers for various occasions. Liturgical manuscripts recording Eastern rites which survive from later centuries often have a narrower focus than those from the West, containing, for instance, only texts for a particular season of the church year, or for a particular ministry or minister with specific Bible passages, or containing particular chants. This means that they are more numerous and diverse than their counterparts in the West.

Already in the 4th and 5th centuries, there is evidence for the Latin Masses of the West, at first as quotations in authors like \*Ambrose and \*Gregory the Great and then as little books, *libelli*, compositions of prayers for various feasts and seasons. Monastic rules, from the 6th century on, including the *Rule* of S. \*Benedict, prescribe orders of psalms for the daily hours of liturgical prayer. Systems of readings for the Mass and the liturgy of the hours appear in the 6th century, mostly as lists with the starting (*incipit*) and ending (*explicit*) point of a reading, and appearing as individual books for use at Mass in the Middle Ages. Finally, some early *Ordines Romani*, rites originally characteristic of Rome which then came to

incorporate traditions from \*Gaul, are known from before the end of Late Antiquity. MFC; OPN

**liturgy and liturgical books, Syriac** Syriac liturgy belongs to the rite of \*Antioch, though in the case of the east Syriac tradition 'Mesopotamian' is a preferable term. The west Syriac tradition covers the \*Syriac Orthodox, \*Maronite, and \*Melkite churches, though the Melkites changed their Church's rite to that of \*Constantinople in the 9th–11th centuries, which required new translations of all its liturgical books. Fragments in Christian Palestinian Aramaic, along with some early \*Armenian and \*Georgian manuscripts, are valuable witnesses to the early \*Jerusalem rite.

Over 80 eucharistic anaphoras are known in the Syriac Orthodox Church, several of which were composed in Late Antiquity; some (including that attributed to James) originated in \*Greek, and some are also in Maronite usage. In the \*Church of the East the number of anaphoras was limited to three in the mid-7th century (those of \*Addai and Mari, \*Theodore of \*Mopsuestia, and \*Nestorius).

The standard Syriac Orthodox \*baptism service is attributed to \*Severus of Antioch, but another, attributed to \*Timothy of \*Alexandria, is also known; this has elements in common with the Maronite service, attributed to \*Jacob of Sarug, and to the old Melkite one, attributed to \*Basil. Until about AD 400, Syrian baptismal usage had no post-baptismal anointing (found in all other rites). The structure of the current services basically goes back to about the 6th century. The east Syriac service is attributed to \*Isho'yahb III (d. 659).

The emergence of the current liturgical books mostly took place after c.750, and manuscripts are very rarely earlier than 9th century, while those of the Church of the East are usually much later. Outside the series *Anaphorae Syriacae* (1939–), most Syriac liturgical texts lack critical editions. SB

B. Varghese, *West Syrian Liturgical Theology* (2004).

**Liturgy of Addai and Mari** The \*Syriac Anaphora attributed to the Apostles Addai and Mari (originally just 'the Apostles') is the oldest \*liturgy for the \*Eucharist in any language still in use, being one of the three anaphoras employed in the \*Church of the East. Its archaic character is indicated by the absence of an Institution Narrative (in 2001 the anaphora in its original form, without the Institution Narrative, was recognized by the Vatican as valid). It has several elements in common with the \*Maronite anaphora known as the 'Sharrar', and their common ancestor may have had its roots in \*Edessa. The oldest manuscript dates from the 10th/11th century. SB

**Liturgy of S. Basil** Byzantine tradition ascribes the earlier of its two main liturgies to \*Basil of \*Caesarea (d. 379), who reformed the \*liturgy of \*Cappadocia in the 4th century, perhaps revising an earlier Antiochene rite. A \*letter indicates that some clergy resisted Basil's liturgical reforms. Though the extant rite bears Basil's imprint, no complete liturgy from his hand survives. Until the 11th/12th century, the *Liturgy of S. Basil* was the primary rite of \*Constantinople; it was then superseded by the \**Liturgy of S. John Chrysostom* for all but ten days of the liturgical year. The *Liturgy of S. Basil* survives in two forms; the earlier and shorter form is the ordinary anaphora of the Coptic Orthodox. MFC

J. R. K. Fenwick, *The Anaphoras of St Basil and St James* (1992).

**Liturgy of S. James** Associated with \*Jerusalem, this Christian \*liturgy was also once used widely in the Orthodox patriarchates of Jerusalem and \*Antioch, until the Byzantinization of the \*Melkite rite during the 9th to 11th centuries. Today it is found in common use only in the \*Syriac Orthodox Church, where it has served as a model for many further Anaphoras. Besides

the \*Syriac version there exist \*translations into \*Arabic, \*Armenian, \*Ethiopic, \*Georgian, and Slavonic. Five \*prayers from it are also found in an early \*Latin translation. The critical edition of the \*Greek is by B.-C. Mercier (PO 26/2; 1950), and that of the Syriac by O. Heiming and A. Raes (*Anaphorae Syriacae*, II/2, 1953). The first specific reference to the liturgy is in canon 32 of the \*Quinisext Council (692). The earliest textual witnesses for the Greek are several 10th-century manuscripts, while some Syriac and Georgian manuscripts are slightly earlier. Several stages in its growth can be observed, and in Syriac there are long and short forms.

**Liturgy of S. John Chrysostom** The \*Eucharistic liturgy most often celebrated in the Byzantine tradition since the 13th century. Some parts are attributed to \*John Chrysostom (c.347–407). The *Liturgy of S. Basil* is older, but is now replaced by the *Liturgy of S. John Chrysostom* on all but ten days of the liturgical year. The earliest manuscript of the rite is the 8th-century manuscript Barberini gr. 336, but elements date from Late Antiquity.

**Liturgy of the Hours** Christian \*prayer at fixed points in the day and night, also called 'Divine Office' or 'canonical prayer'. The practice was inherited from Judaism, and in Christian circles was linked to exhortations in the New Testament to pray unceasingly (1 Thess. 5: 17; Luke 18: 1–8). The *Didache* recommends prayer three times a day (8, 2–3). Commentaries on the Lord's Prayer by Tertullian (25) and \*Cyprian (34–6) refer to prayer at set times, while later texts such

as the \**Apostolic Tradition* describe a more developed pattern of prayer at intervals throughout both night and day. By the 4th century one can identify a popular 'cathedral' tradition of fixed psalmody for morning and evening prayer, and a 'monastic' tradition of variable and longer psalmody for a more complex array of daily services, typically fixed at eight (a nocturnal vigil, dawn, first, third, sixth, and ninth hours of the day, sunset, and bedtime).

**Liutprand** \*Lombard king in \*Italy 712–44. He succeeded his father Ansprand (\*Paul the Deacon, *History of the Lombards*, VI, 35 and 38). His long reign is notable on three fronts: promulgation of \*laws, military activity, and religious \*patronage.

In terms of legislative output, Liutprand issued 152 titles to update the Edict of \*Rothari. As well as new definitions for personal worth or *wergeld* (\*compensation), the laws indicate fuller recognition of the Church, of its property, and of donations of lands to churches and \*monasteries. They take greater account of Romans/natives as well as of women and nuns, and there are clear efforts at tighter control over royal agents, notably \*duces and \*gasindii (retainers).

Liutprand aimed to expand militarily Lombard power over the Byzantine \*exarchate, with campaigns in the 730s and 740s (\**Liber Pontificalis*, 91, 7 and 13 and 21–2 and 92, 14 and 93, 2–9), culminating in the capture of \*Ravenna in 743, which he left at Pope \*Zacharias' request in 744 (\**Liber Pontificalis*, 93, 12–16). He was aggressive also against the largely independent \*Lombard *duces* of \*Spoleto and \*Benevento in the 730s, seeking to promote fuller Lombard unity. A new threat, however, came from \*Arabs/\*Saracens who assailed the western coasts of Italy as well as southern \*Gaul; Liutprand allied with the \*Franks to counter them, although little is known of the scale and effect of the raids (Paul the Deacon, VI, 54).

Paul the \*Deacon's *History of the Lombards* strongly praises Liutprand for his religious \*patronage, especially of monasteries (VI, 48). Textual, epigraphic, and artistic survivals support the notion that Liutprand's reign marked a cultural high point (often termed 'renaissance') for the Lombard kingdom. An impressive decorative carved \*altar, pulpit, ciborium and choir panels, and funerary slabs are attested for royal and ducal seats such as \*Pavia, \*Milan, and \*Brescia, from Liutprand's (lost) \*palace and monastery at Corteolona, and from the older

monastery of \*Bobbio. The latter was richly endowed under Liutprand (whose name appears on a \*marble slab of probably commemorative function), and enjoyed close links with the royal \*court of Pavia. NJC

**loca sancta** See HOLY LAND.

**locusts** \*Famines were exacerbated by locusts, especially major sub-species *Calliptamus italicus* (Italian locust) and *Schistocerca gregaria* (Desert locust). The latter ranges from Europe to \*China and swarms in response to increased population density; such voracious groups may contain millions of individuals and cover thousands of square miles. At least eleven food crises may be attributed to locusts. They were feared (e.g. \*Arnobius I, 3). MD

Stathakopoulos, *Famine and Pestilence*.

**Logistes** See CURATOR REI PUBLICAE.

**logistics, military** The \*Praefectus Praetorio was responsible for managing the supplies for the Roman \*army and the \*emperor's \*Comitatus. Assembling the required quantities of supplies was a huge task, with even small armies requiring many tons of food and fodder and thousands of gallons of water on a daily basis. We thus hear of \*Constantius II in 360 stockpiling 3 million *medimnoi* of wheat (c.120,000 metric tonnes) for his campaign against \*Julian, and of grooms being buried alive when they undermined a haystack at \*Batnae in 363 as part of Julian's preparations for his campaign against the \*Persian Empire also in 363. With the need for so many supplies, it is not surprising that \*Valentinian I spent three months at \*Carnuntum in 375 when preparing an expedition against the \*Quadi. The preparation time, as well as the number of men, animals, and storage sites involved, also meant that strategic surprise was difficult to achieve. River transport of supplies was used wherever possible, but usually supplies were moved by carts and \*draught animals which also needed to be fed. Since it was usually impossible to transport water to supply large

forces, each day's march was determined by the availability of drinking water.

Supplies were not limited to food and fodder. There was also a need to transport equipment, including dismantled \*artillery and siege engines and bolt throwers, spare arrows and other consumable weapons, tools, boats for river crossing, etc. When the emperor was present the \*Comitatus and its animals added to the logistical demands, though where possible on military operations, as before the Battle of \*Adrianople in 378, the Comitatus would be left behind.

The demands of feeding the riding and pack animals belonging to the Roman army meant that campaigning usually started only when there was enough grass available, in the late spring. This also allowed the ground to dry out from the spring rains and for early harvests to be collected. In general, strategic considerations took precedence over logistical demands and Roman armies could campaign in the winter. This was the best time to attack heavily forested areas since the leaves were off the trees, making ambush tactics more difficult. This was also a good time to attack \*nomads whose animals were weakened by lack of grazing. However, winter operations could impose severe stress on logistical systems, and when \*Maximinus Daza force-marched across \*Anatolia in the winter of 312–13, his army suffered severe losses of baggage animals.

Among Rome's enemies, Persian \*armies had similarly sophisticated logistical systems, with \*camels even being used to supply water to a force before the Battle of Solachon in \*Mesopotamia in 586. These systems allowed the Persians to undertake such long operations as the three-month siege of \*Amida in 502. Barbarian forces were less able to manage their logistics and we hear of the operational consequences more often, including disease and famine or the abandonment of sieges, as when the \*Avars withdrew from \*Constantinople in 626 after six weeks. These cultures also found winter operations more difficult. HE

J. F. Haldon, *Warfare, State and Society in the Byzantine World, 565–1204* (1999), Appendix 1–3.

H. W. Elton, 'Imperial Campaigning from Diocletian to Honorius', in Sarantis and Christie, *War and Warfare*, vol. 2, 655–82.

**Lombard invasion of Italy** The \*Lombard arrival in Byzantine \*Italy in the late 560s seems to have been no straightforward episode of barbarian irruption into imperial territory. This initial stage of entry is not necessarily painted in strictly military terms by the sources, although it is portrayed as aggressive particularly by those later in date (\*Gregory of \*Tours, *HF* IV, 41–2; \*Paul the \*Deacon, *HL* II, 6–14 and 25–7). There is in fact a contrast between these literary sources and the documentary evidence for the period c. AD 570–600.

The evidence shows that the Lombards assailed \*cities and forts across the Po plain, penetrated into the Alpine regions, and pushed Byzantine forces back towards the coasts, as well as heading across the Apennine chain to threaten \*Rome and to establish duchies, polities controlled by \*duces, in the far south of Italy. \*Alboin, the king recorded as bringing the Lombards across the Alps, was indeed militarily active, occupying between late 569 and 571 key towns such as Vicenza, \*Verona, \*Milan, and \*Pavia, but a key phase of this early Lombard expansion is marked by initiatives by duces and their forces. These duces rejected kingship after the death of Alboin, in the decade AD 574–84, and established a network of dukedoms based on fortified towns (Paul the Deacon, *HL* II, 32). Subsequently, and in reaction to improved Byzantine counter-attacks and \*Frankish incursions, new kings were elected.

The date of the Lombard arrival in Italy is set between September 568 and September 569, with March to May 569 the date most favoured by scholars. The \**Origo Gentis Langobardorum* (5) records Easter 568 (*I Indictio*) as the date the Lombards left \*Pannonia; by the second year of the \*indiction we hear that the Lombards 'began to plunder in Italy' and by the third indiction 'he was made lord of Italy'.

\*Marius of Avenches refers to the king 'with all the army... with women or all his people' leaving Pannonia, burning their homes as they left (*Chron. ad ann.* 569). This suggests a military advance force taking control of territories in Italy, which were then settled by family groups. Marius and, much later, Paul the Deacon refer to settlement 'in \*fara', a term probably denoting kin and clan groups, and Paul states that \*Gisulf, the first Dux of \*Friuli, requested the best *farae* with which to occupy his duchy (*HL* II, 9). It is true that some archaeological evidence might confirm a major uprooting of people from Pannonia; Hungarian archaeologists have suggested that various \*burial grounds terminate c. AD 570, although the finds in \*tombs cannot provide such precision. But doubts exist whether all people called 'Lombards' would have transferred.

Noticeably, Paul the Deacon does refer to other groups including \*Saxons, some no doubt mercenary forces, joining the migration (*HL* II, 6 and 8). Later sources such as \*Fredegar (*Chron.* III, 65) and Paul the Deacon (*HL* II, 5) repeat a story recorded in the \**Liber Pontificalis* (63, 3) that Alboin was invited to occupy north Italy by the Byzantine general \*Narses, who had been obliged to resign his post. It is possible that this story preserves a memory of Lombards being settled on Italian soil as \**foederati*. At various times in the 540s and 550s the Lombards had been Byzantine allies, even helping in campaigns in Italy against the \*Goths. Italy

had been badly damaged and depopulated by war and \*plague, and the Byzantines may have decided to introduce fresh settlers. Once they had arrived, however, the Lombards seem to have sought to take new lands by force.

N. Christie, *The Lombards: The Ancient Langobards* (1997).

**Lombards (Lat. Langobardi)** Group also known in modern studies as Langobards or Longobards (Italian Longobardi)—a name deriving from their reputedly distinctive 'long beards'. They were not among the many large tribal and confederate groups who assailed the Western Roman Empire in the 3rd–5th centuries. They are recorded by the Roman historian Tacitus in the 1st century AD as 'famous because they are so few' (*Germania*, 40), but later Roman sources pass minimal comment on them. The Lombards did not force the Rhine or Danube \*frontiers as the \*Franks, \*Alamans, or \*Goths did in the 3rd and 4th centuries AD.

While there is much scholarly debate about \*barbarian identity and ethnogenesis (i.e. the formation of new confederations and groups such as the Franks) in these crucial centuries, the Lombards are remarkable for their antiquity and their resilience. Tacitus indeed relates how they were a tribe 'hemmed in... by many mighty peoples, finding safety not in submission but in facing the risks of battle'. Such fortitude helped them to endure into the Early Middle Ages, unlike other tribes such as the Reudingi and Eudoses, also listed by Tacitus.

### Early history

While the earliest phases of Lombard culture and identity remain shadowy, from the 6th century their location is far more securely attested through both text and archaeology. Urnfields (cremation \*cemeteries) along the lower Elbe and in Lower Saxony containing \*arms and armour, as well as Roman imports, are attributed to the tribe. But the capacity of archaeological data to provide information about territory and ethnicity is disputed. It is true that there are indications of change and demographic displacement in the 3rd century; a reading of later textual sources suggests a south-eastward migration of the Lombards towards Bohemia and thence towards the Middle Danube (across the river from \*Noricum). It is doubtful however whether this movement can be tracked easily through a distinctive cultural residue, such as burial goods. Indeed any 'migration' would have involved much more than the movement and carrying of a name: ancestral bonds and

badges of identity characteristic of the Lombard name would have been preserved through language, titles, artefacts, and ritual, even if these also evolved over time.

### Later history

The earliest phases of Lombard culture and identity remain shadowy. From the 6th century, however, their location is far more securely attested through both text and archaeology. By this time the Lombards were settled on the fringes of the Roman world. \*Procopius records alliances made in the 530s–50s between the Lombards and the \*Emperor \*Justinian I in the context of the \*Byzantine invasion and occupation of \*Italy (534–55). By the second quarter of the 6th century, the Lombards had occupied the northern portions of former Roman \*Pannonia (western Hungary), having ousted the \*Heruli and \*Suebes. Southern Pannonia was then largely ceded to them by Justinian, along with considerable \*tribute, so as to provide a secure land corridor for imperial \*armies passing from the East to Italy. The Lombards were also engaged in countering the potential threat presented by the \*Gepids on the Danube and Lombard soldiers also fought in the Byzantine armies in Italy. Various Lombard chiefs became imperial officers, serving in the Balkans and even on the Persian \*frontier. Procopius claims that Justinian's Lombard allies were Christian and Catholic during the 540s, although later kings continued to profess \*Homoean (\*Arian) Christianity into the 7th century.

### Settlement in Italy

The fullest documentation of the subsequent Lombard occupation of large parts of Italy in opposition to the Byzantines is provided by the late 8th-century Lombard historian and poet \*Paul the Deacon, writing chiefly for the court of Charlemagne. The Byzantines had only come to dominate the Italian Peninsula after a disastrously long-drawn-out conflict against the \*Ostrogoths. They wholly failed to oppose the arrival of the Lombards over the Alps in AD 568/9. The Lombards settled first in north-eastern Italy and established the Duchy of \*Friuli at \*Cividale del Friuli. Other key \*cities were also placed under the leadership of a Lombard \*Dux (sometimes anglicized as Duke). Historians disagree about the numbers involved in this migration, but the military component is estimated at about 40,000 men.

The first Lombard expansion in northern Italy, and across the Po plain, was undertaken by King \*Alboin. Expansion continued even in the interregnum which followed Alboin's death (AD 574–84), when the Lombard *duces* chose not to elect a king. Byzantine military responses varied and were often ineffective. They included seeking support from the \*Franks and using

gold to buy off Lombard *duces*. Kings \*Authari and \*Agilulf maintained the offensive and by about 610 the Lombards held most of northern Italy except the coastal \*provinces of \*Venetia et Histria and \*Liguria, and restricted the imperial forces to a central Italian land corridor linking \*Rome and \*Ravenna. The Lombard kings were based first in \*Verona, then in \*Milan and finally settled in \*Pavia. Their territories or duchies were controlled by *duces* from old fortified Roman centres, notably cities. Some new fortresses were created on the frontiers with the Byzantines. Further territorial gains were made in the mid-7th century under kings \*Rothari and \*Grimoald, and in the mid-8th century under \*Liutprand and \*Aistulf when the Lombards occupied \*Ravenna, the Byzantine capital and seat of the \*exarch. The period is punctuated by treaties and 'eternal peaces', and there were probably sustained periods during which warfare was rare. When King Desiderius renewed Lombard aggression against Rome in the 770s, the pope successfully appealed to the Carolingian Frankish court, a development which culminated in Charlemagne's conquest of the Lombard kingdom in AD 774. Powerful Lombard principalities nonetheless endured in central southern Italy, notably those around \*Benevento, which saw significant cultural activity in the 9th century.

### Archaeological evidence

While walled towns were the seats of Lombard power and administration, related settlement archaeology remains very limited. Churches and \*monasteries have been studied, especially those of the 8th century—the Lombard nation became officially Catholic in about AD 680. A few \*houses are known, for example in \*Brescia and Verona, and traces of \*palaces exist at Brescia, Cividale, and \*Spoleto. At rural sites, specifically Lombard-period housing is barely attested and the evidence is even sparser for Lombard Pannonia. This is, however, also the case at non-Lombard sites, including Rome and Ravenna, where 6th- to 8th-century secular structures have yet to be archaeologically identified. Excavations at Brescia in particular have shown how cities had declined by about AD 600, with town centres disfigured by open spaces, timber and rubble buildings, robbed classical structures, and burials. Nonetheless, the persistence of towns as seats of authority suggests that they continued to be lived in, and that the bulk of the population was Italian/Roman and not Lombard. This continuity is reflected also in the survival of Roman \*law, of the \*Latin language, and of Catholic \*bishops and the congregations they cared for.

This urban continuity has implications for the chief source of archaeological information for the 6th and 7th centuries, namely burials. Important excavated cemeteries include \*Nocera Umbra and \*Castel Trosino

in central and eastern Italy, and Testona and Cividale in the north; a key aristocratic group lies at Trezzo sull'Adda near \*Milan. Burials often include weapons, and those of the \*aristocracy have such high-quality 'parade' items as gilded or silvered spurs and decorative shields as late as the mid-7th century. Much attention is now focused on how other artefacts, notably \*dress fittings, can identify patterns of integration or acculturation between Lombards and natives. In particular, the discovery that the \*Crypta Balbi workshops in Rome manufactured items in use in Lombard territories demonstrates the existence of networks of exchange across Italy in the 7th century. Archaeological information complements texts such as the \*letters of \*Gregory the Great, the \**Origo Gentis Langobardorum*, \*charters, the codes of Lombard \*law, the \**Liber Pontificalis*, the \**Historia Langobardorum Codicis Gothani*, and Paul the Deacon to provide a fuller and more complex account of Italy in the period of Lombard rule. **London** (England; Roman Londinium) The largest \*city in Roman \*Britain and presumably the provincial capital. By the end of the 2nd century AD it had reached around 133.5 ha (330 acres); a \*city wall was

constructed at this time. Some economic change appears to have occurred in the city at this time, reflected in reduced manufacture and the demolition of some buildings, but it remained important. With the Severan reorganization of Britain in the 3rd century, Londinium probably became the capital of the new \*province of \*Britannia Superior and then, with the reforms under the \*Tetrarchy, of \*Maxima Caesariensis. The city appears to have been important in the revolt of the \*usurpers \*Carausius (286–93) and \*Allectus (293–6); its recapture by \*Constantius I in 296 is celebrated on a large \*gold medallion from the \*Arras Hoard. A number of new monumental buildings were constructed in the city around this time, but their functions remain problematic. They include a masonry riverside complex and a large stone aisled structure at Colchester House. As yet no churches are definitely known in the city although the aisled structure at Colchester House might be one. A \*Bishop of London attended the \*Council of \*Arles of AD 314. Buildings continued to be altered, demolished, and built in the 4th century, parts of the forum and \*basilica complex were demolished. That the city remained important, however, is reflected in its new administrative name Augusta, assigned in the 4th century and indicated by \*coinage minted in London itself. The mint had been opened by Carausius and operated until its closure by \*Constantine I, with a brief subsequent minting period in 383. \*Theodosius Comes visited the city during his suppression of the \*Barbarian Conspiracy. The \**Notitia Dignitatum* (11) also indicates the residence of a Praepositus Thesaurum in charge of the London treasury. Occupation continued into the 5th century and was probably never completely abandoned although the nature of the settlement by the end of the Roman period and in the immediate post-Roman period remains enigmatic.

In the post-Roman period London was a focus of much reduced activity. Occupation within the walled city was of an ecclesiastical nature with a bishopric founded in AD 604 following the mission of S. \*Augustine of \*Canterbury to the kingdom of Kent in AD 597. The site of this ecclesiastical presence is most likely that of the medieval and modern S. Paul's Cathedral.

To the west of the walled city, at S. Martin-in-the-Fields, burials, perhaps around a Christian shrine, have been found dating to between the 5th and 7th centuries. Urban occupation also emerged here in the mid-7th century and by c.680 both archaeological remains and written evidence (e.g. \*Bede, *HE* II, 3) reveal a thriving centre of production and commerce which, during the 8th century, covered up to c.60 ha (c.150 acres) extending to the east along the Strand and including the area still known as Aldwych (old + *wic*, trading town); in c.680, the laws of Eadric and Hlothere of Kent (16) record the name of Lundenwic. Metalled \*streets

with \*houses and workshops along the frontage and with latrine and rubbish pits behind them display urban characteristics. Evidence for trading connections with continental Europe includes \*coins, \*glass, \*pottery, quernstones, and honestones. A mint appears to have operated from c.650. Production within Lundenwic included bone and antler objects, textiles, and metalwork.

By the late 9th century Viking activity appears to have brought an end to Lundenwic and the *\*Anglo-Saxon Chronicle* (s.a. 871) refers to Lundenburh, reflecting the movement of settlement back within the walled city around a gridded street pattern of that date.

**longhouse** Large, oblong barbarian \*house of a design typical in Scandinavia, northern Germany, and the lower Rhine from the Bronze Age to at least the 7th century, as excavated at \*Feddersen Wierde. The wooden longhouse characteristically provided a byre for animals at one end with accommodation, and a hearth for people at the other. Internal pairs of timber posts supported the massive roof and the doors were opposite one another in the long walls.

SCT

Hamerow, *Early Medieval Settlements*, 14–26.

**Longinus** Brother of \*Zeno. Imprisoned in \*Isauria by \*Illus till 485, he returned to \*Constantinople, where he became \*Magister Militum, and in 486 and 490 \*consul. He also replaced elderly dancers for the \*circus \*factions. When Zeno died in 491 he hoped to become emperor, helped by the \*Magister Officiorum \*Longinus of Cardala. \*Anastasius I banished him to \*Egypt, where he died c.499.

Haarer, *Anastasius*, 25–6.

**lordship** The Germanic peoples of the 1st–4th centuries AD had no theoretical concept of lordship. Any idea they had of it was related to a certain person bearing power.

The Enlightenment and the Romantic era developed a concept of Germanic freedom, which Engels introduced in Marxist theory. According to this model free farmers lived in an egalitarian confraternity (*Genossenschaft*) of freemen, ruled only by an elected assembly (*Thing*). As late as the Carolingian Era, it was considered, lordship finally changed into medieval feudalism and manorialism, influenced by Roman as well as ecclesiastical structures. The same body of scholarship considered specific patterns of lordship to be the main contribution of Germanic peoples to a post-Roman Europe. The most comprehensively theoretical account of this reconstruction was O. Brunner's *Land und*

*Herrschaft* (1939), which—together with H. Dannenbauer and W. Schlesinger—advocated a special 'Germanic' form of retinue (*Gefolgschaftswesen*) and fidelity as the foundation of ancient and medieval lordship. Despite considerable critical and polemical discussion, these theories dominated international scholarship till the 1980s. Modern research tends to look at symbols, rituals, patterns of communication, token gestures, and representation as well as \*gift-giving as the means to legitimize hierarchical social structures.

The elites of the post-Roman kingdoms depended on land. Central for our understanding is the shift from Late Antique \*taxation to rent and the manorial system. Owning land made it possible to pay and feed soldiers and to hold a local power position. At the same time the powerful people were integrated in super-regional structures. Kings also relied on large \*estates. RSt RGA 2 s.v. *Herrschaft*, XIV (1999), 443–57 (Pohl).

**lorica** (Lat. 'breastplate'; cf. 1 Thess. 5: 8) Genre combining \*prayer with an apotropaic charm. The *Lorica of Laidcenn* (Irish, before 661) invokes God's help against physical and spiritual dangers; the *Leiden Lorica* (Celtic?) is a Christianized love-charm. The *Lorica of Laidcenn* in particular relies heavily on vocabulary characteristic of the \**Hisperica Famina*. The detailed enumeration of body parts in both shows the influence of \*curse tablets. Other *loricae* survive in Old Irish and Old Norse. MWH

J. Reid, 'The Lorica of Laidcenn: The Biblical Connections', *JMLat* 12 (2002), 141–53.

**loros** Long \*purple scarf, adorned with \*gold and precious \*stones. Originally the decorative border of the \**toga picta*, it developed into a separate ceremonial garment by the 6th century. As an item of imperial \*dress on \*coinage, it appears regularly only from the late 7th century onwards. MGP

DOC 2/1 (1968), 78–80.

RByzKunst, 3 (1978) s.v. Insignien 428–44 (K. Wessell).

**Loupian** (dép. Hérault, France) An outlier in Languedoc of the sumptuous Late Antique \*villas of \*Aquitaine. The early imperial wine-producing villa at Les Prés-Bas was improved in the 4th century, and then more comprehensively remodelled in the early 5th

century into a particularly lavish residence featuring a vast trilobate banqueting room and a fine ensemble of \*mosaics of both Aquitanian and Syrian inspiration. A substantial church with adjoining \*baptistery excavated some 800 m (about half a mile) north of the villa at S. Cécile belongs to the same building phase. The villa remained in use into the 6th century, while becoming increasingly utilitarian. The longer-term development of both sites is revealing of the transformations in \*estate organization at the end of Antiquity. STL

CAGaule 34/2 (2001), 126–49.

C. Pellecuer and H. Pomarède, in P. Ouzoiliès et al., eds., *Les Campagnes de la Gaule à la fin de l'antiquité* (2001), 503–32.

**Low Ham** \*Villa in Somerset, England, constructed in the mid-4th century with a \*mosaic in the principal reception room, depicting the story of Dido and Aeneas as told by \*Vergil. ACR

C. A. Ralegh Radford, and H. S. L. Dewar, *The Roman Mosaics from Low Ham and East Coker* (1954).

**Lucania et Bruttium** Province of the \*Dioecesis Italiae created under the \*Tetrarchy and listed in the \*Verona List as licaoniam (fol. 256 recto, 11). It appears in the \**Notitia Dignitatum* (occ. II, 20) as under the authority of the \*Vicarius Urbis Romae (occ. XIX, 9), so formed part of \*Italia Suburbicaria. The \*governor was a \*Corrector (occ. I, 81), the metropolis was Reggio, and the province was bounded by the Silaro and Bradano rivers, so that it corresponded largely to the Augustan Regio III, but without Metapontum and including the Picentini mountains. MMA

NEDC 164–5, 218–19.

F. Ausbüttel, *Die Verwaltung der Städte und Provinzen in spätantike Italien* (1988).

R. Thomsen, *The Italic Regions from Augustus to the Lombard Invasions* (1947).

**Lucca (Roman Luca)** \*City in the modern province of Lucca in Tuscany, about 30 km (c.18 miles) inland from the Tyrrhenian Sea. The modern \*street grid replicates that of the Roman *colonia* (settled c.180 BC) and in the plain around the city signs of centuriation may still be discerned in rectangular field divisions.

In the Later Empire, details of the town's transformation are unclear. Some have argued for the abandonment of the old civic centre as early as the 2nd and 3rd centuries; others for more urban continuity. It is clear that in the mid-4th century one of the town's intramural \*basilicas had been adapted from a pre-existing \*bath complex. The \**Notitia Dignitatum* records an imperial \**fabrica* for swords (occ. IX, 20).

By the 6th century the \*Gothic identity of some of Lucca's inhabitants, whether ethnically or socially defined, was secure. In 553, following the \*Byzantine

invasion and occupation of Italy, Lucca, sustained by \*Frankish troops, resisted the general \*Narses, who subsequently captured the town (\*Agathias, I, 17–18). S. Frigidianus (or Fredianus, \*Bishop of Lucca 556–88), formerly an Irish hermit living in the hills above the city, is credited with diverting the river, so saving fields in the plain from flooding (\*Gregory the Great, *Dialogues*, III, 9).

After the \*Lombards took control of the region, the strategic position of Lucca made it the seat of a \*Dux (certainly from the time of Walpert, 713–36) and Lombard landowners built themselves \*houses in the city and its suburbs. From the same period date the earliest surviving records which make Lucca the best-documented city in early medieval \*Italy. DRB

Wickham, *Early Medieval Italy*, 84–6.

P. Squatriti, 'Water, Nature and Culture in Early Medieval Lucca', *EME* 4 (1995), 29–39.

**Lucian of Antioch** (martyred 7 January 312) Presbyter and learned teacher at \*Antioch, \*martyred at \*Nicomedia (\*Eusebius *HE* IX, 6, 3; cf. VIII, 13, 2). An apology attributed to him on that occasion is of doubtful authenticity, as are reports that he founded the exegetical school at Antioch and edited recensions of the LXX and NT; his authorship of a \*creed adopted by the \*Council of Antioch (341) is debated. Lucian's subordinationist Christology anticipated the views of his students \*Arius and \*Eusebius of \*Nicomedia. His \*relics were placed in a \*martyrium at Drepana of \*Bithynia which under \*Constantine I was renamed \*Helenopolis after the \*Empress \*Helena. MWHO *CPG* 1720–3.

### **Lugdunensis Prima, Secunda, Senonia, and Tertia**

These four \*provinces represent divisions of the former province of Gallia Lugdunensis. under the \*Tetrarchy. This was at first divided into Lugdunensis Prima, with \*Lyons as its capital, and Secunda, with \*Rouen as its capital, and these are recorded in the \*Verona List. They were then further divided by \*Constantine I, so

that Lugdunensis Senonia, with Sens as its capital (other towns including Chartres, Auxerre, \*Paris, and \*Orléans), was formed from part of Lugdunensis Prima, and Lugdunensis Tertia, with \*Tours as its capital (other towns including Le Mans, Rennes, and Angers), was formed from part of Secunda. Other \*cities in Lugdunensis Prima in its later form included \*Autun and Langres and in Lugdunensis Prima there were Bayeux and Avranches. All four provinces are recorded in the \**Notitia Dignitatum* with Lugdunensis Prima having a Consularis as \*governor and the other three a \*Praeses. These territories were gradually lost from the Roman Empire to invading \*tribes, including the \*Franks and \*Burgundians over the 5th century. The death of \*Syradius 'Rex Romanorum' in 486/7 set a term to Roman control in Lugdunensis Secunda and Senonia. ACR *Barrington Atlas*, 101 G2.

**Lullingstone** \*Villa in Kent (England), first built in the AD 80s. Marble busts of the 2nd century may represent the owners, but they were found in the shrine (Deep Room) in a 4th-century context, perhaps indicating changing ownership or ancestor worship. The 4th-century phase included an apsidal \*dining room with \*mosaics of AD 330–60, depicting Europa and the Bull and Bellerophon killing the Chimaera. Above the Deep Room, wall paintings of the late 4th and early 5th centuries, apparently depicting worshippers and the chi-rho symbol, may indicate a house church. ACR G. W. Meates, *The Roman Villa at Lullingstone, Kent* (1979).

**Luna** (mod. Luni) lies on a narrow coastal strip north of ancient and modern \*Pisa. It was prosperous in classical times, largely because within its territory were the nearby Luna (now Carrara) \*quarries, which supplied much of the \*marble for early imperial \*Rome. The \*city remained important as an administrative centre into post-imperial times, serving as a centre of Byzantine power against the \*Lombards (who captured it in around 640), and as the seat of a \*bishop (until 1204). However, by the 4th century the quarries had apparently closed, and the economy and population of Luna dropped steadily, until the site was wholly abandoned. Excavations in the 1970s were some of the first in \*Italy to focus on the post-Roman period. They showed that by the mid-6th century the forum square had been comprehensively robbed of its marble, and was partially covered by small wooden houses—a remarkable case of urban change, that, despite the

## Lundeborg

continuing administrative importance of the city, is most readily interpreted as decline. BW-P

A. Manfredi and P. Sverzellati, eds., *Da Luni a Sarzana, 1204–2004: VIII Centenario della traslazione della sede vescovile: atti del Convegno internazionale di studi, Sarzana, 30 settembre–2 ottobre 2004* (2007).

B. Ward-Perkins, 'Two Byzantine Houses at Luni', *PBSR* 49 (1981), 91–8.

**Lundeborg** A trading port dating from the 3rd to the end of the 7th centuries AD at the mouth of the Tange River outflow to the Greater Belt in Denmark. The site is associated with \*Gudme, in the south-east quarter of the island of Funen. Along the coastline (an area about 900 m (3,000 feet) in length on black sandy soil) several small huts with hearths, and pits of various sorts, have been found. The southern part of the occupation can be dated to the Late Roman Iron Age, whereas the northern part dates to the end of the \*Migration Period, the 8th century AD. A hoard of 95 \*gold foil figures from c.600 AD was also discovered on the coastal ridge of the Tange River. A possible sheltered \*harbour was located in the low sandy beach area around the small Tange River. The location and finds of Roman imports (\*pottery, \*bronzes, \*glass beads, glass vessels, and pottery including *terra sigillata*) and the evidence for such local crafts as \*ship-building and blacksmithing suggest that this is an important centre of manufacturing and \*trade. KJe

P. O. Thomsen, 'Lundeborg—an Early Port of Trade in South-East Funen', in P. O. Nielsen, K. Randsborg, and H. Thrane, eds., *The Archaeology of Gudme and Lundeborg* (Arkæologiske studier 10, 1994), 23–9.

K. Randsborg, 'Beyond the Roman Empire: Archaeological Discoveries in Gudme on Funen, Denmark', *OxJnlArch* 9 (1900), 355–66.

**Lupercalia** Ancient Roman religious \*festival, whose origins and purpose remain uncertain. In the time of Julius Caesar, it included a ritual \*sacrifice performed by a brotherhood of priests, the induction of new priests, a semi-nude race performed by male members of the senatorial \*aristocracy, and a good deal of drunken spectacle. The suppression of pagan cults in \*Rome in AD 382 by the \*Emperor \*Gratian and the subsequent disintegration of pagan \*priesthoods forced a retooling of the festival but the rite continued into the 6th century despite the gradual adoption of Christianity. It was still popular at the time of Pope \*Gelasius I (AD 492–6), who, in a sign of his own inability to control popular religious festivals in Rome, issued a lengthy, though toothless, condemnation of its aristocratic patrons. **Lupicina** See EUPHEMIA.

**Lupicinus** See JURA FATHERS.

**Lupus, Dux of Aquitaine** (d. after 676) Frankish \*Dux (from c.672), who summoned the Church \*Council of S. Pierre-de-Granon and assisted the \*Visigothic pretender \*Paul in his revolt against King \*Wamba. After the murder of \*Childeric II in 675, he may have declared himself independent ruler of \*Aquitaine. JJA  
M. Rouche, *L'Aquitaine des Wisigoths aux Arabes, 418–781* (1979), 100–4.

**Lupus, Dux of Champagne** (fl. 566–90) A prominent Frankish magnate under \*Sigibert I and \*Childeric II. During the latter's minority, he favoured an alliance with \*Guntram, and despite \*Brunhild's support, was forced to flee to his kingdom after \*Childebert's treaty with \*Chilperic in 581. He was restored to Childebert's \*court alongside \*Dynamius in 587, after the Treaty of \*Andelot. He was a \*patron of \*Venantius Fortunatus, who praises him extensively.

PLRE III, Lupus 1.

PCBE IV/2, Lupus.

B. Dumézil, 'Gogo et ses amis', *RH* 643 (2007), 553–93.

**Lupus of Troyes** (427–78) An aristocrat from Toul, brother of \*Vincent of \*Lérins, and husband of Pimeniola the sister of S. \*Hilary, \*Bishop of \*Arles. Lupus abandoned his \*estates, separated from his wife, and went to live at Lérins. Later he joined \*Germanus, Bishop of Auxerre, on his mission to \*Britain in 429, and is credited with negotiating with \*Attila and the \*Huns in 451, and later with the \*Alamans. He corresponded with \*Sidonius, Bishop of \*Clermont, who commends him as a learned theologian. A surviving \*letter, written with Eufronius, Bishop of \*Autun, gives advice on the \*liturgy of festive vigils and clerical \*marriage. RVD; STL

**Luxeuil** (dép. Haute-Saône, France) \*Monastery founded in the early 590s on the ruins of the Roman settlement Luxovium by the Irish monk S. \*Columbanus, supported by King \*Childebert II, Queen \*Brunhild, and the local \*aristocracy. Under Columbanus' successors \*Eusthasius and Waldebert, Luxeuil became the centre of a network of monastic foundations, but lost its leading role after Waldebert's death in 670 (though it served as a \*prison for \*Ebroin and \*Leodegar). It remained one of the most important \*Merovingian scriptoria. The monastery was destroyed in 732, restored by Charlemagne, and dissolved during the French Revolution. Most of its surviving manuscripts went to the Bibliothèque Nationale in Paris. Extensive archaeological research has recently given important new insights into the early history of the monastery and its relationship to the Late Antique settlement.

**Luxor** See THEBES AND THE THEBAID.

**Luxor, Tetrarchic temple-chamber** The Pharaonic \*temple of Ammon at \*Thebes (modern Luxor) in Upper \*Egypt was requisitioned by the \*Tetrarchy, perhaps soon after the revolt of \*Domitius Domitianus. Within the temple complex, an apsidal room was dedicated to the \*imperial cult. It was decorated with wall paintings, now poorly preserved but represented in watercolours (now in the Ashmolean, Oxford) by the Victorian Egyptologist Sir John Gardner Wilkinson. These paintings show images of four \*emperors in the

\*apse, underneath the eagle of Jupiter, and there were also ceremonial scenes, including a military \*procession and an imperial audience.

**Luxorius** (occasionally **Luxurius**) (fl. 523/34) Poet of \*Vandal \*Africa, author of 89 (or 90) \*epigrams and one \*cento. His poems were composed (on internal evidence) during the reigns of the Vandal kings \*Hilderic (523–30) and \*Gelimer (530–4), most probably in \*Carthage. They form part of the \**Anthologia Latina*. Luxorius entrusted his book of poems to a \**grammaticus*, Faustus, for circulation among learned men (1, 10–14), and he is the dedicatee of a grammatical treatise on final syllables by another writer, Coronatus (Keil, *Gramm. Lat.* IV, 1), but there is no direct evidence that Luxorius was a \**grammaticus* himself (Kaster, *Guardians*, 415–17), and we have no other information about his life.

His epigrams, composed in a variety of metres, demonstrate a close knowledge of classical Latin poetry, particularly the epigrams of Martial (1st century AD); he is thus often labelled the 'African Martial'. His scoptic epigrams, attacking sexual perversions, physical deformities, and those who have neglected professional duties, bear the particular imprint of the classical epigram tradition. But Luxorius is no mere imitator. His poems offer a vivid picture of daily life in Vandal Africa, and provide valuable evidence of the cultural interaction between Romans and the Vandal ruling elite. He celebrates the grand homes and gardens of wealthy Vandals through classicizing mythological parallels and poetic allusions, attesting to the continuing value of such learning in the period. Amphitheatre performances and chariot racing are particularly prominent in his epigrams (some fourteen poems on this theme survive). Luxorius also uses the epigram for political attack: two poems target the violent rapaciousness of one Eutyclus (55, 56), perhaps a Greek calque on the name Bonifatius, a secretary of Gelimer (*PLRE* III s.v. Bonifatius I).

**Lycaonia** \*Province of \*Dioecesis \*Asiana in south Central \*Anatolia, with \*Iconium (mod. Konya) as its secular and ecclesiastical metropolis. The province was created in the 370s from parts of \*Isauria and \*Pisidia and appears in the \**Notitia Dignitatum* (or. II, 35) governed by a \*Praeses (or. I, 97). In the 7th century Lycaonia was merged into the larger \*Opsikion \*Theme and soon thereafter became part of the Anatolic Theme.

The region flanks the Taurus Mountains which lie to the south, and was centred on the Konya Plain. The economy was mainly rural and best known for large landholdings and \*sheep \*farming. Christianization was well advanced by the 4th century, as appears from \*inscriptions. Extant churches are particularly numerous at Binbirkilise (\*Thousand and One Churches) and other mountain sites and were built in a regional style that is also encountered in \*Galatia. PhN *TIB* 4 (1984).

S. Mitchell, *Anatolia* (1993), II.

**Lychnidus** (mod. Ohrid, FYROM) In antiquity the name of both Lake Ohrid and the major settlement on its north-east shore. Lychnidos lay on the \*Via Egnatia, near the east edge of the province \*Epirus Nova. A bishopric existed already in 343. The region suffered from \*Visigoths under \*Alaric in 397, from \*Ostrogoths in the late 5th century (\*Malchus, fr. 18), and from \*Slavic invasions in the late 6th and subsequent centuries. An \*earthquake caused damage in the reign of \*Justinian I (\*Procopius, *Anecd.* 18).

The Late Antique city occupied two hills above the lake. At least nine churches, mostly decorated with \*mosaics, have been documented, e.g. at Plaošnik (Imaret) both a monumental three-aisled \*basilica with a \*baptistery and atrium on its north side, and a large, double-shell tetraconch church with a trefoil baptistery. A fragmentary rotunda has been found near the acropolis. Three-aisled basilicas also stood in nearby suburbs, e.g. at Studenčišta and Sveti Erazmo. CSS

**Lycia** \*Province bordering the Mediterranean Sea and the provinces of \*Caria and \*Pamphylia, with \*Myra as its civil and ecclesiastical metropolis. It is not clear when Lycia was divided off from the earlier combined province of Lycia et Pamphylia. The \*Verona List has the corrupt reading Phanfilia under the \*Dioecesis \*Asiana (225 verso, 6). A \*Praeses of the combined province is addressed in the closing years of the Great \*Persecution (*CTh* XIII, 10, 2 = *CJust* XI, 49, 1; cf. also *CIL* III, 12132; *ILCV* 1) and the earliest evidence of the separate province comes from the mid-4th century. In the \**Notitia Dignitatum* Lycia is listed as governed by a Praeses (or. I, 100) under the \*Vicarius of the Dioecesis of Asiana and the \*Praefectus Praetorio per Orientem (or. II, 38; XXIV, 15). In the 7th century Lycia was merged into the larger \*Cibyrrhaeotic \*Theme.

The geography is dominated by the southern \*Taurus Mountain Range and its rivers, their estuaries, and the coastal floodplains where the main \*cities are located along the shipping route to the Near East. Accordingly, \*harbours and \*trade played an important part in the economy. Lycia was particularly prosperous in Late Antiquity, as is attested by a wealth of new buildings and whole new settlements that sprang up along the coast, on islands, and in the mountains. In the 6th-century *Life* of S. \*Nicholas of Sion, the rural hinterland appears thoroughly Christianized, with independent and well-to-do farmers living in \*villages, building many churches, and founding \*monasteries. The large, heavy, and precious \*Kumluca Treasure may be attributable to a rural monastery. See also LYCIA, CHURCHES OF. PhN

**Lycia, churches of** Durable lime mortar masonry and impassable mountains have both contributed to the good preservation of many churches in \*Lycia. The provincial architecture has various distinctive features. \*Apses are mostly free standing as in the Aegean and seldom integrated into a straight east wall as in the Near East. In many cases an eastern chapel seems to have contained \*relics. Basilicas with \*triconch sanctuaries occur frequently at remote mountain sites; some of these can be identified with \*monasteries thanks to the *Life of \*Nicholas of Sion*. Some coastal \*cities imported \*marble from \*Proconnesus, but local limestone carvings were more common, of equally high quality, and affordable to rural communities. The great majority of churches and stone carvings dates from the 6th century. PhN

**Lycopolis** (Coptic Siout; mod. Asyut) Metropolis in Middle \*Egypt strategically located on the west bank of the \*Nile at a bend in the river and at the terminus of a Western Desert route from Kharga \*Oasis and beyond. A \*cavalry unit (Cuneus Equitum Maurorum Scutariorum) was stationed there c.400 (\**Notitia Dignitatum* [or.] 31, 23). The \*philosophers \*Plotinus (c.204/5–270; \*Eunapius, *Lives of the Philosophers*, 455) and \*Alexander (3rd cent.) came from Lycopolis as did the poet \*Colluthus (fl. 5th/6th cent.).

Many \*martyrs were associated with the city. \*Meletius, \*Bishop of Lycopolis (fl. 303–32), led the rigorist Meletian Schism arising from the Great \*Persecution. Numerous works surviving in \*Arabic are attributed to Bishop Constantine II, bishop in the 6th/7th centuries,

who was still working to eradicate Meletians in his see in the years following the \*Persian invasion.

The hermit, prophet, and healer \*John of Lycopolis (d. 394/5) lived on the Western Mountain and is said to have advised the \*Emperor \*Theodosius I (\**Historia Monachorum in Aegypto*, 1, \*Palladius, *Lausiac History*, 35, \*John Cassian, *De Institutis*, IV, 23).

The remains of the ancient city are now beneath modern Asyut. The desert escarpment of the Western Mountain contains numerous pharaonic rock-cut tombs and \*quarries reused for habitation in Late Antiquity. The mud-brick ruins of Deir el-Meitin located nearby and Deir al-Azam upon the desert plateau are probably associated with this earlier, apparently monastic settlement. At Deir al-Azam, a jar of \*incense was discovered bearing a Coptic \*inscription and dedicated in 1156 by the monks of 'Apa John of the desert' (O.Cair.Monuments, 8104). ERO

**Lycurgus cup** (c.300–400) \*Glass \*cage-cup, now in the British Museum. The glass has dichroic properties: in daylight it is opaque green, in transmitted light translucent red. Its openwork frieze depicts the myth of Lycurgus: the Thracian king, entrapped by Ambrosia transformed into a vine, is tormented by \*Dionysus, Pan, and a satyr. RHob

D. B. Harden, *Glass of the Caesars* (1987), 245–9.

**Lydda (Diospolis)** (mod. Lod) \*City on the coastal plain of \*Palaestina Prima, first mentioned in the Canaanite period. S. Peter visited the Christian community at Lydda and healed a paralytic (Acts 9: 32–5), Lydda's \*bishops attended the \*Councils of \*Nicaea and \*Constantinople I, and in 415, the \*Council of Lydda absolved \*Pelagius from the charge of heresy. As the site of the alleged \*martyrdom and the shrine of S. \*George, Lydda became a place of \*pilgrimage. The \*Bordeaux Pilgrim passed through (600, 3), the pilgrim \*Theodosius (4) and the \*Piacenza Pilgrim (25) mention that there were many \*miracles at the shrine. \*Adomnán records miracle stories involving horsemen which his informant Arculf had heard at \*Constantinople.

An image of S. George was carved on the \*marble pillar against which the martyr had allegedly been beaten. In the late 7th century John, a disciple of \*Anastasius of \*Sinai (II, 5), was a \*stylyte at Diospolis.

## Lydia

After the \*Arab conquest in 635, Lydda became the capital city of \*Jund Filastin. BH

B. Bagatti, *Ancient Christian Villages of Samaria* (2002).

**Lydia** A province of the \*Dioecesis \*Asiana in western \*Anatolia, governed by a \*Consularis and based on the Hermus Valley around the administrative centre of \*Sardis. The rich and productive agricultural land around Sardis, Thyateira to the north, and Philadelphia to the east, and in the Cayster Valley east of \*Ephesus, rarely features in historical sources of Late Antiquity and has produced few \*inscriptions. The region appears to have become unsettled in the mid-6th century, when in 553 it was placed under a military commander called a Biokolytes (*NovJust* 145). Disturbances at this period may have been connected with the residual survival of \*paganism attested in the Mesogis mountain range, or with Montanist \*heretics, entrenched on the eastern edge of Lydia. Both were suppressed by violent state intervention in the 540s and 550s. There was a significant community of \*Jews and Jewish sympathizers (Godfearers) at Sardis, which in the 6th century created a \*synagogue in the large civic gymnasium, adjoining a commercial \*street of Late Antiquity. The most prominent surviving of many attested Christian churches was that of S. John the Evangelist at Philadelphia. SM Jones, *LRE*.

**Lydney Park** \*Temple complex in Gloucestershire (England) dedicated to Mars and the native healing god Nodens. It was built in the late 3rd century atop a promontory hillfort and had many votive offerings. ACR

R. E. M. Wheeler and V. T. Wheeler, *Report on the Excavation of the Prehistoric, Roman, and Post-Roman Site in Lydney Park, Gloucestershire* (1932).

**Lydus** See JOHN LYDUS.

**Lyons (Roman Lugdunum, France)** A leading political and economic centre of Roman \*Gaul, located

at the confluence of the rivers Saône and Rhône and at the heart of the \*road network. It was the site of an imperial mint from Augustus to Caligula, which was reopened by Aurelian in 258 and produced \*coinage with some interruptions until 413. Lyons became capital of the Late Antique \*province of \*Lugdunensis Prima, but in Late Antiquity forfeited its administrative pre-eminence to imperial residences such as \*Trier. In 456, the neglected local \*aristocracy connived in the seizure of the city by the \*Burgundians, and while the \*Emperor \*Majorian briefly reasserted his authority, requiring \*Sidonius to plead for clemency for himself and his native city, the Burgundians had filled the power vacuum on a more permanent basis by c.461. Lyons thenceforth became an important royal centre, only to decline in political importance once more following the conquest of the Burgundian kingdom by the \*Franks in 534.

The city's early Christian traditions, including an eyewitness account of the \*persecution of the Lyons \*martyrs of the late 2nd century, are reliably mediated through \*Eusebius (*HE* V, 1). The \*bishops include the martyred S. Pothinus and Irenaeus in the 2nd century, \*Eucherius and \*Patiens in the 5th century, and \*Nice-tius in the 6th, and its churches, several of which have been excavated, provide our best markers of the reorientation of the city's landscape that took place during Late Antiquity, and was perhaps accentuated during the period of Burgundian rule. Already by the 3rd century Lyons was contracting away from the Roman monumental centre on the Fourvière hill, leaving only the \*cemeteries upon its fringes where the funerary \*basilicas of the bishops Irenaeus and Justus were subsequently established. Late Antique Lyons came instead to be centred along the western bank of the Saône, the site of the cathedral complex, and in those areas of the western half of the peninsula between the two rivers less susceptible to flooding, where a number of churches existed by the time of \*Gregory of \*Tours. Amid this multifocal pattern, it remains difficult to pinpoint the location of the city walls alluded to by some texts. The presence of African and eastern imports shows that city remained connected via the Rhône corridor to the interregional exchange system of the Late Antique Mediterranean until at least the late 6th century, but there are some indications of urban decline from then on, linked to growing problems of flooding. *RIC* V/1; V/2, 6, 7, 8, 9, 10.

**lyre** Archaeological evidence for early medieval lyres consists mostly of the remains of tuning-pegs made of wood or \*copper alloy, or of lyre-bridges made from bone, copper alloy, \*amber, or wood. Decorated elements include the copper-gilt, garnet-inlaid plaques from \*Sutton Hoo and Prittlewell, and the extraordinary incised and blackened processions of warriors and interlace \*animals on the largely preserved maplewood lyre from Trossingen, Germany.

Lyres accompanied recitations and songs. Their importance is reflected in Germanic heroic \*poetry, such as \**Beowulf*, and also in their rarity and the contexts where they are found, such as the princely burials of Sutton Hoo, \*Snape, Prittlewell, and Taplow, all in England, and the so-called 'Minstrel' grave in S. Severin's Church, \*Cologne. Dates range from the late 6th to late 7th/early 8th centuries AD. SMA

E. Barham, 'The Investigative Conservation of a Poorly Preserved Anglo-Saxon Lyre from Prittlewell', in Booth, *Herausforderungen und Ziele der Musikarchäologie*, 377–82. Bruce-Mitford, *Sutton Hoo Ship Burial*, vol. 3 (1983).

**Mabbug** See HIERAPOLIS OF SYRIA.

**Macarian Homilies** (370s–90s) Remarkable \*Greek corpus of \*ascetic and mystical teaching probably originating in \*Osroene or the region around \*Antioch and comprising \*letters, treatises, question-answer sessions, and homilies. Ascribed to S. \*Macarius the Egyptian (and others) before 534, the Homilies were rapidly translated (into \*Syriac and \*Coptic) and widely circulated. The *Homilies* bestride Greek and Syriac thought-worlds evincing a theological vision of singular power, poetry, and intensity. Noted for their teaching on the action of the Holy Spirit, the deification of man, the heart as spiritual and intellectual centre, and the vision of divine light as the summit of perfection, the *Homilies* profoundly shaped the Eastern Christian spiritual tradition throughout Late Antiquity, being drawn on by writers such as \*Mark the Monk, \*Diadochus of Photice, \*Maximus the Confessor, \*Isaac of \*Nineveh, and \*Dadisho Qatraya. Identified as a \*Messalian production for much of the 20th century, the *Homilies* are now widely recognized as standing in close but sharply critical relationship to the Messalian tendency. MGPe

**Macarius of Alexandria** (d. c.393) Egyptian monk, often confused in ancient texts and by modern scholars with his contemporary \*Macarius the Egyptian. Macarius of \*Alexandria was \*priest-superior of \*Kellia in the late 4th century. He was renowned for a fierce \*asceticism and astute wisdom. \*Evagrius Ponticus (*Practicus*, 94; *Antirrheticus*, 4, 23; 4, 58; 8, 26) and \*Palladius (*Lausiac History*, 18) record first-hand reminiscences of his life and teachings. A longer biography attributed to Palladius is preserved in Coptic. JWH

ET Vivian, *Four Desert Fathers*.

Harmless, *Desert Christians*.

**Macarius of Magnesia** (fl. c.400) Possibly identical to a \*bishop of \*Magnesia in Asia Minor attested in 403 at the Synod of the \*Oak, Macarius Magnes wrote his 'unique' discourse (*Monogenes*) or his 'response' (*Apocriticus*) probably in the last quarter of the 4th century. Of the original five books, only Books 2–4 are partially preserved. They consist of rebuttals of \*pagan criticism, which focuses on difficult biblical passages. Macarius possibly constructed a fictitious interlocutor on the basis of pre-existing anti-Christian tracts, although \*Porphyry's *Against the Christians* has often been proposed as Macarius' main source, and \*Julian and \*Hierocles entertained as possibilities.  ET T. W. Crafer (1919).

**Macarius of Tkow** (d. 451/2) \*Bishop in Upper \*Egypt, martyred for his opposition to the \**Tome of Leo* adopted at the \*Council of Chalcedon. The hagiographical *Panegyric on Macarius* (6th cent. or later) by Ps.-Dioscorus of \*Alexandria is the main source for his life; originally written in \*Greek, with Sahidic and Bohairic Coptic and \*Arabic translations, it probably draws on the *Life of Dioscorus* by Ps.-Theopistus of Alexandria. D. W. Johnson, the modern editor of the *Panegyric*, concludes that '[v]ery little of the life of Macarius as set out in the Egyptian sources can be called historical in the modern sense'. The *Panegyric* makes Macarius a hero who dies defending Coptic orthodoxy.

**Macarius the Egyptian** Also called 'the Great' (c.300-90). Pioneer of Egyptian monasticism and founder of the \*monastery of \*Scetis in lower \*Egypt (modern Wadi al-Natrun). Macarius was renowned for reading disciples' hearts, earning him the nickname 'Spiritbearer' (Gk. πνευματοφόρος: \*Palladius, *Lausiac History*, 17). \*Evagrius Ponticus records personal reminiscences (*Practicus*, 29, 93; *Antirrheticus*, 4, 45). The \**Apophthegmata Patrum* lists under his name 41 stories and sayings (though several of these actually concern his contemporary \*Macarius of \*Alexandria). A \*letter *Ad Filios Dei* (*To the Sons of God*) has some chance of being authentic. A corpus of Coptic hagiographic works also discusses his career and collates his teachings. The influential set of 50 so-called \**Macarian Homilies* once attributed to him are now seen as Ps.-Macarian and of Syrian origin.

**Macrina the Younger, S.** (c.327–379/380), and family Macrina was an \*ascetic from a landowning Christian family of \*Cappadocia and Pontus. Her parents were Emmelia and Basil the Elder (son of Macrina the Elder); her brothers included the monks Naucratus and Peter, \*Basil, \*Bishop of \*Caesarea (330–79), and \*Gregory, Bishop of \*Nyssa (331/40–c.395), to whom she was a 'second mother' (*ep.* 19, 6) and who wrote her *Life*. Secretly named Thecla (after S. \*Thecla the legendary ascetic follower of the Apostle Paul), Macrina was drawn to asceticism at an early age. Later, she persuaded her widowed mother to convert their household into two ascetic communities, one male and one female. She is also remembered as a spiritual teacher, mainly in Gregory's Platonizing \*dialogue *On the Soul and the Resurrection*. GAF

**Macrobius** (early 5th cent.) Roman \*senator, \*Praefectus Praetorio in 430, and a notable link between the cultures of antiquity and the Middle Ages, Macrobius Ambrosius Theodosius represents an aristocratic tradition of amateur erudition that had Cicero and the elder \*Pliny as its most distinguished avatars. Though he flourished in a highly Christianized empire and was himself probably Christian, there is no sign of Christianity in his writings, which instead are devoted to \*philosophy and the traditional literary culture.

Besides a treatise on the differences and similarities between \*Greek and \*Latin verbs (only excerpts survive), Macrobius wrote two substantial works. The *Saturnalia*,

a learned compilation cast in \*dialogue form, recreates and idealizes the cultural life of an earlier generation, in the manner of Cicero's *On the Orator* and *On the Commonwealth* (*De Republica*). Set during the \*Saturnalia in the early 380s, it gathers several (non-Christian) members of the \*aristocracy and their entourage to discuss matters ridiculous (e.g. a number of jokes) and sublime (e.g. the divinity of the \*Sun), and above all the poetry of \*Vergil. Quarried from mostly unnamed sources—including Aulus Gellius, Seneca, Plutarch, and the tradition of scholastic commentary known from \*Servius—the discussion presents Vergil as the master of all human knowledge, from diction and \*rhetoric to philosophy and religion. In this respect it makes explicit a view of Vergil long implied by the scholarship gathered around the poems and anticipates the miraculous figure of 'Vergil the magician' known to the Middle Ages. Though less influential as a source of ancient lore than \*Martianus Capella's allegory of the seven Liberal Arts, the *Saturnalia* was used by John of Salisbury and William of Conches in the 12th century. Like these scholars, we know the work only because a single copy survived into the 9th century. Now itself lost, that defective copy (it lacked as many as 300 modern pages of the original text) begat a series of copies extending from the 9th century into the 15th, when the *Saturnalia* reached the height of its popularity.

More consequential was Macrobius' other major work, a commentary on the 'Dream of Scipio' that concluded Book 6 of Cicero's *On the Commonwealth* (thanks to Macrobius we have a complete text of the 'Dream', though the rest of Book 6 is lost). Like the myth of Er in Plato's *Republic* that inspired it, the 'Dream' presents a view of the soul and the afterlife meant to support the work's earlier arguments, in Cicero's case urging just and vigorous participation in civic life. Placing his emphasis elsewhere, Macrobius uses Cicero's text as the starting point for a thoroughly \*Neoplatonic treatment of (especially) \*cosmology and the soul's ascent to the One, with direct debts to \*Porphyry and \*Plotinus. A copy of the work corrected in 485 by Aurelius Memmius \*Symmachus, father-in-law of \*Boethius, played an important role in the text's transmission, the early stages of which are otherwise unclear: having survived the hazards of the 6th–8th centuries—aided in the latter stages by the work of Irish scholars active on the Continent—the text emerged in 9th-century France, where most of the earliest surviving manuscripts were written. By the end of the 11th century copies were widely diffused, from England to south Italy; but the true efflorescence came in the next century, which has left us over 100 manuscripts. From the 12th century onwards Macrobius enjoyed a reputation as a major Platonist: praised as a philosopher by Abelard (d. 1142) and used extensively by Vincent of

Beauvais (d. 1264) and Albertus Magnus (d. 1280), he continued to be influential into the Renaissance and beyond, when the cosmological views of the 'Dream' and his commentary left traces in writings as diverse as those of Dante (d. 1321), Chaucer (d. 1400), Juan Luis Vives (d. 1540), and Edmund Spenser (d. 1599).

In modern scholarship Macrobius has sometimes been depicted as participating in the 'pagan revival' of the 380s–90s, but that view cannot survive the demonstration that he wrote at least one and more likely two generations later. We know too little of his immediate milieu to draw reliable inferences concerning his motives. RAK

**al-Mada'in** \*Arabic term for the conurbation at the confluence of the Tigris and Nahr Malcha canal. Its \*Syriac (\*Mahoze) and \*Arabic name, 'the Cities', reflects the fact that several cities were established there. Seleucus I founded \*Seleucia ad Tigrim in 305 BC. The Parthians first established \*Ctesiphon as a military camp across the river and it subsequently grew into their main administrative city. \*Bridges probably linked the two cities in Antiquity and they were often thought of as twin cities, Seleucia-Ctesiphon.

\*Ardashir I established the circular city named Veh-Ardashir in New \*Persian (Middle Persian Weh-Ardaxshir) in AD 230. It was called Nea Seleukeia in \*Greek, and was more commonly known as \*Kokhe among its Aramaic- and \*Syriac-speaking inhabitants. Veh-Ardashir/Kokhe was the \*Sasanian dynasty's \*coronation city, winter residence, and the principal centre of their \*administration. In the 5th century, the Tigris changed course, disrupting Weh-Ardaxshir. Aspanbar, or 'New Ctesiphon', grew up on the new east bank in the 6th century. Its centrepiece was the audience hall of \*Taq-e Kesra, part of a palatial complex expanded by several kings. To the south-east, \*Khosrow I founded the 'Better-Antioch-of-Khosrow' (MP \*Weh-Antiogh-Husraw) with \*baths, a \*hippodrome, and captives from \*Antioch on the Orontes.

The city which \*Ardashir I founded, Veh-Ardashir/Kokhe, was across the Tigris from Ctesiphon, to which it was connected by a pontoon \*bridge. \*Kokhe was shaped like an irregular oval, a plan possibly inspired by the layout of Ardaxshir-Xwarrah (mod \*Firuzabad), the first city the king built. The Sasanians maintained a palace in Ctesiphon (the White Palace), known only through literary sources. Following a change in course of the Tigris that flooded Kokhe, a new royal and aristocratic suburb grew up immediately to the south of Ctesiphon known as Aspanbar. Kokhe was the symbolic seat of the \*Church of the East, taking on the name 'Seleucia' in church parlance even though the Seleucid city of that name was now entirely defunct. According to the \**Chronicle of Seert*, there were several churches there. German excavations in the 1920s revealed a large, possibly metropolitan, church. In 544 it was even enshrined in canon law that the \*catholicus must be enthroned at the cathedral of \*Kokhe to be legitimate. By the late period, however, the ecclesiastical hierarchy, like other courtiers, moved to Aspanbar to be close to the king.

In addition to numerous aristocratic dwellings, Aspanbar was the site of royal \*gardens, game parks, and treasuries and an enormous royal \*palace complex.

Despite the \*Abbasids' attempts to dismantle it, the complex's audience hall, known as Ayvan-e Kesra or \*Taq-e Kisra, still stands as an impressive monument. Its massive \*façade opens onto an \*ayvan 25.5 m wide, 43.5 m deep, 35 m high (84 × 143 × 115 feet), although floods reduced the standing remains of its \*façade by one-third in 1888. Muslim authors like Ibn al-Faqih considered it one of the wonders of the world and \*Tabari reports that Khaled b. Barmak advised the \*Caliph al-Mansur not to attempt to raze the structure. Although associated in name with 'Kesra', and attributed variously by early Islamic sources to either Khosrow I or \*Khosrow II, the lost Pahlavi \**Xwaday-namag* (Book of Kings), cited by Yaqut (via Hamza Esfahani), attributed the construction of the Taq-e Kesra to \*Shapur I. Stylistic analysis of the architectural remains has led most scholars to favour Khosrow I as the builder of the palace and \*ayvan, a hypothesis which is reinforced by the fact that Aspanbar does not appear to have expanded until the 5th century when the change in course of the River Tigris bisected Kokhe. Given that it bears clear evidence of construction in multiple stages, it is likely, however, that work on it continued through the reigns of multiple late Sasanian kings, even up to Khosrow II.

The region's urban and monumental structures displayed considerable Roman \*spolia and craftsmanship. \*Theophylact Simocatta states that \*Justinian I 'provided Chosroes [Khosrow] ... with Greek \*marble, building experts, and craftsmen skilled in \*ceilings, and that a palace situated close to Ctesiphon was constructed for Chosroes with Roman expertise' (V, 6, 10). The interior of the ayvan was thoroughly stripped of its decorations in the Islamic period to provide materials for the construction of Baghdad and no evidence survives to corroborate this report. When Khosrow I captured Antioch in 540 (\*Procopius, *Persian*, 2, 8–9 he seized 'slabs of marble' (\*John Lydus, *Mag.* 3, 54; cf. Ps.-\*Dionysius of Tel-Mahre, II, 69, 7–15). This booty was destined for the building of Weh-andiōg-husraw (Rumagan, Arabic Rumiya), a new settlement of deportees built according to the plan of Antioch on the Orontes, which was established a day's walk to the south of Aspanbar. In addition, the early 20th-century German excavations discovered Roman-style \*mosaic and \*opus sectile work at two sites associated with the reign of Khosrow II: Tell Dhahab and Tell al-Dhaba I. This material could have arisen from an indigenous workshop or materials and craftsmen brought in during Khosrow II's decade-long occupation of the Roman Levant. Somewhere in this region Khosrow II built a treasury for the Relic of the True \*Cross, taken from \*Jerusalem in 614.

The \*Arabs conquered the cities in 637. Representative of the wealth of the Sasanians stored there, they found an enormous \*carpet covering the floor of the Taq-e Kesra, called the Bahar-e Kesra ('spring of Khosrow'), c.27 m

(100 feet) square, with depictions of \*garden scenes and embroidered with \*gold, \*silver, emeralds, and other precious \*stones. It was sent to \*Medina where the \*Caliph \*Umar had it cut into many pieces so that it could be shared out amongst his followers.

#### Madayan-i Hazar Datestan (Matigan-i Hazar Datastan, Book of a Thousand Judgements)

A collection of legal cases and decisions, compiled by an otherwise unknown Farroxmard, son of Wahram (Bahram) from Gor (mod. \*Firuzabad) in \*Fars, composed towards the end of the \*Sasanian era (early 7th cent.). This *Book of a Thousand Judgements*, notorious for its intricate and elliptic literary style, is remarkably independent of theological discourse and covers aspects of civil, criminal, and procedural \*law. As the only extant source of its kind firmly dated to the Sasanian era itself, the compilation is indispensable to the study of the Sasanian legal system and society. AZ

*Enclran* (2005) s.n. Mādayān i Hazār Dādestān (M. Macuch). ed. (with ET) A. Perikhanian and N. Garsoian, *The Book of A Thousand Judgements: A Sasanian Law-Book* (Persian Heritage Series 39, 1997).

**madih** The \*Arabic term for praise \*poetry in general, or for the third portion of a tripartite poem that specifically praises a patron. In Arabic poetics, it is usually contrasted with *fakhr* (boasting), *riṭha'* (elegy), and *\*hija'* (invective), which together constitute the primary subjects of early Arabic poetry. See PANEGYRIC, ARABIC. NAM *EI* 2 vol. 5 (1986) s.v. Madih, 955–6 (Wickens).

**Madinat al-Far** See HSN MASLAMA.

**madrasa (plur. madrashe)** \*Syriac literary genre of strophic compositions that employ a variety of poetic \*metres, ranging from simple to complex syllabic patterns. *Madrashe* were sung and in the manuscripts the texts are usually preceded by the first words of a well-known *madrasa*, that indicate both the melody and its particular metre. According to Syriac tradition, \*Bardaisan of \*Edessa (154–222) was the first author to compose 150 *madrashe* ('hymns or 'teaching songs') to spread his teachings effectively. In response to contemporary Bardaisanites and \*Manichaeans, \*Ephrem the Syrian (c.300–373) further developed the *madrasa* into a sophisticated means of instruction. He created women's choirs for the liturgical performance of his *madrashe*, more than 400 of which have been preserved. KDB S. P. Brock, 'Poetry and Hymnography (3): Syriac', in *OHECS*, 657–71.

**magic, Persian Empire and central Asia** See MAGIC AND DIVINATION, PERSIAN.

**magic and divination, Arabian and Islamic** Magic and divination are both frowned upon in \*Islam, as they have precedents in the pagan religion native to the \*Arabian Peninsula in the pre-Islamic period. Numerous \*Qur'ānic verses refer to magic and illusions in derisive ways. Qur'ān 2: 102 refers to magic, and states that: 'And indeed they knew that the buyers of it (magic) would have no share in the Hereafter. And how bad indeed was that for which they sold their own selves, if they but knew.' Traditions in the \*hadith also condemn the use of magic, grouping it with murder, usury, slander, and paganism. It is interesting that a number of traditions do not discount the reality of magic, but condemn its use as sinful. Thus, a number of verses and supplications are found in the tradition as useful in being protected from magic. Divination or soothsaying (fortune-telling or the casting of arrows or

lots to predict future events) was also a feature of pre-Islamic life. This is warned against in the Qur'ān as well, as is the prohibition against soothsayers who 'blow on knots' in divining practices (Q. 113: 4). NK E. Savage-Smith, ed., *Magic and Divination in Early Islam* (2004).

**magic and divination, barbarian** Evidence for Germanic magical practice comes from Graeco-Roman ethnography, Christian theology, and Old Norse or Viking Age texts. This makes it very difficult to describe barbarian magic and divination, as distinct from Celtic or general phenomena. Archaeological evidence is limited and problematic.

Tacitus (*Germania*, 10) indicates that early runes were used not only as a simple writing system, but also as magical signs for charms and divination, but the significance of this passage is disputed. The late 8th-century *\*Indiculus Superstitionum et Paganiarum* (*Small Index of Superstitions and Paganism*) refers to divination, \*amulets, charms, and \*witchcraft (e.g. to influence the weather or the outcome of fights). Similar allusions are found in many penitentials, in the codes of Germanic \*law, and in the writings of Burchard of Worms (d. 1025). Most scholarly conclusions about early Germanic magic are derived from Snorri Sturluson's *Ynglinga Saga*, the *Edda*, and other scaldic texts from the High Middle Ages. RSt

**magic and divination, Celtic** Magic is the use of supernatural forces to influence events; divination is the foretelling of the future through an assessment of natural signs or the interpretation of specific actions, such as a sacrificial act.

Most information for Celtic magic and divination comes from the interpretative writings of classical authors or later vernacular literature. According to various classical writers there was a strong connection between divination, magic, and the \*druids. In particular the group known as the *vates*, who are closely aligned with the druids, seem to have strong associations with divination. Divination took many forms including the analysis of bird and animal behaviour, \*astrological study, and the interpretation of sacrificial killings. Strabo, for instance, writes that the druids

evaluated the final struggle of a sacrificed victim to make their magical prophecies (IV, 4, 5). Early \*Irish vernacular literature also emphasizes the prophetic role of the druid; for example, the predictions of the druid Cathbadh are central to the political decisions of King Conchobar. ED

Koch, *Celtic Culture*, 602 and 1636–40.

**magic and divination, Jewish** The Hebrew \*Bible (Deuteronomy 18: 9–12) considered magic an abomination practised by non-Israelites. In reality, Jewish magic was widely practised at the grassroots level during Late Antiquity as the \*Babylonian \*Talmud attests (*Sanhedrin* 7: 7). Jewish magic during Late Antiquity underwent 'scribalization', in contrast to the largely oral traditions of the Second Temple Period. This process was accompanied by a sharp rise in the manufacture of magical artefacts; different types of artefact were characteristic of different cultural and regional contexts. The Graeco-Egyptian tradition produced metal \*amulets, rings, pendants, and gems inscribed in \*Greek, Hebrew, and Aramaic. \*Mesopotamia produced vast quantities of \*pottery \*incantation bowls, as well as a handful of skulls, inscribed with Aramaic texts. Hebrew and Aramaic magical \*papyri and Aramaic books, notably *Sepher ha-Razim* (*Book of Secrets*) and *Harbe de-Moshe* (*Sword of Moses*), were also produced.

Jewish magic influenced the Graeco-Roman and Mesopotamian traditions: the Tetragrammaton, and other Jewish elements, which included the names of \*angels, passed into \*pagan magical texts. On the other hand, Jewish magical texts in both the Graeco-Egyptian and Mesopotamian traditions cite pagan elements. The \*rabbis did, in certain circumstances, permit the study of magic, such as for medicinal purposes, but were ill at ease with other practices including the adjuration of angelic names. ECDH

**magic and divination, Persian** The English word 'magic' is derived from Gk. *magos* (OP *magush*), the word for a \*Zoroastrian priest, whom Classical Greeks and Romans associated with magic because of the reputation of the Achaemenid magi for having knowledge of powerful arcane rituals.

In the texts of the \*Avesta known to the \*Sasanians, spells and incantations were used in rituals to remove evil forces and illnesses, but sorcerers and others who supported the forces of evil were worthy of death. In

Sasanian Zoroastrian literature, sorcery is proscribed and its practitioners promised dire punishments in hell. \*Manichaeism also proscribed magic but there is ample archaeological evidence that adherents of both religions practised what scholars define as magic. The Sasanian-period Zoroastrian literature contains a few spells against diseases (fever, stemming blood, against evil animals, venomous bites, and poison). These proliferate in Zoroastrianism of the Islamic period though they probably reflect earlier practices.

Archaeological material provides greater primary source evidence. \*Incantation bowls, that is, terracotta bowls found in domestic contexts in \*Mesopotamia, were inscribed with spells and used to guard households from \*demons. Manichaean material from \*Turfan has preserved \*amulets written on paper that combine multiple different magical traditions. Magical \*seals worn as amulets were popular, some targeting specific demons, such as the demon *Sesen* (not to be confounded with the progenitor of the Sasanian dynasty, *Sāsān*). On the seals, the demon is often portrayed enclosed in a square or circle, with dishevelled hair, with spears pointing to his legs or with his legs chained together. Some seals also feature animals (scorpions, serpents) similarly enclosed. Coloured gems and precious \*stones were understood to provide protection as amulets against illness, poison, and enemies or to bring the wearer good fortune. The Avestan hero *Thraetaona* (MP *Frēdōn*) was invoked against sickness in the Avesta (*Yasht*, 13,131) and appears iconographically on Parthian and Sasanian seals.

Graeco-Roman and early Muslim sources refer to the practice of divination among Persians, possibly continuous with Achaemenid-era practices (e.g. Herodotus, VII, 37). \*Agathias (II, 25) refers to Zoroastrian priests who foretold the future by looking into flames and multiple Late Antique sources remark on the purported ability of Sasanian kings and priests to descry the future in the stars. In Islamic-period Zoroastrianism, divination became quite common, especially among the Parsis in India. \*Dream interpretation appears occasionally, such as in the \**Karnamag-e Ardashir-e Pabagan* (*Book of Deeds of Ardashir*), where the future \*Ardashir I's father Pabag (\*Papag) receives a dream prophesying the glorious future of his son, whose meaning is revealed by dream-interpreters. **magic and divination, Roman and post-Roman, Christian** Christians practised many traditional forms of magic and divination, even though Christian leaders denounced these as \*pagan and \*demonic. They also drew upon a rich heritage of biblical and contemporary 'signs and wonders'—including \*dreams, visions, \*miracles, \*exorcisms, \*curses, and prophecy—to create distinctively Christian modes of access to God's unlimited power and knowledge. The result, in a Christian world of remarkable variety, was a wide range of techniques for healing and protecting, judging and avenging, binding and cursing, and revealing and deciding.

Christians practised four main types of divination: sortilege, \*astrology, dream divination, and vaticination (or prophecy). Sortilege, the selection of a written passage, was the broadest category. Authorized by Psalm 30: 15–16 (Vulg.) and Acts 1: 26, it included practices as various as the biblical divination practised by \*Augustine in \*Milan (*Confessions*, VIII, 12, 29–30), the \*Coptic and \*Greek 'ticket oracles' offered by the clergy at the shrine of S. \*Colluthus at Antinoë, and the use of Christian lot books such as the *Lots of the Saints* (*Sortes Sanctorum*) in \*Latin and the *Gospel of the Lots of Mary* in \*Coptic. Astrology, prominently displayed in S. Matthew's account of Jesus's birth (Matt. 2: 1–12), attracted Christian clients of all ranks, especially in its less determinist forms (Hegedus, 372–3). Divinatory dreams, which occur frequently in the biblical books (Gen. 41: 12; Dan. 7: 1; Job 33: 14; Matt. 1: 20; Acts 2: 17), commended themselves to Christian Platonists such as \*Synesius, \*Bishop of \*Cyrene, because they required no instruments or outside interpreters (*De Insomniis*, 11–13). S. Monnica of \*Thagaste (Augustine's mother) is a well-known example, the Christian heir to a long \*Berber tradition. Prophecy included the true predictions of \*holy men like \*John of \*Lycopolis (\*Sozomen, *HE* VII, 22), the mundane secrets revealed to Augustine and his friends by the *hariolus* Albicerius (*Contra Academicos* I, 6, 17–18; *PLRE* I, Albicerius), and the ravings of possessed persons consulted at \*martyrs' shrines. In addition to offering Christians the hidden information considered necessary for responsible decision-making, these forms of divination avoided \*pagan practices such as extispicy (the

examination of the inner organs of sacrificed animals), and offered a legitimacy based on biblical tradition, on sanctified modes and places of operation, and on the participation of holy persons, including clergy and \*ascetics. Despite continued theological and pastoral objections, all four practices remained popular into the Western and Byzantine Middle Ages, an indication of continuing approval across the Christian *oikoumenē*.

As a category of ritual practice, magic is broader and more difficult to define than divination; this is no less true of Christian magic. Along with Christianized versions of classical forms, including pleas for justice, \*curses, and binding spells (e.g. *PapGraecMag* P15c, P16; *SupplMag* 59–62; Meyer and Smith, 100, 108), Christian clients expressed a strong preference for magical rituals and objects that offered protection and healing. A comprehensive example is the \*silver *lamella* from \*Beirut, now in the Louvre, on which Alexandra, daughter of Zoë, called upon a wide range of angelic powers and above all 'One God and his Christ' to protect her from \*demons, binding spells, and magical drugs (ed. D. R. Jordan, 'A New Reading of a Phylactery from Beirut', *ZPE* 88 (1991), 61–9). \*Amulets featuring the Lord's Prayer and other biblical verses served the same purpose more generally (e.g. van Haelst, nos. 183, 184, 345, 347, 423), as did powerful symbols such as \*crosses, interlocking knots, and figural images widely found on domestic objects, clothing, door lintels, and \*mosaic floors in the Christian world (Maguire et al.). The ritual experts who created and operated these objects and techniques, although elusive and almost always anonymous, can sometimes be glimpsed in church legislation, sermons, and \*saints' lives. Whether male or female, clerical or lay, local or itinerant, shrine-based or independent, they were recognized (and opposed) for the capacity to energize the natural and spiritual powers hidden in God's creation on behalf of their Christian clients. **magic and divination, Roman and post-Roman, pagan and general** The right to control and if necessary proscribe knowledge-practices in the field of religion lay traditionally with the Roman Senate. During the Principate, with political power centred notionally upon the \*emperor, illicit religious practice ('magic') came tendentially to be identified in public discourse with private, esp. \*astrological, divination that might threaten him (e.g. Tacitus, *Annals*, II, 27–32; Dio Cassius, LII, 36, 2–4). Essentially private acts, and even the possession of relevant books, were thus construed as injuries to the body-politic as a whole (\*Paul, *Sententiae*, V, 23, 18 = Riccobono, *FIRA* 2nd edn., p. 410). Given the traditional conviction that 'Rome's empire was the reward given by the Gods for the piety of the Romans', the military and politico-fiscal problems of the period AD 235–84 encouraged the belief that Rome's weakness was partly due to the spread of such knowledge-practices (*superstitio, error, secta, haeresis*); the attempt by \*Decius to enforce 'piety' empire-wide (250–1) is one expression of this anxiety.

Decisive legal steps, however, notably the attempted repression of 'Chaldaean' astrology (*ars mathematica*) in 294 (*CJust* IX, 18, 2) and of 'Persian' \*Manichaeism between 297 and 302 (\**Collatio Legum Mosaicarum et Romanarum*, 15, 3), were taken by \*Diocletian on the basis of the pseudo-historical conviction that magic (Gk. *magike technē*, Lat. *ars magica*) had been invented by the Persian magus Zoroaster (\*Pliny, *Historia Naturalis*, XXX, 2). This legislation in turn was the precondition

for the characterization in mid- to late 4th-century imperial legislation of 'magicians' (*malefici*) as *peregrini naturae*, 'outside nature' (*CTh* IX, 16, 5 of 356 = Delmaire, *Lois religieuses*, II, 142/4), *humanae generis inimici*, 'enemies of the human race' (*CTh* IX, 16, 6 of 357 = Delmaire, *Lois religieuses*, II, 144/6) and *host[es] communis salutis*, 'enemies of (our) collective well-being' (*CTh* IX, 16, 11 of 389 = Delmaire, *Lois religieuses*, II, 154). The Christian self-definition of the political centre extended and intensified the category of illicit religious practice, conceived of as 'pollution', to cover all forms of religious expression, \*pagan and Christian (especially when practised by members of privileged groups), which could be represented by some interested and vocal party as opposed to *vera religio christiana* (true Christian religion). By AD 409, knowledge of astrology could in itself be considered a sign of \*heresy (*CTh* IX, 16, 12 = Delmaire, *Lois religieuses*, II, 156). It is likely that this process of extension met, at any rate initially, with some resistance: whereas \*Constantine I explicitly excepted traditional public haruspicy, 'magical' healing, and beneficent weather-magic from his bans on divination (*CTh* IX, 16, 1 of ?315 = Delmaire, *Lois religieuses*, II, 134/6) and *magicae artes* (*CTh* IX, 16, 3 of 321 = Delmaire, *Lois religieuses*, II, 138/40), no such exceptions were allowed in the legislation of the mid-4th century—haruspicy and 'rural magic' were then treated uniformly as *maleficium*.

The direct interest of the political centre in such dichotomous classification lay in its tendential legitimization of the emperors' claim to unlimited authority over the religious life of the inhabitants of the Empire, itself a symbol of their concern to preserve an imagined universal piety. Just as in the 'Early Modern Witch Craze', vague legislation combined with the practice of delation and judicial \*torture produced ample evidence of the very crimes the legislation envisaged, evidence that in turn confirmed the objective status of the threat posed by magic to collective well-being. The baleful effects of this are well illustrated by the psychological terror unleashed by accusations at the court of \*Valens in \*Antioch in AD 371 (\*Ammianus, XXIX, 1, 4–2, 28; XXXI, 14, 8f.; \*Zosimus, IV, 14, 1–15, 3; \*John Chrysostom, *Homilies on Acts*, 38, 5).

Under the influence of social-anthropological work on modern, mainly African, witchcraft-accusations, Peter Brown argued (1972) that there was an absolute increase in magical practice in Late Antiquity, which he traced to a dynamic conflict between 'articulated' and 'inarticulated' power, expressed above all in fear of the social mobility made possible by the establishment of Christianity and the uncertainties created by socio-political conflict. This model may be doubted: Brown himself admitted that there is no means of establishing the 'true' level of magical activity. What the imperial

legislation provided was a legitimizing discourse, a set of stereotypes, and a device for turning personal animosities and fears into legal process under the guise of working for the public good.

This in turn legitimized the ascription of 'peculiar' misfortunes, such as psychosomatic symptoms, to magical attack, even within the elite, which earlier had usually dismissed such explanations as old women's tattle, *aniles fabulae* (e.g. \*Libanius, *Oration* 1, 243–50; *Oration* 36). At the same time, the genre of \*saints' lives provides a quite new type of information about \*village conflicts in the eastern Mediterranean as well as a motive for representing saints as measuring themselves up against the power of Satan (e.g. \*Theodoret, *Historia Religiosa*, 6, 5). As 'thinking with \*demons' became institutionalized in Christian contexts (e.g. \*Zacharias, *VSeveri* 57–65), all pagan religiosity, as well as Christian \*heresy, could be defined as maleficent. Since the vast majority of the agrarian population, which itself composed at least 85% of the total population, remained pagan, 'magic' necessarily abounded. In other words, what changed was above all the nature and visibility of a discourse concerning *magicae artes*. RLG

**Magister** Title of a wide range of posts, civil and military. The highest ranking were \*Magister Militum (army commander) and \*Magister Officiorum (supervising the central \*administration) sharing with the \*Quaestor Sacri Palatii oversight of the three \*Magistri Scriniarum: namely \*Magister Epistularum, \*Magister Libellorum, and \*Magister Memoriae. Much lower ranking were the magistri managing imperial estates in \*Cappadocia (\*Domus \*Divina per Cappadociam).

CMK

**Magister Dispositionum** Head of the \*Scrinium Dispositionum responsible to the Magister Officiorum for coordinating the \*emperor's daily schedule and planning imperial travel. The Magister (\*Comes by early 5th cent.) and his \*officium ranked below the three \*Magistri Scriniarum and the Sacra Scrinia.

CMK

Clauss, *Magister Officiorum*, 18.

Boak, *Master of the Offices*, 67.

**Magister Epistularum** Originally one of the emperor's principal officials (Ab Epistulis), but displaced under \*Constantine I by the \*Magister Officiorum and \*Quaestor Sacri Palatii. As one of three \*Magistri Scriniarum, the Magister Epistularum retained responsibility (under the Magister Officiorum) for communicating with embassies from \*cities and (under the Quaestor) for drafting responses to legal queries from judges (*consultationes*) (*Not. Dig.* 19.8–9 [or.]). The Magister Epistularum drew administrative support from the Scrinium Epistularum, whose staff (\*epistulares) was regulated by the Magister Officiorum. He was a member of the \*Consistorium with the rank of *spectabilis*. CMK

Jones, *LRE* 504–7.

Clauss, *Magister Officiorum*, 5–11, 17–18.

**Magister Equitum** See MAGISTER MILITUM.

**Magister Libellorum** Senior official, and member of the \*Consistorium with rank of \**spectabilis*, whose functions combined some of those of earlier \*emperors' principal legal officials (A Libellis and A Cognitionibus) who had been displaced under \*Constantine I by the \*Magister Officiorum and \*Quaestor Sacri Palatii. As one of three \*Magistri Scriniarum, the Magister Libellorum retained responsibility (under the Quaestor) for the preparation of legal cases heard before the emperor (Sacrae Cognitiones)—hence his full title as Magister Libellorum Sacrarumque Cognitionum (*ILS* 4152). The Magister Libellorum drew administrative support from the Scrinium Libellorum, whose staff (\*libellenses) was regulated by the Magister Officiorum.

CMK

Jones, *LRE* 504–6.

Clauss, *Magister Officiorum*, 18.

**Magister Memoriae** Senior official, member of the \*Consistorium with rank of \**spectabilis*. Originally one of the \*emperor's principal officials (A Memoria), but displaced under \*Constantine I by the \*Magister Officiorum and \*Quaestor Sacri Palatii. As one of three \*Magistri Scriniarum, the Magister Memoriae retained responsibility (under the Magister Officiorum) for

promulgating imperial rulings and probably gave a final form to legal texts composed by the Quaestor (*Not. Dig.* 19.6–7 [or.]). The Magister Memoriae drew administrative support from the Scrinium Memoriae, whose staff (*\*memoriales*) was regulated by the Magister Officiorum. CMK

Jones, *LRE* 504–7.

Clauss, *Magister Officiorum*, 5–11, 17.

J. D. Harries, 'The Roman Imperial Quaestor from Constantine to Theodosius II', *JRS* 78 (1988), 159–64.

**Magister Militum** Commander-in-chief of imperial \*armies ('Master of the Soldiers'). The generic title covers a range of variations which trace their origin back to \*Constantine I, who is said to have created a commander (\*Stratelates) of \*cavalry and one of \*infantry (\*Zosimus, II, 33, 3; cf. Lydus, *Mag.* II, 10, 3, 40), although the Latin terms Magister Equitum and Magister Peditum do not occur until after Constantine (Hermogenes in \*Ammianus, XIV, 10, 2—referring to 342, and Bonosus in *CTh* V, 6, 1 of 347). The division of the Empire between Constantine's sons saw a multiplication of \*field armies and hence commanders, until by the late 4th century there were five Magistri in the East—two Praesentales in charge of the armies based near the \*emperor in \*Constantinople, and one each for \*Illyricum, \*Thracia, and \*Oriens. Arrangements were more centralized in the West with a single Magister Peditum Praesentalis and a subordinate Magister Equitum, thought to reflect \*Stilicho's influence. \*Justinian I added a Magister for \*Armenia in 528, and one each for \*Africa and \*Italy, following the \*Byzantine invasion of each. A striking feature is the number of holders of barbarian origin, reflecting more general trends in army \*recruiting, although these men were invariably well Romanized. Magistri in the 5th century, notably \*Aëtius, \*Ricimer, and \*Aspar, often exercised significant political influence and were often given the added title of \*patricius. Some even gained the imperial \*purple (\*Constantius III, \*Zeno), which may explain why 6th-century emperors often favoured relatives for these posts. ADL

*RE* Suppl. 12 (1970) s.v. Magister militum, 556–790 (Demandt).

A. Demandt, 'Der spätrömische Militäradel', *Chiron* 10 (1983), 609–36.

**Magister Officiorum** Powerful palatine official, with \*title of *illustis* (at least by 380s), who controlled personnel (civil and military) concerned with the coordination and dispatch of business (legal, administrative, diplomatic, ceremonial) by the \*emperor: Sacra \*Scrinia, \*Scholae Palatinae, \*Magister Dispositionum, \*admissionales, \*mensores, \*decani, \*cancellarii, \*lampadari,

\*cursores, and (perhaps) \*notarii (*Not. Dig.* 11 [or.]). He was an important member of the \*Consistorium with particular responsibility for—and the ability to enable or impede—delegations from \*provinces, \*cities, and individuals and embassies from foreign powers (handled by the *scrinium barbarorum*). He shared administrative control of strategic areas, managing the \*fabricae (arms factories) and \*Cursus Publicus (transport and communications system) alongside the \*Praefectus Praetorio. Aside from supervision of the three Sacra Scrinia, the Magister relied on his own staff, the \*agentes in rebus. Junior-ranking *agentes* were sent to the provinces as \*curiosi to monitor the Cursus Publicus. The most senior (*principes agentum in rebus*) were transferred to head the administrative departments (\*officia) of high-ranking civil officials and military commanders, but continued to report to the Magister. From the establishment of the post by \*Constantine I (aiming to restrict the authority of the Praefectus Praetorio), contemporaries regarded the Magister Officiorum as a key player in the formation and implementation of imperial policy and the regulation of government activity—hence his, sometimes much exaggerated, sinister reputation. A history of the Magister Officiorum by \*Peter the Patrician (in post under \*Justinian I) has not survived. CMK

Jones, *LRE* 368–9, 575–84.

Boak, *Master of the Offices*.

Clauss, *Magister Officiorum*.

Delmaire, *Institutions*, 75–95.

**Magister Peditum** See MAGISTER MILITUM.

**Magister Utriusque Militiae** From the reign of \*Constantine I, the term used for one of the senior generals in the Late Roman \*army. Initially attached to the \*emperor, by the mid-4th century there were several regional field armies led by a \*Magister Militum, as well as an imperial ('praesental') \*field army in each part of the Empire. This system lasted until it was replaced by the \*Theme system in the 7th century. HE

**magistriano** See AGENTES IN REBUS.

**Magistri Scriniorum** Collective term for the three Magistri who drew staff from the Sacra \*Scrinia (in order of seniority): \*Magister Libellorum, \*Magister Epistularum, and \*Magister Memoriae. They were members of the \*Consistorium with the rank of \*spectabilis. Their titles recall longstanding, senior imperial administrative offices (A Libellis, Ab Epistulis, A Memoria) reorganized by \*Constantine I and made subordinate by him to the \*Magister Officiorum and \*Quaestor Sacri Palatii. Together with the Quaestor, the Magistri Scriniorum were the emperor's chief legal

## Magistros

advisers; all were members of the commission for the compilation of the *\*Theodosian Code* (I, 1, 5; I, 1, 6, 2).

CMK

Millar, *Emperor*, 104–7, 224–8.

**Magistros** \*Greek term (μάγιστρος) used regularly on its own (e.g. in \*John Malalas) to represent \*Latin \*Magister Officiorum, though occasionally τῶν ὀφφικίων is added.

Latin \*Magister Militum was regularly translated as \*Stratelates (στρατηλάτης). The rare use of Magistros in a military context (e.g. of the \*Laz Pharsantes by \*Agathias, IV, 13, 3–4) seems coincidental.

Later Magistros was used (first attested in the late 9th century) for a high-ranking dignitary, originally fewer than ten in number, reaching 24 by the mid-10th century but obsolete probably by the mid-12th century. The vernacular word *maistor* usually means teacher or craftsman.

RDS

ODB s.v. magistros, 1267 (A. Kazhdan).

J. B. Bury, *The Imperial Administrative System in the Ninth Century* (1911), 29–33.

**Magnentius** \*Military commander of \*barbarian origin who seized power in the West in 350. He had risen under \*Constantine I and by 350 commanded the corps called the Joviani and Herculiani. He was acclaimed \*emperor at \*Autun on 18 January 350, supported by Marcellinus the \*Comes Rei Privatae who became his \*Magister Officiorum. The Emperor \*Constans was killed, as was Julius \*Nepotianus, a cousin of Constans, who had been acclaimed emperor at \*Rome in June 350. Magnentius sought a \*marriage alliance with \*Constantius II, but married \*Justina (possibly of Constantinian blood, later wife of \*Valentinian I). He appointed his brother Decentius as \*Caesar.

Constantius came west to counter Magnentius, and in March 351 at \*Sirmium appointed \*Gallus as Caesar. After the Battle of \*Mursa on 28 September 351 Magnentius withdrew west to \*Aquileia, and in 352 was driven back into \*Gaul. Following his defeat at Mons Seleucus in 353 he committed \*suicide at \*Lyons.

SFT

PLRE I, Magnentius.

**Magnesia ad Maeandrum** \*City in the Maeander Valley in south-west Asia Minor, 24 km (15 miles) inland from \*Miletus. The surrounding area was very productive, particularly of \*olives and figs. A lengthy tax register from the early 4th century survives as an \*inscription excavated near the \*Temple of Zeus. This reveals the presence of some very large \*estates in the area, with one property alone responsible for 22% of the tax assessment. On the other hand, the register reveals that \*village communes had survived with 38 of the 81 properties listed being independent smallholdings.

**Magnus Maximus** \*Augustus in \*Britain, \*Gaul, and \*Spain, 383–8, Maximus was perhaps of Spanish origin and served with \*Theodosius Comes, to whom he was perhaps related, in Britain in the later 360s and in \*Africa, before taking a command in Britain. After a victory over the \*Picts in 382, he rebelled against the \*Emperor \*Gratian, crossing to Gaul in June/July 383. He confronted Gratian near \*Lyons but the emperor was deserted by his army and killed. Preliminary negotiations opened with the court of \*Valentinian II in \*Italy and with \*Theodosius I, partly conducted through the mediation of \*Ambrose, \*Bishop of \*Milan (Ambrose, *ep.* 24), whose protracted discussions at \*Trier allowed time for Valentinian to consolidate his position.

Maximus promoted administrative reforms, within his domain, perhaps including changes to provincial structures, recorded in an early version of the *\*Notitia Galliarum*, which lists the \*provinces and \*cities of Gaul. He was also an active supporter of orthodox Christianity. This led to the controversial trial and execution of the Spanish heresiarch \*Priscillian on charges of \*magic and a split within the Gallic episcopate.

In 386, Maximus wrote to Valentinian II, castigating his support for \*Arianism (*\*Collectio Avellana*, 39) and to Pope Siricius on matters of ecclesiastical jurisdiction (*Collectio Avellana*, 40). In the same year, Theodosius recognized Maximus's nominee, Fl. Euodius, as \*consul, and Maximus' portrait was displayed in \*Alexandria. In 387, Maximus expelled Valentinian and his \*court from Italy, and such Roman \*senators as \*Symmachus, who delivered a \*panegyric for Maximus as consul in 388, accepted his legitimacy. However, already in 387, Theodosius had decided to act. He invaded the west and Maximus was defeated and killed at \*Aquileia on 28 August 388.

Despite his eventual failure, Maximus' posthumous reputation was remarkable. A man who 'would have been an excellent emperor had he not been a usurper' (\*Sulpicius Severus), he features in the Welsh *Mabinogion* as Macsen Wledig, and in Kipling's *Puck of Pook's Hill* and as a putative ancestor of King \*Arthur in Mary Stewart's novels on the career of Merlin. **Magnus of Carrhae** Historian, who participated in \*Julian's Persian campaign in 363 of which he wrote a (lost) account. Fragments are preserved in \*John Malalas (*FGrHist* Jacoby, 225). Sometimes identified with the tribune Magnus (PLRE 1, Magnus 2) mentioned by \*Ammianus (XXIV, 4, 23–4) and \*Zosimus (III, 22, 4) and decorated for bravery. It is uncertain whether Ammianus used him as a source, as is sometimes suggested. HJWD

J. den Boeft et al., *Philological and Historical Commentary on Ammianus Marcellinus XXIV* (2002), 131–2.

Matthews, *Ammianus* (1989), 163–4.

**Magusaioi** Term derived from the Aramaic name for a priest (*magūšā*), denoting Persian settlers outside Iran who retained \*Zoroastrian customs. They are referred to by \*Epiphanius of \*Salamis and \*Basil the Great (*ep.* 258). PTa

A. De Jong, *Traditions of the Magi: Zoroastrianism in Greek and Latin Literature* (RGRW 133, 1997), 404–13.

**Māhbodh (Gk. Mebodes)** (d. 589) Persian diplomat and general of the Suren family. He was sent as an ambassador to \*Justin II in 567, and following the capture of \*Dara by the Persians in late 573 he extracted from the Romans a promise of 30,000 *nomismata* in return for three years of peace (\*Menander Protector, fr. 18, 3–4). In 577 he negotiated with a Roman embassy, which included the son of \*Peter the Patrician, at \*Constantia-Tella, suggesting that the payment of 30,000 *nomismata* be renewed, but talks broke down and he returned to Constantia the following year at the head of an army. A similar demand in 586 evaporated with the Roman victory at the Battle of Solachon, south of Dara (\*Theophylact Simocatta, I, 15). In 589 he marched to relieve a Roman siege of \*Martyropolis, and was killed (Theophylact Simocatta, III, 5, 11–16, 4).

His kinsman, also Māhbodh (Mebodes), was part of the first embassy of \*Khosrow I to the Romans (\*Procopius, *Persian*, I, 11, 25). Another namesake was sent

to secure \*Ctesiphon in 591 by \*Khosrow II at the time of his restoration to the throne (\*Theophylact Simocatta, V, 4, 2–3; cf. V, 6–7). OPN

Justi, *Iranisches Namenbuch* 185 s.n. Mahbodh (2).

**Mahgritai** See MUHAJIRUN.

**Mahoze** The \*Syriac name (meaning 'the fortified towns') for the conurbation formed by \*Seleucia ad Tigrim and \*Ctesiphon, the royal cities, which together formed the capital of the Arsacid and subsequently of the \*Sasanian Empire. The \*Arabic name of the conurbation was \*al-Mada'in, 'the cities'.

Seleucia, on the right bank of the Tigris, was refounded by the Seleucids in order to supplant \*Babylon. The Hellenistic structure of the city survived until the 2nd century AD, when Roman raids (Trajan in 115/16, Cassius in 165, Septimus Severus in 198/9) and a violent flood of the Tigris, which changed its course between 79 and 116, led to its abandonment.

Mar \*Mari, allegedly one of the Seventy Disciples of Christ (*cf.* Luke 10, 1–24), is said to have evangelized the region and to have founded the episcopal see of Seleucia-Ctesiphon (as it is often termed in documents relating to the \*Church of the East).

Ctesiphon was considerably enlarged in the 1st century AD. It had been founded by the Parthians on the left bank of the Tigris and became the winter residence of the \*court and an important place for \*trade, thanks to the emporium of Vologesias built c. AD 69. Around 230, the first Sasanian King, \*Ardashir I, founded (on a circular plan) a new Seleucia, called Veh-Ardashir, at \*Kokhe, south of Ctesiphon. According to the \**Chronicle of Seert*, this was the site of several churches. Beyond the city, along the Tigris and in the direction of \*Veh-Antiok-Khosrow/Rumagan, lay the district of Aspanbar (Aspanir): here houses and public buildings were set apart among \*gardens, in particular the Treasury where Khosrow II placed the Relic of the True \*Cross which his armies had taken from \*Jerusalem in 614. Mahoze was conquered by the Arabs in 637, who called it al-Mada'in.

See also CTESIPHON; KOKHE; AL-MADA'IN; SELEUCIA AD TIGRIM. CJ

**Ma'in** (biblical Ba'al Ma'on, Beth Ba'al Ma'on and Zarqa Ma'in) Settlement located c.30 km (18 miles)

south-west of \*Madaba, close to natural thermal springs at Hammamat Ma'in/Baarou. As Late Antique Belemounta, its extensive remains include a \*monastery and public \*bath. In the church \*mosaics with an \*inscription of 719/20 depict eleven buildings identified by name as \*cities of \*Palestine and Transjordan. In places it is possible to see where representations of \*animals have been deliberately replaced by \*foliage and images of inanimate objects. Analogous alterations were made to mosaics in a \*basilica at Khirbat 'Asida near Jericho and in the Church of S. Stephen at Umm al-Rasas. PWMF; OPN

M. Piccirillo, *The Mosaics of Jordan* (1993).

**Mainz** (Rheinland-Pfalz, Germany, Roman Moguntiacum) Military base on the middle Rhine \*frontier with an adjacent civilian settlement. In 269 it was the focus of a failed rebellion against \*Postumus, who was then killed by his own troops when he refused them permission to sack the \*city. Mainz subsequently became the capital of the \*Verona List \*province of \*Germania Prima. Its legion was withdrawn in the mid-4th century, probably to support \*Magentius' usurpation, and the camp abandoned, although troops under a \*Dux were still located there (\**Notitia Dignitatum*, XLI). It was repeatedly attacked thereafter by the \*Alamans, and sacked in 407 when the barbarians crossed the Rhine nearby. \*Salvian reports its derelict state (*De Gubernatione*, VI, 39). \*Inscriptions imply it was never wholly deserted, but there is a long lacuna in the \*bishop list until the later 6th century, when \*Venantius Fortunatus praised its bishop, Sidonius, for restoring churches and undertaking works on the Rhine (*Carmina*, II, 11–12; IX, 9), presumably in connection with the active river \*harbour. \*Charter evidence from the mid-8th century onwards confirms the city's revival, and helps to explain why S. \*Boniface made it his missionary base. STL

**maiorina** Large billon coin introduced in the coinage reform of AD 348. Almost immediate and rapid \*debasement of the *maiorina* reflects the failure of the 348 reform. Legislation in 349 (*CTh* IX, 21, 6) condemned extraction of \*silver from these coins and in 356 described the *maiorina* as a forbidden coin (*CTh* IX, 23, 1) though it remained in circulation. RRD Hendy, *Studies*.

**Maiozamalcha** Lit. 'royal capital' (*mahōzā malkā*; cf. Hebrew *mahōz*, 'port'; Akkadian *mahāzu*, 'city').

Described as 'a great city surrounded by strong walls' where \*Julian the Apostate pitched camp (\*Ammianus Marcellinus, XXIV, 4, 2), it sat between \*Kokhe, \*Seleucia ad Tigrim, and \*Ctesiphon in Persian \*Mesopotamia. DTP

Matthews, *Ammianus*, 155–7.

Oppenheimer et al., *Babylonia Judaica*, 231.

**Maiuma** Spring \*festival most famously associated with \*Daphne-by-\*Antioch. \*John Lydus (*De Mensibus*, IV, 76–80) proposes a \*Syrian origin for the festival which was also attested in \*Rome and \*Ostia, while \*John Malalas (AD 284–5) identifies it with the mysteries of Dionysus and Aphrodite. It featured public nocturnal rites and private feasting (\*Julian, *Misopogon*, 362D), the former involving scantily clad dancers who performed in water basins, a feature it shared with the festival of the Brytae (Gk. Brytai), in the theatre of Daphne. Such celebrations prompted stern criticisms from Christians (\*John Chrysostom, *Homilies in Evangelium secundum Matthaeum*, 7) and \*pagans (\*Libanius, *Oration* 41, 16) and were condemned in two imperial laws of 396 and 399 (*CTh* XV, 6, 1 and 2). And yet they were still attested in the early 6th century (\*Severus of Antioch, *Homilies*, 95). RLi

G. Traversari, *Gli spettacoli in acqua nel teatro tardo-antico* (1960).

**Maiuma, port of Gaza** \*City in \*Palaestina Prima and port of \*Gaza (mod. al-Minaon) on the Mediterranean coast, c.6 km (3.7 miles) from Gaza, a city known for its attachment to its pagan gods. In the reign of \*Constantine I, the predominantly Christian Maiuma became an autonomous city, called Constantia Neapolis (\*Eusebius, *VCon* IV, 37) although under \*Julian the Apostate it returned to Gaza's administration (\*Sozomen, V, 3). The unreliable *Life* of \*Porphyry of Gaza by Mark the Deacon suggests that in 403 Bishop Porphyry played an important role in excluding pagans from civic government, thus restoring the supremacy of Christian Maiuma over Gaza; there are, serious textual problems with this *Life*. Bishops of Maiuma attended the \*Council of \*Ephesus in 431 and the 'Robber Council' of 449. In 444 or 445, the \*Miaphysite \*Peter the Iberian became abbot of a \*monastery near Maiuma before becoming bishop in 452 until his death in 491. The last known bishop is Procopius, who took part in the Synod of \*Jerusalem in 518. In 570 the \*Piacenza Pilgrim recounted his visit to the \*martyrium of S. Victor, an important site in the city. **majestas** See TREASON.

**Majorca** See BALEARIC ISLANDS.

**Majorian** (d. 461) Western \*emperor 457–61. Little is known of his background beyond his maternal grandfather having been a general and his father a financial official. He served in the \*army under the general \*Aëtius before retiring to his \*estate. He seems to have resumed his military career when \*Valentinian III sought his aid in placating the army after the murder of Aëtius in 454. With the general \*Ricimer, he defeated the Emperor \*Avitus at Placentia and deposed him (456), then was himself proclaimed emperor at the end of 457 with the support of Ricimer and the endorsement of \*Constantinople. He proved to be able and energetic in both civil and military affairs. His surviving legislation shows, among other things, a concern to limit oppression and corruption in the \*taxation system and to strengthen \*city councils (*NovMaj* 2–3, 7). He consolidated aristocratic support in \*Italy, gained cooperation from the independent general \*Marcellinus in \*Dalmatia, and gradually won over important constituencies in \*Gaul who had previously backed his predecessor \*Avitus, reflected in a \*panegyric by \*Sidonius Apollinaris (*Carmen*, 5). However, his plan for a major expedition against the \*Vandals was thwarted in 461 when the \*fleet he had assembled in \*Spain was captured at \*Cartagena in a pre-emptive Vandal strike. Returning to Italy, he was deposed and executed by Ricimer, who had perhaps become wary of his efficiency and increasing independence. ADL

**Makhzum** A sub-branch of the dominant \*Quraysh tribe of \*Mecca, the Makhzum were important in the political life of the settlement in the pre-Islamic and early Islamic periods and appear frequently in \*Tabari's *History*. However, the Makhzum are said to have come out on the wrong side of a dispute surrounding the rebuilding of the Ka'bah sanctuary, and they and their supporters—known as the *ablaf* (confederates) or as the *la'aqat al-dam* (the blood lickers, after the way they sealed their oath)—were somewhat marginalized around AD 605. While the Makhzum would prove to be among the most strident of \*Muhammad's enemies

in Mecca and among the last to reconcile, members of the tribe played important roles in the conquest, including the great commander \*Khalid b. al-Walid.

**Malaia Pereschepina Treasure** Large treasure of over 800 objects, many of \*gold and \*silver, discovered in Poltava, Ukraine, in 1912, now in the Hermitage Museum, St Petersburg. Many think it a set of grave goods, probably belonging to the \*Bulgar leader, the \**patricius* \*Kubrat, whose \*monogram is found on two, possibly three, \*rings. Highlights include: a paten acknowledging restoration by Paternus (\*Bishop of \*Tomis, early 6th cent.); a necklace of coins of \*emperors ranging in date from \*Maurice to \*Constans II (582–668); and a Persian \*silver dish depicting \*Shapur II. The collection provides evidence for the early Bulgar state, as well as for cultural interaction in the 7th century, with Roman, barbarian, and Persian objects hoarded together. HAHC

**Malalas** See JOHN MALALAS.

**malaria** Disease caused by parasites transmitted by mosquito bites. Its main symptoms are intermittent fevers that correspond to the life cycle of the micro-organisms that cause it and peak every three (tertian) or four days (quartan). The disease caused both an increased mortality—especially in children—and also weakened exposed populations considerably in a chronic way. Malaria was endemic in many regions in the Mediterranean Basin up to the 20th century, mostly in swampy or low-lying areas and particularly around \*Rome as well as in the Po Valley. It is recorded in both the Hippocratic Corpus and \*Galen. It is assumed that populations exposed to it for long periods developed as a result thalassaemia, a type of anaemia that is antagonistic to the disease. In recent years malaria has been identified on human remains excavated in a 5th-century villa in central \*Italy. DSt

**Malatya** See MELITENE.

**Malberg Glosses** Words and phrases in a Germanic, probably Franconian, vernacular added to manuscripts of the *\*Lex Salica* of the 6th and 8th centuries. They are not glosses in the proper sense, but rather explanations of terms of Germanic origin that were still in use, probably among lay people, in the Frankish *\*courts* of the era. The badly garbled form of the glosses makes them difficult to interpret and suggests the work of uncomprehending scribes.

MVDH

R. Schmidt-Wiegand, 'Malbergische Glossen', in K. Ruh et al., eds., *Die deutsche Literatur des Mittelalters* (1985), vol. 5, 1193–8.

**Malchus** A native of *\*Philadelphia*, a sophist by profession, and the author of a Byzantine History (*Byzantiaca*) in seven books, from 473/4 (seventeenth year of *\*Leo I*) to 480 (the death of *\*Julius Nepos*). The original work appears to have been much longer, from *\*Constantine I's* reign (324 or 330) to the death of *\*Zeno* (491), which has occasioned a hypothesis that there were two works (Treadgold, 104). The history survives in some extended passages in the *\*Excerpta de Legationibus*, in a summary by *\*Photius* (78), and a few notices in the *\*Suda*.

In language and style the work adheres to the classicizing conventions of late antique *\*historiography*, and its focus is on secular, military, political, and diplomatic affairs. The text, as it survives, concentrates on events in and around *\*Constantinople* (in the *\*Balkans* and *\*Asia Minor*), inserting material on the Western Empire, primarily *\*Italy* and *\*Africa*. The narrative is structured around the prominent figures of the age: the *\*Emperor Zeno*, the *\*Empress Verina*, the *\*usurper Basiliscus*, *\*Theoderic Strabo*, and *\*Theoderic the Ostrogoth*. It is an important source for the political manoeuvrings in Constantinople, and for relations between the Eastern Empire and the Ostrogoths (and *\*Vandals*). RCB

Treadgold, *Early Byzantine Historians*, 103–7.

**maleficium** Magical practice directed against one or more individuals, performed through incantations and rituals, often by specialists and usually in secret. Magical *\*papyri* and inscribed lead *\*curse tablets* (*tabellae defixionum*) attest to its widespread use throughout the Empire. Charioteers were famous for resorting to it, and even clerics were sometimes accused of it. Laws associated *maleficium* with *\*homicide* and adultery (*CTh*

XI, 36, 1), punishing it with *\*death*. Those involved had no right to clemency, regardless of rank (*CTh* IX, 16, 6). It was associated with high *\*treason*, leading to violent political persecutions in *\*Rome* and elsewhere. The boundary between *maleficia* and magical arts became gradually blurred, and being associated with it was dangerous. CARM

M. Escribano Paño, 'Heretical Texts and *Maleficium* in the *Codex Theodosianus* (CTH. 16.5.34)', in R. L. Gordon and F. Marco Simón, ed., *Magical Practice in the Latin West* (2010), 105–38.

**Mamikonean clan** One of the noble families of Parthian and early Christian \*Armenia. Under the \*Arshakuni kings (c.54–428) the office of *sparapet* (commander-in-chief) was the hereditary prerogative of the Mamikoneans; after the demise of the last Arshakuni king the clan assumed de facto primacy over Armenia. The Mamikoneans had pro-Byzantine tendencies for most of their history; their loyalty to the theology of the \*Council of \*Nicaea, which opposed them to the Arianizing kings in the 4th century, is evident in the \**Buzandaran Patmut'wunk'*. Perhaps the most famous Mamikonean, immortalized by \*Elishe Vardapet in his *History*, was \*Vardan, leader of an uprising of the Armenian nobility in 451 against the Persian King \*Yazdegerd II. Although Vardan was killed and the battle lost, the Armenians gained their autonomy in 484 under his nephew and successor Vahan. Another Vardan Mamikonean led a revolt against the Persians in 571, fleeing to the \*court of the Roman Emperor \*Justin

II for protection when the rebellion failed. The Mamikonean clan also featured prominently in the histories of \*Lazar and \*Sebeos. However, their power declined throughout the 7th century while that of the \*Bagratuni clan rose to prominence. The main branch of the Mamikonean was extinguished in the 8th century, although minor branches survived into the late Middle Ages.

**Mamre** (Heb. *Elonei Mamre*: Oaks of Mamre) Also called Terebinthus after the famous Oak, ancient trading site near Hebron c.32 km (20 miles) south-west of \*Jerusalem. According to Hebrew tradition, Abraham entertained three divine messengers at Mamre (Gen. 18: 1–10). Christians reinterpreted this revelation (\*Eusebius, *HE* I, 2, 7). \*Constantine I's mother-in-law, \*Eutropia, told him about pagan worship at Mamre (Eusebius, *VCon.* III, 52–3). Constantine had the \*bishops of \*Palestine cleanse the site and build what the \*Bordeaux Pilgrim of 333 called a 'basilica of wondrous beauty'. \*Paula also visited (\*Jerome, *ep.* 108, 11); archaeological remains are scanty.

\*Sozomen (II, 4) describes the continuing participation of \*pagans, \*Jews, and Christians in the trade fair. The \*Piacenza Pilgrim (30) describes separate entrances for Christians and Jews, with a screen dividing them; many Jews came on \*pilgrimage offering \*lamps and copious \*incense. \*Adomnán (*De Locis Sanctis*, II, 11) describes the church, the monastic cells, and what was left of Abraham's oak-tree.

**Mandaeans** Religious group in the \*Sasanian province of Meshan in south \*Babylonia, at the head of the Shatt-al-Arab. They are now scattered over several countries since the Second Gulf War in 2003.

The characteristic ritual of the Mandaeans was baptism. Their traditions suggest an origin in \*Palestine or

west \*Syria; scholars have connected the early Mandaean with a Jewish-Christian sect who were exiled under the \*Emperor Hadrian and migrated to \*Mesopotamia. According to \*Syriac sources, a Babylonian Mandaean movement initiated by Ado in the 4th century probably united several groups who practised baptismal rites. There is a particular group of \*magic \*incantation bowls from 3rd–7th century \*Mesopotamia which have been associated with the religion.

The Mandaic language is a dialect of eastern Aramaic. Their scriptures were primarily the *Ginza*, a collection of history and theology, a prayerbook (*Qolasta*), and the *Book of John the Baptist*, whom they revered as their prophet in the lineage of Adam; this explains why they were considered as People of the Book during the Islamic period. They rejected the Bible and the \*Talmuds. Lady (E. S.) Drower (1879–1972), who did fundamental fieldwork between the First and Second World Wars, characterized their doctrinal system as gnostic. Mandaean theology is dualistic. Its world of light opposed to a corrupted world of darkness suggests diverse Iranian religious influences (\*Zoroastrianism, Manichaeism, Mazdakism), but may equally suggest links with Christian \*gnosticism. Rules of ritual purity and \*baptism by immersion are the principal liturgical practices. CJ

The following numbers of the journal *ARAM* are concerned with the Mandaeans: vol. 11/2 (1999), 199–331; vol. 16 (2004), 1–126; vol. 22 (2010).

**mandata** Administrative orders or general instructions issued by the \*emperor to specific bureaucrats. See *CJust* I, 15 and *NovJust* 113 and 124. RvdB; CH A. Berger, 'Mandata principum', in A. Berger, *Encyclopedic Dictionary of Roman Law* (TAPS 43/2, 1953), 574.

**Mandylium of Edessa** (Syr. *mandila*, towel) Portrait of Jesus, forming part of the \*Abgar legend from the 5th century onwards. According to the *Teaching of Addai*, a \*Syriac text of c. AD 400, King Abgar of \*Edessa sent the keeper of the royal \*archives to visit Jesus, and the

archivist returned with a promise that Edessa would be impregnable and with a portrait of Jesus which he had painted and which Abgar placed in one of his palaces. \*Evagrius, writing in 594, describes (IV, 27) how the Persian siege of Edessa in 544 was brought to an end by a \*miracle performed by this \*icon 'not made by hands' (cf. *ACHEIROPOIETOS*). The *Acts* of \*Mari, probably composed at about the same time, is the earliest text to claim that Christ's face impressed the image directly onto the linen cloth. A cloth which was believed to be this portrait was installed at \*Constantinople in 944. RMJ; OPN S. P. Brock, 'Transformations of the Edessa Portrait of Christ', *Journal of Assyrian Academic Studies* 18/1 (2004), 46–56.

**Mangup** (modern name of Byzantine Dory, Doros, or Theodoro) \*City and region in south-western \*Crimea, which emerged as a centre for the \*Goths. Although fortified by \*Justinian I (r. 527–65) in c.530 (\*Procopius, *Aed.* III, 7, 13), it fell to the \*Khazars in the 8th century, but retained its Roman connections.

ABA

A. A. Vasiliev, *The Goths in the Crimea* (1936).

**Maniakh** A \*Sogdian 'caravan leader' (Sog. *sārtpāw*, Chinese *sabao*) instrumental in brokering short-lived trade and diplomatic ties between the Eastern Roman Empire and the \*Türk Empire. With the Türks' conquest of the \*Hephthalites, the Sogdians urged their new overlords to open Persia to Sogdian \*silk trade. As related in \*Menander Protector (frs. 10.1–2), \*Maniakh headed a trade delegation to the \*Persian Empire. The Persians bought but then burnt their silk to discourage further efforts. After the Persians poisoned a second Türk-Sogdian embassy, Maniakh led a mission to \*Constantinople in 568, which \*Justin II immediately reciprocated by sending \*Zemarchus. Maniakh's name suggests he might have been \*Manichaean. MPC

**Mani, Manichaeism, and the Manichaeans** The Manichaeans were the followers of Mani, a religious visionary, author, and tireless missionary from southern \*Mesopotamia (216–c.276).

Within his own lifetime Mani and his followers spread his teachings across *inter alia* Mesopotamia, Roman \*Egypt and North \*Africa, and \*Armenia as well as the \*Persian Empire. As early perhaps as the 240s, Mani had converted a \*Buddhist monarch in the Indus Valley to his teachings. Eventually the religion spread through \*Central Asia and \*China, where Manichaeism survived even up to the 16th century. Related through his mother to the Iranian Arsacids, Mani was initiated in his childhood years into the Mesopotamian baptizing community of his father Pattek in Babylonia, part of the same religious general milieu as the \*Mandaeans. According to the Cologne \*Mani Codex, these baptizers held a certain Elchasaios in high regard, revering him as the founder of their rule. During his time with the Elchasaites, however, Mani experienced a number of revelations which hastened his departure from the community, as a result of a strongly held desire to practise religion in a different manner.

A prolific author, Mani wrote predominantly in \*Syriac though he utilized Iranian languages as well. Mani produced theological works and \*letters addressed to individuals and his nascent communities as well as a Middle \*Persian work dedicated to the Persian King of Kings, \*Shapur I. In these works, Mani presented his teachings and Church as heirs to the prophets of Antiquity, and styled himself the 'Apostle of Jesus Christ'. His writings, and those of his followers (e.g. *Kephalaia*), were rapidly translated during Late Antiquity into a variety of languages, including \*Greek, \*Coptic, \*Latin, and \*Sogdian. Mani himself eventually fell out of favour with the successors of \*Shapur I, a victim of dynastic and religious machinations at the Sasanian \*court. His life ended c.276 in an ignominious fashion, as he was left to perish in the prisons of \*Bahram I. Very soon after his death, and impelled possibly by their own experience of persecution by the Sasanian elite, Mani's Mesopotamian followers set about commemorating him as a divine 'Apostle of Light' who had undergone enormous suffering. Following his death in the Persian prison, styled in the \*Coptic homilies as a crucifixion, he was understood to have entered a state of blessedness, which the Central Asian material calls his 'entry into *parinirvana*'. In its mature form, the four prophets of Manichaeism include Jesus, Zoroaster, and the Buddha as well as Mani himself, whose teachings were portrayed as continuing and perfecting those of the earlier prophets in their original purity.

As his teachings and Church spread further east into Central Asia from the 6th century onwards, Manichaeism continued to be written and copied in Parthian (which functioned as a liturgical language) and Middle Persian, and translated into Sogdian, \*Uighur

(Uyghur), and Chinese. During Late Antiquity, the Manichaean Church proved to be very resilient to state-sponsored persecutions in the Roman and Sasanian empires, and also, later, in areas under Islamic rule. The conversion to Manichaeism in the mid-8th century of Tengri Bögü, the ruler of the Uighur (Uyghur) \*Türk steppe Empire, initiated a renewal of the Manichaean Church in Asia. It led to the establishment of well-organized monastic institutions responsible for various cultural initiatives including translations of Late Antique Manichaean texts into a range of Central Asian languages, and the creation of new liturgical, communal, and historical writings. Manichaeism remained a state religion in the kingdom of Kocho, which the Uighur clan ruled after the collapse of their empire.

Ancient jaundiced opinions of the Manichaeans persisted into the early 20th century. Discoveries of Manichaean writings, e.g. from \*Central Asia (near \*Turfan and \*Dunhuang), North Africa (Tebessa Codex from \*Theveste), Egypt (e.g. \*Medinet Madi and \*Kellis manuscripts), together with the Cologne Mani Codex, have brought to light many aspects of the Manichaeans' own preoccupations. With this new material to hand, scholars are revising a range of established opinions about the religion in Late Antiquity including the term 'Manichaean', which being the creation of Christian heresiology was used hardly at all by Mani's followers, who preferred to refer to themselves collectively by such terms as the 'Holy Church'.

Mani's theology and cosmology sought to incorporate and outflank Zoroastrian, Christian, and, eventually, Buddhist teachings and tenets. It appeared to each religion as a heresy and because of this it represented a virulent threat that all were compelled to confront. Reflecting its original context, Manichaean cosmology and \*eschatology bears a deep Zoroastrian imprint—much deeper than that of Christianity or Buddhism. The Manichaeans adopted contemporary 3rd-century Zoroastrian terms designating gods (e.g. MP *bay* and *yazad*; Parthian *bag* and *yazad*) and many Manichaean gods and demons originally bore the names of Zoroastrian divinities. In an MP text the religion is even overtly designated as the (true) 'Mazda-worshipping Religion' (MP *dēn māzdēs*). Given how aggressively Manichaeans appropriated Zoroastrianism and proselytized the Persian King and nobility, it should come as no surprise that the Zoroastrian priesthood spearheaded a strenuous polemical campaign against Manichaeism. The archmagus \*Kerdir boasts of persecuting Manichaeans in his \*inscriptions and ultimately contrived Mani's death using his influence at the court of \*Bahram I. \*Adurbad-i Mahraspand, who was influential under \*Shapur II, was Manichaeism's chief persecutor in the 4th century. Book 3 of the \**Dēnkard*

preserves his 'Ten injunctions which the crippled demon Mani clamoured against those of the restorer of righteousness, Adurbad-i Mahrspand. Similar polemics are reflected in other texts, including the *Škand-gumānīg Wizār*, composed by one Mardan-Farrox, who, like \*Augustine of \*Hippo, was probably a Manichaean convert and apostate. The \*Sasanian persecutions play an important part in Manichaean scripture and the later development of the religion.

Within the Roman Empire both Christian and \*pagan authors (such as \*Alexander of \*Lycopolis) produced anti-Manichaean polemics. Understood by Manichaeans to preserve the true teaching of Jesus, they portrayed their religion as Christianity in its 'pure' form, unadulterated by Jewish beliefs and practices and/or by Christians. The portrayal of Manichaeism as a Christian heresy by both Manichaeans and orthodox Christians was made more plausible by the presence of pronounced Christian components in Late Antique Manichaean thought and practice. These include Mani's own claim to be an Apostle of Jesus Christ, the Manichaeans' commitment to Jesus as a figure of cosmic significance, and the saturation of Manichaean literature by canonical and apocryphal biblical themes. Like the Zoroastrian polemicists, Late Antique Christian reactions to Manichaeans often proceed by exaggerating the differences between the two religions, and like them contend with Manichaeism's simpler explanation of the origin and nature of evil. The religion succeeded most notoriously in securing the allegiance of the adolescent Augustine in 373 (*Confessions*, III, 6, 10). After finally abandoning Manichaeism on leaving \*Rome for \*Milan in 384, Augustine became one of its most virulent critics. Long after his death, Mani's teachings remained influential in shaping religious debates in Late Antiquity. Patristic heresiology, such as Hegemonius' *Acts of Archelaus* and \*Epiphanius' *Panarion*, and in the West Augustine's anti-Manichaean works, both those which went into detail and more popular denunciations such as his *De Moribus Manichaeorum*, influenced early medieval and Byzantine authors, and 'Manichaean' became a term of opprobrium applied to a wide variety of later Christian dualists, including the \*Paulicians and the Cathars. Similarly, the late Zoroastrian treatise, the *Gizistag Abālīs*, preserves a fictionalized dispute between a Zoroastrian priest and a Manichaean at the court of the \*Caliph al-Ma'mun (813–33). Buddhism too produced polemical works against Manichaeism, which similarly was portrayed as preserving the Buddha's 'true' teachings, just like those of Jesus and Zoroaster.

As the remains of Mani's teachings and those of his followers indicate, Mani taught a theogonic myth detailing a universal conflict between the powers of Light and Darkness. Mani's *Šābuhragān* was a work

written c.240 for Shapur I during Mani's time at the Sasanian \*court and the closest text we have to his own words. In the form given here the myth embraced both cosmology and eschatology, revealing the influence of Judaeo-Christian narratives (e.g. Enoch literature), and the dualism then current within Zoroastrianism. While sharing many elements in common with \*Gnostic mythology, Mani's myth informed both the ecclesiological and social structures of Manichaean communities. The members of Mani's Church served as active participants in this universal war, with two ranks on the front line of the battle. The lay members of the Church—the Auditors—were its foundation. They provided alms—consisting of their time, finances, accommodation, and food—for the benefit of the Elect, who were the renunciate order of the community. The Elect took on the responsibility of 'saving' the Light (termed 'Living Soul') trapped in the material world through performing various \*ascetic activities, including the consumption and metabolization of a ritualized daily meal. This was understood to release the trapped Light and allow it to return to the Realm of Light. The multilingual Elect also engaged in a programme of copying and translation of scripture and hymns as well as more 'practical' texts such as medical and magical material. The Manichaean sacred books comprised both scripture and an 'image book'. Most of these images, which are characterized by a complex iconography, were didactic. The Turfan fragments include many finely illustrated manuscripts that appear to preserve parts of these image programmes and correspond closely to images created by the late Manichaean communities in Ming China. Scattered evidence in the Turfan and early modern Chinese material also hints at ritual and devotional use of images.

Manichaeism's liturgical calendar prescribed regular prayers, fasts, and services, including a weekly service on Sunday for the Auditors and a service on Monday for the Elect. Manichaeism's daily and weekly cult activity consisted of \*fasting, \*prayer, singing of hymns, scriptural readings, \*sermons, and confessions. Special so-called 'yimki' fasts took place throughout the year dictated by various solar and lunar conjunctions with the \*Zodiac. These commemorated the early \*martyrs of the Church, culminating in the 27-day 'Mani-yimki', which recalled the days the prophet spent in the Persian prison and his death. The religion's high holiday, the 'Bema', or 'Throne Festival', celebrated the 'Paraclete', that is the elevated Mani enthroned in the Realm of Light. During the \*festival Mani was understood to return to the midst of his communities when the community prepared and venerated a throne, possibly (though not conclusively) accompanied by a book or an image of Mani.

**Manichaean art** Physical remains of the Manichaeans from Late Antiquity are almost entirely confined to books. A surviving crystal \*seal from Persian \*Mesopotamia, now in Paris (BN INT. 1384 BIS), depicting \*Mani flanked by two other figures, and describing him in \*Syriac written in the Manichaean script as 'the apostle of Jesus Christ', appears to have been made for the personal use of the prophet. Written sources refer to a picture book made by Mani himself illustrating his teachings for those who could not read; it does not survive but appears to have influenced later Manichaean

book production, not least a surviving painting of the Great Fire at the End of Time (Parthian Turfan fragment M 35). In the Islamic world, Mani was remembered as a painter.

A substantial body of Manichaean illustrated books, \*textiles, and wall paintings dating from the mid-8th century to the mid-11th century was discovered by expeditions to Central Asia in the late 19th/early 20th century in \*Turfan, where early medieval Manichaeans flourished under the patronage of the \*Uighurs on the western edges of \*China. One fragment of a codex (now in the Museum of Indian Art in Berlin) bears a painting of the Bema \*festival, with white-robed bearded members of the Elect on a richly coloured \*carpet gathered around piles of bread and fruit to be consumed by the Elect whose digestive processes will separate out the light in them which will be then be uploaded to the Realm of Light through the singing of hymns of \*praise.

**Manichaean Law, Tetrarchic** \*Rescript issued by \*Diocletian and the \*Tetrarchy, probably in 302, from \*Alexandria to Julian, the \*Proconsul \*Africae. The rescript responds to reports from the proconsul concerning the empty and wicked \*superstitio of the \*Manichaeans, highlighting the danger of its origin in the \*Persian Empire, and asserting the wrongness of resisting what the *providentia* of the immortal gods has determined is good and true.

Manichaeans had recently arrived in \*Egypt under the charge of \*Mani's disciple Adda. The law orders that their leaders and books are to suffer the severest penalties, so much so that they are to be burnt, their followers subjected to capital punishment, and sympathetic \*honorati and persons of importance sent to the \*quarries of \*Proconnesus or the \*mines of \*Phaeno.

**Manichaean texts** The Manichaeans commemorated \*Mani as the author of revelatory writings, which soon after his death were arranged to form a canon of

scriptures. Only fragments of these writings survive, including the doctrinal treatise he composed in Pahlavi, *Šābuhragān*, written for \*Shapur I c.240.

Mani's followers imitated Mani's own authorial tendencies and wrote a range of works, including the 'sub-canonical' *Kephalaia* ('The Book of Chapters'), which aimed to systematize Mani's theology by introducing commentary to Mani's own apparent sayings. Controversial writings composed by Mani's immediate followers, e.g. the collection of biblical *Antitheses* (*Disputationes*) by the disciple Adda of \*Palmyra, and by later Manichaeans (e.g. the *Capitula* by the North African Manichaean Bishop \*Faustus of \*Milevis), indicate continuities with Mani's writings and those produced in the period after his death, which sought to resolve issues and problems raised by Mani's theology (e.g. the *Kephalaia*) and the Christian biblical tradition which Mani had inherited and transformed to accord with his own teachings. The discoveries of Late Antique Manichaean works from \*Egypt, including the \*Coptic codices from \*Medinet Madi, the \*Greek \*Cologne Mani Codex, and the extensive range of fragmentary Manichaean texts in Coptic, Greek, and \*Syriac from Ismant El-Kharab (ancient \*Kellis), reveal a highly literate religious culture.

The finds from Kellis, which housed a Manichaean enclave, include liturgical works in the form of psalms and \*prayers (e.g. 'The Prayer of the Emanations'), translations of Mani's own epistles, and \*letters passed between members of a community of Manichaeans, many of which were exchanged between relatives in a family of believers. The latter—unlike the other texts from Kellis and for example the Cologne Mani Codex—are not literary works but provide documentary evidence for the daily preoccupations of the Manichaeans in Egypt during the 4th century. This, arguably, makes them unique documents in the history of a religion with gnostic characteristics. NJBB

**Manichaean texts: Cologne Mani Codex** A fragmentary parchment codex in \*Greek dated between the 4th and 8th centuries. The original language of the text was most likely \*Syriac. A miniature codex, one of the smallest known from Antiquity, it measures 35 mm × 45 mm (1.4–1.8 inches, the size of a passport photograph) and contains 192 pages. The manuscript

carries a recurrent heading, 'On the Origin of his Body', probably its ancient title.

While many questions about the redaction history and literary purport of the Cologne Mani Codex remain unanswered, the text is ostensibly a biography of \*Mani in which his immediate followers (e.g. Salmaios, Baraies, Abiesous, Timotheos, Koustaïos) relate central moments in the religious life of Mani. Much of this testimony appears as the reported speech of Mani himself ('the Lord said ...'), thereby mirroring the style of other Manichaean texts among others the *Kephalaia*.

These chains of testimony probably preserve the earliest eyewitness material for the life of Mani, which the Cologne Mani Codex gathered together to create a hagiography. It has identifiable sections, beginning with an account of Mani's early life in a \*Mesopotamian baptizing community, descriptions of Mani's revelatory experiences with his 'Twin' (Gk. *Syzygos*), his dramatic departure from the baptizers, and the early missionary activities of Mani and his first followers in \*Ctesiphon, Naser, and \*Ganzak. The final pages of the work (pp. 121–92) are severely damaged, nevertheless they indicate Mani's arrival in Pharat in Mesene, the principal port at the head of the Persian Gulf for travel to \*India. **Manichaean texts: Manichaean Psalm Book** A large collection of antiphonal \*hymns in \*Coptic dating from the 4th century, the Psalm Book is one of the seven codices found at \*Medinet Madi in the Fayyum region of \*Egypt (the \*Arsinoite Nome). It survives in two parts. Part I has been published in facsimile editions, while Part II was published first in 1938 by C. R. C. Allberry, with new editions of Part II appearing in the 1990s. The text is a \*Coptic translation of a \*Syriac *Vorlage*, but the text of the Psalm Book indicates adaptation to a western Manichaean environment, with the inclusion of Egyptian names in its doxological portions. It is valuable to scholars reconstructing the origins and structure of \*Manichaean liturgies, and seeking to understand the broader theological concerns of the Church of \*Mani. NJBB

### Manichaean texts: Medinet Madi Manuscripts

\*Coptic codices named from the place where they were found in the Fayyum region of \*Egypt (\*Arsinoite Nome). The collection numbers seven codices but was broken up soon after its initial discovery in 1929. Four codices, the *Kephalaia of the Teacher*, the *Synaxeis* codex, the *Letters of \*Mani*, and the *Acta* codex, were housed in Berlin, while the *Homilies*, the Psalm-Book (see MANICHAEAN TEXTS: MANICHAEAN PSALM BOOK), and the *Kephalaia of the Wisdom of my Lord Mani* were acquired by the \*Chester Beatty Collection in London (now Dublin). Taken as a whole, the codices represent a wealth of theological, didactic, and liturgical material from the earliest years of the Manichaean Church in \*Mesopotamia in the late 3rd century. They were translated at some point (c. early 4th century) into a dialect of \*Coptic employed in and around \*Ly-copolis. Some of these codices, including the *Acta* codex (comprising an early history of the Manichaean Church), and a sizeable portion of the *Letters*, were lost during the 1940s. In recent times, the work of editing and commenting on the remaining codices has accelerated. Improved editions of the Psalm-Book and the *Homilies* have recently appeared, in addition to translations of the Berlin *Kephalaia*.

**Manichaean texts: Tebessa Manichaean Codex** A fragmentary codex of the 4th/5th centuries, one of the few surviving \*Latin \*Manichaean works from Late Antiquity. Discovered in a cave near Tebessa (Roman Theveste) in north-east Algeria in 1918, its Manichaean character was recognized by P. Alfarić in 1920. Apparently an epistle to a Hearer (addressed as *carissime*, cols. 12 and 24), the codex justifies the two

grades in the Manichaean community—i.e. the Elect and Hearers—through the citation of New Testament proof-texts. It also offers a defence of the labours of the Elect and Hearers, borrowing heavily from a range of Pauline writings to frame the \*almsgiving and \*asceticism conducted within the Manichaean Church.

**Manichaean texts from Central Asia** A vast collection of manuscripts in various states of repair stemming largely from the period of protection \*Manichaeans enjoyed from the late 8th century onwards under the \*Uighur (Uyghur) khanate and later Uyghur kingdom of Kocho. The texts provide the majority of extant primary source evidence of the religion. They were discovered during a series of Prussian imperial expeditions to the \*Turfan Oasis and its environs, during the late 19th–early 20th centuries. Led by such luminaries as Albert Grünwedel and Albert von Le Coq, the excavation of library caves and a host of other sites in the Oasis, in places such as Kocho, the former Uighur capital of the Oasis, and \*Dunhuang in the Gansu province, yielded an array of Buddhist, Christian, and Manichaean art and manuscripts covering a broad chronological spectrum. The Manichaean texts, written in a host of languages including Middle and New \*Persian, Chinese, \*Sogdian, Parthian, Bactrian, Tocharian, and Turkish, are evidence for the consolidation of Manichaeism's eastern implantation during the 6th century onwards into the regions of \*Central Asia. The texts cover a range of genres including liturgical writings (e.g. the Iranian Hymns), doctrinal texts (e.g. the Chinese *Traité* edited by É. Chavannes and P. Pelliot), and \*prayers and confessional formulae (e.g. the Turkish *Xwāstwānift*). This Central Asian material has given a much more complete understanding of Manichaeism in Late Antiquity as in many cases it preserves in translation writings and traditions from the earliest periods of the religion, including historical accounts of Manichaeism's origins in the form of biographies of Mani, and early histories of the Manichaean Church. Just as important as the texts, many of the Turfan fragments preserve elaborate

## Manlius Theodorus

manuscript illumination as well as other works of art, attesting to the complex Manichaean artistic tradition described in various textual sources. NJBB

**Mantai** Archaeological site in north-west Sri Lanka (Ceylon), possibly the ancient port of Mantota, mentioned by \*Cosmas Indicopleustes. Excavations at Mantai ceased in 1984 due to the outbreak of the Sri Lankan civil war. Publication of the 1980–4 seasons in 2013 revealed the complexities of dating the multi-period site. The site is often considered an important port for Roman traders in the Indian Ocean. From the 10th century it was engaged in \*trade with \*China and the Islamic world. In Late Antiquity, however, it is very unclear how closely connected the site was to anywhere except the Indian subcontinent, whence the small number of foreign Western finds may have travelled indirectly. Roman finds at the site comprise a small number of Roman coins and local imitations, two Roman beads, and a handful of potsherds. RRD

J. Carswell, S. Deraniyagala, and G. Campbell, *Mantai: A City by the Sea* (2013).

**manumission** Legal freeing of a slave. Various forms of manumission existed. Traditionally, Roman manumission could bestow two forms of citizenship, depending on how it was done: Roman or Latin citizenship. Freedom granted formally before a state official (*CJust* VII, 1, 4) or by a document recognized by the state (*per testamentum*) could grant Roman citizenship. Freedom granted informally in the presence of witnesses bestowed Latin citizenship. Under \*Constantine I a new form of manumission, *manumissio in sacrosanctis ecclesiis* (*CJust* I, 13, 1; *CJust* I, 13, 2), which involved the Church in the process of manumission, was sanctioned by law and conferred Roman citizenship. \*Justinian I subsequently legislated that all forms of manumission, formal or informal, could potentially grant Roman citizenship (*CJust* VII, 6, 1). In post-Roman north-western Europe adaptations of Roman manumission coexisted with local procedures. The frequency of manumission cannot be measured, but it seems not to have dropped during Late Antiquity and may have increased due to Christian criticism of slavery.

JUB

J. Barschdorf, *Freigelassene in der Spätantike* (Quellen und Forschungen zur Antiken Welt 58, 2012).

Harper, *Slavery in the Late Roman World*.

**Maphrian** Head of the \*Syriac Orthodox Church in the area that in the pre-Islamic period was part of the \*Persian Empire. The office is the second highest in the Church after that of the patriarch. Although the title Maphrian (meaning 'fructifier', i.e. 'consecrator') was probably not used until about 1100, the office later designated by that name can be traced back to \*Marutha of \*Takrit in the 7th century. These primates sometimes styled themselves as \*catholicus, to the annoyance of their \*Church of the East (\*Nestorian') counterparts. The seat of the Maphrian, originally in Takrit, was transferred to \*Mosul in 1156. The original maphrianate was suppressed in 1860, but the title is now used by the head of the Syrian Orthodox Church in \*India. HT *GEDSH s.v.* Maphrian, 264–5 (Kiraz).

J.-M. Fiey, 'Les Diocèses du "Maphrianat" syrien (629–1860)', *Parole de l'Orient* 5 (1974), 133–64, 331–93; 8 (1977/8), 347–78.

**maps** Apart from the \*Madaba \*mosaic map, no physical map survives from Late Antiquity. All others are copies no earlier than the 9th century.

The Peutinger Map (late 3rd cent., revised in Late Antiquity), a scroll 6.7 m (22 feet) long, now in Vienna, delineates itineraries in the Roman Empire. It shows both Pompeii (destroyed AD 79) and Constantinople (founded AD 324).

Other maps appear as book illustrations. In his *Commentary on the Dream of Scipio*, \*Macrobius provided a diagram which divided the spherical earth, oriented north, into five climate zones. Another world map, found in a manuscript of \*astrological texts, is of Greek origin (possibly 3rd cent.) and shows the terrestrial world (including \*Egypt, and Persia) divided into zones with celestial lines (the ecliptic, the polar circles) superimposed on it, while a continent in the southern hemisphere features the rivers of hell. The 7th-century encyclopaedist \*Isidore of Seville (622/33) summarized the contents of his library in his *Etymologiae* and in the geographical part presents a simple diagram, oriented to the east, showing the three continents surrounded by the world Ocean.

How close these surviving medieval copies are to Late Antique originals cannot be determined. As Christianity spread among educated people, the earth became infused with biblical references, such as the Earthly Paradise, the allocation of the earth among the sons of Noah, and sites associated with the life of Christ. The most extreme example is the *Christian Topography* of \*Cosmas Indicopleustes (6th cent.) whose map portrayed the Earth in the rectangular shape of the Tabernacle; Paradise was on the eastern side, separated by a band of the sea, under which the Four Rivers passed to emerge on the other side as the Nile, Tigris, Euphrates, and Ganges. **maqsura** A screened area of a \*mosque located near the \*minbar and the \*mihrab and reserved for the use of the \*caliph and his most intimate entourage. The origin of the *maqsura* was to protect the \*caliph from assassination attempts during his participation in public prayers, but it directly contravenes the Islamic precept that all should be equal before Allah in the mosque. The most famous example of a *maqsura* still extant is found in the Great Mosque of \*Cordoba. EL

N. N. N. Khoury, 'The Meaning of the Great Mosque of Cordoba in the Tenth Century', *Muqarnas* 13 (1996), 80–98.

**Mar (fem. Mart)** Literally \*Syriac for 'my master'. Honorific used especially as a title for native saints or \*bishops. The same word (in a different form) can refer also to God. When stories of Syriac saints were translated into other Eastern Christian languages, the title was often carried over. ACMc

**Mara bar Serapion, Letter of** The *Letter* is preserved in a single \*Syriac manuscript. The purported author is among a group from \*Samosata (in Commagene) being held in exile by the Romans. Mara addresses his young son Serapion and admonishes him to seek wisdom rather than worldly prosperity. He cites Socrates, Pythagoras, and the 'wise king' of the Jews as examples. The letter's historicity and date remain disputed, with estimates ranging from the 70s of the 1st century AD to the 4th century. A setting in the late 2nd or early 3rd century seems most probable. UP *GEDSH s.v.* Mara bar Serapion, Letter of, p. 266 (Van Rompay).

**Maraş (Kahrmanmarash)** (Turkey) Ancient and modern \*city on the Euphrates. Various Late Roman architectural \*sculpture and coin \*hoards have been found and also the remains of a \*bridge on the \*Antioch road. The \*Umayyads formed a new settlement in the

valley as a forward base for a chain of garrisons (Thughur) commanding access to the central plateau of \*Anatolia and the Arab–Byzantine \*frontier. This settlement pattern resembles that at \*Qinnasrin, the Umayyad settlement near ancient \*Chalcis.

Maraş is sometimes identified with Germanicea, a city on the borders of \*Cilicia, \*Syria, and \*Cappadocia whose \*bishop under \*Constantine I was improperly translated to \*Antioch (\*Theodoret, *HE* II, 20) and is mentioned by \*Theophanes as involved in the campaigns of \*Heraclius against \*Shahrwaraz in 626 (AM 6116). **marble** Late Antique \*architects, like their classical predecessors, continued to use marble in ostentatious buildings and imitated it in other materials where it was not available. It also continued to be used for free-standing \*sculpture at least into the 5th century, e.g. at \*Aphrodisias. Church \*furniture was often made from marble, too. The use of marble as a building stone was a rare luxury, e.g. at the \*Golden Gate of \*Constantinople. Normally, marble was employed in building for load-bearing parts such as columns, epistyles, and \*door jambs that required strength, workability, and beauty. In addition, marble slabs were used for highly prized flooring (and also in the form of \*opus sectile) and for wall revetment, e.g. in the Church of the \*Holy Wisdom at Constantinople, the poetic description of which by \*Paul the \*Silentiary illustrates how educated men might be connoisseurs of rare marbles. \*Sidonius Apollinaris (*ep.* II, 2, 7) is defensive about the absence of precious marbles (which might promote coolness) from the walls of the *frigidarium* in the \*baths at his \*villa.

The Tetrarchic \*Prices Edict (31) lists nineteen varieties of marble. The \*quarries which were the source of many coloured marbles are easily recognizable, but identifying the provenance of white marbles often depends on the form and the find spot of an artefact in combination with art historical probability, and may require archaeometrical analysis. Coloured marble was used mainly for wall revetment, sometimes for flooring (including opus sectile), and occasionally for items of liturgical furniture, e.g. verde antico for templon posts and \*ambos. Structural elements normally consisted of white marble, and the best quality was supplied by the island of \*Proconnesus in the Sea of \*Marmara, by \*Docimium on the High Plateau of central \*Anatolian, and by \*Sivec in the highlands of northern \*Macedonia.

From the time of \*Theodosius I onwards all three of these \*quarries provided the same style of super-regional products of the same high standard to areas well beyond their immediate region; their organizations were probably connected to one another, possibly through the administration of the imperial \*estates which had a long-standing stake in quarrying and was the single most important client. Columns and column \*capitals and other architectural \*sculpture were exported in a quarry-finished condition, as is apparent from the Church Wreck at \*Marzamemi. The variations in size and shape of such artefacts suggest that they were custom-made to the specifications of clients, whereas \*sarcophagi have been found with uncarved spaces where the faces of the deceased might be added as required. Architectural sculpture was employed in imperial and other prestigious building projects, and was imitated in other materials by various local workshops when marble was not available.

Large and heavy marbles were not normally exported from the highlands to the Mediterranean or vice versa, but polychrome slabs and white pilasters from Docimium which could travel more easily on carts and/or \*pack animals occur in wall revetment throughout the Mediterranean basin and even in the \*Balkan mountains, e.g. at \*Caričin Grad/Justiniana Prima. In contrast, liturgical furniture that could also have been imported with relative ease was more often acquired locally, and various regions developed a formal repertoire of their own. Docimium set the example for many local workshops of Central Anatolia, Proconnesus and Constantinople produced characteristic furnishings, and Macedonia as well as coastal \*Caria each adhered to their own local traditions.

There may be a connection between the local character of Carian furnishings and the late date of numerous Carian churches dating from the second half of the 6th century, for instance at \*Miletus. The exploitation of Proconnesian marble ceased in the mid-6th century, when the building boom under \*Justinian I subsided. Other churches in the later period were built with reused marble \*spolia, for instance the \*Basilica of S. Eufrasius at \*Poreč, S. Euphemia at \*Grado, and S. \*Demetrius at \*Thessalonica. The spolia had various forms and shapes, and their combination compares to earlier examples at \*Rome, where a variety of marble spolia had been reused since the time of \*Constantine I. In the East, such variety had always been customary, either from the use of spolia, as at the Church of the Apostles in \*Anazarbus, or *ex novo*, as at Docimium and Constantinople from the 4th century onwards.

**Marcellinus** (d. 468) Roman general and \**patricius*. After his friend \*Aëtius was assassinated in 454, he rebelled against \*Valentinian III, seized \*Dalmatia, and apparently ruled it independently till 468. He defeated the \*Vandals in \*Sicily (461 or 465) and, as a commander in the imperial expedition of 468, in \*Sardinia, but was then murdered in Sicily. He was a \*pagan.

ADL

PLRE II, Marcellinus 6.

MacGeorge, *Late Roman Warlords*, 17–67.

**Marcellinus Comes** (c.480–c.540) Imperial official of military background who earned his honorary \*title of \*comes from his years serving the future \*Emperor \*Justinian I (reigned 527–65) but during the reign of Justinian's uncle \*Justin I (reigned 518–27). Marcellinus came from the same \*Balkan background as Justin's family, enjoyed a career as an army clerk there, and from c.500 settled in \*Constantinople. He wrote (i) a four-volume work on chronology and topography (his description of the foundation of \*Dara in 507 being its only surviving fragment); (ii) a work on Constantinople and \*Jerusalem (nothing extant); (iii) a *Chronicle* (extant in full) which continued that of \*Jerome from 379 to 518 and was written shortly after 518. Marcellinus updated his chronicle in 534 to honour the Roman victory over the \*Vandals in \*Africa. The *Chronicle* follows the pattern of Jerome in including notices of natural phenomena and famous church writers, but most entries cover events in the Balkans (successive

invasions of \*Goths, \*Huns, and \*Bulgars) and Constantinople (construction of \*buildings, births, marriages, \*accessions, and deaths of emperors and other members of the imperial family). Many of these are first-hand eyewitness accounts of events such as the \*Nika Riot in 532. Events are set out annually by \*consuls and \*indications and a narrow range of sources is deployed. Marcellinus' local audience of Illyrians and other \*Latin speakers in Constantinople resonated with his emphasis on the local and personal impact of invasions, the significance of strong military action, support for orthodox \*bishops and emperors (\*Theodosius I and \*Marcian but not \*Anastasius I), as well as for the see of \*Rome, and the civic and ceremonial life of the capital. Much scholarly attention has been devoted to interpreting his statement that the \*fall of the Western Roman Empire occurred with the deposition of the Emperor \*Romulus in 476. An anonymous continuation of the chronicle from 535 to the early 550s (but extant only to 548), also written in Constantinople, is focused mainly on events in \*Italy. Marcellinus' *Chronicle* was first used by \*Jordanes in c.551 and all his works were known to \*Cassiodorus whose recommendation ensured the chronicle's regular and widespread copying in later centuries.

**Marcellus** One of the \**judices pedanei* under \*Justinian I, and \*Comes of the \**excubitores*. He spied on \*John the Cappadocian for \*Theodora (541), and investigated a conspiracy against Justinian, \*Belisarius, and himself (549). In 552, he failed to persuade Pope \*Vigilius to return to \*Constantinople from \*Chalcedon.

PNB

PLRE III, Marcellus 3.

**Marcellus Empiricus** Roman civil servant (\*Magister Officiorum 394–5; the name Empiricus is later) and medical author from \*Bordeaux, and a contemporary of \*Ausonius, with whom his relationship is unclear. Marcellus wrote in 408 a treatise *De Medicamentis* in verse (with a prose preface), dedicated to his sons. In his preface, he greets not only Ausonius but also a certain Eutropius and \*Symmachus' correspondent Siburius. Not all his sources are identified or identifiable, but he draws on classical \*Latin texts (e.g. \*Pliny the Elder) as well as more obscure medical traditions (folk \*medicine). Indeed, some of the remedies he advocates can be related to *physica remedia* and thus to \*magic. His work is deeply (and probably deliberately) grounded in a Gallic context, but displays many exotic Mediterranean

remedies. Whether he was a Christian or not is still unclear. CP

**Marcellus of Ancyra** (d. 374) \*Bishop of Ancyra of \*Galatia (mod. \*Ankara) from c.314; one of the leading bishops of the generation following the Great \*Persecution, and one of the longest-lived protagonists of the Arian controversy. He presided over the Synod of Ancyra (314), which begins the tradition of Eastern \*canon law, laying down four stages of public penance for apostasy and sexual sins. He spoke against \*Arius at the \*Council of \*Nicaea (325) and afterwards wrote *Contra Asterium* against the theology of Arius' supporters, which was in turn indicted for \*heresy by \*Eusebius of \*Caesarea in his *Contra Marcellum*. Deposed by a synod of his enemies in front of \*Constantine I at \*Constantinople in 336, he was granted a return after Constantine's death the following year, but was deposed again by 339. He appealed to Julius of \*Rome in person together with \*Athanasius of \*Alexandria and other exiles and was accepted into communion by a synod in Rome in 341, and by the Western rump of the intended ecumenical Synod of \*Serdica in 343, but not by the \*bishops of \*Constantius II's regions. Thereafter Marcellus withdrew from public life. \*Basil of \*Caesarea tried unsuccessfully to have him condemned by Athanasius and \*Damasus of Rome, but he died at peace with both. SP

**Marcellus the Centurion** Roman centurion venerated as a \*martyr, especially at Leon in \*Spain. Several versions of his \*martyr passion survive (BHL 5253–5). They agree in providing a \*report of proceedings at Marcellus' two trials. On 21 July 298, at a military celebration, probably of the \*natalis of the \*Emperor \*Maximian, Marcellus threw down his \*belt and vine-staff and repudiated his military \*oath. One version places this event at Leon. He was interrogated by the \*Praeses and then sent under guard to \*Tingi (mod. Tangier) to be tried on the basis of written *acta* by a judge *agens vice Praefecto Praetorio*. He was beheaded at Tingi on 30 October 298. OPN

**Marcian** (392–457) Eastern \*emperor 450–7. Born into a military family of \*Balkan origin, he pursued a career in the \*army. The ranks of tribune and \*domesticus which he achieved did not make him an obvious contender to succeed \*Theodosius II as emperor, which is why he has often been seen as the candidate of the influential general \*Aspar under whom he had served in the army. However, another powerful general, Flavius \*Zeno, may also have played a part in his elevation (25 August 450). Although dynastic continuity was provided by Marcian's marriage to Theodosius II's sister, the consecrated \*virgin \*Pulcheria, his \*accession initiated significant policy changes, reflected in the prompt execution of the \*eunuch \*Chrysaphius, a dominant influence during Theodosius' final decade. The new emperor discontinued annual payments to \*Attila and announced another Ecumenical \*Council of the Church to reconsider the outcomes of the controversial second 'Robber' Council of \*Ephesus of 449. The ensuing council, at \*Chalcedon (451), proved to be a landmark in ecclesiastical affairs and earned Marcian acclamation as a 'new Constantine', but the theological definition failed to win the backing of those whom modern scholarship terms \*Miaphysites, so Marcian had to use military force to install Chalcedonian \*bishops in some major Eastern sees. The unexpected death of Attila in 453 eased pressure on the Danube \*frontier, while there was modest military success against \*Arab raiders and tribesmen in southern \*Egypt; Marcian was responsible for construction of a new \*forum with a victory monument in \*Constantinople, dedicated by \*Tatianus, the \*Praefectus Urbi. Although, in a move no doubt designed to win support for his new regime, he remitted tax arrears at his accession (*NovMarc* 2), and abolished the \**foliis* (a tax on senatorial land), and the ending of payments to Attila allowed the imperial treasury to accumulate a healthy reserve in excess of 100,000 lb of \*gold by his reign's end (Lydus, *Mag.* 3.43). \*Euphemia, Marcian's daughter by an earlier marriage, married \*Anthemius (Western emperor, 467–72). Marcian died in Constantinople on 27 January 457. ADL

**Marcianopolis** (mod. Devnia, Bulgaria) Capital of \*Moesia Inferior, founded under Trajan and named after his sister. It was unsuccessfully besieged by the \*Goths in 248 and served as base for \*Decius and \*Valens in their campaigns against them. It had an imperial munitions factory (see *FABRICAE*). The \*Huns sacked Marcianopolis in 447 and \*Theoderic the \*Ostrogoth resided there in 477 (\*Malchus frag. 18, 2 Blockley = 15 Müller *FHG*). It flourished under \*Anastasius I and \*Justinian I, but the \*Avars sacked it in the late 6th century. \*Maurice's general \*Peter visited it while campaigning against them.

The city had a fortified area of about 70 ha (c.173 acres). Its remains include a 4th-century house with \*mosaics, at least four Christian \*basilicas, one of them within a 3rd-century amphitheatre, and 5th-century painted tombs. After a long period of abandonment, a fortified settlement appeared around the amphitheatre in the 9th–10th centuries. ER

**Marcianus, Flavius** Son of the Western \*Emperor \*Anthemius, and, as husband of \*Leontia, son-in-law of \*Leo I and \*Verina. In 475–6, Marcianus supported \*Basiliscus' rebellion against \*Zeno. In 479, backed by \*Theoderic Strabo and others, he asserted his right to the \*purple by rebelling against Zeno and attacking the \*Great Palace, but was repressed by \*Illus and his

Isaurians, forcibly ordained, and exiled to \*Caesarea of \*Cappadocia. When in turn Illus and \*Leontius revolted against Zeno in 484, Illus sent Marcian to Italy to seek help from \*Odoacer. OPN

PLRE II, Marcianus 17.

Haarer, *Anastasius*, 19–20.

Bury, *Theodosius to Justinian*, vol. 1, 389–97.

**Marcionites** Followers of Marcion (d. 160), a wealthy shipping \*merchant from \*Sinope on the Black Sea, who founded his own Church after splitting with the Christian churches in \*Rome (c.144/5). Marcion's *Antitheses* set examples of the evil, cruel God in the Jewish scriptures over against the Gospel of S. Luke (Tertullian, *Adversus Marcionem*, I, 19, 4) to demonstrate that the beneficent God revealed in Jesus was not identical to the Creator. As evidence of their disdain for the God who gave the Law, Marcionites refused to eat meat or procreate, and they fasted on the Sabbath. Marcion edited S. Luke's Gospel and a commonly used collection of ten Pauline \*letters to remove the corruptions he believed had been introduced by followers of the Creator. Along with a literal reading of the Jewish scriptures, this revised Gospel and letters became canonical in Marcionite churches. The organization (\*bishops, presbyters) and sacraments of those churches were identical with those of orthodox churches. Apelles (c.170), Marcion's most famous disciple, initially rejected the Jewish scriptures as illogical fables.

The Marcionites had many \*martyrs (\*Eusebius, *HE* V, 16, 21; cf. VII, 12; IV, 15, 46 and *Passion of S. \*Pionius*, 21, 5; Eusebius, *Martyrs of Palestine*, 10, 3). An \*inscription records the construction in AD 318 of a Marcionite 'synagogue' at Lebaba (mod. Deir 'Ali) near \*Damascus (*OGIS* II, 608), but \*Constantine I ordered the confiscation of Marcionite conventicles (*VCon* III, 64–5). Nevertheless \*Cyril of \*Jerusalem (*Catechetical Lecture*, 18, 26) was concerned that members of his flock might stray into a Marcionite church by mistake, and in the late 4th century \*Epiphanius of \*Salamis (*Panarion*, 42, 1, 2) recorded that there were Marcionites in \*Rome, \*Palestine, \*Arabia, \*Syria, \*Cyprus, the \*Thebaid, and the \*Persian Empire. \*Theodoret told Pope \*Leo I (*ep.* 113) that in 26 years as Bishop of \*Cyrrhus he had converted over 1,000 Marcionites; another letter (*ep.* 81) gives the figure as eight \*villages and a letter to the monks of \*Constantinople (*ep.* 145) claims he baptized 10,000.

As late as 695 Marcionites were among the heretics for whose reconciliation to the Church the \*Quinisext Council made provision (*Canon*, 95). PP; OPN

**Marcomanni** Germanic tribe belonging originally to the Elbe cultural grouping, and famous for fighting two wars against Marcus Aurelius in 166–73 and 177–80 (e.g. \*Ammianus, XXIX, 6, 1; cf. \*Claudian, *De Sexto Consulatu Honorii*, 367–79). The Marcomanni threatened \*Thessalonica under \*Valerian (\*Zosimus, I, 29, 2) but \*Gallienus granted part of \*Pannonia to their King Attalus by treaty (\**Epitome de Caesaribus*, 33, 1; cf. Aurelius \*Victor, 33, 6). They were defeated under the \*Tetrarchy (Aurelius Victor, 39, 43). Ambrose corresponded with a Marcomannic queen called \*Fritigil, but references to the Marcomanni by writers such as \*Jerome (ep. 60, 16) and \*Isidore of \*Seville, *Etymologiae*, IX, 2, 97) may owe much to literary convention. In the 5th century there were various corps of the Roman \*army named after the Marcomanni stationed in the field army (\**Notitia Dignitatum*, occ. VI, 65), in \*Libya (\*Synesius, ep. 11), and in \*Italy (*Notitia* occ. V, 198–9; VII, 38), as well as a Tribunes Gentis Marcomannorum commanding native troops in \*Pannonia on the Danube \*frontier (*Notitia* occ. XXXIV, 24). TF; OPN

**Mardin (Gk. Margdis)** Modern Turkish town occupying the site of a fortress on the Roman Eastern \*frontier, spectacularly situated on an escarpment overlooking the Mesopotamian Plain. \*Ammianus Marcellinus (XIX, 9, 4) calls it Maride. It was part of the defence line between \*Dara and \*Amida in the 6th century and was rebuilt by Justinian I (\*Procopius, *Aed.* II, 4, 14). EKK

Sinclair, *Eastern Turkey*, vol. 3, 201–14 (medieval etc.).  
 S. Aydın et al., *Mardin Aşiret Cemaat Devlet* (2000).

**Mareotis** \*Greek toponym for a lake, district, and town located south of \*Alexandria. The freshwater lake provided a vital link between \*Egypt and the Mediterranean, connecting Alexandria to the Canopic branch

of the \*Nile by way of canals; its \*harbours were trans-shipment points for produce, materials, and goods from the Nile Valley and beyond. It was also an important transfer point for people on \*pilgrimage to the monumental \*martyrium complex, at \*Abu Mina, and the monks of \*Nitria, \*Kellia, \*Scetis, and the Nile Valley.

The lake's marshes had a reputation for concealing bandits (Achilles Tatius, IV, 12; \*Heliodorus, *Aethiopica*, 1, 14, \*Eusebius, *HE* VII, 11, 16), and rich Alexandrians reportedly hid there to avoid paying tribute after the \*Arab conquest (\*John of \*Nikiu, *Chron.* 120, 69).

Settlement on the north shore of the lake was largely residential, an extension of suburban Alexandria. On the south shore and what is now Mareotis Island were commercial, industrial, and agricultural activities, including the manufacture of \*pottery and \*glass, and the production and processing of \*wine, \*olive oil, linen \*textiles, and \*papyrus (\**Historia Monachorum in Aegypto*, Epilogue 10). Extensive archaeological remains of a 6th–8th-century \*harbour town on the south shore of the western arm of the lake have long been identified as ancient Mareotis/Marea but may instead (or also) be Philoxenite, a stopping-place for pilgrims. **Marga** Region whose name means 'the meadow', north-east of \*Mosul, east of the Great Zab. A \*Miaphysite bishopric is attested in 595 at Gomel. A \*diocese of the \*Church of the East is not mentioned before the mid-8th century, when there was a \*bishop dependent on \*Adiabene; formerly, it was probably a part of Beth-Nuhadra.

\*Syriac sources give evidence of the vitality of pagan cults until the 7th century. \*Thomas, \*Bishop of Marga c.840, describes numerous \*monasteries reformed according to the rule of \*Abraham (the Great) of Kashkar. They were important centres for training, especially for future leaders of the east Syrian communities, such as the monasteries of \*Bar 'Idta or Mar Giwargis. From Beth-'Abē, established in the beginning of the 7th century, many missionaries went to the eastern and northern lands; at Ba Shosh, Babai the Musician (who 'had a high sweet voice like a trumpet') set up a school of \*liturgy, and Abraham bar Dashandad, a century later, educated a generation of scholars in Hellenic *paideia*.

**marginal land** Mountain uplands, boggy lowlands, desert margins, islands, and coastal areas could not be exploited for arable \*farming. \*Hunting and fishing were the best ways to exploit marshy and woody ground, though such tracts also provided wild edible plants and berries including numerous medicinal and herbaceous plants, such as purslane (\*Dioscorides, 2, 150). Mediterranean islands that were small, treeless, and waterless were used to graze \*sheep and goats; water was carried or supplied by \*cisterns and such animals could even tolerate some seawater.

\*Irrigation often made marginal land, such as the \*Limestone Massif of northern \*Syria in the 4th–6th centuries, available for farming. Dry lands in North \*Africa and the East were brought into cultivation, by using cisterns, dams, and terraces, and directing seasonal surface water, such as seasonal runoff. Floodwater runoff watered \*fruit and tree crops throughout the \*Negev in southern \*Palestine and contributed to the expansion of settlement there. The capturing of groundwater resources in wells and \**qanats* was especially vital to the development of the desert margins of \*Arabia and \*Syria and the diffusion of water-lifting technologies in the Mediterranean allowed cultivation of wider areas than previously possible. MD

Decker, *Tilling the Hateful Earth*.

**Margus (Margo)** Roman \*city and river (mod. Morava, Serbia). In 285 a battle on the Margus between \*Diocletian and \*Carinus led to the latter's death and completed Diocletian's rise to power (*NEDC* 50). \*Priscus describes the \*Huns' breach in 442 of an important treaty in retaliation against the \*Bishop of Margus who had looted their ancestral graves. **Marib** City of southern \*Arabia (Yemen) in a transition zone between irrigable hills and desert. It is noted

for having sophisticated \*irrigation works beginning in c. the 3rd millennium BC. The capital of the \*Sabaean kingdom from the 8th century BC, it flourished 7th–1st centuries BC thanks to the \*incense trade from \*south Arabia to the Mediterranean; this is attested by the many Sabaic \*inscriptions and remains of walls, temples, and irrigation works. The city withstood Roman invasion in 25–24 BC, but damage to its irrigation network may have inaugurated some decline; Marib remained important, but other south Arabian kingdoms, notably \*Himyar, usurped its power by the 1st century AD.

Local inscriptions record serious dam bursts and emergency repairs in the 4th–6th centuries; topographical survey reveals further flooding in the late 6th century, with a possible final, unrepaired burst in the early 7th century. The \*Qur'an (34: 16) describes the flood and subsequent desolation. \*Arabic literature cites the breaking of Marib's dam as the impulse for legendary Arabian migrations: it is unclear to which dam-break these stories refer. In the Islamic period, Marib was inhabited, but only called a *qarya* (Ar. village). PAW

Holum, *Empresses*.

**Marinus** (early 5th cent.–c.490) Marinus was born in \*Neapolis in \*Palestine, trained as a \*rhetorician, and lived as a \*Samaritan until converted to \*paganism (\*Damascius, *VIsidori*, 97A). Sometime in the late 450s or early 460s he travelled to \*Athens to study under \*Proclus and stayed on as a teacher in the \*school after completing his training. Marinus instructed \*Isidore in Aristotelian \*philosophy and \*Damascius in \*mathematics and \*geometry. He wrote commentaries on Plato's *Parmenides* and *Philebus*, though he chose to destroy the latter before its publication after Isidore criticized it. His extant works include an introduction to \*Euclid's *Elements* and a prose biography of Proclus (a verse biography of Proclus has been lost). Marinus was plagued by ill-health throughout his later life and Proclus was so worried about Marinus' ability to sustain Athenian Platonic teaching that he tried to convince Isidore to serve as his successor in Marinus' place. Isidore declined and Marinus took over as \*Diadochus of the Athenian \*Neoplatonic school following Proclus' death in 485. Marinus proved to be a divisive leader. He clashed with \*Theagenes, the school's most important political supporter, and was once forced into exile in

## Marinus the Syrian

\*Epidauros (Damascius, *VI Isidori*, 101C). He was succeeded as head by Isidore, though Isidore left Athens soon after.

Potter, *Empire at Bay*, 265–6.

**Marius Mercator** (fl. 420) Latin Christian from \*Italy or \*Africa who wrote anti-heretical treatises and translated \*Greek texts into \*Latin. In \*Rome he wrote two works against \*Pelagius (418) which he sent to \*Augustine, and in a \*monastery in \*Thrace he compiled condemnations and refutations of the Pelagians (429). He also wrote against \*Theodore of \*Mopsuestia. Only a selection of his writings survives, mostly his own Latin translations and refutations of some of \*Nestorius' Greek \*letters, \*sermons, and treatises, and of the proceedings of part of the \*Council of \*Ephesus. These were collected and circulated about a century after his death, and survive in a single manuscript (Cod. Vat. Pal. 234).

**Marius of Avenches** (?530/1–c.592) Bishop of Avenches, and latterly Lausanne, from 574. Marius wrote an important \*chronicle which continued that of \*Prosper from 455 to 581. Its earlier entries are generally sparse, but offer much useful information, particularly about the \*Burgundian kingdom, and become fuller from the 530s onwards. Marius' metrical \*epitaph, known only from its transcription into a chronicle of the bishops of Lausanne of 1235, discloses that he was from an \*aristocratic \*Autun family, and entered the Church at an early age. As well as exhibiting the more familiar episcopal virtues, he manufactured his own liturgical vessels.

**Marius Victorinus** (c.280–c.363) Renowned \*rhetor at \*Rome of incisive philosophical abilities, who composed theological treatises and biblical commentaries after his \*conversion to Christianity.

Victorinus' own writings contain almost no biographical hints. Born in \*Africa, he taught rhetoric in Rome during the reign of the \*Emperor \*Constantius II, received a statue in the Forum Trajani (\*Jerome, *Chron.* 239e Helm), and became a Christian 'in extreme old age' (Jerome, *Vir. Ill.* 101), which must have occurred before mid-362 since he resigned as a teacher of rhetoric in the wake of \*Julian's legislation against Christian teachers (\*Augustine, *Confessions*, VIII, 5). Long interested in Christianity, his eventual public \*baptism at a church in Rome aroused much popular interest and was cited prominently as a model by Augustine for his own \*conversion (Augustine, *Confessions*, VIII, 2–5).

A group of rhetorical and grammatical treatises probably date from his pre-Christian period. An *Ars Grammatica* in four books bears strong manuscript evidence of being a corrupt compilation of his own work (Keil, 3, 6–31, 12) with that of Aelius Festus Aphthonius

*de metris omnibus* (Keil, 31, 12–173, 32, with explicit attribution at Keil, 173.32), an anonymous text on Horatian metre (Keil, 174, 1–183, 21), and a brief glossary of key terms (Keil, 183, 22–184, 14), the latter two possibly by Victorinus. Extant works on rhetoric include a commentary on Cicero's *On Invention* and a treatise *On Definitions*; the scope and nature of other works, including a commentary on Cicero's *Topica*, an *On Hypothetical Syllogisms*, and a translation of \*Porphyry's *Introduction*, may be discerned to varying degrees from \*Boethius, \*Cassiodorus, and \*Martianus Capella.

Soon after his \*conversion he made an important, if not entirely influential, contribution to the \*Arian controversy with responses to \*letters of a (probably invented) Arian named Candidus, four books *Against Arius*, a short pamphlet *On the Necessity of Accepting the Homoousion*, and three theological hymns. These exhibit a fascinating application of \*Neoplatonic doctrine to the Christian theological debate, in particular in the adoption of the triad Being–Mind–Life and in the articulation of the Trinity in terms of ontological predominance (each person of the Trinity possesses all three elements of the triad while distinctively typifying one of them). While Augustine records that Victorinus had translated many 'books of the Platonists', significant debate remains on the precise relationship between his theology and the thought of \*Plotinus, Porphyry, and the anonymous *Commentary on the Parmenides* (often attributed to Porphyry). Possibly after producing his anti-Arian writings, Victorinus composed commentaries of a rather elementary nature on several epistles of Paul; those on Ephesians, Galatians, and Philippians are extant. His granddaughter's \*epitaph commemorates him (*CIL* VI, 31934). APJ

**Marius Victorinus of Marseilles** (fl. c.435) Claudius Marius Victorinus, teacher of \*rhetoric at \*Marseilles, and author of *Alethia*, a biblical \*epic in three books based on Genesis. The narrative currently ends with the destruction of Sodom and Gomorrah, but may have

originally extended to four books (\*Gennadius, *Vir. Ill.* 61). The poet incorporates a large amount of exegetical material, primarily relating to the literal level of meaning. His poem shows a special interest in the development of the human race and its relation to God, stressing divine generosity, human decline into idolatry, and the redemptive piety of Abraham. MJR

### Marmara, Sea of (Propontis), and Princes' Isles

Enclosed sea connecting the \*Bosporus and the Aegean, containing the group of nine Princes' Isles, lying some 15 km (10 miles) from \*Constantinople. As \*Constantinople grew in the 4th century, using much \*marble from the Marmara island of \*Proconnesus, the northern coastline of the Sea became dotted with summer \*villas, \*monasteries, the shrines of saints, and other small settlements, such as \*Hebdomon, Rhegium, Athyras, and Drypia. \*Procopius criticized the villas for their excessive luxury and noted that they were vulnerable to barbarian raids (*Aed.* IV, 9, 1–13). The area suffered badly in the \*Kutrigur raid of early 559 and again at the hands of the \*Avars in c.590. The Princes' Isles provided a safe country retreat from Constantinople. \*Justin II built a \*palace on Principus, the largest of the group. The islands were also a secure place to detain political prisoners. In 542, \*Hypatius, who had been proclaimed \*emperor during the \*Nika Riot, was executed on Principus (*AnthGraec.* VII, 591), the \*Patriarch Euthymius was exiled there in 565, and \*Heraclius exiled his illegitimate son Athalaric there in c.639 (\*Nicephorus the Patriarch, 72–3). Settlements on the Asiatic shore included \*Chalcedon, \*Rufiniana, \*Hieria, and \*Helenopolis. JPH

**Maron, S., and Maronites** \*Theodoret tells the story of Mar Maron, a 4th/5th-century anchorite, who lived out of doors, 'consecrating to God' a former \*pagan sacred site near \*Cyrus in the \*province of \*Euphratensis and attracting numerous disciples. After Maron's death there was bitter competition to secure his \*relics; the successful \*village built a shrine and held a public \*festival for him (*Religious History*, 16; *BHG* 1172). \*John Chrysostom wrote to a 'priest and monk' called Maron in 404/7 asking for \*prayers (*ep.* 36).

In the 5th and 6th centuries a \*monastery near \*Apamea named after Mar Maron played a leading part in advocating the Christology of the \*Council of Chalcedon. A \*letter of 517 from the archimandrites of \*Apamea complains that Peter, the \*metropolitan bishop, and \*Severus, the \*Miaphysite \*Patriarch of \*Antioch (in office 511–18), had sent \*Isaurians to assault the monks (*ACO* III, 106–10; GT in Suermann, 79–81).

Like many Chalcedonians, the monks of Mar Maron accepted the doctrine of \*Monotheletism promoted by the \*Emperor \*Heraclius as a compromise between Chalcedonian and Miaphysite positions. Monotheletism ascribes to Christ two Natures (human and divine), but only one will and energy. The Sixth Œcumenical \*Council (\*Constantinople, 680–1) condemned Monotheletism, but the Maronites were not present at the council and are not mentioned amongst the Monotheletes. From the 7th century onwards, they developed as a separate Church, whether because they were isolated from the Greek world by being under \*Arab rule or because as Chalcedonians they were distinct from their Miaphysite \*Syriac Orthodox neighbours. Certainly the \*Melkite Theodore Abu Qurra (d. c.820) describes the Maronites as distinct from both Miaphysites and Chalcedonians.

The increasingly independent Maronite community required dedicated church officials, as the Patriarch of Antioch resided in \*Constantinople from 636 onwards, and between 702 and 742 no Patriarch of Antioch was appointed at all. John Maron (d. 707) was appointed the first Maronite patriarch. \*Dionysius of Tel Mahre (d. 845) is the earliest author to describe the Maronites as a separate community with a history going back to the late 6th century and headed in the 8th century by a patriarch, but he does not provide any details. The

Maronites developed as a spiritual and military 'nation', settling in the Lebanese mountains for protection from \*Melkite and Miaphysite attack. Muslim persecutions in the 9th century forced the community to withdraw entirely, and the monastery at Apamea was destroyed in the 10th century (al-\*Mas'udi d. 956). In the Crusader period the Maronites united themselves to the Church of Rome, eschewing Monotheletism but retaining their distinctive \*Syriac \*liturgy. Two features of Maronite history continue to be much debated, namely their early historical origins and their stance in the Christological debates of Late Antiquity. PMS

CTH

**marriage, adultery, divorce, and remarriage, Arab and Islamic** The prevalent form of marriage in the pre-Islamic \*Hijaz seems to have been monogamous, with the bridewealth passing from the husband to the wife's guardian. Alternative forms of marriage were between men and the women they captured following tribal conflict and (less frequently) concubinage with non-Arabs. Divorce was also permitted.

The arrival of \*Islam made some changes to these practices. In the context of the high mortality rate of Muslim men in the Medinan period, the \*Qur'an allowed men to marry up to four free women at a time; a man was also permitted intercourse with his slave or captured women (Q. 4: 3). Marriage to maternal cousins, milk siblings, and polytheists was forbidden.

Temporary marriage (*mut'a*) is also alluded to in the Qur'an (Q. 4: 24) although most Muslims came to argue that this form of marriage was later abolished. Others—predominantly \*Shi'is—maintain that it has always been permissible.

The ability to divorce was retained in the Islamic period but the Qur'an stipulated that the wife retained the bridewealth, not her guardian. Adulterers were punished by flogging according to the Qur'an, followed by restrictions on the offender's choice of future marriage partner; later generations of Muslims argued that this had been overruled and the true punishment was death by stoning (albeit mitigated with almost unachievably high standards of evidence).

By the middle of the 8th century concubinage came to dominate *élite* marriage. While the \*caliphs of the \*Umayyad dynasty were almost all the children of free Arab women, their \*Abbasid successors were almost all born of slave women. MJRo

W. Robertson Smith, *Kinship and Marriage in Early Arabia* (1885).

K. Ali, *Marriage and Slavery in Early Islam* (2010).

**marriage, adultery, divorce, and remarriage, Central Asian** Known through a few remaining contracts, the institution of marriage in \*Central Asia is understood poorly. Based on what we know of marriage customs in the \*Persian Empire in \*Sasanian times, we assume that a type of 'authorized' or *padixshayih* marriage existed at least in \*Bactria and \*Sogdiana. In this type of marriage, the bride was allowed to get married upon obtaining permission from her father or legal guardian/head of the household, and had control over her dowry and the property brought into the marriage. We do not possess information about the next of kin, *khwedodeh*, marriage, as was recommended in the \*Zoroastrian \*law, but can assume that it was at least religiously sanctioned in parts of Central Asia most closely connected to the Zoroastrian traditions, i.e. \*Sogdiana.

Two marriage contracts provide first-hand information. One survives from the 4th century among the Bactrian Documents; another is an early 8th-century Sogdian marriage contract. The most striking feature of the Bactrian contract is the presence of polyandry, where one woman has married several husbands. This is a custom known from \*India and is assumed to have been common in Bactria and other parts of Central Asia. Its significance is most likely that of preservation of property, and it might indicate a type of *sturib* 'guardianship' marriage. Known from Sasanian law, this is when a childless widow was obliged to marry the closest male kin of her deceased husband in order to produce an offspring who would then be designated as the heir of the deceased husband.

The Sogdian contract is a regular contract between a man, an official, and a woman of rank. The most significant part of the contract is its specification of the provisions in case the pair decide to separate, mostly

due to the husband's taking of a second wife or a concubine. Specifying different provisions depending on who initiates the divorce, the document shows that the main concern of the contract was the provision of property rights, and the control of the wife over her original property and what she has acquired during marriage.

**marriage, adultery, divorce, and remarriage, Jewish** Rituals associated with marriage seem to have developed from biblical to rabbinic times and were probably practised in various ways in Late Antiquity. Whereas the \*Bible differentiates between betrothal and marriage and knows of the so-called brideprice (*mohar*), which the husband has to pay to the bride's father, Palestinian rabbinic literature merges the two rituals and replaces the brideprice by the marriage contract (*ketubbah*), which provides a security for the property which the bride brings into the marriage.

\*Rabbis considered it necessary to define marriage and adultery. According to the Mishnah, 'a woman is acquired in three ways ... she is acquired by money, by contract, and by intercourse' (Mishnah Qid. 1: 1). Neither a monetary payment nor a written contract are necessary to validate a rabbinically defined marriage: intercourse with the woman suffices. At the same time, it remains possible to hand over a small and symbolic monetary payment whose value differs in accordance with the 'value' of the bride (e.g. virgins require a higher fee than divorced women). Marriage contracts were probably used amongst the wealthy only to secure the property of the bride's family.

All Jewish marriages were what Roman \*law termed marriages *in manu* in which the woman stood under the legal control of her husband. During the time of marriage her property belonged to her husband who could invest it in his own business. The *ketubbah* stipulated what the wife should receive if the marriage ended with divorce or the husband's death. Women could not initiate divorce in \*Judaism but had to accept the divorce document (*get*) to make the divorce valid. They could not remarry without a *get*. Adultery was seen as a serious offence if committed by women. The Bible already recommends the so-called *sotah* ordeal for women suspected of adultery: she was forced to

drink bitter water to determine whether she was guilty or not. CH

J. Hauptman, *Rereading the Rabbis: A Woman's Voice* (1998).

**marriage, adultery, divorce, and remarriage, Persian** In the \*Sasanian period, marriage centred around the need to produce sons. In ancient Iranian religion, it was most meritorious to marry within the immediate family: father–daughter, mother–son, or brother–sister. Many Sasanian kings, such as \*Shapur I, married in this manner and the \*Zoroastrian clergy, such as \*Kerdir, actively promoted such consanguineous marriages (MP *xwēdōdah*). It was justified in religious terms as keeping family lines pure and preventing disorder, mixture and disorder being the works of \*Ahriman. It also kept the family's property from being split up.

A man's principal wife was the one that had legal and religious precedence. She was under the husband's guardianship; her children were his heirs and she would be the man's wife in the afterlife. To ensure \*succession if there was no son when the man died, a 'proxy' (*stūr*) was needed, who was often female. The *stūr* could be the deceased's wife, his sister, the eldest daughter (*ayōgēn*), or a male member of the extended family. If no one else was available, someone could be designated the *stūr*, i.e. designated by the man or 'appointed' by some local authority. If a man did not have enough money to pay for a *stūr*, he could set aside part of his property. A sister's marriage as a principal wife would be annulled automatically when she became an *ayōgēn*, while a daughter's marriage 'in authority,' which had been approved by the father, would have to have a time limit specified in case the father and mother died without issue, after which she would be considered the father's principal wife.

Temporary marriages were considered a solution to obtain a son, both for the sonless man and, after his death, for a female proxy to restart his line. If his principal wife failed to produce a son, the husband could take a secondary wife (*chagar*) to produce a son, who would legally be the son of the temporary husband not her own husband. In order to produce a son, the female proxy (*čagar*) would conclude an auxiliary (usually temporary) marriage (*čagar*) with another man, while remaining the principal wife of the departed. In incestuous marriages, a daughter or sister acting as proxy also received the (formal) legal status of wife 'in authority' of the deceased. The children from the *čagar* marriage all belonged legally to the original husband.

Divorce could take place with mutual consent, but a man could also send his principal wife away on grounds of sinful behaviour, including adultery and knowingly having intercourse with her husband during her

- menstrual period. If he dismissed her against her will, however, he would be guilty of transgression. POS *Enclran* VII/4–5 s.v. divorce. ii. In the Parthian and Sasanian Periods, 443–51 (M. Shaki).

## marriage, adultery, divorce, and remarriage, Roman, Germanic barbarian, and post-Roman

The basic principles of Roman marriage changed little during Late Antiquity. The influence of Christian teaching on legislation and actual behaviour has in the past been exaggerated, and still remains a controversial issue. While there was limited influence on divorce and remarriage, there was negligible effect on the forms of marriage and on extramarital sexual relations. The dissolution of imperial power and the Germanic immigration brought about more sweeping changes.

### Marriage

Roman marriage was free of any forms, depending only on the spouses' intention to be married. It was sometimes difficult to distinguish a wife from a \*concubine. In the 5th and 6th centuries, the lawgivers attempted to introduce some compulsory signs, such as public weddings, \*dowry, or written \*contract. This was imperfectly realized both in the East and West and mainly applied to the upper classes.

For Roman girls, the minimum legal age of marriage was 12. Most women in the Mediterranean area married in their late teens, while men usually delayed marriage up to their late twenties. The consent of both parties and their fathers was necessary, although the consent of the young bride could often be tacitly assumed. A first marriage was not based on romantic love but on the parents' prudent consideration. Friends and relatives frequently assisted in the West, whereas

professional matchmakers were preferred in the East. In a second marriage, the spouses' own affections played a far greater role.

The \*law placed certain barriers to marriage. Slaves could not contract legal matrimony, although informal unions between free and slave existed. In Late Antiquity, marriage was forbidden e.g. between the following persons: citizens and barbarians; \*Jews and Christians (a ban endorsed by the leaders of both religions); a guardian and his \*ward; a woman and her own freedman; dignitaries and women of very low status (including freedwomen, but not poor freeborn women, unless they were occupied in a shameful profession). The last prohibition was removed by \*Justinian I. Unions between cousins were forbidden in the late 4th century, but the ban was soon lifted in the Eastern Empire, where close-kin marriage remained common. The original marital customs of the Germanic peoples are poorly known. Polygamy existed at least in the \*Frankish royal families up to the 7th century. The Church extended incest prohibitions to a wider circle of relatives, but they were adopted in secular legislation only in the 8th century.

Pagan and Christian authors concurred that male predominance was natural in a happy marriage. However, as Roman marriage was based on the separation of property between the spouses, the wife was not subjected to her husband's legal power. Although imperial law continued to uphold this principle, the idea of a common family property appears by the 6th century in both Eastern and Western practice. This led to a decrease of wifely independence in post-Roman societies. It had always been foreign to Germanic marriage.

### Adultery

The penalties for marital infidelity are not consistently defined in the extant Roman sources. Although \*exile with a partial confiscation of property seems to have been the norm in the 3rd century, even death sentences were passed. The practice may have varied according to \*courts and social classes, humble people usually receiving more severe sentences. The death penalty was probably regularized by \*Constantine I in the early 4th century, but it was not universally applied. Later laws sanctioned various punishments, which ranged from burning or drowning to \*exile with a total confiscation of property. Literary sources describing actual sentences reflect both this uncertainty and the government's occasional campaigns to pursue offenders. People frequently did not denounce the culprits to the authorities, to avoid the most extreme consequences. This was also recommended by many Christian authors. According to an Eastern law of 556, the male adulterer had to be executed, while the woman was shut up in a \*monastery unless her husband forgave her.

Occasionally an enraged husband wanted to revenge himself privately on his adulterous wife. In Roman law, he was not permitted to kill her, even if she was caught in the act. This rule was upheld by \*Justinian I in the East, whereas in the West both the post-Roman codes and Germanic laws accepted private violence as the normal reaction. Frankish law attempted to avoid blood \*feuds by offering statutory fines as an alternative.

Only the infidelity of the wife counted as criminal adultery. Although the Church strongly censured male sexual freedom, the infidelity of husbands was never penalized. Despite slight embarrassment about the double standard, \*emperors and kings always allowed sex with \*prostitutes and slave girls, and the practice was so prevalent that ecclesiastical penalties were impossible to apply.

### Divorce and remarriage

Until the early 4th century, both men and women could divorce almost freely, with varying financial consequences for the culpable party. In 331 Constantine imposed severe penalties on unilateral divorce: exile for the woman or celibacy for the man (*CTh* III, 16, 1). Later legislation vacillated. \*Julian rescinded Constantine's law and restored free divorced. The liberal tradition continued in the East until Justinian, who again imposed celibacy on the divorced of both sexes. Consensual divorce remained permissible except in 542–66, and Egyptian \*papyri attest that in practice divorce was common. In the West, a ban on unilateral divorce was reintroduced in 421 (*CTh* III, 16, 2), and was maintained in the post-Roman codes of the early 6th century. Christian teaching was extremely hostile to divorce, but it cannot alone account for the legislation, because it would entail assuming that the more tolerant East was less Christian.

The original Germanic attitudes on divorce are partly conjectural. Divorce by women seems to have been more strongly censured (in extreme cases punished by death), while men could escape with lighter consequences. Divorce was not shunned by the Frankish and \*Anglo-Saxon \*aristocracies in their political marriages. Consensual divorce remained common until the Carolingian period, when the Church and state finally united to regulate marriage.

The population policy of the Early Empire had imposed financial disadvantages for people who did not remarry after divorce or \*widowhood. In 320 Constantine I abolished these unpopular rules (*CTh* VIII, 16, 1). The Church sought to discourage remarriage but never condemned it totally. It remained an approved and common solution to the social problem of widowhood. Secular uneasiness about remarriage was connected with stepparents and the financial protection of

children. From the late 4th century remarried parents had to preserve property received from the deceased spouse for the benefit of their common descendants. Later the same rules were extended both in the East and West to cover widows and widowers who did not remarry.

**Marseilles** (*civitas Massiliensium*: dép. Bouches-du-Rhône, France) A port \*city in the \*province of \*Viennensis which had forfeited its former regional dominance under Roman rule. Its Late Antique revival is initially signalled in a Christian context in the pretensions of \*bishops such as \*Proculus to an anomalous \*metropolitan status, though this quarrel was soon settled in favour of \*Arles.

However the arrival of \*John Cassian c.416 combined with that of such Gallic refugees as \*Prosper, \*Salvian, and \*Paulinus of \*Pella to thrust the \*city to the forefront of the emergent western ascetic movement, and generated the responses to \*Augustine's views on grace and free will that have been misleadingly categorized as semi-\*Pelagianism. The sites of Cassian's two \*monasteries remain elusive, but the dynamism of the wider Christian community is reflected materially in the

remains of a substantial cathedral complex, two funerary \*basilicas, and some fine decorated \*sarcophagi.

This golden age for the Church of Marseilles did not outlast the 5th century, but the disintegration of the Western Empire did see the port gradually regain the pivotal role in interregional exchange formerly played by the original Greek colony. Although Marseilles was a centre for the production of \*glass and the regional DSP (\**dérivées des sigillées paléochrétiennes*) fine \*pottery, its primary commercial function was as a gateway for the distribution of Mediterranean goods into \*Gaul by way of the Rhône corridor. Anecdotal indications in 6th- and 7th-century texts to the port's traffic in commodities such as \*olive oil, \*papyrus, and slaves have now been amplified by abundant ceramic evidence of imports from \*Africa and the East.

This economic significance is reflected in the political importance of Marseilles under the Frankish kings, whose divisions of power took particular account of the city. By the 7th century Marseilles had supplanted \*Arles as the leading centre in \*Provence, and it became a staging-post in the careers of courtiers such as \*Desiderius, \*Eligius, and \*Bonitus. Specific mechanisms were developed to exploit its trade, including distinctive \*gold \*coinages and fiscally controlled warehouses at which northern \*monasteries enjoyed privileges. But when the Mediterranean interregional exchange-system underwent its final crisis c.700, the supply of imports to Marseilles dried up, and the port returned to obscurity. STL

**Marthanes (Malthanes)** (fl. 549–60) Noble and general from \*Cilicia. In the late 540s \*Justinian I charged him, probably as \*Dux, with suppressing violence in his home \*province. According to \*Procopius (*Anecd.* 29, 26–38), he took this as a licence to despoil his people, while offering part of the proceeds to the \*emperor. He violently suppressed opposition from the Blue \*faction and avoided punishment through his contacts in \*Constantinople, in particular his father-in-law Leo. While visiting Constantinople, he escaped from a violent mob of Blues. \*Inscriptions attest his promotion to \*Magister Militum in 559/60. The dating of the events in Cilicia affects the dating of Procopius, *Anecdota*. GGB

**Martianus Capella (Martianus Minneius Felix Capella)** (5th or early 6th cent.) North \*African author of *The Wedding of Mercury and Philology*, a

nine-book encyclopedia in a mixture of prose and verse. Its coda (IX, 999) identifies the author as a native of \*Carthage and hints at a legal career (cf. also VI, 577). Martianus' date is controversial. He is later than \*Servius, whose work he used in a recently discovered metrical treatise. His major work was corrected at \*Rome by one Securus Melior Felix in either 498 or 534. The traditional dating between 410 and 439 rests on vague allusions to the contemporary state of Rome (VI, 637) and Carthage (VI, 669). A date in the early \*Vandal period is at least as plausible. The work's traditional title goes back to a citation by \*Fulgentius the Mythographer (*Expositio Sermonum Antiquorum*, 45); the metrical treatise calls it simply *Philologia*.

Generically the work is a *satura* ('hodge-podge'); its prosimetrical form is paralleled in \*Boethius, Fulgentius, and \*Ennodius. It opens with a \*hymn to Hymenaeus, followed by a brief \*dialogue between Martianus and his son. The inspiration for the work is ascribed to the allegorical figure of Satura herself, who will occasionally intervene to correct or rebuke the author (notably at VI, 575–9; VIII, 806–9, and IX, 999). The first two books contain an elaborate mythological narrative combining motifs from Menippean satire with \*Neoplatonic \*cosmology. Book I describes Mercury's selection of Philology as a bride and the ratification of his choice by Jupiter at an assembly of the Gods. Book II details Philology's preparations for the wedding, her immortalization, and her journey to the Milky Way. At the wedding feast, Mercury presents his bride with seven handmaidens: \*Grammar, Dialectic, \*Rhetoric, \*Geometry (really \*geography), Arithmetic, \*Astronomy, and \*Music. The remaining seven books consist of lectures by these ladies, each depicted with suitable mannerisms, \*dress, and accoutrements. Proposed presentations by Architecture and \*Medicine are put off to a later occasion. The implied total of nine arts may look back to Varro's lost *Disciplinae*, but Martianus' abbreviated canon of seven proved decisive for medieval readers.

The work's style reflects its 'mixed' nature. The encyclopedic portions are pedestrian and rely heavily on earlier authors. Direct or indirect sources include Cicero, the 3rd-century \**grammaticus* Aquila Romanus, and \*Marius Victorinus (Book V), \*Pliny and Solinus (Book VI), Nicomachus of Gerasa (Book VII), and \*Aristides Quintilianus (Book IX). The frame narrative is highly ornate, with inset poems in a dazzling variety of metres and a baroque and archaizing prose style that owes much to Apuleius. The work as a whole has been viewed as a serio-comic educational aid, a crypto-pagan manifesto, and everything in between. Its vast medieval influence is evidenced by over 240 surviving manuscripts, a rich tradition of medieval commentary, and an Old High German translation by Notker Labeo. GH

**Martin, S.** (c.316–397) \*Bishop of \*Tours 371–97. Biographical details are known from \*Sulpicius Severus' *Life of S. Martin* (composed 394–7) and *Dialogues* (c.405); the former narrates Martin's \*conversion, career, and \*miracles; the latter compares his deeds to those of Eastern monks. Martin was born into a military family in \*Pannonia and entered the \*army at the age of 15. He was baptized c.336 after offering half of his cloak to a cold beggar and subsequently having a \*dream in which Christ appeared wearing the same garment. Despite Sulpicius' claim that Martin almost immediately left the army and became a monk, he waited over twenty years before becoming a disciple of \*Hilary of \*Poitiers, who trained him in \*asceticism. Following Hilary's lead, Martin became an anti-\*Arian crusader and travelled to \*Italy, where he became a hermit at \*Milan in the 350s. Soon expelled by the Arian bishop \*Auxentius, he lived on the island of Gallinaria in Liguria with a presbyter friend as the first of a succession of hermits. With the restoration of Hilary to his see (360/1), Martin returned to \*Gaul and became a hermit at \*Ligugé, near Poitiers. Attracting both disciples and the attention of local clergy, he was elected Bishop of Tours in 371. His country retreat at \*Marmoutier soon became a community of monks dedicated to the copying of manuscripts and to contemplation. Martin was a vigorous campaigner against \*paganism, destroying shrines,

building churches, and performing miracles to demonstrate the power of the Christian faith. Noted for his asceticism and insouciance about his own appearance or comfort (as well as for his avoidance of women), Martin's way of life was a reproach to his fellow bishops and to secular powers.

Martin's example inspired monastic foundations throughout western Gaul, though the lack of formal organization and reliance on the leadership of charismatic figures meant that these \*monasteries tended to be short-lived. \*John Cassian criticized the state of \*monasticism in Gaul c.415, disparaging its alleged emphasis on miraculous powers and ostentatious asceticism rather than proven disciplines of spiritual perfection, and condemning liturgical practices for their lack of order and reverence. These critiques are generally understood to be directed at Martin's monasticism. Martin's ultimate legacy lay less in the monasticism he inspired than in the burgeoning cult around the saint himself, which had reached \*Canterbury before the Romans left and was later fostered by \*Gregory of Tours. Feast day: 11 November.

**Martin I** As pope (649–55), Martin resisted the doctrine of Monotheletism (one will in Christ), promulgated by the \*Emperor \*Heraclius from 638 in the \**Ecthesis*. Martin was born in Todi (Umbria) and served

as papal Apocrisiarius in \*Constantinople, where he opposed the \**Typos* issued by the \*Emperor \*Constans II in 648, which enjoined silence on the question of the number of \*wills and operations in Christ. When he became pope in July 649, apparently without seeking imperial approval for his election, he continued his predecessor Theodore's preparations for the \*Lateran Council with the cooperation of \*Maximus Confessor. As a result of this council's condemnation of the *Ecthesis* and *Typos*, Martin was arrested on 17 June 653 by Theodore Calliopas, \*Exarch of \*Ravenna, and sent by boat via Naxos to Constantinople. Arriving on 17 September, he was tried before the imperial \*court in December and found guilty of conspiracy against Constans. He was accused of cooperating with the rebel Exarch of Ravenna, \*Olympius. During this trial Martin was not permitted to raise any discussion on the *Typos*. After a lengthy period of incarceration, he was put on a boat bound for \*the Chersonese, in the \*Crimean region of the Black Sea. Although he did not know it, he had already been replaced by Pope Eugenius in August 654. Martin died in \*exile in \*Cherson on 16 September 655. \*Letters survive, as well as an account in the \**Liber Pontificalis* (76), a *Life* in \*Greek, and an account of his exile (*Narrationes de Exilio Sancti Papae Martini*). **Martin of Braga** (c.520–c.579) \*Bishop of \*Braga (Bracara Augusta), \*Spain. Born in the Roman \*province of \*Pannonia, Martin lived briefly as a monk in the \*Holy Land, and then ventured westward eventually arriving in \*Gallaecia—around the year 550—where he became the leading churchman of the province. He was instrumental in the permanent \*conversion of the \*Suebes, formerly \*Homoeans (\*'Arians') and followers of \*Priscillian. He maintained close relations with the Suebe rulers spanning 550 to 579. A highlight of his illustrious ministry was his participation in the two \*Councils of Braga held in 561 and 572. He communicated a collection of canons from the eastern councils, the *Capitula Martini* to the council of 572. \*Isidore of \*Seville (*Vir. Ill.* 35) records that Martin wrote numerous works and \*letters most of which do not survive. Of the extant, the most widely read was the *Formula Vitae Honestae*, dedicated to King \*Miro and based loosely on a lost work of Seneca on the four cardinal virtues; it circulated well into the Renaissance. His \*sermon against \*paganism *De Correctione Rusticorum* was adapted and used in \*Anglo-Saxon England and medieval Iceland. His \**Sayings of the Egyptian Fathers* and *Questions and Answers of the Greek Fathers*, translated from \*Greek to \*Latin with assistance from \*Paschasius of Dumium, had a decisive impact on Galician monasticism. **Martinus** General under \*Justinian I, popular with the troops, he held important commands in \*Africa (533–6), \*Italy (536–40), and then in the East (\*Agathias, *Histories*, II, 18, 8). He was \*Magister Militum by 536, was at \*Dara in 540 when \*Khosrow

I broke the \*Everlasting Peace, and was defeated at \*Anglon in 543. In 551 he mishandled relations with \*Gobazes II, King of \*Lazica, so badly that Gobazes' territory of \*Suania defected to the Persians. In 554 Gobazes complained to Justinian about Martinus' incompetence. The following year Martinus murdered Gobazes. After an inquiry, Justinian dismissed Martinus and banned him from further command (Agathias, *Histories*, IV, 21, 1–4). PNB  
PLRE III, Martinus 2.

**martyr cult** Veneration of the \*martyrs was a central feature of Late Antique Christianity. It was practised even before the \*persecutions had come to an end. \*Cyprian's \*letters make clear the grace and authority bestowed upon martyrs even while they were in \*prison awaiting trial and execution, as well as after their witness had been perfected in death. \*Martyr passions record the anniversary of martyrs' execution, their *natalis* (literally 'birthday'); Cyprian, writing to the \*Carthage clergy during the Decian \*Persecution, asked them to provide accurate records of the dates of death for both martyrs and Christians who died in \*prison (*ep.* 12, 2, 1 of April/May 250). Passions also provide evidence of the veneration of \*relics; when Cyprian of Carthage was executed his admirers ran forward to dip pieces of cloth in his blood, before he was taken off to be buried. Once the threat of actual persecution and suffering had faded away during the 4th century, devotion to the martyrs expanded exponentially, so that \*Basil of \*Caesarea could write almost wistfully of the days when 'the persecutors were in evidence, but so were the persecuted... The blood of the martyrs, watering the churches, nourished many more champions of true religion' (*ep.* 164, 1).

### Communal cult of the martyrs

Early calendars, such as the \**Codex-calendar of 354* and the lists known as \*martyrologies, provide fundamental evidence for the initial growth of liturgical martyr cult, though by themselves they provide only a partial sample of the martyrs honoured. Official liturgical celebration of the martyr cult can be reconstructed from a range of sources, though it was clearly subject to considerable local variation.

The celebrations began with a night-time vigil, which preceded the feast day itself. Evocative descriptions of these vigils can be found in the writings of several church fathers. These sometimes appear as intensely spiritual occasions, where \*miracles could and did take place, as \*Gregory of \*Nyssa describes (e.g. *Second Encomium on the \*Forty Martyrs*, 9 = PG 46, 784D–785B). There are also disapproving accounts of more worldly behaviour. \*Augustine attacked

misbehaviour at vigils, notably drinking, singing, and dancing (e.g. *Sermon Denis*, 13, 4) as well as describing his own youthful indiscretions at martyr vigils in Carthage, which he had used as an opportunity for romantic liaisons (*Sermon Mainz*, 5, 5). Such disapproving commentary continued into the early Middle Ages (e.g. \*Caesarius of \*Arles, *Sermon* 55, 2).

On the feast day itself, a service was held, during which, in many areas of the Late Antique world, the passion of the martyr was read aloud, as prescribed by the \*Council of \*Hippo in 393 (*Breviarium Hipponense* 393, 36; cf. *Registri Ecclesiae Carthaginensis Excerpta*, 46). After this reading, the \*sermon was delivered, often referring to the martyr passion; numerous sermons preached on such occasions survive, from both eastern preachers (such as the \*Cappadocian fathers) and western (e.g. Augustine). During the Mass which followed, after the catechumens had left the church, the names of the martyrs were recollected in the \*Eucharistic \*prayers. The \*festivals of the martyrs could last for several days, and attract pilgrims from far and wide; the writings of the Cappadocian fathers clearly demonstrate their importance in the local calendar.

Outside the annual festivals the faithful visited the tombs and shrines of the martyrs to pray, in particular for healing. This was not a purely popular phenomenon for which the impetus came from the faithful. Following the work of P. Brown, the involvement of the church hierarchy, in particular that of bishops, has generally been recognized to be of great importance. The exchange of \*relics across ecclesiastical networks and the literary publicizing of the miracles of local martyrs were important elements in promoting the cults of martyrs.

### Personal cult of the martyrs

Some lay practices related to the cult of the martyrs were disapproved by the clergy, even apart from the misbehaviour at vigils noted above. Clerics worried about the privatization of relic cult (particularly among women) and about the veneration of unauthorized (including heretical) martyrs at unofficial shrines. The cult of the martyrs had grown out of, and alongside, the traditional cult of the dead, the \**refrigerium*. Many of these practices and traditions caused clerical unease not least because of a suspicion that they were tainted with residual \*paganism; Augustine's mother S. Monnica was turned back from taking \*wine and food to the martyrs in \*Milan, in accordance with a North African custom that was forbidden by \*Ambrose (Augustine, *Confessions*, VI, 2, 2). The very popularity of the martyrs amongst the faithful could lead to concern amongst the clergy, who were at times anxious to stress that martyrs were only human, and not themselves gods. Broader

criticism of martyr cult as superstitious, like that of \*Jerome in his *Contra Vigilantium*, did exist within the Church, and also came from outside, most famously as uttered by the \*Emperor Julian (*Against the Galileans*, 335B–340A).

### Archaeology of martyr cult

The archaeology of martyr cult does much to supplement the picture given by texts, by providing a picture of the setting of the ecclesiastical cult of the martyrs across a number of locations. These are highly various. Martyr cult formed part of the regular round of the liturgy in cathedrals and local churches; it also found a place in the \*martyria dedicated to individual martyrs and groups of martyrs as well as in funerary \*basilicas and cemeteries, both above and below ground, smaller shrines, and memorials. Archaeological investigation reveals the nature and chronology of the development of martyr cult and its acquisition of commemorative monuments. It shows also the importance of burial *ad sanctos* (burial in close proximity to the saints) for Late Antique Christians. Study of \*inscriptions associated with the martyrs also aids understanding of unofficial cult, for instance in the form of the many North African inscriptions and monuments erected to martyrs who are otherwise unknown. Visual depictions of martyrs developed much more slowly than texts but by the later 4th and 5th centuries they can be found in various media, including small objects (e.g. medallions, \*glass, \*pilgrimage flasks, especially those commemorating S. \*Menas) and larger-scale depictions in churches, shrines, and \*catacombs.

**martyrdom, Islamic (Ar. *shahada*)** In early Islam martyrdom varied with context but became closely associated with battle (although some tied it to the state of soul at death rather than the manner of death). The 'biography' of the prophet by Ibn Ishaq (d. 767) includes lists of battle martyrs. The term *shahada*, also denoting devotion apart from suffering, need not accompany description of a believer's death. In \*Mecca, before the \*Hijra (Emigration) to \*Medina, Sumayya, mother of 'Ammar b. Yasir, was killed for

refusing to abandon belief. Once in Medina, the prophet encouraged battle martyrdom with the promise of paradise as with 'Umayr b. al-Humam at the Battle of \*Badr. The martyr is not sacrificial victim but battle hero whose readiness to die for God garners communal honour and heavenly reward.

**martyrium** A commemorative structure built for a Christian saint, generally sheltering his or her tomb and \*relics. Martyria have attracted persistent debate among historians of early Christian architecture. The influential work of André Grabar distinguished the form of classic martyria in the East from those in the West. In the East, a centralized plan dominated, usually circular, polygonal, or cruciform, originating in Greek and Hellenistic *heroa*. In the West, A. Grabar argued, the \*basilica form prevailed. Subsequent research, however, has cast doubt on the possibility of identifying the martyrium as a single architectural form, with a clear linear development. The earliest known martyrium is generally thought to have been built at \*Salona in \*Dalmatia, and its excavation has been most illuminating. The Church of the \*Holy Apostles in \*Constantinople, a centrally planned building, featuring twelve 'columns', representing the apostles, alongside the \*Emperor Constantine I himself, was greatly influential in Late Antiquity. There are few surviving examples of ancient martyria, one exception being that of S. Philip in \*Hierapolis in \*Anatolia, built at the end of the 4th century. This domed \*octagonal structure was decorated with \*mosaics and \*marble, and featured a large enclosed ambulatory and accommodation for those who came there on \*pilgrimage.

**martyrologies** Catalogues of the names of saints, not only of \*martyrs, according to the day and month on which the anniversaries of their deaths were celebrated.

A calendar records the genuine liturgical celebrations actually observed by a definite group or place, normally listing one saint per day, but not for every day. A martyrology constitutes an artificial collection of names from a variety of sources, often listing several names per day for every day of the year. Martyrologies developed from calendars, and they originally included

similarly minimal information concerning each saint: personal name, place of execution, profession.

The starting points for martyrologies vary. The oldest surviving martyrology is the \*Syriac *Martyrology of 411*, taking the feast of the first martyr S. Stephen (December 26th) as its starting point. The *Martyrology of Carthage*, dated 505/35, starts with the first feast after Easter.

Writing probably in 627/8, the author of the *Martyrologium Hieronymianum* drew upon a large variety of texts, including calendars from Auxerre and \*Aquilaia, lists of martyrs and \*bishops from \*Rome, a version of the *Martyrology of Carthage*, and a translation of the Syriac *Martyrology*, to create the first universal martyrology listing multiple saints for every day, taking his starting point from the birth of Christ on 25 December.

Writing probably in 725/31, \*Bede adapted the *Martyrologium Hieronymianum* by deleting most of the names, but adding narrative information derived from the relevant hagiographical texts in the case of the names retained, to produce the first so-called historical martyrology, taking 1 January as his starting point, while leaving some days empty. This process reached its peak in the 9th century when Florus of Lyons expanded Bede's text, Florus was revised by Ado of Vienne, and Ado was revised in turn by Usuard of Saint-Germain-des-Prés. Each of these compilers supplemented his predecessor's work from a large variety of other sources.

H. Quentin, *Les Martyrologes historiques du Moyen Âge* (² 1908).

J. Dubois, *Les Martyrologes du Moyen Âge latin* (1978).

***Martyrologium Hieronymianum (Martyrology of Jerome)*** Pseudonymous \*Latin martyrology attributed to \*Jerome. It lists multiple \*martyrs and \*holy men from throughout the early Christian world for every day starting on 25 December. The four earliest surviving manuscripts, all dating to the 8th century, derive from a Gallic text probably composed at \*Luxeuil in \*Burgundy in 627/8, possibly by the monk Agrestius as a propaganda text for use at the \*Council of \*Mâcon, using a wide variety of sources. A fictitious letter from \*bishops \*Chromatius of \*Aquilaia and \*Heliodorus of Altinum to Jerome, and his reply to them, serve as a preface to the martyrology proper.

F. Lifshitz, *The Name of the Saint: The Martyrology of Jerome and Access to the Sacred in Francia, 627–827* (2006).

***Martyrology of 411, Syriac*** The oldest Eastern Christian \*martyrology. Although it survives in \*Syriac,

its affinities are not with later eastern martyrologies but with the later, \*Latin *Martyrologium Hieronymianum*.

The sole manuscript was written at \*Edessa in November 411, taken from Baghdad to \*Deir al-Suryani in \*Egypt in 931, and from there to London in the mid-19th century (BL Add. 12150). The Syriac is a \*translation from \*Greek. The most recent saints mentioned date from the reign of \*Julian, but their names may have been inserted later than the original composition of the text.

The list of 'martyrs of the West', arranged by day and month of their deaths, begins with S. Stephen on 26 December and ends on 24 November with \*Peter of \*Alexandria. The \*cities most frequently mentioned are \*Nicomedia, \*Antioch, and \*Alexandria. There follow names of 'martyrs of the East', that is to say of saints who suffered in the persecution of \*Christians in the \*Persian Empire initiated by \*Shapur II, listed by their order in the Church rather than by date. A fragment of a leaf listing further Persian martyrs was recognized at Deir al-Suryani in 2005.

***Martyropolis*** (Syr. Maipherqat, mod. Turkish Silvan, formerly Farqin and Mayyafariqin) Roman \*frontier \*city of Sophanene, one of the \*Transtigritanae Regiones. It was founded in the late 4th or early 5th century by the \*bishop and diplomat \*Marutha, who brought back \*relics of \*martyrs from the \*Persian Empire for this purpose. The city overlooks a tributary of the Nymphius River (mod. Batman Su), very close to

the Persian frontier district of \*Arzanene; it was therefore the frequent target of Persian attacks. Surrendered to the Persians by the local satrap Theodore in autumn 502, it was soon recovered and its \*city gates and walls were strengthened by \*Justinian I, who also installed a \*Dux in the city and incorporated it into the new \*province of \*Armenia Quarta. It resisted a siege in 531 but in 589 was betrayed to the Persians by a disgruntled Roman officer. \*Khosrow II returned it to Roman control in late 590 or 591, an event commemorated by an \*inscription on the north wall, now lost but recorded by C. F. Lehmann-Haupt. Parts of the city walls which survive confirm \*Procopius' description (*Aed.* III, 2) of the work carried out by Justinian. Gertrude Bell in 1911 recorded two substantial churches of which one no longer survives; parts of the west wall of another were recorded in 1982 built into a modern house. GBG

**martyr passions, Armenian** \*Agat'angelos's story of the \*conversion of \*Armenia combines historical narrative with hagiographic stories of martyrs' deaths. S. \*Gregory the Illuminator (Grigor Lusarovits', d. c.328) is all but martyred: he is left to die, and only after fifteen years does he rise from the deep pit to convert the afflicted king and his \*court. The *Passion* of Ss. \*Gayane and Rhipsime (Gaiane and Rhipsime) forms part of Agat'angelos's *History of the Armenians*. Gregory the Illuminator's son and successor \*Aristakes suffered martyrdom, as did his grandson Grigoris.

A legendary tale introduces Thaddeüs as the apostle of Armenia, where he is martyred along with Sandukht (Sanduxt), daughter of King Sanatruk of Armenia; a similar legend leads S. Bartholomew to martyrdom in Armenia. The story told by \*Elishe (Elišē)'s *History of Vardan* (end of the 5th cent.) of religious freedom wrested from the Persians who were attempting to reimpose \*Zoroastrianism follows the pattern of the story of the Maccabees, with the Armenians modelled on the solitary paradigm of the \*Jews. The martyrdom of the Armenian \*Shushanik (Šušanik), whose \*Georgian husband did embrace Zoroastrianism, is preserved in Armenian and Georgian versions (*BHO* 1107–8).

**martyr passions, Egypt** Most of the \*Coptic manuscripts transmitting passions of martyrs who perished in the persecutions in the centuries before \*Constantine I date from after the \*Arab conquest. Noteworthy exceptions are the short passion of \*Stephanos of Lenaïos from the 4th century, or the beginning of the Coptic passion of \*Phileas of \*Thmuis from the 6th.

Most have come a long way from the \*reports of proceedings produced by a *commentariensis* present at the \*court hearing and later allegedly collected together by pious figures like \*Julius of Aqfahs. The passion of Stephanos of Lenaïos seems very closely related to such official documents, while other passions, such as those of \*Colluthus I, Phileas, or Psote, also give the

impression of resulting ultimately from copies of court proceedings.

It has been generally assumed that Coptic martyr passions owe their existence to \*Greek originals (Phileas of Thmuis) and that only the passions written after the Arab conquest are likely to have been composed originally in \*Coptic. This view is supported by the many Coptic martyr passions written in an 'epic' manner, enhancing the negative image of the persecutor as well as the saintliness of the martyr by adding numerous cruel tortures to which the martyrs respond by citing extensively from the \*Bible. These trials go on for several days, weeks, sometimes months, or even years with the martyrs being put in prison to die from their wounds, but miraculously always emerging entirely healthy. This phenomenon of physical indestructibility has been interpreted as an Egyptian feature referred to as the 'Koptischer Konsens'.

**martyr passions, Latin and Greek** The trauma of the \*persecutions was such that Christians were still writing stories about the sufferings of the \*martyrs a thousand years later. Such treatments as the *Golden Legend* of Jacobus de Voragine (1228–98) are useful to the historian only as a record of the spirituality of their imaginative medieval inventors. The elaboration of incident began early, as did the disappearance of accurate delineation of the martyrs' spiritual intentions. In his eyewitness account of the \*torture of S. Romanus of \*Antioch in 302/3 \*Eusebius observes that the saint continued to 'glory boldly in the faith' even after his tongue had been cut out (*MartPal* S&L 2, 3–4); only 100 years later the Christian poet \*Prudentius gives S. Romanus more than 130 lines of verse to utter his witness (*Peristephanon*, X, 895–1100).

The existence of so much fiction has made the sifting of \*saints' lives and martyr passions, perhaps surprisingly, an exceedingly rigorous branch of historiographical study over the centuries since the Pères Bollandistes published the first volume of the monumental *Acta Sanctorum* in 1643. The number of martyr passions which can be affirmed as records contemporary with the events and attitudes they purport to describe now

stands at about two dozen. They are of various literary genres. There are \*letters from one church to another, as in the *Passion* of S. Polycarp and the Martyrs of \*Lyons. There are more or less modified court records such as the *Passion* of the Scillitan Martyrs, the *Acta Proconsularia* of S. \*Cyprian of \*Carthage, and from the Great Persecution, all or parts of the *Passions* of S. \*Euplus of Catania, of Ss. Agape, Irene, and Chione of \*Thessalonica, of Ss. \*Crispina of \*Theveste, \*Stephen of Lenaios, and \*Gallionius and his companions, and the Bodmer and Chester Beatty \*papyrus copies of the *Passion* of S. \*Phileas of Thmuis. What all these texts (except the *Life of S. Cyprian* attributed to Pontius) have in common is that they record only the martyrs' trial, torture, and death, events which will have formed the final act of what must have been a protracted drama. The most harrowing account to survive is certainly the memoir of the execution of his friends, his housemates, and his beloved teacher \*Pamphilus by Eusebius in his *Martyrs of Palestine*.

There is of course authentic information to be gleaned from passions which were written after the persecutions were over and also from the dated lists known as \*martyrologies. Sometimes such information can be cross-checked. \*Lactantius and Eusebius both record the execution of the Christian who tore down the imperial \*edict inaugurating the Great Persecution on 23 February 303 and was 'cooked according to law' (*legitime coctus*: *Mort.* 13, 2–3; cf. *HE* VIII, 5); by comparing the dates with the Syriac \**Martyrology of 411* it may be concluded that his name was Euetius. However the information that can be ascertained in this way is generally confined to dates and names; it imparts nothing about attitudes and intentions. The same is true of later passions which can be shown to be well informed about local geography, such as those of S. \*Alban and S. \*Theodotus of Ancyra (\*Ankara): geography is about maps, history is about chaps; it may be that the compilers of such passions were more familiar with the layout of their martyr's later shrine than with the horrific facts of his death. It is fortunate that there are contemporary sources for the persecution of the Christians apart from the accounts of individual martyrdoms.

During the century which followed the end of the Great Persecution, the reading of martyr passions came to form part of the saints' liturgical commemoration. The Armenian \*Bible Lectionary of Jerusalem prescribes a number of such readings and the popularity of the practice is apparent from \*sermons of \*Augustine preached at martyrs' shrines (Saxer). There is even a sermon of \*Gregory of \*Nyssa which had to be broken off prematurely because the local crowd at \*Sebasteia apparently disliked what he was saying about their \*Forty Martyrs (PG 46, 756BD). The give and take

of public performance therefore came to shape the memory of the martyrs and the texts which encapsulated it. Those who heard the \*Cappadocian fathers or \*John Chrysostom speak in \*praise of the saints who protected their \*cities came to expect a properly composed oration; what H. Delehave called 'panegyric martyrdoms' were still being read in churches frequented by \*Severus of \*Antioch in the early 6th century. A more vulgar vigour was represented by 'epic martyrdoms'. In these texts, psychological subtlety was sacrificed to a proliferation of miraculous incident enacted by sharply polarized characters: the wicked \*governor, no longer a busy official responding to local accusations but always acting on an \*edict from the \*emperor, cruelly confronts the heroic martyr; both engage in vigorous \*invective and the martyr while suffering excruciating \*torture is fortified by frequent \*miracles. The image of the saint is so thickly varnished with partisan admiration that it is impossible for the reader to divine his intentions. No doubt such texts were exciting to hear in public performance.

In time the tales of the martyrs became even more elaborate, as in the hagiographical romances from \*Rome known as the \**Gesta Martyrum*, written over the late 5th and early 6th centuries. Accounts of martyrdom in the Roman Empire also helped later Christians undergoing persecution for their faith in other parts of the world understand what was happening to them. Echoes of Roman martyr passions are found in accounts as far apart as the description of the sufferings of S. \*Sabas and his companions north of the Danube \*frontier in the mid-4th century and those of the martyrs of \*Najran in early 6th-century southern \*Arabia.

Saxer, *Morts, martyrs, reliques*.

**martyr passions, Syriac** Accounts of Christian martyrdom from the \*Syriac-speaking regions of the Roman Empire share features with many of their \*Greek and \*Latin counterparts. They recount the saint's virtue, arrest, dialogue with a judge, \*torture, death, and burial, as well as the distribution or enshrining of \*relics.

Two sets of passions survive from \*Edessa. One cycle describes the martyrdoms of Ss. \*Shmona, Guria, and Habib. The legendary account of the sufferings of Ss. \*Sharbel, Babai, and Barsamya, set in the early 2nd century under the \*Emperor Trajan, belongs to a collection of 5th-century texts compiled to crystallize Edessa's Christian history.

The *Life* of S. Febronia of \*Nisibis (6th cent.) is a romance idealizing the life of a monastic scholar, Febronia, who lived in a convent in Nisibis and was martyred for her refusal to marry a \*pagan. Febronia's legend (perhaps written by a fellow sister) defines her death as betrothal to Christ. The story circulated also in Greek and Latin versions, thus diffusing her cult in the West.

The Long Recension of \*Eusebius of \*Caesarea's *Martyrs of Palestine* which describes, often in eyewitness accounts, the execution during the Great \*Persecution of several of Eusebius' friends, of a man he shared a house with, and of his beloved master \*Pamphilus has survived only in Syriac \*translation from the Greek. The oldest surviving list of \*Christian martyrs is the Syriac \**Martyrology of 411*.

**martyrs, Christian** 'Anyone who bears witness to Christ for the sake of righteousness is without doubt a martyr' (\*Caesarius of \*Arles, \*Sermon, 53, 1). The primary meaning of 'martyr' as it is used in the New Testament is 'one who bears witness' (e.g. John 1: 7) and witness remained the core significance of martyrdom. In the late 2nd century, the term became more specialized, as it came to denote those who had completed their witness with their deaths, so that there was no longer any danger that through fear or other external pressure they might give way to official demands and \*sacrifice to pagan gods (\*Letter of Church at \*Lyons, in \*Eusebius, *HE*, V, 2, 3). But witness remained the core of the matter.

### Persecution

Fear was the principal weapon of the persecutors. Their primary purpose was not to kill Christians, it was to secure conformity with the normal practice of the public religion which was each \*city's first line of defence against \*natural disasters. Persecution, like pagan religion, was in the first place a matter for individual cities; they rounded up Christians they wished to have dealt with and the provincial \*governor tried them in the

course of his assize tour. Only on three occasions was there a general Empire-wide persecution, under \*Decius in 250, under \*Valerian in 257–9, and during the Great Persecution which began in 303.

Through all this time, from \*Pliny's governorship of \*Bithynia in the early 2nd century (*ep.* X 97, 2) to the Great Persecution two centuries later, judges consistently viewed as no threat a Christian who was prepared to offer sacrifice. A stubborn Egyptian \*bishop was cajoled by the \*Praefectus Augustalis by having held up to him the example of a compliant colleague: 'You have killed many men by not sacrificing. Pierius saved many by submitting' (\**Passio* of S. \*Phileas–col. II Bodmer). Around the same time a judge in \*Bithynia wore down a Christian he had been working on for two years; the man sacrificed, the judge was as pleased as if he had conquered an entire barbarian nation (\*Lactantius, *Inst.* V, 11, 15).

### Christian reactions

Terror gave rise to various reactions. Some Christians simply gave way and did what the authorities wanted; \*Cyprian described the cheerful queues snaking their way up to the Capitol at \*Carthage during the Decian Persecution, to sacrifice (*On the Lapsed*, 8–9), and to receive the official counter-signature on the \*papyrus chits (\**libelli*) which certified that they had done so. The pastoral letter sent out to the Christians of Egypt by \*Peter, \*Patriarch of Alexandria, at the fourth \*Easter of the Great Persecution in 306 reveals a broad range of stratagems adopted by his people. Some gave way after \*prison and \*torture, but others bribed the authorities or sent a pagan friend to sacrifice for them; some even sent their Christian slaves.

Of particular interest are those who simply fled. Both Cyprian (*On the Lapsed*, 10–12) and Peter (10) commend these refugees for Christ. They would have had their goods confiscated and would need to rely on God to provide for them, but they had avoided the greater danger of apostasy. Peter (9) contrasts them favourably with hotheads who thrust themselves forward in the hope of dying a martyr's death; such voluntary martyrs should listen, he says, to the words of Jesus: 'But when they persecute you in one city, flee ye unto another' (Matthew 10: 23). The corollary of such praise of prudent withdrawal is that Christian witness is not simply a matter of getting oneself killed, like a lemming leaping off a cliff, it is something more subtle.

### Christian martyrdom

For all that, Christians, as one Roman emperor complained to another, 'had the habit of dying gladly' (Lactantius, *Mort.* 11, 3). Ignatius of \*Antioch, on his way to martyrdom in \*Rome under Trajan, prayed that

the \*lions would make a meal of him, 'for it is they who can provide my way to God' (*To the Romans*, 4).

To the emperors such Christian resilience was simply an annoyance. To a reflective Christian, though, it was the product of 'inspirata patientia' (Minucius Felix, 37, 3–5). The phrase is revealing. Stoics achieved *patientia*, the capacity to bear pain, by denying its power over a rational man; Christian *inspirata patientia* was the capacity to bear pain by accepting the infusion of an external power greater than the pain. There was more to martyrdom than simply standing up for a set of beliefs, though it was that.

For \*Origen, in his remarkable treatise the *Exhortation to Martyrdom*, the fear generated by persecution is sublimated into a wholesome faith in God: 'give place to the Spirit of your Father' (39). Both Origen (34) and Cyprian (*ep.* 76, 5, 1) counsel Christians who get arrested not to plan in advance the speech they will give in court, but to let the Spirit speak through them. The advice comes from the Gospel (Matthew 10: 19–20) but it is remarkable in a world where \*rhetoric was what educated men valued most. At the heart of martyrdom, then, is not the wish to suffer but the discovery of a source of strength.

The strength of the martyrs was recognized by their contemporaries. Some who had given way and sacrificed in the Decian Persecution put such confidence in Christians who were suffering in prison that they asked them for the forgiveness of their sin. Some imprisoned Christians even issued written documents forgiving sins, and Cyprian had to impress on his people that it was only the Church at large which could mediate God's forgiveness.

The strength of the martyrs was also remembered for centuries afterwards. The anniversaries of their deaths were celebrated at \*martyria all over the Christian world and their sufferings were written up as \*martyr passions—and unfortunately for historians the stories lost nothing in the telling. There are, however, sufficient contemporary sources written by thoughtful Christians, such as Cyprian, Origen, and Lactantius, for us to be able to see past the gratuitous invective and incredible miracles of most martyr passions to the subtle strength of their witness.

**martyrs, Jewish** The most celebrated tales of Jewish martyrs (before the extensive Crusader-era literature) are located in the historical settings of (i) the Maccabean revolt (167–160 BC), and (ii) the aftershocks of the Roman destruction of the Second Temple (AD 70).

The Hasmonean traditions in 2 Maccabees 6–7 are the earliest strata of martyrology: Jews are compelled by the unjust king (Antiochus Epiphanes) to break the 'laws of their fathers and cease to live by the laws of God' (2 Macc. 6: 1). Refusal is met with \*torture and death; the most repeated narrative is 2 Maccabees 7's tale of the mother and her seven martyred sons. The blameless martyrs pay for their community's sins: a lesson that 'discipline[s] our people', their public deaths constitute a 'blessing' that affords the community opportunity to reform before the chance for salvation is lost (2 Macc. 6: 12–13).

The Maccabean martyrdoms are preserved in \*Greek Jewish scriptures, not in later rabbinic literature. The earliest rabbinical texts describing martyrdoms concern the deaths of Pappus and Julian during the reign of Trajan (*Sifra Emor*, 9, 5). Deaths during Bar Kokhba's Revolt, notably that of Akiba, expanded the corpus of martyr stories and, in the geonic period, they were embellished and combined into the tale of the 'Ten Martyrs': *Midrash Asarah Haruge Malkut*.

The interpretation of Jewish martyrology, its significance in halakhic literature, and role in religious thought during Late Antiquity are contested. Christian writers from the 4th century elevated martyrdom to a central pillar of Christian identity, and since the events associated with Jewish martyrdoms occurred prior to Christian persecution, it was assumed that Jewish traditions inspired Christian interest in martyrology (Frend). The scant attention to the Maccabean martyrs in rabbinic literature, however, could imply that martyrdom was not so central in Judaism during Antiquity, and that the martyr stories are Late Antique retrojections. Bowersock proposed that martyrdom's relevance arose from Jewish borrowings from Roman beliefs. Boyarin suggests that the stories result from an intimate nexus between Christian and Jewish writers in the 4th

century AD (see \*Sozomen, *HE* II, 4 for the sharing of the sanctuary at \*Mamre between various faiths).

Jewish martyrology appears to have developed as part of widespread consideration of martyrdom and salvation in Late Antiquity, and the stories must have developed in dialogue with Christian martyr tales—and perhaps 'Pagan' martyrology too (Musurillo, *Acts of the Pagan Martyrs*), but certain specifically Jewish aspects are noteworthy. Josephus (*Jewish Antiquities*, XII, 11, 2), provides anecdotal evidence for Jewish reverence for Maccabean martyrs prior to any articulated Christian martyrology, and martyrdom is sometimes described as a form of *kiddush hashem* (sanctification of God's name) in exegesis of Leviticus 22: 32. Notwithstanding the obvious symbolic importance of *kiddush hashem*, halakhic literature tends to restrict the obligation of martyrdom only to cases where an individual would otherwise be forced to engage in one of the three major transgressions, namely worshipping idols or committing incest or murder. Jewish exegetes legislated martyrdom towards the margins of rabbinic Judaism, interpreting martyrdom less as vicariously redemptive for the community, and more as joyful death of the individual as harbinger for end-time. **martyrs and martyr passions, Christian, in Persian Empire**

The earliest known Christian martyrs in the \*Persian Empire suffered during the reign of \*Bahram II (276–93) and further martyrdoms occurred right up to the reign of \*Khosrow II (590–628). Persecutions occurred principally in \*Adiabene, Babylonia (southern Persian \*Mesopotamia), and Susiana (\*Khuzestan), the areas where Christian communities had been longest established.

The *Persian Martyr Acts*, despite the long transmission and revisions to which their texts have been subjected, give a clear reflection of such judicial and administrative practices from the \*Sasanian period as laceration, dislocation, sawing, bastinado, dismemberment (the penalty of the Nine Deaths), and the abandonment of corpses to wild animals. Trials by ordeal subjecting the accused to water, fire, or molten metal can be exactly compared to descriptions in the

\**Madayan-i Hazar Datestan* (*Book of a Thousand Judgements*), a 7th-century legislative compilation in Middle \*Persian.

This hagiographical literature was translated from \*Syriac into \*Greek in the early 5th century. \*Sozomen and \*Theodoret exploited many Syriac texts in their *Ecclesiastical Histories*. At around this time, Abraham the Confessor translated some of them into \*Armenian. \*Sogdian fragments have been found in Bulayiq, north of \*Turfan, transmitted through the missionary movements of the \*Church of the East. The attribution to \*Marutha, \*Bishop of \*Martyropolis (Maypherqat) in the late 4th/early 5th centuries, of the principal passions describing martyrdoms under Shapur II is disputed. Some texts were collected into cycles, such as that containing the *Passion* of \*Symeon bar Sabba'e, Bishop of Seleucia-\*Ctesiphon.

Scholars who study \*saints' lives usually classify this literature in three categories. First there are historical passions, corresponding to the reigns of \*Bahram V (Ss. Jacob the Notary, Narsai, Tataq), and of \*Khosrow I and Khosrow II in the 5th–7th centuries (the Patriarch \*Aba, Ss. Piran-Gushnasp, Giwargis Mihr-Mah-Gushnasp, Isho'sabran), which are based on contemporary testimonies. In a second category are narrative passions written following the persecution of \*Yazdegerd II (439–57), such as those of the martyrs of Karka d-Bet Slokh (\*Kirkuk), Ss. Anahid, Pethion. The third and largest category, comprising novelistic and interpolated stories (e.g. the passions of Ss. Symeon Bar Sabba'e, Tarbo, Pusay and Martha, Azad, Badam) is related to \*Shapur II (309–79). The construction of \*martyria, \*pilgrimage, and commemorative reading of the passions contributed to the cult of \*relics. CJ *GEDSH* s.v. martyrs and persecutions, 271–3 (Brock). **Marutha of Martyropolis** (mid-4th cent.–c.420) A monk, \*Bishop of \*Martyropolis/Maypherqat (mod. Silvan), northern \*Mesopotamia, c.399. His father was \*governor of Sophanene. He was present at the \*Councils of \*Constantinople (381) and \*Antioch (383, or 390). He acted as an ambassador, sent by the Emperor \*Arcadius and his son \*Theodosius II, to the Persian \*court. His *Vita* was originally written in \*Syriac (fr. ms. Sinai Syr. 24; BHG 2265–6; Armenian, BHO 720) then in \*Arabic. A tradition makes him a skilled \*doctor who succeeded in curing \*Shapur II's daughter (Yaqut, *Kitāb al-buldān*) or in exorcizing \*Yazdegerd I's son (\*Socrates, *HE*, VII, 8). Marutha is recorded to have negotiated peace between the two empires and taken part in the \*Council of Seleucia-\*Ctesiphon of 410 (J.-B. Chabot, *Synodicon orientale*, 17–36) which reorganized the Persian Church after it had been deeply disrupted during the persecutions. After this mission, Marutha brought the \*relics of the Persian Christian \*martyrs to Maypherqat/Martyropolis.

The corpus of works attributed to Marutha is debated. Ascription to him of the \*martyr passions of the Christians persecuted under Shapur II is hardly credible. One tradition attributes to him a history of the \*Council of \*Nicaea and its canons. The Acts of the Council of \*Seleucia-Ctesiphon as well as some \*hymns and an anaphora are his work. CJ

**Marwan I b. al-Hakam** (c.623/6–85) \*Umayyad \*caliph (r. 684–5). Stigmatized in the historical tradition as a late convert to \*Islam (although most accounts place his birth well within the last decade of the Prophet \*Muhammad's lifetime), Marwan entered the Muslim elite during the reign of the third caliph, \*Uthman b. 'Affan, who was his cousin. Marwan held the governorship of \*Medina for two periods under \*Mu'awiya, amassing a considerable estate in the area. After the failure of the Sufyanid branch of the Umayyad clan with Mu'awiya II's death in 684, Marwan was chosen as the family's candidate to challenge \*Abd Allah b. al-Zubayr for the caliphate during the Second \*Arab Civil War (\**Fitna*). His claim was not widely recognized, however, and much of his short (six- to ten-month, according to differing reports) 'reign'—if such it can be called—was spent on the battlefield, including his notable victory at \*Marj Rahit in 684. **Marwan II al-Himar** (c.692/6–749/50) Last \*Umayyad \*caliph (r. 744–49/50) to rule in \*Damascus. Marwan fought his way to power after rebelling against \*Yazid III's designated successor. His victory was short-lived; in 747 a group known as the Hashimiyya, led by

the mysterious \*Abu Muslim, raised their own (black) banners of revolt in \*Khorasan. (To whom 'Hashimiyya' referred remains a matter of debate.) Two years later in \*Kufa, they acclaimed al-Saffah, a member of the \*'Abbasid family, as caliph. Marwan's forces were defeated. One member of the Umayyad family escaped the subsequent massacre: \*Abd al-Rahman found refuge in al-\*Andalus, establishing an Umayyad regime that lasted until 1031. NC

M. Sharon, *Black Banners from the East*, 2 vols. (1983–90).

**Mary, the Blessed Virgin** The Mother of Jesus. She conceived and gave birth to Jesus while a virgin according to Matthew 1–2 and Luke 1–2. Other important NT passages mentioning Mary are Mark 3: 31; John 2: 1–11; 19: 25–7, and Acts 1: 14.

Mary's early significance is evident in 2nd-century extra-canonical writings, such as the *Protoevangelium of James*, and the *Infancy Gospel of Thomas*. The earliest depictions of her are in Roman \*catacombs of the 3rd/4th century, when Marian cult is evident from \*amulets and such supplicatory prayers as \**Sub tuum praesidium*. Hence, \*Epiphanius of \*Salamis (d. 403) voiced concern about excessive devotion to Mary.

Patristic writers such as Justin Martyr (d. c.165) and Irenaeus (d. c.202) often contrast her with Eve. In the 4th century a substantial Marian theology began to form. \*Athanasius (d. 373) and \*Jerome (d. 420) stressed her perpetual virginity, which was accepted by most church fathers, East and West, in the 5th century. At the \*Council of \*Ephesus (431) the title \*Theotokos (Gk. 'God-bearer') for Mary was endorsed, and those contesting it were condemned as heretical. After Ephesus, important Marian \*relics emerged (her \*veil, \*belt, tears, milk), and related \*pilgrimage sites were founded. Mary was venerated as a symbol and protector of the Church. Primary Marian feasts, such as the Annunciation (25 March), Presentation (14 February: \*Egeria, 26; *Armenian \*Bible Lectionary*, 13) and Dormition/Assumption (15 August), gradually took their places in popular and liturgical calendars in the 5th and 6th centuries. - Mary in art** Before the 5th century, Mary was depicted in connection with Christ, as his mother in scenes of his infancy, or in connection with the prophecy of his birth. Early images mostly come from funerary contexts, such as the Annunciation scene in the 2nd-century \*Catacomb of Priscilla, \*Rome. Thereafter, thanks to the apocryphal *Protoevangelium Jacobi* (Mary's biography), and her \*acclamation as \*Theotokos at the \*Council of \*Ephesus in 431, autonomous depictions became commonplace, particularly in the East. The \*iconography shows her holding the infant Christ, either enthroned (\*S. Maria Maggiore, Rome), or standing (the Pantheon icon); as queen (\*S. Maria Antiqua, Rome); breast-feeding (Coptic \*wall paintings); \*orans (\*S. Sabina, Rome); and, from the 6th century, ascending into heaven at the Dormition. Images of Mary as intercessor anticipate her later popularity in the Deisis (approaching Christ, with John the Baptist). Representations of her as Hodegetria (pointing to Christ as the Way), based on a portrait of Mary believed to have been painted by S. Luke through divine inspiration, informed Byzantine debates about the legitimacy of \*icons. The recent discovery near \*Jerusalem of the 5th-century Kathisma church, dedicated to Mary, indicates the prevalence of the cult of Mary. HAHC

**Mary of Egypt, S.** The story of Mary of \*Egypt was told in monastic circles in a \*Greek version by \*Sophronius in the East from the 6th century and in \*Latin soon after. Its main theme is of a \*prostitute from \*Alexandria who went to the Holy Sepulchre in \*Jerusalem, underwent a \*conversion of heart, and lived thereafter as a hermit in the desert beyond \*Jordan. There a priest-monk Zosima encountered her, heard her story and eventually was present at her burial. She is commemorated in Orthodox churches on the fifth Sunday of Lent as a model of repentance for all. The main theme is the contrast between the pious works of Zosima and the free reception of unmerited grace by Mary. BW

**marzban** Military official of the \*Persian Empire whose title indicates he was 'guardian of the marches'. The rank and functions of a marzban are not entirely clear, but seem to denote responsibility on a provincial level rather than on the level of the four administrative regions of the late \*Sasanian Empire. AZ

Ph. Gignoux, 'L'Organisation administrative sasanide: le cas du marzbān', *Jerusalem Studies in Arabic and Islam* 4 (1984), 1–29.

**Mashtots', Mesrop (Maštoc')** (d. 441) Armenian \*bishop credited with inventing an \*Armenian alphabet. The *Life* of Mashtots' by his disciple \*Koriwn is itself one of the earliest extant works of Armenian literature. Mashtots was charged with the task of the invention of an alphabet by King Vramshapuh (389–417) and the \*Catholicus \*Sahak I Part'ew, who saw the need for a vernacular text of the \*Bible in order to continue the work of spreading Christianity throughout the \*Caucasus. He is also credited with the invention of the \*Georgian and \*Albanian alphabets around the same time. Mashtots' and his disciples travelled to \*Edessa and \*Caesarea to seek inspiration for an alphabet, and also to collect texts for written \*translation into their native language. These disciples came to be known as the \*Holy Translators for their work in establishing an Armenian version of the Bible and other liturgical and ecclesiastical texts. As well as an account of the origins of Armenian literature, the *Life* of Mashtots' demonstrates the competing influences of Syrian and Greek Christianity, respectively, on the early Armenian church. TLA PLRE II, 'Mesrop'.

**Masius, Mons** See TUR 'ABDIN.

**Maslama b. 'Abd al-Malik** (d. 738) \*Umayyad general and son of the \*Caliph \*'Abd al-Malik (r. 685–705; 692–705 unopposed). Maslama's main theatre of campaigning was the Arab–Byzantine \*frontier: among many other routine, seasonal raids, in 716–17 he led a major (but unsuccessful) campaign against \*Constantinople (\*Theophanes AM, 6208–10). In 720 Maslama put down a revolt by Yazid b. al-Muhallab; after the latter was removed from his post as governor of Iraq by Maslama's half-brother, the Caliph \*'Umar b. 'Abd al-'Aziz. Maslama then became Iraqi governor himself, but was soon removed. He owned considerable land in \*Syria and \*Mesopotamia (al-\*Baladhuri, *Futūḥ al-Buldān*, I, 228–9 and 232–3). NC EI 2 vol. 6 (1991) s.v. Maslama b. 'Abd al-Malik b. Marwān, p. 740 (G. Rotter).

**Masona of Merida** Catholic \*bishop (c.570–610) of the \*city of \*Merida (Emerita Augusta) in \*Visigothic

\*Spain, known from the 7th-century *Lives of the Fathers of \*Merida*. He is an unusual example of a \*Goth who professed the Catholic faith before the official conversion of the kingdom in 589. He built a \*hostel in the city in 580, founded \*monasteries, and built \*basilicas. The \*Homoean (\*'Arian') King \*Leovigild tried to reduce Masona's power by appointing a rival, Arian bishop named Sunna and attempting to seize the tunic of the city's patron saint S. Eulalia. When both attempts failed, he banished Masona from 582 to 585. In 588, with the Catholic King \*Reccared in power, a disenfranchised Sunna plotted Masona's murder but was thwarted and exiled. EMB

**masons and masons' marks** Carvers of stone or \*marble marked their work with their signs, mostly letters and \*monograms. In the churches of \*Constantinople, \*Ephesus, \*Ravenna, and \*Poreč from the reign of \*Justinian I, the same marks appear on similar artefacts made of marble from \*Proconnesus, all apparently carved by the same highly specialized masons at a central workshop in or near Constantinople. Other artefacts from the same workshop are not marked, and the purpose of the marks remains unclear. Other masons worked elsewhere; \*Gregory of \*Nyssa asked for some to be sent from \*Iconium (*ep.* 16). Masons from the mountains of \*Isauria were particularly famous and were involved, for instance, in building the church of S. \*Symeon Stylites the Younger near \*Antioch.

**al-Mas'udi** (c.890–956) Muslim traveller and scholar of many and varied interests. The author of (by his own account) 36 works, he is best known for *Kitab muruj al-dhabab* ('Book of the Meadows of Gold'), an eclectic compendium of history, folklore, geography, and travel writing. The *Muruj* spans the breadth of the Islamic world and beyond; as well as a narrative of Prophetic and caliphal history, it contains sections on Frankish kings, Indian customs, precious stones, hunting and hawking, and legends of pre-Islamic figures such as Alexander the Great, among others. Al-Mas'udi gathered his information from teachers (many named in his books), his own travels (including in India), and the vast array of books at the disposal of the intellectually curious Muslim in 10th-century Baghdad; he cites over 150 works in the *Muruj*, including Arabic translations of Aristotle and Ptolemy, and also indicates familiarity with some contemporary Christian writing. **Matara** Major archaeological site in the highlands of southern Eritrea. Large-scale excavations in 1959–63 revealed an extensive and prosperous Aksumite settlement as well as earlier occupation, but have not yet been comprehensively published. Sixth-century levels yielded evidence for Christianity. Buildings included substantial elite structures as well as a basilican church over an underground tomb, and tightly packed, less prosperous accommodation. The Aksumite settlement, lying on or close to the most direct practicable route between the capital at Aksum and the Red Sea port at Adulis, was involved in overseas trade, with luxury items originating in the Mediterranean basin and in southern Arabia.

**mathematics** In Late Antiquity the mathematical domain took a meta-textual and scholarly turn. The main outcome was the production of commentaries, which took several forms. Some were running commentaries on texts, such as the work of Pappus and Theon on Ptolemy's *Almagest*. Other commentaries such as that of Eutocius (who also treated philological issues) considered only specific points. Some focused on self-contained argumentative units, definitions and propositions, and other works, such as that of Proclus on Euclid's *Elements* I, discussed foundational issues. Pappus' *Collectio* is typical of commentaries organized as a simple sequence of lemmata. Such writings might include antiquarian digressions and these therefore preserve earlier texts which are otherwise lost.

Shorter writings called *prolegomena* served as an introduction to major treatises according to an isagogical scheme that came to be canonized, as applied to philosophical treatises, in the 5th/6th-century Neoplatonic schools. Among such writings are the *Prolegomena to the Almagest*, prefacing the Ptolemaic treatise in a textual family originating in the circle of Ammonius, a very short text on Nicomachus' *Introduction to Arithmetic*, Marinus of Neapolis' *prolegomena* to Euclid's *Data*, the spurious introduction to one of the redactions of Euclid's *Optica*, Damianus' *Optical Hypotheses* and the extracts on optical subjects from Geminus' *Theory of Mathematics*, a part of the material edited in the pseudo-Hero of Alexandria's *Definitions* and *Geometrics*, collections of scholia and extracts that in some manuscripts precede the *Elements*.

On the technical side, number theory had its culminating point in Diophantus. Domninus is a shadowy figure; to him are ascribed a 'pocketbook' version of Nicomachus' *Introduction to Arithmetic* and a very short tract on the 'subtraction' of ratios. Writings on arithmetic, in the form of disconnected lists of (supposed) properties of numbers in the decad, took shape as early as Speusippus (in the 4th century BC), grew by accretions in the hands of Anatolius and Nicomachus, and surfaced in some (pseudo-)Iamblican writings (*On Nicomachus' Arithmetic Introduction* and the *Theology of Arithmetic*).

The development of mathematical astronomy entailed the redaction of *logistica* (computation manuals). Two such treatises are ascribed to scholars called Magnus and Apollonius, but the only surviving work dedicated to it is the logistical core of the *Prolegomena to the Almagest*. It contains an introduction to the sexagesimal system and main operations on single sexagesimal species (multiplication, division); descriptions of the algorithms of multiplication, division between (and square root of) numbers with a complex sexagesimal representation; rules of interpolation; composition and 'subtraction' of ratios.

Editorial activity during Late Antiquity (we only have names: Patrikios, Makarios, the \*Praefectus Praetorio Modestus) and interactions with the agrimensural practices of land \*surveyors eventually gave rise to the pseudo-Heronian metrological corpus, currently edited under the titles of *Geometrics* and *Stereometrics*. **mathematics in art and architecture** From the origins of Christian architecture there was a strong interest in incorporating sacred \*geometry and \*number symbolism into places of worship. From the beginning this was expressed in its simplest terms by the adoption of a tripartite \*apse, often lit by three \*windows in the central apse, signifying the mystery of the Trinity. This interest in number symbolism extended to the shape of buildings, especially \*octagonal buildings, including such centrally planned monuments as \*Qal'at Seman in \*Syria, where a central octagon surrounds the \*style's pillar and an octagonal \*baptistry stands at the ancient entrance to the complex. The significance of octagonal baptisteries is explained in a 4th-century \*inscription on the baptistry at \*Milan (*CIL* V, p. 617, 2 = *ILCV* 1841), attributed to S. \*Ambrose but probably earlier. The inscription links the number eight to \*baptism and the Christian hope of salvation, drawing on a common Christian cosmological association between eight and the General Resurrection which will occur once the seven Great Days of world history have been completed by the Last Judgement.

The most famous example of mathematical virtuosity in architecture, praised by \*Procopius (*Aed.* I, 1, 29) and much discussed by scholars, is the Church of the \*Holy Wisdom in Constantinople. Historians have particularly examined the mathematical calculations that enabled

\*Isidore of \*Miletus and \*Anthemius of \*Tralles to build upon a rectangular base a curved (if irregular) \*dome with a diameter of 30.9 m (101 feet 6 inches) to 31.8 m (104 feet 4 inches).

However \*mathematics was employed by Late Antique \*architects for purposes which went far beyond the symbolic and mechanical calculations necessary for the construction of large buildings. Detailed knowledge of \*astronomy and \*optics could be combined with geometry and number symbolism to ensure that buildings such as the Holy Wisdom were aligned to be well lit whatever the season of the year, and to enhance the sensation of entering a hallowed space, a microcosm, so Procopius claims of the Holy Wisdom, created from the composition of number, nature, and light (*Aed.* I, 1, 27–65). EL; OPN

#### mathematics in art and architecture, Islamic

The earliest extant Islamic material culture exhibits extensive use of mathematics in the design of buildings and in the patterns of their decoration, as well as in other decorative arts. Very early monuments, such as the \*Dome of the Rock (c.692) and the Great Mosque of \*Damascus (c.706), are built upon geometric formulae, and their decorations are also ordered geometrically; both the repeating vegetal motifs of the Dome of the Rock and the lattice windows from the Great Mosque of Damascus are laid out according to geometric patterns. Similar patterns are also found in the decoration of Umayyad-era \*Qur'ān manuscripts and the arrangement of early Arabic calligraphy also depended upon the use of ratios and measured spacing. This earliest art and architecture of the \*Umayyad period developed the mathematical and geometric aspects of the art of Roman Late Antiquity into new forms. It is very likely that the artists and patrons of these works made similar connections between these material forms and the heavenly order. AM

**matricula** In the Late Empire term for a public register listing praetorian officers (e.g. *CJust* XII, 20, 3 of \*Leo I). In the 6th century, it was a term for a church register listing clerics who had the right to be remunerated, or, more frequently, the \*poor, disabled, and sick entitled to beg for alms in front of sanctuaries. The term was also used, by extension, for an almshouse for the care of the poor. Its changing function reflects the disappearance of ancient \*euergetism and the rise of episcopal

Matrona, S.

power in the \*cities, and the Christian spiritualization of poverty and emphasis upon \*almsgiving and ministration to the poor as a means to salvation. RLJ

**Mauretania Caesariensis, Mauretania Sitifensis, and Mauretania Tingitana** Westernmost provinces of \*Africa, encompassing modern Morocco and Algeria. Mauretania had been divided in two in AD 42. To the east, Caesariensis had its capital at \*Caesarea (Chercell). To the west, Tingitana had its capital at \*Tingi (Tangiers). Sitifensis was divided from the eastern end of Caesariensis under the \*Tetrarchy; it was governed from \*Sitifis (Sétif). From the 2nd and 3rd

centuries there was a reduction of military presence in the line of forts along the southern \*frontier. The \**Notitia Dignitatum* gives the title of the governors of Sitifensis and Tingitana as Praeses and of the \*governor of Caesariensis as \*Dux et \*Praeses—that is to say that the governor of Caesariensis, unusually, was also the local military commander. It places Tingitana in the \*Dioecesis \*Hispaniae, and Caesariensis and Sitifensis in the Dioecesis \*Africae. From the 5th century the area was ruled by \*Moors who consolidated their power inland away from the coast. CJG

**Maurice** (c.539–602) \*Emperor (582–602). A successful commander on the eastern \*frontier and in the \*Balkans, Maurice's reign often delimits accounts of Late Antiquity, as his death precipitated the last great war between the Roman and \*Persian Empires.

#### Early career

Born in \*Cappadocia, Maurice became \*notary to the future \*Tiberius II while the latter was \*Comes Excubitorum. Evidently, Tiberius saw Maurice as a loyal lieutenant, for on Tiberius's appointment as \*Caesar, Maurice succeeded him as Comes Excubitorum. Then in 577 Maurice was promoted to \*Magister Militum per Orientem and given overall command of the eastern armies.

In 578 Maurice led the army on a successful expedition into the rich province of \*Arzanene, and again raided territory of the \*Persian Empire in 580. In 581 Maurice undertook a daring foray against \*Ctesiphon in conjunction with the \*Jafnid leader al-\*Mundhir, but the expedition proved an acrimonious failure, leading to accusations of treachery being levelled against al-Mundhir. In 582, a Persian \*army was defeated at \*Constantia-Tella, though Maurice may already have left for \*Constantinople. Arriving in triumph, Maurice was made Caesar by Tiberius on his deathbed, and quickly succeeded him as \*Augustus.

#### Internal affairs

Maurice immediately consolidated his rule by marrying Tiberius' daughter \*Constantina, with whom he had eight children, thereby becoming the first emperor since 401 to have a son.

Maurice's pre-eminent problem was financial. Tiberius' profligacy, expensive \*diplomacy, constant warfare, recurrences of the \*plague, and an increase in the power of prominent men had all drained the imperial treasury. Maurice, therefore, sought to retrench and save. Customary expenses were curtailed, giving rise to accusations of greed and general unpopularity. More dangerously, Maurice sought to reduce military expenditure, so causing a mutiny in the eastern \*army in 588 and in the \*Balkans in 593/4. Further, despite Maurice's personal frugality, perceptions of avarice were compounded by Maurice's generosity towards members of his own \*family.

Maurice inherited a religiously divided empire. He was personally highly devout, but was generally disinclined to persecute either \*Miaphysites or \*pagans. However, Maurice became involved in disagreement with \*Gregory the Great about the position of the \*Patriarch of \*Constantinople, and over imperial policy in \*Italy and the Balkans. Maurice was also a notable \*patron of literature.

### *The eastern front*

Maurice and his commanders generally followed the strategy of raiding Persian territory, reinforcing Roman defences, and continuing diplomacy. The overall result in 582–8 was stalemate, but in 589 the rebellion of \*Bahram VI Chobin in the \*Persian Empire, and the flight of \*Khosrow II to the Romans dramatically altered the picture. Both factions of Persians sought to purchase Roman assistance, but Maurice chose to support Khosrow, duly dispatching a force in 591 that restored Khosrow to his throne. In return, the Romans received back \*Dara (lost in 573 under \*Justin II), and were ceded \*Iberia and much of \*Persarmenia. This diplomatic coup radically improved the Roman Empire's position in the East, and ushered in a decade of cooperation between the empires.

### *The West and the Balkans*

In Italy, operations against the \*Lombards included offering inducements to the \*Franks to intervene, but achieved little beyond containment. Campaigns by the \*Exarch of \*Ravenna in the 590s managed to secure communications between Ravenna and \*Rome, but this belligerence alienated Gregory the Great, who preferred negotiation with the Lombards. Meanwhile, Roman territory in \*Spain continued to contract in the face of \*Visigothic pressure. Both Italy and Spain were essentially left to their own resources, as first the Persian front and then the Balkans diverted men and money.

By Maurice's accession, the Roman position in the Balkans had become precarious. \*Slavs had overrun much of the countryside, and the \*Avars held the strategically vital \*city of \*Sirmium and were extracting

from the Empire an annual \*tribute of 80,000 \*solidi. The Avars then demanded an increase in their tribute to 100,000 *solidi*, and Roman refusal led to their capture of Singidunum (\*Belgrade) on the Danube in 583, followed by ravaging as far as \*Anchialus on the Black Sea, before in 584 Maurice agreed to the increased tribute. Then the Slavs rampaged throughout \*Thrace in 584–5. Limited Roman counter-attacks succeeded only in displacing Slav raids, leading to the sack of \*Athens and \*Corinth, and the \*siege of \*Thessalonica. In 586, the Avars renewed hostilities, penetrating into Thrace, and capturing Anchialus in 588. There the \*Khagan symbolically donned imperial robes, challenging Roman authority.

For unknown reasons, the Avars were quiescent between 589 and 593, allowing a Roman recovery, including an expedition in 590 to Anchialus under Maurice's personal command. Following the peace with Persia of 591, Roman resources were directed to the Balkans, and a succession of commanders made gradual process, against both Avars and Slavs. The different challenges these opponents presented, and the Roman responses to them, are revealed in the \**Strategicon*, the handbook of military strategy normally ascribed to Maurice. By 599, the Roman position had improved sufficiently to permit an attack on the Avars' heartland in \*Pannonia, which inflicted a series of humiliating defeats. By 601 the Avars seemed on the verge of disintegration.

### *Downfall*

Seeking to cap these successes, Maurice ordered the army in 602 to winter north of the Danube, when the Slavs were thought to be most vulnerable. Faced with this hardship, and long resentful of Maurice's economies, the army mutinied. Electing \*Phocas their leader, they marched on Constantinople. Maurice's unpopularity, demonstrated as recently as February 602 by riots in the capital, once more bubbled to the surface. Lacking sufficient troops to defend Constantinople, after a night of further rioting on 22 November, Maurice fled, and on the following day Phocas was proclaimed emperor. Finally, on 27 November, Maurice and most of his male relatives were seized and killed, providing the perfect pretext for Khosrow II to restart hostilities and avenge his patron. MTGH

**mawali** (sg. *mawla*) *Wala'* (Ar. 'proximity') is the term denoting the connection of a person (*mawla*) to another person, whether a relationship between equals, mostly in pre-Islamic Arabia, or an unequal relationship of support, most prevalent in \*Islam. In pre-Islamic \*poetry *mawali* occur frequently as Arabs with the status of kinsmen or allies. Islamic *wala'* was an instrument by which non-Arab freedmen, converts,

and others could join Muslim society. According to Islamic \*law a freedman became a *mawla* to his former master who was obliged to pay his blood money and was entitled to a share of his inheritance.

According to some schools of \*law contractual *wala'* was also possible between a free, male, adult Muslim and a \**dhimmi*, convert, freedman without *wala'* or foundling. *Mawali*, although formally treated like other subjects, were considered inferior because of their defeat by the Arab conquerors and their prevalent background as enslaved prisoners of war. Depending on their skills, background, and the status of their patron, *mawali* earned important positions, especially in the administration and as scholars. From the end of the 8th century, *mawali* regularly served in the \*army, also obtaining positions of command. Socially heterogeneous, the experience of *mawali* cannot be uniformly described, nor can one explanation be offered for their actions. The \*Abbasid Revolution (750) diminished Arab political and social superiority, and marked the beginning of a steep acceleration in \*conversion to Islam among the conquered peoples.

**Maxentius** \*Emperor 306–12. Marcus Aurelius Valerius Maxentius, son of the \*Augustus \*Maximian, exercised power from the \*City of \*Rome from his usurpation in 306 till he was defeated and killed by \*Constantine I at the Battle of the \*Milvian Bridge outside Rome on 28 October 312.

Maxentius was born c.283, the son of \*Maximian, \*Diocletian's colleague as \*Augustus in the original \*Tetrarchy, and his wife \*Eutropia. When Diocletian and Maximian abdicated in 305, both Maxentius and the future Constantine I were passed over for promotion to imperial rank. On the death in 306 of \*Constantius I (one of the Augusti since the abdication of Diocletian and Maximian), his son Constantine was acclaimed by troops at \*York. Maxentius followed Constantine's example and was hailed emperor at \*Rome by the \*Praetorian Guard with popular support. He initially styled himself Princeps Invictus, but in 307 took the title Augustus.

Maxentius failed to receive recognition from members of the new Tetrarchy, led by the Augustus \*Galerius (called Maximianus in most ancient sources). In 307 Galerius launched an attack on \*Italy, in an attempt to reinstate \*Severus the Tetrarch, but was repelled by Maxentius. In November 308, Maxentius was declared

a public enemy by a conference of surviving emperors held at \*Carnuntum. Seeking legitimacy and support, Maxentius restored the title Augustus to his father Maximian in 307, but father and son soon fell out, and in 308 Maximian fled to join Constantine in \*Gaul. Despite such uncertainties, Maxentius (residing at Rome) was widely acknowledged as emperor over Italy, \*Sicily, \*Sardinia, and \*Corsica; in 308/9 he temporarily lost \*Africa to the \*usurper, \*Domitius Alexander, but he regained these \*provinces after a brutal campaign waged by Rufius \*Volusianus, his \*Praefectus Praetorio (Aurelius \*Victor, 40, 18; \*Zosimus, II, 14, 2).

Throughout his reign Maxentius was based in Rome and promoted a revival of the old imperial city. His building programme included the Temple of Romulus in the Roman Forum, and the Basilica Nova which was completed with modifications by Constantine. He also built a \*circus and mausoleum on the Via Appia south of the city. Contrary to his later reputation, Maxentius also tolerated Roman Christians and called a halt to the Great \*Persecution in his dominions (\*Eusebius, *HE* VIII, 14, 1).

In 312 Constantine invaded Italy from the north-west and found troops loyal to Maxentius mostly concentrated in north-eastern Italy; he therefore secured mastery of the Po Valley before turning south to meet Maxentius unusually late in the campaigning season (*PanLat* XII [IX], 5–14; \*Nazarius, *PanLat* IV [X], 19–26; Eusebius, *HE* IX, 9, 3). Maxentius himself remained in Rome, but at the last moment advanced into battle just across the Tiber from the \*city gates, reportedly following the advice of the \*Sibylline Books (\*Lactantius, *Mort.* 44). On the sixth anniversary of his \*acclamation as emperor, Maxentius' army was crushed and Maxentius himself drowned in the river. Constantine retrieved his body and had his head paraded around Rome and Africa. The victory was depicted on the \*Arch of Constantine dedicated to the victor by the Roman \*Senate in 315. The \*panegyrics of Constantine (*PanLat* XII [IX] and IV[X]) which celebrated these events are the earliest surviving texts to represent Maxentius as a \*tyrant—Lactantius' *On the Deaths of the Persecutors* (44) is altogether milder in his depiction of Constantine's enemy. The *Church History* (*HE* IX, 9) and *Life of Constantine* by Eusebius (especially *VCon* I, 33–6) were to cement Maxentius' unsavoury reputation as usurper and persecutor in history and legend. **Maxima Caesariensis** \*Province created in the early 4th century and listed in the \*Verona List and \**Notitia Dignitatum* as part of the \*Dioecesis \*Britanniae (*Not. Dig. occ.* III, 33). The \*governor was a \*Consularis. Its boundaries are imprecisely known but lay in south-east England with \*London probably as capital. It was possibly renamed Valentia after the \*Barbarian Conspiracy of 367–8. ACR

D. Mattingly, *An Imperial Possession: Britain in the Roman Empire* (2006).

**Maxima Sequanorum** Late Roman \*province established under the \*Tetrarchy in the southern part of the former Germania Superior. It included the uppermost Rhine, Geneva, and its principal \*city, \*Vaison-la-Romaine. The \*Verona List calls it Sequania within the \*Dioecesis of \*Galliae. The *Notitia Dignitatum* lists it as Maxima Sequanorum in the Dioecesis \*Septem Provinciarum (*occ.* III, 23) and as governed by a Praeses (*occ.* I, 109; XXII, 31). It became part of the \*Burgundian kingdom. EMB

*Topographie chrétienne, Gaule*, vol. 15, Besançon, ed. C. Bonnet and C. Santschi (2007).

**Maximian** \*Caesar 285–6, \*Augustus 286–305, \*usurper 306–8 and c.309–10. Marcus Aurelius Valerius Maximianus *signo* Herculus, one of the last 3rd-century \*Balkan soldier \*emperors, was \*Diocletian's first colleague as an \*emperor after his \*accession in 284. They had served together under \*Aurelian and \*Probus. Maximian was appointed first as Caesar in 285/6 and then, on 1 March 286, as joint Augustus. Maximian oversaw the West, its \*armies and \*frontiers, while Diocletian ruled the East. His achievements were commemorated in two of the \**Panegyrici Latini* (*PanLat* X (II) of 289 and *PanLat* XI (III) of 291). On the organization of the \*Tetrarchy in 293, Maximian received as his Caesar \*Constantius I, who had married \*Theodora, Maximian's daughter or stepdaughter.

As part of the \*Tetrarchy, Maximian campaigned on the Rhine, in \*Spain, and in \*Africa. He visited \*Rome in 298/9 and commissioned work on the \*Baths of Diocletian, returning there in 303 with Diocletian to celebrate their \*Vicennalia. Like Diocletian, Maximian trusted in the traditional gods. Diocletian adopted Jupiter as his divine patron, Maximian took Hercules, hoping to produce the same effects on affairs as their guardian gods (*PanLat* X [II] 11, 6). When Diocletian began the Great \*Persecution of Christians in 303 provincial \*governors in Maximian's territories enforced the initial \*edicts in \*Italy and particularly in North \*Africa, where the persecution gave rise to the \*Donatist Schism.

On 1 May 305 Diocletian and Maximian abdicated as Augusti, although Maximian apparently did so

unwillingly. He retired to southern Italy, but on 28 October 306 his son \*Maxentius usurped power at Rome and recalled Maximian as Augustus for the second time. Together in 307 they confronted \*Severus the Tetrarch (\*Lactantius, *Mort.* 26–7), and Maximian formed an alliance with \*Constantine, ruling north of the Alps, by marrying to him his daughter \*Fausta (*Mort.* 27, 1; 28, 1), a union celebrated in one of the surviving *Panegyrici Latini* (*PanLat* VI [VII]). In 308 Maximian attempted, but failed, to supplant his son, so took refuge with Constantine (*Mort.* 28). The conference of emperors at \*Carnuntum in November 308 obliged him to retire again and he returned to Constantine in Gaul, where he once more tried and failed to reinstate himself as emperor and to murder Constantine in his bed. 'In the end,' says Lactantius (*Mort.* 30, 5), 'he was given a choice of how he would like to die' and he hanged himself.

The following year Constantine damned Maximian's memory (*Mort.* 42, 1; \*Eusebius, *HE* VIII, 13, 15); Lactantius stigmatizes Maximian more than Maxentius in *On the Deaths of the Persecutors*. Constantine later damned Maxentius and rehabilitated Maximian whom he placed on the \*coinage as the grandfather of \*Constantine II, \*Constantius II, and \*Constans I.

**Maximianus** (fl. c. 540) \*Latin poet and author of six elegies (or, as some scholars suggest, one long continuous elegiac poem), which lament the ills of old age and narrate a series of apparently autobiographical erotic encounters. Although not everything in his witty and allusive poems need be true, the poet speaks of a bachelorhood spent in \*Rome (*Elegy* 1, 64), of fame as an orator (1, 10), mentorship by the \*philosopher \*Boethius (whom he portrays rather scurrilously, *Elegy* 3), and an ambassadorial mission to the East (*Elegy* 5). The elegies adapt phrases and themes from classical models (chiefly Ovid), but recent critics have also stressed their allusions to 6th-century politics, philosophy, and religion.

**Maximinus** Envoy to \*Attila in 449, accompanied by \*Priscus. In 453 he went to \*Egypt, defeated the \*Nubians and \*Blemmyes in the \*Thebaid and negotiated a 100-year peace, which collapsed after his sudden death.

OPN

PLRE II, Maximinus 11.

**Maximinus Daza** (c. 270–313) \*Emperor 305–13. Galerius Valerius Maximinus Daza (or Daia) was born around 270 in \*Dacia Ripensis. His mother was a sister of the Emperor Maximianus \*Galerius, referred to by scholars as Galerius. \*Lactantius represents him as a country bumpkin, who had gained rapid promotion from the ranks in the imperial household troops, and claims that there was general surprise when he was selected as one of the new \*Caesars when \*Diocletian abdicated on 1 May 305 (*Mort.* 18, 13–14; 19, 2–6). The territory for which he was initially responsible was

the \*Diocesis of \*Oriens (which at this time included \*Egypt), and he resided principally at \*Antioch and \*Caesarea of \*Palestine.

Maximinus Daza was twice passed over for promotion to \*Augustus. In 306, after the Augustus \*Constantius I died, \*Severus the Tetrarch was promoted to Augustus rather than Daza, though he did become the more senior Caesar. After the turmoil initiated by the usurpation of \*Maxentius in October 306 and the reappearance in active politics of the retired Augustus \*Maximian, an imperial conference was held at \*Carnuntum in November 308. This conference reconfirmed Daza's rank as Caesar within the Tetrarchy, but it was \*Licinius who was given the title of Augustus. He did receive the title of Filius Augustorum in 309, but this did not satisfy him. He laid claim to the title of Augustus in 310 with support from his troops, a claim that Galerius eventually recognized. After Galerius' death in the spring of 311, Daza advanced to the \*Bosporus and took control of \*Anatolia in addition to the territories he already controlled in \*Oriens. He also attempted to marry Galerius' widow, Diocletian's daughter \*Galeria Valeria, but she declined his proposal (*Mort.* 39, 2–41, 3).

Maximinus Daza favoured the traditional Roman gods. He promulgated an \*edict of \*persecution against Christians in 309 (\*Eusebius, *MartPal* 9, 2), enforced in his territories, and though he initially recognized Galerius' deathbed retraction of his persecuting policy in the spring of 311, he reverted to persecution with renewed vigour in the autumn of that year (Eusebius, *HE* IX, 1–7; Lactantius, *Mort.* 36, 3–7). He responded favourably to \*petitions requesting permission to remove Christians from \*cities; the texts of several of these \*rescripts are preserved by Eusebius (\*Tyre copy: *HE* IX, 7) and on \*inscriptions from \*Arycanda of \*Lycia (*ILCV* 1) and Colbasa of \*Pisidia (Mitchell, 108).

It was only in 313, after Licinius had defeated him in battle, that Daza himself promulgated an \*edict lifting the persecution in his territories. Lactantius reports that Daza then fled to \*Tarsus and ate poison, which failed to act instantaneously because of the immense dinner he had consumed beforehand, so that he endured prolonged and excruciating visions of divine judgement (*Mort.* 49). Others report an illness (Aurelius \*Victor, 41, 1; \*Eutropius, X, 4, 4; \*Zosimus, II, 17, 3). After Daza died, Licinius extinguished his line by killing Daza's family and followers. Eusebius (*HE* IX, 11, 2) remarks that *damnatio* of his memory caused a number of his images to be damaged, though several survive, in Berlin, Chieti, and Leiden. The unfinished fortified residence at \*Šarkamen is associated with him.

**Maximus** \*Usurper 409–11. Maximus was proclaimed \*emperor by the general \*Gerontius at \*Tarragona, after Gerontius had defected from the cause of the Gallic usurper \*Constantine III. This resulted eventually in Constantine's demise (\*Orosius, VII, 42; \*Olympiodorus fr. 16; \*Sozomen, IX, 13).

The antecedents of Maximus are unclear; he may have had a close military or family connection to Gerontius. Although Maximus was proclaimed in Tarragona his \*silver and \*bronze coinage was all struck in \*Barcelona, and he probably transferred his administration to that highly fortified port city very soon after his elevation. Maximus and Gerontius invaded \*Gaul in 410, and in 411 captured and executed Constans, son of the usurper \*Constantine III, near \*Vienne. Their supporters abandoned them, Gerontius died, and Maximus fled and was apparently hiding in \*Spain when Orosius was writing in 417.

The usurper of 409–11 is probably identical with the Maximus who 'obtained power in Spain by force' (\**Chronicle of 452*, ad ann. 420), and was captured and executed at \*Ravenna in 422, at the public games in honour of \*Honorius' Tricennalia \*anniversary.

*PLRE* II, Maximus 20.

**Maximus of Ephesus** \*Neoplatonic \*philosopher and practitioner of \*theurgy, believed to have influenced \*Julian towards \*paganism before he became \*emperor

c.350. Maximus was a pupil and kinsman of \*Aedesius, and Julian sought Maximus out at \*Ephesus when he was studying with Aedesius at \*Pergamum (\*Eunapius, *Lives of the Philosophers*, 475). After \*Constantius II died, Julian summoned Maximus to \*Constantinople and greeted him effusively (\*Ammianus, XXII, 7, 3). His brother Nymphidianus became Julian's secretary for \*Greek correspondence. Maximus accompanied Julian's Persian expedition and discussed with him the sublimity of the soul as the emperor lay dying (Ammianus XXV, 3, 23). He was arrested twice under \*Valens, and was executed in 371 for \*treason. SFT  
PLRE I, Maximus 21.

**Maximus of Turin** \*Bishop of \*Turin (c.390–408/23) and preacher of the early 5th century. Little is known about Maximus' life. He is sometimes confused with a bishop of the same name in the same city who lived in the latter part of the 5th century. He assisted in defending the city during at least one siege (*Sermon* 86). His \*sermons (106 survive) display a love of imagery, but no systematic theology. RJM

**Maximus the Confessor** (c.580–662) Author of a huge body of work in various genres, Maximus is a significant figure for the theology and philosophy of the 7th century. His impact spanned the Church in both West and East, with his involvement in the western resistance to Monoenergism and \*Monotheletism, notably at the \*Lateran Council in 649. Over the course of seven years Maximus endured two trials in \*Constantinople (655 and 662), three \*exiles, and possibly mutilation for his commitment to the cause of two energies and two wills in Christ. In this doctrinal controversy he found a staunch ally in the \*bishops of \*Rome, especially Theodore II and his successor \*Martin I, who was also sentenced to death by the imperial tribunal in 655. Martin's sentence was transmuted to exile and he died in \*Cherson in the same year.

Concerning Maximus' early life the sources offer various accounts. Before he became a monk at \*Sophronius' \*Monastery of Eucrates in North \*Africa he was probably based at Constantinople. The Greek *Life* also recounts that he came from an aristocratic family and was \*A Secretis of the imperial \*court of \*Heraclius.

A hostile \*Syriac *Life* by the Monothelete \*George of \*Resaina makes him the son of a Persian \*merchant and a slave girl. George plays up the bad influence of Sophronius on Maximus, who, he claims, grew up near \*Tiberias, and fled the Palestinian monastery of Mar Chariton to \*Anatolia, \*Crete, and then North Africa, arriving there in the 620s. According to the Greek source, after a few years Maximus left Constantinople to pursue a monastic life in the monastery of \*Chrysopolis, on the Asian side of the \*Bosporus. After some ten years there he moved to the monastery of S. \*George in \*Cyzicus (mod. Erdek) in 624 or 625. He fled the Persian invasion of Cyzicus, travelling to \*Rome via North Africa. He was certainly in Rome by 649, in time to orchestrate the Lateran Council in the name of \*Martin I. The similarities between the accounts of Maximus' peregrinations in the two *Lives* up until his arrival in North Africa suggest that the truth lies somewhere in the middle.

His works from this period include *Questions and Doubts*, and the tract *On the Ascetic Life* and the *Four Centuries on Charity* (Sherwood, 24–7, nos. 1–15), the tract *On the Our Father*, and the *Books of Difficulties* (Sherwood, 31–2, nos. 25–6), the latter being composed after his arrival in North Africa c.630. Some time after 618, Heraclius and \*Patriarch Sergius concocted the formula of one activity or operation in Christ (Monoenergism) in an effort to bring the anti-\*Chalcedonian Churches in \*Egypt, \*Palestine, and further east back into communion with the Church of Constantinople. Parts of Egypt were reconciled when \*Cyrus, Patriarch of \*Alexandria, accepted the formula in 633. The doctrine of one will (Monotheletism) was the next stage in Constantinople's bid for unity, based on Pope \*Honorius I's unfortunate use of the expression 'one will in Christ' in a letter of 638 to Sergius of Constantinople. Only in the 640s did Maximus fully join the anti-Monothelete campaign in earnest, harnessing the energies of a large circle of exiled eastern monks to destabilize the \*Emperor \*Constans II's attempts to establish his authority in the wake of the \*Arab conquests of Palestine and Egypt.

At the trial of 655, Maximus was accused of \*treason, for betraying Egypt, Alexandria, and the Pentapolis to the Arabs. Such an unlikely accusation was most likely a foil for the true cause of imperial dissatisfaction with the monk, namely his denial of the emperor's authority in matters of doctrine. Maximus's hostility towards the invaders, 'a barbarous nation from the desert overrunning another's lands as if they were their own', is made clear in his *Letter* 14 to Peter (PG 91, 540A). Maximus died during his third exile, in \*Lazica, on 13 August 662. His cause but not his name was exonerated at the Council of \*Constantinople, in 680/1. BN

**Mayen (Roman Megina)** Gallo-Roman settlement now in the Rhineland-Palatinate Land of Germany, noted for its extensive Late Antique stone and \*pottery \*trade and significant \*cemetery excavations. Located in a region of volcanic geology, on a crossroads along the River Nette, as well as being a hub for long-distance trade, Late Antique Mayen boasted both public buildings and a large number of craft workshops.

As well having volcanic tufa, the Mayen area is richly provided to the north-east with basalt, used in Late Antiquity to make millstones. There were also seven ceramic workshops in the \*vicus on the right bank of the river. During the Late Roman period common tablewares were produced industrially, baked at high temperature and characterized by a rough surface and gritty paste with volcanic inclusions. Their quality and distribution reached levels unprecedented for this type of ceramic. The later 4th and the 5th centuries mark the peak of the diffusion of these ceramic products. They are found throughout the Rhine and Moselle valleys, Lorraine, Switzerland, western Germany, and also in

north-west \*Gaul. Outside the settlement itself even larger workshops developed subsequently, and remained active during the early Middle Ages. Roman-era kilns seem to have been concentrated on the left bank of the Nette, with medieval workshops on the right.

Mayen is also known for excavations of a large cemetery, including burials in \*sarcophagi made of tufa. During the last third of the 4th century grave offerings were particularly rich, and another significant burial group of the mid-5th century has been identified. The Mayen graves have a military appearance and contain objects of 'Germanic' style, suggesting a link with the fortified site of Katzenberg, 2 km (1.25 miles) from Mayen, an elevation with surviving monumental defensive works.

**Mayor of the Palace (Maiordomus)** Official who emerged in 6th-century \*Merovingian \*Gaul, in charge of the offices and provision of the royal \*palaces. Initially, there could be several, but there came to be three mayors corresponding to the *tria regna* of \*Austrasia, \*Neustria, and \*Burgundy. After 626–7, only two mayors existed, one in Austrasia, the other in Neustria-Burgundy. In the earlier 7th century, mayors of the palace, now in charge of the royal \*estates, became more powerful, but kings were able to maintain their pre-eminence. Subsequently, as royal power declined, both mayoral offices came under the control of the \*aristocracy, and mayors such as \*Grimoald and \*Ebroin became central figures in Merovingian politics. In Austrasia as in Neustria-Burgundy, leading kin groups competed, often violently, for the control of the mayoralty. Ultimately, the Austrasian Pippinids succeeded in eliminating their rivals, first in Austrasia (680s), then in Neustria (687). They were able to use royal estates,

\*monasteries, and bishoprics to build up their followings and eventually took the throne for themselves (751). After this, they did away with the office of Mayor of the Palace. RLJ

**Maypherqat** See MARTYROPOLIS.

**Maysun bt. Bandal b. 'Unayf** (fl. c.660) Wife of the \*Caliph \*Mu'awiya, mother of the Caliph \*Yazid I, Maysun was daughter of a chief of the Christian Arab \*tribe \*Kalb. Her marriage solidified a vital alliance between the Sufyanid \*Umayyads and the Kalb; a surviving fragment of \*poetry is dubiously attributed to her. RJL

*EI* 2 vol. 6 (1991) s.v. Maysūn, p. 924 (Lammens).

**Mazdak and Mazdakism** Mazdak was a \*Zoroastrian high priest in the \*Persian Empire in the late 5th/early 6th centuries whose heretical judgements and interpretation of the \*Avesta were exploited by \*Qobad I and \*Khosrow I to institute social and economic reforms in the Sasanian Empire.

Our most detailed source of the description of Mazdakite religion comes from the 13th-century *Kitab al-melal wa'l-nehal* of al-Shahrestani. Mazdakism stemmed from a wider intellectual ferment within Zoroastrianism and other Late Antique Iranian religions. Contrary to the tenets of orthodox Zoroastrianism, Mazdakism held that light and darkness were pre-existent entities. Mazdak's ideas may have been influenced by an earlier Zoroastrian priest name Zardosht Khorragan from the province of \*Fars. Some of the teachings of Mazdak have \*Gnostic traits which may have come from \*Mani or a similar tradition. The Mazdakites abhorred violence and were vegetarians. Most notoriously, Mazdak allegedly held that all men's property and women should be held in common.

It is difficult to assess the historicity of all the tenets attributed to Mazdakism, but it is clear that with the accession of Qobad I, the King of Kings promoted Mazdak and used his ideas to break the power of the great \*aristocracy and to empower the lesser nobility. In Middle \*Persian texts the Mazdakites are commonly accused of sharing property and women, probably an exaggeration and slander stemming from Mazdak's rulings on legal matters pertaining to \*marriage which relaxed marriage laws in order to accommodate the lower classes. The great houses viewed this (probably correctly) as a ploy to dilute their bloodlines and privileges.

Mazdak is remembered in medieval Zoroastrian tradition as the arch-heretic who tricked the king and

weakened the Zoroastrian religion. The episode contributed to the overthrow of Qobad I in favour of his son, Khosrow I. After they had served their purpose, Khosrow I orchestrated a massacre of the Mazdakites. Mazdak himself is said either to have perished in prison or to have been killed and then flung from a \*bridge.

**Mazun (Oman)** Called 'Omana', more commonly 'Magan' in Hellenistic sources (*Periplus of the Erythraean Sea*, 32, 38, 106), and 'Mazun' in \*Pahlavi. From the 3rd millennium BC, Sumerians imported \*copper and diorite from 'Dilmun [Bahrain] and Magan'; Persian control may date from the Parthian period.

'Mzw[n]' is listed as part of the \*Persian Empire controlled by \*Shapur I on the \**Res Gestae Divi Saporis* at \*Naqsh-e Rostam. \*Arabic literature refers to migrations of the \*Azd \*tribe into Mazun/Oman and clashes with \*Sasanian authority. The Azd eventually established some independence; kings of the Julanda family were sovereign at the dawn of \*Islam. The Azd converted to Islam, but \*Umayyad control was weak overall: the \*Kharijites, in particular the \*Ibadites, established independent imamates and clashed with the Umayyads and \*Abbasids. From the 9th century, an Ibadī imamate asserted more successful and lasting independence.

**mead** An ancient alcoholic beverage made from fermented honey and water. During the early Middle Ages mead became a potent symbol of obligation and \*patronage in north-west Europe. The warriors praised in Y \**Gododdin* were feasted and given mead in a great hall by their lord before being sent into battle. The mead-hall theme recurs in \**Beowulf* and early medieval sources from \*Ireland depict the consumption of mead as an important element in aristocratic social life. JFG

**Meander Valley** Fertile agricultural area in \*Asia Minor. At some 530 km (330 miles), the Meander

(mod. Büyük Menderes) is the longest river in western \*Anatolia. Rising on the Anatolian Plateau it meanders westwards through a broad, flat-bottomed valley, covering 25,000 square km. In Late Antiquity, the river emptied into the Aegean at \*Miletus. Its flood plain is ideal for the cultivation of \*olive and fig trees. Much of the land was incorporated into very large \*estates, but there were also independent smallholdings, as appears from \*census records preserved on \*inscriptions at such small but prosperous \*cities as \*Tralles and \*Magnesia ad Maeandrum.

**meat** Consumed more commonly in the Roman Empire than in classical Greece. In the Roman world meat was prepared mainly by boiling or roasting, though frying, grilling, and baking were also employed. Wild game apparently played only a minor role in the diet. Meat \*sacrificed to pagan gods posed problems for Christians (1 Cor. 8).

Archaeozoological data indicate that meat probably contributed a greater portion of calories to the Late Roman diet than is often assumed. Beef and pork were the most important meat in the Late Roman \*diet (MacKinnon, 244), though \*sheep, \*goats, and chickens were also consumed. For a time pork was distributed as part of the food dole, and pork consumption seems to have risen in urbanized regions. Data from \*Sagalassos in \*Anatolia suggest an increase in pork consumption in AD 300–450 but a rise in sheep and goats in the food supply AD 450–600, probably reflecting changing ecological conditions. In the post-Roman West, evidence from \*Anglo-Saxon England also indicates that sheep and goats were increasingly important in supplying meat, with \*cattle and \*pigs in secondary roles.

On a protein equivalent basis, animal protein from meat was about three times the cost of vegetable protein. The Tetrarchic \*Prices Edict (§4.1) set the price of a Roman pound (0.3 kg/0.7 lb) of pork at 12 *denarii* and a *modius castrensis* (about 44 litres, approximately 12.5 kg/28 lb) of beans—a common source of protein—at 60 *denarii* (§1.9). Meat was sold in stalls in urban markets or in *macella* by butchers who slaughtered the animals and processed the meat. At least two *macella* specializing in meat sales existed in \*Constantinople. In the \*Persian Empire the types of meat consumed and the reservation of choice cuts for wealthier consumers parallels the Roman experience.

**Meaux** (départ. Seine-et-Marne, France) A \*city in a meander of the Marne, which acquired a wall-circuit encompassing 8 ha (c.20 acres) during Late Antiquity; little else is known of its layout. Meaux was briefly the site of a mint (mint mark IAN) in 293/4 as part of the campaign to end the usurpation of \*Allectus but it was rapidly superseded by \*Trier.

The Church of Meaux appears in the *Life of \*Genovefa*, but its \*bishops appear only sporadically from the mid-6th century onwards.

**Mecca** Town in western Arabia (the \*Hijaz), the spiritual and cultic centre of \*Islam, and scene of \*Muhammad's early prophetic career. Although this is not certainly attested in any pre-Islamic source, Muslim tradition ascribes Mecca's urbanization to Qusayy, who gathered the \*Quraysh together there, five generations before Muhammad.

According to tradition, the site had previously been occupied by various peoples. Its importance is that it was the place of the \*Ka'ba, a shrine established there by God when He expelled Adam from Paradise, and subsequently rebuilt by Abraham and Ishmael. Ishmael continued to live there and became the forefather of the main branch (from an Islamic perspective) of the Arab people.

Although Abraham introduced \*pilgrimage to Mecca (\*Hajj) and monotheism to the Arabs in Arabia, by the time of Muhammad, \*Quraysh and most of the Arabs were polytheists and idolaters, and Mecca one of the main centres of their religion. Muhammad experienced his first revelations there, but failed to win over Quraysh. He left the town for \*Medina (then called Yathrib) in 622, and by 629 was strong enough to return to capture it, destroy its idols, and restore the Ka'ba as the House of God on earth.

How the strongly monotheist religion of \*Islam originated in a remote part of Arabia dominated by pagans has been at the heart of academic enquiry. The solution favoured by many is that Mecca was not so isolated from the outside world as Muslim tradition suggests, and that social and religious changes were at work there by the late 6th century. Exploiting certain other details and reports in Muslim traditional sources, historians such as H. Lammens and W. Montgomery Watt argued that Mecca lay on important international \*trade routes, and Montgomery Watt in particular developed from this an economic and social explanation for the emergence there of Islam.

Others, like J. Wansbrough, have regarded Islam's origins in Mecca as an idea developed by early Muslim

scholars for religious purposes. In 1987 P. Crone argued that the notion of Meccan trade derives from a misunderstanding of the traditional reports and does not make logical sense, and that Montgomery Watt's explanation of the rise of Islam in Mecca is unsustainable. These scholars and some others envisage the possibility that what in due course became Islam emerged further north where the Arabs were more in contact with the religious and other developments of the early 7th century.

Although Muslim tradition portrays the significance of Mecca for Islam as part of the divine order of things, some scholars envisage its rise as the consequence of the early development of Islam in the Arab empire. \*Abd Allah b. al-Zubayr, a claimant to the \*caliphate, made Mecca his base between 684 and 692, but the building of the \*Dome of the Rock in \*Jerusalem by his \*Umayyad rival, \*Abd al-Malik, could indicate that Mecca's status in Islam was still contested in the 690s. The rebuilding of the Ka'ba by 'Abd al-Malik after the defeat of 'Abd Allah b. al-Zubayr may have been an important stage in the adoption of Mecca as the centre of Islam. GRH

**medicine** From the 4th century onwards, Galenism eclipsed earlier traditions and dominated medical discourse and practice in the Greek East, and later the Muslim world and Latin West. Medical education in 5th–6th-century \*Alexandria and 6th–7th-century \*Ravenna was based around a syllabus of Hippocratic texts (primarily those favoured by \*Galen) and a Galenic canon consisting of sixteen books. Read in a particular order, these works offered a wide-ranging curriculum, covering general principles and more specialized disciplines, e.g. \*therapeutics and dietetics. Medical professors expounded the syllabus in formal lectures and commentaries, adding significant qualifications in light of their own clinical experience. For ease of memorization, the

Galenic canon was also abridged, thereby consolidating Galenism into a more unified, dogmatic system.

The medical encyclopedists \*Oribasius of \*Pergamum (c.325–400), \*Aëtius of \*Amida (fl. 530), and \*Paul of Aegina (c.630) derived most of their material from Galen and earlier authorities. Composed as reference guides, these encyclopedias cover both theoretical and practical aspects of medicine. While authorial comments are rare, sources are often modified based on personal experiences or contexts. Paul, for instance, gives instructions for the surgical removal of arrows with specific reference to an Egyptian environment (*Pragmateia* VI, 88).

### Other traditions

In North \*Africa, \*Caelius Aurelianus (c.420) and \*Cassius Felix (fl. c.447) compiled medical handbooks in \*Latin, drawing on \*Greek sources, both Methodist and Galenic. Perhaps due to its simple and practical nature, Methodism flourished in the Latin world despite Galen's trenchant criticisms. It stressed that all diseases shared 'commonalities' (*κοινότης*), which once recognized suggested a certain course of treatment. Enquiries into the hidden causes of disease were irrelevant and time-consuming, as the patient's condition indicated the appropriate commonality. In *Acute Diseases*, Caelius Aurelianus also cites prescriptions from the Empiricist Heraclides of Tarentum (c.100–65 BC), although he primarily advises against their use (e.g. 1, 17). Founded by Philinus of \*Cos (c.260 BC), Empiricism maintained that knowledge should be derived from experience (*ἐμπειρία*) alone, not rational abstraction. Successful treatment depended on accurate observation, a written collection of past experiences, and an understanding of similarities. Both Methodists and Empiricists dismissed the 'Dogmatic' insistence on the use of reason to determine the causation of disease. Attributing their origins to Hippocrates, the Dogmatics believed that disease resulted from an excess or deficiency of one of the four humours; treatment consisted in restoring balance. The Ps.-Galenic author of *Introductio* lists Asclepiades of \*Bithynia (1st cent. BC) among the Dogmatics (14, 683K). Asclepiades, however, held that the body was composed of invisible particles, and health depended on their unhindered and balanced movement through pores. His opponents criticized the gentle nature of his therapies (e.g. use of \*wine and light exercise) as a means of indulging his wealthy clientele. Doctors identified as Asclepiadeans can be found in 3rd–4th-century \*Gaul and \*Anatolia.

### Diseases

Considered a disease, fevers (Gk. *πυρετοί*, Lat. *febres*) are discussed at length in the medical handbooks and

encyclopedias. The taxonomy 'quotidian', 'tertian', 'quartan' derives from the fever's periodicity: intervals of one, two, or three days. This pattern suggests malarial infection. Increased deforestation and the neglect of hydraulic works contributed to the diffusion of \*malaria in Late Antiquity. The Roman Campagna was a particularly virulent region for malarial infection, as abandoned farmland receded into marsh. Scattered populations prevented frequent outbreaks of \*epidemic diseases, but \*armies moving en masse were vectors for transmissible diseases such as bacillary dysentery and typhus. Beginning in \*Egypt c. AD 541, the Justinianic \*Plague, possibly the first outbreak of bubonic plague, spread as far as \*Spain, \*Trier, and \*Wales. It continued to flare up in densely populated areas of the eastern Mediterranean throughout the 6th–8th centuries. Those who contracted leprosy (Hansen's Disease) were excluded from society, as the disease was thought to be an outward sign of divine punishment, though it was also deemed curable (e.g. \*Cyril of \*Alexandria, *Sermon*, 82, cf. Num. 12: 10). The first *leprosaria* ('hospitals for lepers') in Europe date from the 5th or 6th century; \*Gregory of Tours (c.538–94) mentions a \**xenodochion* (Gk. 'hospice') for lepers built outside Cabillonum (mod. \*Chalons-sur-Saône) c.550 (*Gloria Confessorum*, 85).

### Doctors

Often bi- or even trilingual, many doctors served on \*embassies or as guides, or \*court politicians in political and religious negotiations. The doctor and \*deacon Elpidius (fl. 510–30) took part in an embassy to \*Constantinople, and later attended \*Theodoric the \*Ostrogoth on his deathbed (\*Procopius, *Gothic*, V, 1, 38). \*Sergius of \*Resaina (d. 536) translated a number of Greek medical and philosophical works into \*Syriac, but also participated in theological disputes that sent him to \*Rome and Constantinople. Used by Hunayn \*Ibn 'Ishāq (d. c.873 or 877) and his associates, Sergius' translations shaped the reception of Galenic medicine in the Islamic world and beyond. ARD

**Medina** Town in the north-western \*Arabian Peninsula about 350 km (220 miles) north of \*Mecca, home of the first Muslim polity, centre of the \*caliphate from 632 until 656, and thereafter important in Islamic practice and learning.

A number of linked settlements around an oasis, before \*Islam Medina was known as Yathrib, and is attested in several pre-Islamic texts in various languages. Why it came to be called Medina (*al-madina*, 'the town') is variously explained. According to Islamic sources its population on the eve of Islam consisted of pagan Arab and Jewish clans. There are diverse theories about the origins and nature of the \*Jews of Yathrib, who are not mentioned in pre-Islamic Jewish sources.

\*Muhammad reportedly came to the town with several Meccan \*Companions at the invitation of some of the pagan Arabs, in 622 (the \*hijra). His supporters in Medina are known as the \*Ansar. Over the next ten years he established his political and religious authority in the town, fought off attacks from his Meccan opponents, expelled and then exterminated the Jews who refused to accept him, sent expeditions against neighbouring tribes and places, and conquered \*Mecca in 629. A document drawn up by Muhammad, known to scholars as the Constitution of Medina, is preserved in Muslim literary sources, and widely accepted as fundamentally authentic. Muhammad's house is counted as the first \*mosque, and he was buried there on his death in 632. A monumental mosque was built on the site under the \*Umayyad Caliph al-\*Walid I (705–15), and became the second most important mosque in Islam after that of Mecca. Most pilgrims to Mecca also try to visit Medina.

After the death of Muhammad, the caliphs remained in Medina until \*Ali left for \*Kufa at the start of the First \*Arab Civil War (656–61). The Caliph \*Umar I was assassinated (644) in Medina, and the Caliph \*Uthman b. 'Affan killed by rebels (656). Following the succession of the Umayyad Caliph \*Yazid I in \*Syria in 680, many leading Muslims in Medina refused to accept his authority and expelled the governor and members of the Umayyad family living there. In 683 an army sent by Yazid defeated the dissidents and forced them to acknowledge Umayyad rule.

Subsequently Medina lost the political importance it had had in early Islam, but its reputation as the home of

Melania the Elder, S.

authentic Islamic practice grew as Islamic \*law developed primarily in Iraq. Medina came to be seen as the home of the \**sunna*, which more and more was identified as the practice of the Prophet and the main source of Islamic law together with the Qur'ān. The most prominent legal scholar of Medina, \*Malik b. Anas (d. 795), the eponym of the Maliki 'school of law', regarded the practice of Medina as an authoritative source alongside traditions about the Prophet's practice. The town is also seen as the birthplace of the traditional biographical material about Muhammad (*sira*), \*Ibn Ishaq (d. 765), being its best-known representative. GRH

**Melania the Elder, S.** (c.340–c.410) Noblewoman from \*Spain, Christian benefactor, saint and promoter of \*asceticism. Granddaughter of Antonius Marcellinus (consul 341), Melania was c.22 when her husband and two of her three sons died (\*Palladius, *Lausiac History*, 46). After ten years in \*Rome to establish her remaining son, Publicola, in senatorial circles, she travelled to \*Egypt, where she visited the \*monasteries of \*Nitria. When Egyptian ascetics were exiled to \*Sepphoris (Dio-caesarea) by \*Valens she followed as their patroness (\*Paulinus of Nola, *ep.* 29, 11) and c.374 established a women's \*monastery on the Mount of Olives. She presided there 27 years, an associate of fellow ascetic \*Rufinus and a minister to visitors, most famously \*Evagrius Ponticus (383) and \*Jerome (386), whose early praise turned to opprobrium after the second \*Origenist controversy (compare *ep.* 4 of AD 374 to *ep.* 133.3 of 417). She returned to Rome c.400, promoting asceticism among the aristocratic class (Paulinus of Nola, *ep.* 29) and persuading her granddaughter \*Melania the Younger and her husband to embrace an ascetic \*marriage (*Lausiac History*, 54). After disposing of her \*estates she lived out her life in \*Jerusalem. JDK

**Melania the Younger, S.** (c.380–31 December 439) Roman saint and \*ascetic, granddaughter of \*Melania the Elder (c.342–c.410). After losing two children in infancy, she persuaded her husband Pinianus (*PLRE* I, Pinianus I, 385/7–431/32) to adopt an ascetic life and together they divested themselves of their properties. They joined \*Paulinus' ascetic circle at Nola, then

sailed to \*Africa in 410, where they founded \*monasteries and came to know \*Augustine, eventually visited ascetics in \*Egypt, and finally settled in \*Jerusalem. They founded a nunnery on the Mount of Olives, where Melania lived enclosed in a cell. Following the death of Pinianus, she founded a male monastery near the Church of the Ascension. Her *Life*, which survives in both \*Greek and \*Latin recensions, was composed by Gerontius (d. 485), a monk associated with her in Jerusalem. GAF

**Meleager** Mythological hero, admired for his bravery. \*John Malalas recounts one version of the \*hunting of the Calydonian Boar, Meleager's love for Atalanta, and his tragic death (VI, 21). This myth combined love and hunting with an elevated moral tone, so continued to inspire visual artists. Meleager spearing the boar and his death appear on \*sarcophagi in the 2nd–3rd centuries, and the hunt on 4th-century floor \*mosaics both eastern and western (e.g. \*Daphne-by-Antioch, Constantinian villa; S. Pedro del Aroyo, Villa Romana). He also features on \*silver, e.g. the Meleager plate in the \*Sevso Treasure (5th century), another plate in Munich (6th/7th century), and a plate of 613–29 in the Hermitage. MGP

Leader-Newby, *Silver*, 137–40.

**Meletius and Meletians** Meletius was \*Bishop of \*Lycopolis in \*Egypt and a confessor during the Great \*Persecution. Imprisoned with \*Peter I, \*Patriarch of \*Alexandria in 305/6, Meletius split from Peter over the readmission of lapsed Christians and formed the rigorist Meletian 'Church of the Martyrs', resembling the better-known \*Donatist Schism in \*Africa. An attempt at reconciliation at the \*Council of \*Nicaea in 325 failed, and the Meletians clashed with successive patriarchs of Alexandria, particularly \*Athanasius (bp. 328–73). Meletian \*letters, preserved in P. London VI, 1914 (Bell) accuse Athanasius of violence, charges which contributed to Athanasius' first \*exile in 335. Athanasius in turn accused the Meletians of allying with

'Arian' heretics and conspiring against him (*Apologia contra Arianos*, 59–71, *Historia Arianorum*, 78–9).

The *Breviarium Melitii*, the list of clergy that Meletius submitted at Nicaea (in Athanasius, *Apologia contra Arianos*, 71), reveals a Meletian presence throughout the Nile Valley. While in no sense a nationalist movement, the schism posed a significant threat to Alexandrian episcopal authority and held special attraction for Egyptian ascetics. By 400 Meletian influence was fading, although Meletians appear in the works of Cyril of Alexandria and Shenoute and may have survived into the 8th century. DMG

**Melitene** (mod. Eski Malatya, Turkey) \*City and bishopric in eastern Cappadocia near the Euphrates. It housed a legionary camp of the Legio XII Fulminata attested from 71/2 until the 5th century AD, and received city status from Trajan.

The Tetrarchy integrated the city into the province of Armenia Minor. In the wake of the Peace of Acilisene (c.387), the city became part of Armenia Secunda, and under Justinian I of Armenia Tertia. The city housed monasteries named after the local military martyr S. Polyeuctos, allegedly executed under Valerian in 259 (*BHG* 1567–8), as well as S. Hieron and the 33 martyrs who purportedly died at Melitene in 290 (*BHG* 749–50). Cyril of Scythopolis' *Lives* frequently mention inhabitants of Melitene who came to the Holy Land on pilgrimage; some settled there in monastic communities. The most famous of them was S. Euthymius the Great in the early 5th century. Strongly fortified under Anastasius I and Justinian (Procopius *Aed.* III, 4, 15–20), the city was destroyed by the army of Khosrow I in 575. In Islamic times, Melitene continued to switch back and forth between the Byzantine Empire and the Muslims. In 656/7 Mu'awiya's generals reconquered it and used it as an important strategic rear base for the Islamic campaigns against Byzantium. During the reign of Abd al-Malik Melitene again became Byzantine but was conquered for a third time by Hisham. However, in 751 the city was destroyed under Constantine V and rebuilt by the Abbasid al-Mansur. KMK

**Meliton the Philosopher** (fl. 2nd or 3rd cent.)

Author of an oration addressed to Antoninus Caesar, found in a 7th-century Syriac manuscript, alongside works of Bardaisan and various Greek philosophical texts. The author urges the emperor to adopt monotheism because it is morally superior to polytheism. The text, however, makes no explicit reference to either Christianity or Judaism. It remains unclear whether the author is identical with the 2nd-century Bishop Melito of Sardis, an excerpt of whose *Apology*, cited by Eusebius of Caesarea (*HE* IV, 26, 3, 5–11), does not align with the Syriac text. **Melkite** Term of derision employed by Miaphysite writers to describe those who adopted Dyophysitism, the doctrine that there are Two Natures in Christ, both human and divine, as promulgated by the Council of Chalcedon (451) and the *Tome of Leo I* (449). It originated from the Syriac adjective *malkaya* ('royal' or 'imperial'), thereby characterizing the proponents of Chalcedon as simply 'the king's men'. There is no Coptic equivalent to 'Melkite', though the term became relatively common among later Arabic Christian writers in Egypt. CJH

**Melloproximus** Second-highest-ranking official (behind the Proximus) in each of the Sacra Scrinia. Melloproximi from the *epistulares* and *libellenses*, and the *Laterculensis* (the third-ranked *memorialis*) acted as the senior assistants (*adjuvatores*) to the Quaestor Sacri Palatii, with the right to sell their posts to a substitute (*NovJust* 35). CMK

Jones, *LRE* 576–7.

**Melminii** Family of curial status from \*Ravenna, important in the \*city government from the late 5th to the late 6th century. Individual Melminii are recorded in the \*Ravenna Papyri as *Defensor Ecclesiae Ravennatis*, as *Defensor Civitatis*, and as *magistrati*. As *\*principales* they had a prominent position in the \*city council. In the Byzantine period, two Melminii were honoured with the \*title of *\*vir clarissimus* (PLRE III, Andreas 6 and Cassianus). The family is not attested after the 6th century.

**Melque** See SPAIN, CHURCHES OF, MELQUE.

**Membij** See HIERAPOLIS OF SYRIA.

**memoriales** Staff, overseen by the \*Magister Memoriae, in one of three main departments of the Sacra \*Scrinia, whose organization is outlined in a law of \*Theodosius II and \*Valentinian III (CJust XII, 19, 7). In 470, \*Leo I made provision for 62 personnel (CJust XII, 19, 10). By then, legitimate sale of offices and a supernumerary waiting-list had arisen. AGS Jones, LRE 575–8.

**memra** (plur. *memre*) Ambivalent \*Syriac term indicating both poetic and non-poetic texts. The latter are 'homilies', 'exhortations', or 'discourses' that often combine straight prose with highly stylized artistic prose, as in the *Demonstrations* of \*Aphrahat (c.270–after 345). The poetic *memra* is a 'verse homily' that consists of isosyllabic couplets (cf. METRE, POETIC, SYRIAC) and whose length ranges from just 100 to several thousands of verses. Composed for a rhythmic, psalmodic recital, its repetitive structure full of parallelisms and antitheses generates a narrative kind of poetry of great rhetorical power. The oldest extant poetic *memre* are found among the works of \*Ephrem the Syrian (c.300–373); the genre was mostly popularized by \*Jacob of Sarug (c.451–521), to whom more than 700 verse homilies are ascribed.

S. P. Brock, 'Poetry and Hymnography (3): Syriac', *OHECS*, 657–71.

**Mên** (deity) \*Pagan Moon God depicted with Phrygian cap, cloak, crescent moon, pine-cone, and cockerel, worshipped in central \*Anatolia, with a few \*inscriptions from \*Greece, \*Italy, \*Dacia. Like other local deities, he was associated with justice and punishment. Mên Askaenos was the highly officialized *patrios theos* of the Roman *colonia* at \*Antioch in \*Pisidia, where his \*temple survived until the 3rd century AD. Other dedications are known from Laodicea Combusta of \*Pisidia,

\*Aphrodisias, and Cabeira in Pontus. In \*Lycaonia, Mên was invoked to protect graves. ACFC

Mitchell, *Anatolia*, II.

**Menander Protector** (fl. late 6th cent.) Historian. Born, probably in \*Constantinople, to a father who gave both his sons a legal education. His brother dropped out; Menander persisted, although a legal career lacked appeal. Instead, he explains, in one of two surviving testimonies by a \*circus \*faction supporter (the other is \*Jacob the Newly Baptized), how he 'put aside serious things and chose the most disreputable... my enthusiasms were the brawls of the colours (*scil.* the factions), the chariot competitions, the pantomime ballets... I lost my cloak, my common sense and my honour.' He was apparently rescued from his disorderly life by the \*patronage of the new \*emperor, \*Maurice, which led him to write his *History* (fr. 1). His career is otherwise obscure; he appears to have acquired the status of a \*protector. By the late 6th century, *protectores* were less military men than imperial agents and courtiers, and Menander enjoyed access to imperial \*archives, which he quotes extensively and reliably.

His *History* survives in over 70, sometimes extensive, fragments chiefly found in the *\*Excerpta de Legationibus*, the *Excerpta de Sententiis* (parts of an encyclopedia commissioned by \*Constantine VII Porphyrogenitus), and a later encyclopedia, the *\*Suda*, which drew on the *Excerpta*. It starts from where \*Agathias ended (557/8), and continues until at least 582 (fr. 1). Judging from what remains, it was written on a grand scale, relating the history of wars, emperors, and empires, with \*Constantinople as the centre of events. It was also 'classicizing', less in terms of allusions to ancient writers or ancient learning, than in the use of a classical style of writing, in its linguistic purism (although technical \*Latin words intrude), and in the introduction of speeches that often owe more to the conventions of \*rhetoric than to what was actually said—though, in the best traditions of classical historiography, the speeches do often characterize the speakers and explore the issues.

While wide-ranging both geographically and ethnically, the *History* focuses on the East more than the West, and is particularly concerned with Roman relations with the \*Avars and the \*Persian Empire. The latter are treated as Rome's equals and their primary diplomatic partners. Notable is the unusual attention Menander pays not just to international relations, but to the procedures and language of \*diplomacy—especially to that employed in treaties, which he quotes at length (e.g. fr. 6.1; the \*Fifty Years Peace of 561). This reflects

his understanding of diplomacy as an economical way of achieving balance between the two great powers. It probably also indicates professional experience of diplomacy as well as careful study of official texts. His generally fair-minded approach is reflected in his evaluation of the main characters in his *History* from \*Justinian I to \*Khosrow I. Nor are his judgements warped by religious enthusiasm, though he was almost certainly a Christian, as is indicated by his \*epigram on a martyred Persian convert to Christianity, Isaozites (fr. 13, 3). But he was no zealot.

Hunger, *Literatur*, vol. 1, 309–12.

**Menander Rhetor** A \*rhetorician from \*Laodicea ad Lycum, under whose name two treatises on epideictic oratory have been preserved. Both are dated on internal evidence to the late 3rd century, but differences in approach suggest different authors.

Treatise I, the work of a rhetorician with Platonist leanings, identifies the topics appropriate to the different genres of epideictic speech, subdividing each topic into alternative possibilities. By contrast, Treatise II analyses the different genres of epideictic speech into linear sequences of headings—an approach methodologically similar to Menander's other attested work.

Though he is most familiar to modern scholars as an expert on epideictic, Menander's fame in Late Antiquity rested primarily on his commentary on Demosthenes. Only sixteen named fragments survive, but parallels in material transmitted anonymously in the Demosthenes scholia show that the overall strategies and local tactics of Demosthenes' arguments were analysed in minute detail, using the theoretical resources of Late Antique issue-theory. Significantly, Menander's entry in the \**Suda* (M590) reveals that he also wrote a commentary on \*Hermogenes, *On Issues*. Menander's exegesis of Demosthenes appears to have originated in lectures to advanced students, and was practically oriented. He highlights rhetorical techniques for his students to observe and imitate, while encouraging them to evaluate doctrines taught by textbook writers such as Hermogenes independently, in the light of Demosthenes' practice and their own experience. Source-critical analysis suggests that Menander's commentary was the dominant (though not the only) influence on the Late Antique commentaries that lie behind the Demosthenes scholia.

The *Suda* also mentions a commentary on a treatise on \**progymnasmata* by Hermogenes' rival Minucianus. Two references to Menander in the scholia to \*Aelius Aristides suggest a commentary on (at least) the *Panathenaicus*. A late 5th-century \*letter (P.Berol. 21849) contains an urgent request for the return of borrowed copies of

Menander's *Art*, *Methods*, and *Encomia*: these works cannot be identified with certainty.

**Menas, S.** Christian \*military saint widely venerated as a \*martyr, \*miracle worker, and healer. Plentiful and mutually contradictory sources survive in \*Greek, \*Coptic, Old Nubian, Ethiopic, \*Latin, \*Syriac, and \*Armenian for his life, martyrdom, and miracles. Menas was believed to have been Egyptian in origin, and to have served as a soldier under the \*Tetrarchy in \*Phrygia where he was martyred. His fellow soldiers brought his body to \*Mareotis, south-west of \*Alexandria. Eventually, the \*camels bearing his \*relics refused to move further, and this was taken as a sign that his body should be interred at \*Abu Mina. Soon, miracles of healing were reported at his grave, and his cult flourished even as his \*martyrium was enlarged to accommodate growing numbers of pilgrims. They often returned with souvenir \*pilgrimage flasks (*ampullae*) depicting S. Menas in the \*orans position, flanked by a pair of kneeling camels. The diffusion of these flasks throughout the Mediterranean, and his veneration at sites outside Egypt, indicate the popularity of S. Menas' cult in Late Antiquity.

**Menas of Nikiu** \*Bishop of \*Nikiu in the \*Nile Delta in the early 8th century in succession to \*John of Nikiu. Menas was already old when he came to Nikiu from the \*monastery of Macarius in \*Scetis. He wrote in \*Coptic an encomium *On Macrobius* (BHO 583) and a *Life* (BHO 539) of Isaac, \*Patriarch of \*Alexandria (in office 690–2).

The *Life* of Isaac relates the patriarch's wondrous works and also gives especially good information on the relationship between the patriarch and the \*Arab governor 'Abd al-'Azīz (r. 685–705). The governor is generally sympathetic towards the patriarch, observing his holiness and appreciating his clever disobedience

at times. He also, however, has the patriarch arrested when he suspects him of having intervened by \*letter in a conflict between the kingdoms of \*Nubia and \*Ethiopia.

Macrobius, a 4th-century Bishop of Nikiu, was believed to be a \*martyr of the Great \*Persecution. His \*martyr passion written by Menas describes Macrobius' career in the Church, his ordeals in \*prison and in court at the hands of officials, and his \*miracles. PMS

**menorah** The most frequently encountered motif in ancient Jewish art and a central appurtenance in the Wilderness Tabernacle (Exodus 25: 31–40), it became prominent in the First and Second Jerusalem Temples. Only in the 1st century BC did the *menorah* appear elsewhere, and in Late Antiquity it served as the dominant Jewish symbol in cemeteries and \*synagogues in \*Palestine and the Diaspora, much as the \*cross did in Christian contexts. Often appearing alone, the *menorah* could also be accompanied by other Jewish symbols such as the Torah shrine, *shofar*, *lulav*, and *ethrog*. LL

R. Hachlili, *The Menorah, the Ancient Seven-Armed Candelabrum* (2001).

**Menouthis** See ABOUKIR.

**mensores (metatores)** Junior palatine officials responsible for arranging billeting for the \*emperor and \*court (\*Comitatus) while travelling, and for requisitioning lodgings in \*Constantinople for visiting dignitaries (*CTh* VII, 8). They reported to the \*Magister Officiorum (*Not. Dig.* 11.12 [*or.*]), and were probably (like the \**lampadarii*) organized as a \*Schola. They should not be confused with the *mensores* at \*Portus (the \*harbour for \*Rome) who measured state-imported \*grain before storage (*CTh* XIV, 4, 9). CMK

Boak, *Master of the Offices*, 80–2.

Chastagnol, *La Préfecture urbaine*, 306–7.

Clauss, *Magister Officiorum*, 19–20.

**merchant** (Lat. *negotiator*, also *mercator*) There was no recognized mercantile class in Late Antiquity, and buyers and sellers of products for resale, i.e. of products not primarily produced by the merchant or intended for his own consumption, came from diverse social backgrounds and attained very varied levels of success. Nobles and government officials were discouraged from engaging in \*trade, but these suggestions were often disregarded, and some merchants built huge fortunes and great social notoriety. Other merchants struggled financially or ran modest enterprises, and slaves, women, and clerics could all operate as merchants (*CTh* XIII, 1 *passim*). No particular religious, linguistic, or ethnic community dominated merchant activity, though note may be made of a Syrian merchant in \*Paris in 592 (\*Gregory of \*Tours, *HF* X, 26) and Manichaean merchants on the \*Silk Road in \*Central Asia.

Mercantile activity could also accompany other professional activities; \**navicularius* (shipowner) and merchant were not synonymous, for example, but many who owned \*ships were also merchants. Evidence for a voluntary \*guild structure in Late Antiquity is limited but for the collection of the \**collatio lustralis* merchants were obliged to organize themselves according to trade. Less formal social networks based upon ethnicity, origin, and language facilitated inter-regional trade. Both literature and legal documents tend to exhibit moral disapproval toward merchants, although it is equally clear from legal texts that the government relied upon merchant activity to secure goods for public consumption, to provide markets at outposts, and to acquire luxury items which it valued (e.g. \*silk). Trade in specie, rather than barter, was the norm (*CJust* IX, 23, 1). Speculative trading was facilitated by the availability of loans, particularly (though at high rates) maritime loans, as well as by the unpredictability of government requisitions, and by the system of tax-collection, which promoted an active trade in precious and base metals. Merchants operated both intra- and inter-regionally as

well as at and beyond the borders of the Roman and \*Persian Empires, with some efforts at government regulation (*CJust* IV, 63, 4). AAB Jones, *LRE* 864–72.

**Meriamlik** See SELEUCIA AD CALYCADNUM.

**Merida (Roman Emerita Augusta)** \*City in modern Extremadura in western \*Spain on the River Guadiana. Founded in 25 BC as a *colonia* for Roman army veterans, it was the capital of the \*province of \*Lusitania. \*Bishops of Merida were criticized in 254 for yielding during the \*persecution of \*Decius (\*Cyprian, *ep.* 67). The significant rebuilding of the city in the 4th century included the first \*basilica to its patron saint, S. Eulalia; it was then occupied by \*Alans, \*Vandals, and \*Suebes before coming under \*Visigothic control in 456. The archaeological record shows \*houses and mausoleums within the city \*walls destroyed and abandoned during these occupations. The *Lives of the Fathers of \*Merida* recount the lives of the 6th-century bishops Paul, Fidel, and \*Masona, who presided over more rebuilding and some new constructions, including a bishop's \*palace, \*hostel, \*monasteries, and many basilicas that provided the setting for a \*stational liturgy. In 713, the \*Arab conquest reached the city. Many Roman monuments are preserved in part, including a \*bridge, \*villa, \*circus, theatre, amphitheatre, sections of city wall, \*forum remains, and multiple \*aqueducts. Part of the Visigothic basilica of S. Eulalia can be seen under the modern church, and some of the Arab riverside fortress remains. EMB

**meritum (plur. merita)** Criteria, encompassing both performance and pedigree, for deserving promotion to high office or rank; or time served and seniority (*ordo*) for promotion to higher clerical positions within the \*civil service, independent of \*suffragium (influence) or \*patronage. JND

Rilinger et al., *Ordo und dignitas*, 181–222.

Schlinkert, *Ordo senatorius*.

**Merobaudes, Flavius** \*Magister Peditum and \*consul in 377, 383, and possibly 388. Merobaudes was possibly of Germanic origin. He supported the proclamation of \*Valentinian II, but later backed the \*usurper \*Magnus Maximus and committed \*suicide at \*Trier soon before Maximus' defeat by \*Theodosius I (\*Pacatus, *PanLat* II (XII), 28, 4–5). DN

*PLRE* I, Merobaudes 2.

B. S. Rodgers, 'Merobaudes and Maximus in Gaul', *Historia* 30 (1981), 82–105.

**Merobaudes, Flavius** (fl. 435–46) General, poet, and panegyrist. Born in \*Baetica (\*Sidonius, *carm.* 9, 297), Merobaudes was probably related to the 4th-century Magister Peditum and \*consul of the same name (in 377, 383, and 388). He left \*Spain for an imperial career and by the early 430s was closely associated with the powerful general \*Aëtius. As a *vir spectabilis* and \*Comes Sacri \*Consistorii, he was honoured in 435, like the earlier 'epic panegyrist' \*Claudian and later Sidonius (Gillett, 284–7), with a \*statue in the Forum of Trajan in \*Rome; its \*inscription praises him for literary and military accomplishments alike (*CIL* VI, 1724). His first extant \*panegyric, a speech

## Meropius

of thanksgiving for Aëtius, probably dates between 437 and 443. He married the daughter of Fl. Asturius (consul 449), and after 441 succeeded his father-in-law as \*Magister Utriusque Militiae in \*Tarraconensis. His victory in 443 over the \*Bacaudae was followed by a sudden recall to Rome (\*Hydatius, *Chronicle*, 120, ed. Burgess). His last datable accomplishment was probably the hexameter panegyric for Aëtius's consulship of 446. A fragmentary \*epitaph commemorates his burial at the cemetery of S. Agnese on the via Nomentana (*CIL* VI, 41395) in \*Rome. His works survive on eight folios of the palimpsest Sangallensis 908 (*CLA* VII, 962). In addition to the panegyrics, his writings include two \*ecphrases on imperial themes (*Carmina* I–II), fragmentary couplets describing a *locus amoenus* (*Carmen* III), and a *genethliacum* for the first birthday of Aëtius' son (*Carmen* IV). Merobaudes may also have written the hexameter poem *De Christo* (*AnthLat* 1.878). WEK PLRE II, Merobaudes.

**Meropius** Greek \*philosopher from \*Tyre who travelled to \*India under \*Constantine I. He put in at \*Aksum, and was killed, but the king took his two young kinsmen into his court. One of them, \*Frumenius, was eventually consecrated by \*Athanasius as the first Christian \*bishop in Aksum. OPN PLRE I, Meropius.

**Merovech** (fl. mid-5th cent.) First mentioned by \*Gregory of \*Tours (*HF* II, 9) as a descendant of the Frankish King \*Chlodio and father of \*Childeric I. \*Fredegar (III, 9) makes him the son of Chlodio or a sea-beast (a likely play on his name), and is the first to describe him explicitly as the eponymous founder of the ruling Frankish dynasty of the \*Merovingians. STL PLRE II, Merovechus.

A. C. Murray, 'Post vocatur Merovingii: Fredegar, Merovech and Sacral Kingship', in Murray, *After Rome's Fall*, 121–52.

**Merovingians and the Merovingian dynasty** Name given since at least the 7th century to the dynasty that held sole kingship among the \*Franks from c.500 to 751. The first certainly historical king of that dynasty was \*Childeric I, who achieved power in northern \*Gaul by astute alliances with the last Roman powers in the

area; it is likely that he controlled much of northern Gaul by the time of his death in c.481. He was succeeded by his son \*Clovis, who was the true founder of the Merovingian monopoly of royal power, by his military successes, by his \*conversion to Catholicism, and above all by his elimination of other royal dynasties among the Franks, notably those based in \*Cambrai and \*Cologne.

\*Fredegar, in the 7th century, claims (III, 9) that 'it is said' that Childeric's father \*Merovech was the result of a union between 'a beast of Neptune resembling the quinotaur' (Minotaur) and the wife of King \*Chlodio, and that Merovech's descendants were called *Merovingii* after him. This assertion, combined with the fact that Merovingian kings were distinguished from their subjects by their long \*hair, has led to much (possibly futile) speculation about the 'sacral' nature of Merovingian kingship.

At Clovis' death in 511, royal power was shared between his four sons, the youngest three of whom were the children of Queen \*Chlothild. It is likely that this was the result of negotiation between the eldest son \*Theuderic I and Chlothild herself rather than traditional Frankish practice. Theuderic retained power in the Frankish homeland in the north-east of Gaul, up to and beyond the middle and lower Rhine, which would later be called \*Austrasia. He and his son \*Theudebert I were prime movers in the aggressive extension of Frankish power east of the Rhine, and also south, against the \*Burgundians, into \*Provence, and even beyond into \*Spain and \*Italy. If we are to believe \*Gregory of \*Tours, almost the only source for Frankish political history in the 6th century, his younger brothers \*Childebert I and \*Chlothar I acted decisively to prevent further dissolution of royal power by eliminating the children of their brother \*Chlodomer when he died in 524. By 558 all the sons of Clovis apart from Chlothar I had died, and he ruled as sole king. When he died, in 561, his four sons, \*Charibert, \*Guntram, \*Sigibert I, and \*Chilperic I, divided the kingdom up in much the same way as had happened in 511.

Civil wars between the three brothers who survived Charibert's premature death in 567 occupy many pages of Gregory's *Histories*. These disputes have sometimes been seen as the result of rivalry between \*Sigibert's Queen \*Brunhild and Chilperic's Queen \*Fredegund, after Brunhild's sister \*Galswintha, who had for a time replaced Fredegund as Chilperic's consort, had been murdered at \*court. Conflicts over the redistribution of Charibert's territory may, however, have been more significant. Sigibert was assassinated in 575 (possibly by his brother Chilperic), and succeeded by his infant son \*Childebert II; Chilperic was assassinated in 584, and succeeded by his infant son \*Chlothar II. There is doubt, then and now, that Chlothar was the child of Chilperic

and \*Fredegund, since the appearance of a baby, after Chilperic's death, was essential for the political survival of Fredegund. After 584 the sole surviving son of Chlothar I, \*Guntram, was dominant, and he cemented an alliance in 587 with his nephew Childebert.

When Guntram died in 592, Childebert II took over much of the realm, for his cousin Chlothar was still only 9 years old. When Childebert himself died in 596, his mother Brunhild became regent for her grandchildren and, briefly, great-grandchildren. However, in 613 Chlothar II was able to establish himself as the single ruler of the Franks, with the help of nobles such as \*Arnulf of \*Metz and \*Pippin I (the first known members of the family that would later become the Carolingians) and inaugurate a long period of internal peace, during which monasticism was able to prosper. In 622 he gave Austrasia, based on the Rhine and Meuse valleys, to his son \*Dagobert I as a sub-kingdom. Henceforth, \*Neustria (the Seine and Oise valleys) and \*Burgundy, centred on the former Burgundian kingdom to the south-east, were frequently ruled together, with Austrasia under a separate king. Dagobert established himself as sole ruler of Francia again after Chlothar's death in 629, but when he died another division took place between his two sons by different wives: \*Clovis II, still a child, took Neustro-Burgundy, and \*Sigibert III took Austrasia.

From this time onwards, the \*Mayors of the Palace in each kingdom (notably ambitious ones such as \*Grimoald, the son of Pippin I, or \*Ebroin) have often been seen as more important than the kings themselves. But that should not blind one to the continuing significance of the later Merovingian kings (and queens), for the Mayors themselves needed kings in order to survive, at least until the last gasps of the dynasty in the 730s and 740s. Although it has become traditional to refer to these later monarchs as the *rois fainéants*, the 'do-nothing kings', in fact adult Merovingian kings, such as \*Childebert III (694–711), could still be very effective; unfortunately, many of the later Merovingians were children. There were a number of crises, notably in 675 (the murder of \*Childeric II), and 679 (the murder of \*Dagobert II, which instigated the resumption of warfare between Neustrians and Austrasians, for the first time since 613).

But the end of the dynasty was not inevitable until \*Charles Martel, son of \*Pippin II, acquired the mayoralty, and began an aggressive policy to reunite Francia. His son \*Pippin III suggested to Pope \*Zacharias that the Merovingian kings had outlived their usefulness; and the pope agreed. \*Childeric III was deposed in 751, and Pippin was anointed as the first Carolingian king. **Merv (Marw, Marv, Marw al-Shahijjan)** City on the Murghab River, capital of Achaemenid Margiana and later the Persian province of \*Khorasan. Known as Alexandria Margiana or Antiochia Margiana under the Seleucids (Ptolemy, VI, 10), Merv was an integral part of the Persian world and the seat of the \*marzban responsible for defending the \*Persian Empire against the steppe nomad barbarians to the north-west (Markwart, *Catalogue*, 11). Situated at the crossroads of major east-west trade routes, it was well known for its extensive walls, citadel, and \*irrigation system and renowned as an agricultural and commercial centre. Before the \*Arab conquest, most inhabitants of Merv were \*Zoroastrians, with sizeable \*Buddhist, Christian, and \*Manichaean minorities at times.

In 651, \*Yazdegerd III, the last \*Sasanian shah, was killed in the city, sealing the Arab conquest of Persia (al-\*Baladhuri, *Futūh al-Buldān*, I, 490–3). Under the Muslims, Merv functioned as the capital of \*Khorasan (al-Baladhuri, *Futūh al-Buldān*, II, 163–5) and the launching point for Arab expansion into \*Central Asia, especially under \*Qutayba b. Muslim (d. 715). In addition to the native Persians, a large part of the population was soon composed of Arab \*ghazis, 'fighters against the infidels'. Later on, Merv played a key part in the social revolution which led to the establishment of the \*Abbasid \*caliphate in 750. Several Arab geographers give accounts of the place, including al-\*Yaqubi (86–8), Ibn al-Faqih (375–82), and al-\*Muqaddasi (273–6). Nine seasons of excavations were carried out between 1992 and 2000 under the auspices of the International Merv Project, whose study of the city and its oases continues, coordinated from offices at University College, London. **Mesembria** (mod. Nessebur, Bulgaria) Coastal \*city of \*Haemimontus founded in the 6th century BC on an oblong tombolo, now in parts submerged. It was unsuccessfully besieged and assaulted several times in Late

Antiquity. The \*Bulgars took it in 812, but the Romans reconquered it in 863. In the 8th century, it was the liaison centre for \*trade between Romans and Bulgars and base of the *Commerciarius*, the successor to the \*Comes *Commerciorum*.

Its Hellenistic fortifications were rebuilt in the late 3rd, 5th, 6th, and 9th centuries. \*Brickstamps of \*Justinian I have been found in the masonry. The city had at least six 5th- to 6th-century \*basilicas, the most notable being the Old Metropolis, the Holy Apostles, and the Sea Basilica. Four of the churches replaced \*pagan \*temples. In the late 5th century Mesembria acquired an \*aqueduct and monumental \*baths. ER

**Mesopotamia, Persian** Region forming the southwestern end of the territories of the \*Persian Empire, as it had done since the Arsacid period. In the \*Sasanian period, it housed the longest-lasting Sasanian capital, \*Ctesiphon, and was known as Asuristan or Suristan (from Assyria) and Dil-ī Eranshahr 'the Heart of the Iranian Realm'.

#### *The Sasanian capital and provinces*

The capital complex at Ctesiphon, known as al-\*Mada'in in the later Islamic sources and \*Mahoze in \*Syriac—both meaning 'cities'—was founded in the Seleucid and Arsacid periods. It was originally made up of \*Seleucia ad Tigrim, and was later expanded with the addition of Walashgerd under the Arsacid Vologases I (AD 51–78). The \*Sasanian founder, \*Ardashir I, expanded the complex with the addition of Weh-Ardashir (\*Kokhe). In the late Sasanian period, a *dastgerd* (royal settlement) was founded to the east of Ctesiphon and along the Nahrawan Canal, demonstrating the prosperity of the region.

Apart from Ctesiphon, Sasanian Mesopotamia included the important cities of \*Nisibis, often contested with the Roman Empire in the north, Anbar (MP \*Peroz Shapur, location of the main military supply storage and possibly the city of Misikhe) in the west, and the port of Ubulah in the south. It also contained the city of \*Hira in the south-west, used by the \*Lakhimid Arab tribe as the seat of their client kingdom of the same name. The whole of Asurestan, in fact, was divided into 12 *kura* or *ostan* (provinces) and 60 *tasuj* (districts), each with a governor and local tax authority.

These provinces are named as Holwan in the north, Shad-Hormizd, Shad-Kawad, and Bazigan-Khosrow in the east, Shad-Shapur and Shad-Bahman in the south on the plain of the Tigris and Euphrates, and the Upper Ostan, Ardashir Pabagan, Masapatan, Upper-Weh-Kawad, Middle Weh-Kawad, and Lower Weh-Kawad in the west. This strict division appears to have been significant for Sasanian tax regulation in the 6th and 7th centuries, following the reforms of \*Qobad I and \*Khosrow I. The more ancient divisions of the region, known from the Babylonian \*Talmud and the Syriac sources, divide \*Asorestan/Mesopotamia from south to north into the regions of Kashkar/\*Beth Aramaye, Babil, Jukha, Garmakan, Now-Ardashiragan/\*Adiabene, and Arbayastan/\*Beth 'Arabaye. The description of these regions given by the 9th-century Arab geographer Ibn Khordadbeh clearly drew on accounts dating from the Sasanian period.

#### *Economic development*

The Sasanian \*court invested heavily in the development of Mesopotamia, the seat of their empire and perhaps their largest tax contributor. Archaeological investigations show the most intense period of occupation in the Diyala basin, as well as southern Mesopotamia, was during the middle Sasanian period. Imperial investments in creating artificial waterways such as the Nahrawan Canal provided water across the higher plains and allowed for intense settlement in northern Mesopotamia. Drainage of marshlands in the south also allowed for the use of marginal lands, while the alluvial plain in the south, remaining from the Babylonian and Achaemenid periods, continued to yield abundant crops and taxes at least until late Sasanian times. The newly formed gentry, known as the \**dehqan*, were among the most enduring communities of the region and communicated much of the Sasanian administrative practices to the early Islamic period.

#### *Religious communities*

While the Sasanian ruling class spoke Middle \*Persian, and perhaps initially Parthian, and conformed to the general tradition of \*Zoroastrianism, most of the Mesopotamian population appears to have adhered to other faiths. Ample evidence from the acts of church \*councils (\**Synodicon Orientale*) and other texts implies that a great portion of the population spoke Aramaic and were Christians. Throughout the Sasanian period, their numbers grew and by the late Sasanian period, members of both the \*Church of the East and the \*Syriac Orthodox Church were active in the service of the Sasanian \*administration and \*court.

The presence of Christians in Mesopotamia had in fact been the subject of discussion between the Romans

and the Sasanians since the exchange of \*letters between \*Constantine I and \*Shapur II in the early 4th century. It continued to be a factor in relationships of the two empires, with Christians such as \*Aphrahat being considered a Roman fifth column by the Persians. They were subjected to serious \*persecution by Shapur II, and again intermittently in the 5th century. The Romans showed concern for the safety of the Christian population of the Sasanian territories when engaged in \*diplomacy with the Persians. However, as early as 410, the King of Kings, \*Yazdegerd I, permitted a \*council of the \*Church of the East to be convened in Ctesiphon and these meetings continued to be held. After the \*Council of \*Ephesus of 431, Christians who favoured the Christology of \*Nestorius migrated to Nisibis, in the north-west of Asurestan, and reinforced the Church of the East. By the 6th century, the Church of the East was well established, and in subsequent centuries carried the gospel as far afield as \*China. The Sasanian King of Kings was prepared to intervene in the election of the \*Catholicus of the Church of the East and Christians of Mesopotamia became active members of the Sasanian \*administration. In the latter years of \*Khosrow I and under \*Khosrow II, Christians who favoured a \*Miaphysite Christology and adherents to the \*Syriac Orthodox Church became more numerous in the Persian Empire. Yazdin, Khosrow II's minister, and \*Shirin, his favourite wife, were \*Miaphysite Christians.

The evidence of the Babylonian Talmud points to the presence of a large Jewish population, mostly living in southern Mesopotamia, where they were farmers. Numerous Talmudic commentaries concern the use of land, the legal basis of its ownership, and the role of the Jewish community vis-à-vis the Sasanian administration, so demonstrating the established position of the \*Jews in Mesopotamia. At least one Sasanian king of kings, \*Yazdegerd I, married a Jew, Shoshindokht, the daughter of the Jewish \*Exilarch (Resh-Galota: 'Head of the Exiles', the official head of the Jewish community of Mesopotamia); their son Narseh was an important military and political figure in the 5th century.

Alongside these communities, other Aramaic-speaking populations, including \*Mandaeans, in addition to other gnostic cults, lived in Sasanian Mesopotamia. Some of these have survived to the present. \*Mani was brought up in one of these communities, the Elchasaites, before he received the revelations which inspired Manichaeism to spread west into the Roman Empire and east to \*China. It was out of these communities that the Manichaean religion also founded, since the prophet \*Mani is known to have been a native of Babylonian.

**Mesopotamia, Roman** Roman \*province of the \*Diocesis of \*Oriens, extending from the \*frontier with the \*Persian Empire in the east to \*Osrhoene in the south-west, and \*Euphratensis in the north-west. To the north of the Tigris lay the Armenian Satrapies which in 536 under \*Justinian I became the province of \*Armenia Quarta.

A small province called Osrhoene was formed in the late 2nd century, when it encompassed territory east of the Euphrates taken from the client-kingdom of Osrhoene, though not the kingdom's principal \*city of \*Edessa. To this province was added c.198/9 a large province to the east called Mesopotamia, garrisoned by at least two legions. The Abgar dynasty finally disappeared from Edessa in 241/2 (Millar, *RNE* 125–6, 151–2). The \*Verona List names separate provinces of Osrhoene and Mesopotamia. By this time Mesopotamia would have included the territory ceded by the \*Persians in 298.

The territorial gains of 298 were returned to the Persians by \*Jovian in 363. \*Nisibis and \*Singara were handed over denuded of their inhabitants (\*Ammianus, XXV, 7, 11). Those who became refugees at Edessa included the \*Syriac poet \*Ephrem the Syrian. The \**Notitia Dignitatum* indicates that the legions previously stationed at Nisibis and Singara were relocated at \*Constantia-Tella to the west and at \*Cephas, on the Tigris, north of the \*Tur 'Abdin; Constantia-Tella became the headquarters of the \*Dux Mesopotamiae (or. XXVI). He commanded formidable detachments of troops dispersed across the province and its neighbours, but the loss of Nisibis left Roman Mesopotamia vulnerable to attack from the east along the flat lands of the northern Mesopotamian plain. The title of the civil \*governor was \*Praeses (or. I, 93; II, 22, XXII, 13 and 29). The only \*city listed by \*Hierocles is \*Amida (715, 3–4).

When the Persians eventually did attack, in 502, they came from the north, from the direction of \*Theodosiopolis (Erzerum). The \*Emperor \*Anastasius I built \*Dara a few miles inside the Roman frontier to block future Persian approaches from Nisibis, but a condition of the \*Everlasting Peace of 532 was to move the headquarters of the Dux Mesopotamiae from Dara (\*Procopius, I, 22, 3). It is from this time onwards that the

\*Arabs of the Syrian Desert, the \*Ghassanids on the Roman side and the \*Lakhimids on the Persian side, became more heavily involved in the tensions between the empires. From 540 (when the Everlasting Peace was broken by \*Khosrow I) the province continued to be a military zone, with lulls in fighting between the making of the \*Fifty Years Peace in 562 and its breaking by the Romans in 573, and between 591 and the \*Persian invasion under \*Khosrow II which started in 603. Dara was captured in 604, after a siege of more than nine months. When \*Heraclius struck back, Amida was one of the first places to see Roman troops, and the emperor appears to have passed through and founded a church there on his triumphant return in 628/9.

However, probably in 641, the Arab general \*Iyad b. Ghanm came to Constantia-Tella where the 300 Romans refused to surrender and were killed. He then captured Dara and killed every Roman in the city. He is said to have taken \*Resaina, \*Mardin, and Amida by treaty, but himself died violently and was buried at Amida. Mesopotamia became the Arab province of al-\*Jazira.

Despite these persistent military manoeuvres the province of Mesopotamia remained, with neighbouring Osrhoene, part of a \*Syriac-speaking civilization which flourished throughout Late Antiquity on both sides of the international frontier. This was predominantly Christian and produced poetry as well as theology; monasteries such as \*Qenneshre were important centres of learning producing original work as well as \*translations into Syriac and commentaries on Greek \*philosophy and literature, some of which were later translated into \*Arabic. Christians in the 5th century who found their Christology at odds with that formulated by the \*bishops at the Council of \*Ephesus of 431 made their way to Nisibis and Persian territory and eventually carried Christianity as far afield as \*China. In the mid-6th century \*Jacob Burd'oyo set up a separate \*Miaphysite Christian hierarchy in Roman Mesopotamia and this too began to spread into Persian \*Mesopotamia by the end of the century. On both sides of the frontier, \*monasteries were numerous: \*John of \*Ephesus, originally a monk of the Monastery of Mar John Urtaya near Amida, chronicled the lives of 6th-century Miaphysite monks in his *Lives of the Eastern Saints*, Thomas of Marga those of the \*Church of the East in his *Book of the Governors*. \*Syriac-speaking monasticism is still alive in Roman Mesopotamia on the \*Tur 'Abdin and at the 5th-century Abbey of Deir Zafaran near Mardin. **Mesopotamia and Osrhoene, churches of** The churches of the \*cities of \*Mesopotamia and \*Osrhoene are known mostly from ancient written sources (e.g. *Soghitha on the Church at \*Edessa*). The few that survive and have been recorded show a variety of types of plan. The three-aisled \*basilica was a common type mentioned in texts and has been recorded archaeologically at \*Martyropolis. The aisled \*tetraconch in \*Amida and the Octagon in \*Constantia-Tella were monumental centralized churches. The former plan was widespread, whereas the latter was unique in many respects. The monumental \*cistern beneath the cathedral at \*Dara survives. The cathedral of Edessa, dedicated to the Holy Wisdom, was considered one of the wonders of the world by Arab writers but none of the 23 churches in the city recorded in the texts has survived, though reused fragments are scattered around the city. Excavations around the \*baptistery at \*Nisibis have uncovered remarkable architectural remains which may have belonged to the cathedral, but they remain unpublished.

In the countryside, surviving churches are concentrated in the \*Tur 'Abdin. Isolated churches also survive on the hills around Edessa, in the Tektek Mountains, and in Kale-i Zerzevan, close to Amida. The style of the architectural \*sculpture (e.g. at \*Deir Zaferan) unites the whole region, urban and rural, and is significant for its classical character. EKK

**Mesrop Mashtots'** See MASHTOTS, MESROP.

**Messalians** An allegedly heretical \*ascetic group arising in 4th-century \*Mesopotamia; 'Messalianism' became a staple of ecclesiastical condemnations for centuries. The name, from the \*Syriac *msallyānē*, 'those who pray', appears first in \*Ephrem's *Against Heresies* (before 373) with the single comment that they are 'debauched' or 'agitated'. It soon moved into \*Greek and \*Latin heresiological literature, appearing in works by \*Epiphanius of \*Salamis in the mid-370s

and in anti-\*Pelagian writings by \*Jerome c.415. The Messalians and an associated book, their *Asketikon*, were condemned at the \*Council of \*Ephesus of 431. Later Greek texts contain lists of alleged Messalian doctrines, the most complete in \*John of \*Damascus' *De Haeresibus*, 80 (before 749), claiming to be taken 'from their book', perhaps the *Asketikon* mentioned at Ephesus. These lists include claims that sin is indwelling and can be uprooted only through the power of the Holy Spirit, that \*prayer rather than \*baptism accomplishes such liberation from sin, an emphasis on intense spiritual experience, and disdain for manual labour and for ecclesiastical authority. In the 1920s the list presented by John of Damascus was found to contain excerpts from the \**Macarian Homilies*, a classic of Byzantine spirituality. More recent study has examined the Syriac origins of the Messalians and of the terminology found in the *Macarian Homilies*, while leaving inconclusive the exact constitution and leadership of the group.

**metallurgy** In Late Antiquity it is difficult to identify metallurgy as a distinct science since theoretical concepts about metals belonged to so many different disciplines (\*philosophy, natural history, \*medicine, \*pharmacy) and because it is not clearly distinguishable from the studies of minerals, precious \*stones, \*dyes, etc.—in practice, theoretical metallurgy is included in \*alchemy. Outside the context of alchemy, interest in metals was mainly practical (\*mining, smelting, and casting) rather than theoretical, until Georgius Agricola struggled for metallurgy to become an academically accepted subject (*De Re Metallica*, 1556).

In accordance with ancient beliefs, metals were considered powerful agents in medicine and \*magic, used in pharmaceutical concoctions and talismans alike. Within the framework of analogical thinking characteristic of antique natural philosophy in general and alchemy in particular, metals were associated with the seven planets (deities): \*gold—\*Sun; \*silver—Moon; \*copper—Venus; \*iron—Mars; \*tin—Jupiter; lead—Saturn; quicksilver—Mercury (alternative associations and sequences are attested). Analogical thinking was by no means restricted to the relationship between microcosm and macrocosm but was pertinent as well to correlations within the terrestrial sphere (minerals, animals, plants, virtues). In Greek alchemy (\*Zosimus of \*Panopolis, 3rd cent.) the main purpose of manipulating metals shifted from imitation (coating, colouring) to transformation (*transmutatio*). Beyond the question of feasibility, disputations focused on the quality of the

metalwork, Roman, barbarian, and post-Roman

products, the legality of such operations, and ultimately on their theological implications.

The fundamental importance of metallurgy is reflected in the uninterrupted tradition of its practice as well as its theory during the historical turbulences of Late Antiquity. Metallurgical precepts from the earliest alchemical \*papyri of Upper \*Egypt find their way into medieval compendia of European \*monasteries through a scarcely documented but undeniable chain of tradition suggesting a steady undercurrent of metallurgical lore throughout the ages.

## metalwork, Roman, barbarian, and post-Roman

Metals known and worked in Late Antiquity include: \*gold; \*silver; \*iron; \*tin; \*lead; and \*copper. They were used to make tools, \*arms and armour, plate, \*jewellery, \*coinage, and furnishings. Metalworking techniques were refined throughout the Classical period, and Late Antiquity featured new developments, particularly the use of *niello*, a black powder consisting of silver sulphide. Formerly, the evidence was limited to literary allusions and depictions of manufacturing processes, but 20th-century archaeological discoveries of metallurgy and metalworking, combined with archaeometallurgy (the experimental reconstruction of metalworking processes), now offer a clearer picture.

## Mining and refining

Precious metals were rarely mined in a pure state, and their ores required washing and refinement, through such processes as cupellation, liquation, or amalgamation, followed by treatment with \*salt or sulphur. This took place at \*mines, creating ingots which were then sent to smiths. Gold was obtained by sifting either alluvial detritus or mined rock. Sources in \*Armenia, \*Nubia, \*Egypt, \*Greece, the \*Balkans, and the Danube were supplemented by imports from Afghanistan and \*India. Silver was produced widely, with \*Anatolia, the Danube, \*Britain, \*Macedonia, and Greece the largest producers. Silver was derived by purifying smelted lead; in Late Antiquity, high purity was often achieved, particularly in plate, which can be explained by its use as bullion. \*Bronze (*aes*) was produced by alloying copper with tin, and brass by alloying copper with zinc. Copper was mined at \*Phaeno of \*Palestine; tin (and silver) was still reaching \*Alexandria from \*Britain in the early 7th century (*Life of*

\**John the Almsgiver*, 10). Control of mines exacerbated tension between the Roman and \*Persian Empires from the 5th century, and the loss of \*mining areas in the 7th severely disrupted state mining operations.

### Smiths and techniques

Smiths worked independently, or in large workshops, and formed \*guilds. Areas of \*cities where smithies concentrated, such as the Chalkoprateion at \*Constantinople, were named after them. The imperial household employed its own smiths. There is no extant ancient treatise on smithing, so the objects themselves constitute the main evidence.

Different techniques were used for different types of metal. Ancient furnaces could not reach temperatures sufficient to melt iron, so iron was primarily worked while hot, using hammer and anvil. Techniques used for softer metals, such as silver and gold, included: raising (hammering a sheet into shape); casting (used for attachments, such as feet and handles, but also whole vessels, both decorated and plain); and spinning (the burnishing of sheet metal onto a ready mould on a lathe). Vessels might be created in one piece, but larger and more complex designs involved joining separate pieces by soldering or rivets (or, more rarely, hammering at high temperatures). Creating large bronze \*sculptures from cast pieces (as was done in making statues of pagan gods) declined in Late Antiquity. Coins were struck in \*mints using punches and dies to impress designs.

Methods of decoration included: chasing (the indentation of the surface using a hammer or punch; 'flat chasing' involved removing the background); engraving (the cutting away of the design, while cold, popular in 3rd-century \*Gaul); *repoussé* (the embossing of a design from the back, using hammer or punches); casting (from a mould, sometimes of much earlier date; common for vessels from the 3rd century); overlaying (the beating of leaf or foil onto a design, or whole vessel); inlaying (the filing of recesses in a design with another metal, or precious \*stones; *niello* was popular from the 3rd century); and gilding (using gold mixed with mercury). \*Cloisonné \*enamel and filigree developed in Late Antiquity, notably in barbarian \*jewellery. \*Inscriptions were carried out in pointillé, or *graffito*. Names (usually in the form of a \*monogram) may be those of owners, \*donors, recipients, or (for bronze vessels) smiths or workshops. Weight inscriptions guaranteed the metal's value, and an official, imperial system of \*silver stamps developed, under the supervision of the \*Comes Sacrarum Largitionum, in the 5th century.

Metalwork can exhibit local influence or peculiarities; the Gallic Hemmoor bucket (consisting of a deep bowl on a low foot, in bronze or silver) was a type characteristic of \*Gaul, and a hybrid of Persian and Roman styles was evident further east (e.g. in the \*Concești Treasure).

### Survival

Precious metals were regularly melted for bullion or reuse throughout Antiquity (and even into the 19th century). Many surviving vessels have been recovered from burials, whether as grave goods (especially in barbarian areas), or from \*hoards (sometimes broken up ready to re-melt, like the 5th-century \*Traprain Law Treasure). The \*Treasure of Berthouville (Normandy) is a rare example of a pagan treasure that escaped the melting pot. Late Roman hoards have been found in \*Italy, Gaul, \*Britain, the \*Balkans, southern Russia, and \*Syria, and swords in Sweden. Domestic plate (such as the \*Kaiseraugst Treasure) was distributed as imperial \*largitio, and along trade routes extending beyond Roman \*frontiers. Roman metalwork, such as the \*Hildesheim Treasure, reached barbarian areas through both looting and gift-giving. HAHC

**Metanoia, monastery of** (Gk. 'Repentance') Convent founded by the \*Empress \*Theodora in a disused \*palace on the Asian side of the \*Bosporus to shelter some 500 women previously forced into \*prostitution (\*Procopius, *Aed.* I, 9, 1–10). Unwilling inmates escaped by night (Procopius, *Anecd.* 17, 5–6). JPH Janin, *GrandCentres*, 20–1.

**Metanoia, monastery of, Egypt** See ABOUKIR.

**meteorology** Study of 'things high up' (Gk. *met-eora*). The focus of several later commentators, Aristotle's natural philosophical *Meteorology* treated 'everything that happens naturally'—but with less regularity than that of the primary element (*aither*)—in the region below the celestial motions. Phenomena common to air and water, and kinds and parts of earth, including shooting stars, \*comets, clouds, rain, hail, rivers, coastal erosion and silting, the sea's saltiness, \*thunder, lightning, whirlwinds, rainbows, winds, and \*earthquakes are among those things explained.

In the 6th century, the Christian philosopher \*John Philoponus produced a (partially extant) commentary on Aristotle's *Meteorology*, as did \*Olympiodorus, whose work is the most extensive extant ancient commentary on the text. Both repeatedly cite Alexander of Aphrodisias' earlier treatment, but disagree with him, considering Book 4 (concerning metals and minerals) part of the *Meteorology*. Famously rejecting Aristotle's *aither*, Philoponus explained heat as arising from the \*Sun's fiery nature (*In Meteorologicorum Librum Primum Commentarium*, 49), rather than its motion. Like Philoponus, Olympiodorus did not rely only on ancient texts; he also incorporated information from contemporary scientists from \*Alexandria.

**Methodius, Apocalypse of Ps.-** (Greek) The \*Greek translation of the Syriac *Apocalypse of Ps.-Methodius* was made sometime between c.691/2, the date of the composition of the \*Syriac original, and 727, the date of the earliest manuscript of the \*Latin translation made from the Greek. Some Greek texts of the *Apocalypse* are distinguished by a probably 9th-century interpolation (13, 7–10) which mentions Malagina (a district of \*Bithynia attacked by the \*Arabs in 798, 860, and 875) and seems to refer to the severe cold during the winter of the Arab \*siege of \*Constantinople in 717–18. The Greek *Apocalypse* can provide a *terminus post quem* for the latest recension (γ) of the \**Alexander Romance*, since the *Apocalypse* is the source for that version of the *Romance*'s account of Alexander's encounter with the Unclean Nations. The *Apocalypse* was the fountainhead and the mainstay of the Byzantine \*apocalyptic tradition and perennially popular reading. The Greek text was also at the root of all the European versions of the *Apocalypse*. Peter the Monk translated it into Latin in the early 8th century, thence it was translated into many Western vernacular languages. Old Slavonic translations

were also made from the Greek in the 11th and 13th or 14th centuries.

BMG

Hoyland, *Seeing Islam*, 295–7.

CPG 1830:

ed. W. J. Aerts and G. A. A. Kortekaas (with GT), *Die Apokalypse des Pseudo-Methodius. Die ältesten griechischen und lateinischen Übersetzungen* (CSCO 569, 570, Sub. 97, 98; 1998). text (with ET) B. Garstad, *Apocalypse of Pseudo-Methodius: An Alexandrian World Chronicle* (DOML 14, 2012).

**Methodius, Apocalypse of Ps.-** (Syriac) (c.690 or 691) An Eastern Christian apocalypse, composed in \*Syriac in the late 7th century (possibly of \*Miaphysite origin) in the \*city of \*Singara and attributed pseudonymously to the 4th-century \*Bishop \*Methodius of Olympus (\*Patarā). Pseudo-Methodius presents itself as a 'Homily on the succession of kings and the End of Time' (so the superscription), dividing the history from Adam to the End (the *eschaton*) into segments of seven millennia. The historical part begins with the expulsion of Adam from Paradise (I, 1) and ends with the defeat of the \*Persian Empire in the early 7th century (X, 6). It is followed by a prophecy about the End (XI, 1–XIV, 14), set during the seventh and final millennium: an eschatological 'king of the Greeks', the Last Emperor who acts like a second Alexander the Great, will overthrow the \*Arab invaders, conquer the entire world, and establish an eternal Christian reign of peace, before his abdication on Golgotha (XIV, 6–14).

An apocalypse of immense popularity and influence in the Middle Ages and beyond, Pseudo-Methodius' translations into \*Greek, \*Latin, and subsequently several other languages testify to its broad readership. Not only does Pseudo-Methodius explain the Islamic threat as an act of divine chastisement, it seeks to assure its readers that the Muslim invaders of the time of the actual author will soon be defeated by the last Byzantine king.

**Methodius of Olympus** (martyred c.312) \*Bishop of Olympus (in Eastern tradition, of \*Patarā) in \*Lycia. Of fourteen writings which are known, only the *Symposium* has survived completely in \*Greek. In this

dialogue Methodius imitates Plato's *Symposium*, but at the same time contrasts Platonic \*praise of Eros with the praise of Virginity, sung by ten \*virgins. In his longest writing, *De Resurrectione*, Methodius attacked the concept of spiritual resurrection as put forward by \*Origenists, thereby influencing the reception of \*Origen (e.g. \*Epiphanius, *Panarion*, 64). This and five more writings are extant only in Greek fragments (*De Autexusio*, *De Creatis*, *De Lepa*, *In Iob*, *De Martyribus*), supplemented by a reliable Old Slavonic translation dating from the 10th century. This translation includes three additional writings not transmitted in Greek (*De Cibis*, *De Sanguisuga*, *De Vita*). Most of Methodius' writings are Platonic \*dialogues with numerous allusions to and quotations from Plato's writings, but also reflecting considerable Stoic influence. Four other writings mentioned by \*Jerome (*Vir. Ill.* 83), including a refutation of \*Porphyry, *Against the Christians*, are lost completely. KB CPG 1810–30:

**metre, poetic, Arabic** \*Arabic \*poetry is scanned quantitatively, and its forms were apparently followed intuitively by pre-Islamic nomadic poets. A formal system was first elaborated by al-Khalil b. Ahmad (fl. 750), who identified fifteen metres. Of these, about a half dozen are the most common; five of the seven \**Mu'allaqat*, for example, are in either *al-kamil* or *al-tawil* metres.

Any line of Arabic poetry is divided evenly into two hemistichs, each of which consists of two to four feet. Seven of Khalil's metres use one foot throughout; the others feature some sort of alternation. So, for example, the repetition of a bacchius (short-long-long) eight times in a line (four per hemistich) gives *al-mutaqarib*. Beginning with a bacchius and alternating with a first epitrite (short-long-long-long) four times (two of each foot per hemistich) gives us the most common metre, *al-tawil*. One metre is maintained throughout a typical poem.

Outside the poetic corpus, one pre-4th-century \*inscription seems to be in *al-tawil*, perhaps indicating ritual origins. Occasional segments of the \*Qur'an are metrical. NAM

**metre, poetic, Latin and Greek** Late Antique poets writing in \*Greek and \*Latin inherited schemes of quantitative verse that had formed the distinctive sound of classical poetry for centuries. As in classical times, prosody in most Latin and Greek poetry depended on artificial but fluid patterns of long and short syllables, though Latin poets also developed rhythms keyed to word accent. DET

**metre, poetic, Greek** Apart from occasional experimentation with rare metrical schemes and polymetry (e.g. by \*Synesius), quantitative verse in Late Antiquity was limited almost exclusively to stichic hexameter, elegiac, anacreontic, or iambic trimeter. The weakening distinction in pronunciation between long and short vowels is often evident (e.g. increased incidence of 'false' quantities). In the 5th century, however, \*Nonnus perfected a strict set of rules for the hexameter that both respected classical prosody and accounted for the growing influence of stress accent (e.g. avoidance of proparoxytone line-endings). Nonnian rules were observed by the better \*epic and elegiac poets down to the 7th century (e.g. in \*Agathias' *Cycle*). At the same time the iambic trimeter also underwent transformation. Already in the 4th century, \*Gregory of \*Nazianzus was limiting resolution. This was a step towards the later dodecasyllable, in which lines invariably contain twelve syllables without regard for their quantity. KWW

A. Wifstrand, *Von Kallimachos zu Nonnos. Metrisch-stilistische Untersuchungen zur späteren griechischen Epik und zu verwandten Gedichtgattungen* (1933).

**metre, poetic, Latin** Late Latin poetry retained many of the metres that distinguished its classical forerunners while also initiating the rise of accentual verse schemes characteristic of much medieval poetry. Dactylic hexameter remained, like \*epic itself, a benchmark, while also serving an array of poetic genres that now included Gospel epic, \*saints' lives, *elogia* of \*martyrs, and funerary \*epigrams as well as didactic, \*panegyric, and satire. Writers from \*Ausonius and \*Prudentius in the 4th century to \*Ennodius and \*Boethius in the 6th displayed versatility and sustained literary tradition by deftly deploying lyric and elegiac as well as epic metres. In the hands of a good poet metre remained not an inert formula but an integral part of the sound of poetry being written, read, and enjoyed.

At the same time, however, word accent, which had always been a feature of Latin prosody but may have become more prominent in the spoken Latin of the Later Empire, began to serve as the foundation of a parallel tendency. Quantitative metres such as the iambic and trochaic schemes employed in \*hymns by \*Hilary of \*Poitiers, \*Ambrose, and Prudentius lent themselves to accentual scansion. \*Augustine's *Psalm against the Donatists*, however, epitomizes the turn towards the rhythm, rhyme, and syllabically equal lines of popular song within Christian liturgical and polemical contexts.

**metre, poetic, Syriac** The basic principle of \*Syriac poetic metre is syllable count, with no importance attached to vowel length or word accent or stress. While the oldest samples of Syriac poetry (e.g. \**Odes of Solomon*, late 2nd cent.) do not follow strict metric schemes, the poetic works of \*Ephrem the Syrian (c.300–373) contain a wealth of metres. These can be distinguished in two subsets insofar as they belong to the literary genres of \**memra* or \**madrasa*.

The poetic *memra* or 'verse homily' is a composition in which two isosyllabic verses make up a couplet. Ephrem's *memre* characteristically employ a heptasyllabic metre with 7+7 syllables in each couplet. The poet \*Balai (fl. 450) is known for his pentasyllabic *memre* (5+5 syllables per couplet), while the genre was greatly popularized by \*Jacob of Sarug (c.451–521) who used a dodecasyllabic structure of 12+12 syllables per couplet.

The \**madrasa* is a highly developed strophic composition, whose stanzas all have the same syllabic pattern. Ephrem uses about 50 different metres, ranging from simple structures like 4+4/4+4/4 syllables to complex structures like 5+5/5+5/5+5/6+3/5+3/6+3/5+3 syllables. Metrical breaks in the stanzas usually correspond to transitions in the text.

**Metrodorus** A \*philosopher during the reign of \*Constantine I (\*Jerome, *Chron.* 232h Helm). Of Persian origin, Metrodorus travelled to \*India, where he taught the construction of water \*mills and \*baths. He won the respect of the Brahmins in this way and was

granted access to their shrines, where he stole many \*pearls and precious \*stones. Metrodorus also received precious gifts from the King of India for Constantine. However, after returning to \*Constantinople he offered the presents to the \*emperor in his own name, and added that the Persians had stolen many others. Constantine demanded these from \*Shapur II and, as he did not receive any answer, broke the peace with the Persians (Cedrenus, i, p. 295). The story, narrated by the 11th/12th-century historian \*George Cedrenus, is regarded as apocryphal. However, in the 4th century, \*Ammianus Marcellinus also said that Metrodorus' lies to Constantine were the reason for the war with the \*Persian Empire (XXV, 4, 23). Metrodorus' travels induced \*Meropius and \*Frumentus to follow his example and visit \*Ethiopia, where Meropius was killed and Frumentus became the first \*bishop (\*Rufinus, *HE* X, 9). **metrological systems** See WEIGHTS AND MEASURES.

**metropolitan** In general, the \*bishop of the principal \*city of a civil \*province. The \*Council of \*Nicaea (325) required the appointment of any bishop in a province to be ratified by the metropolitan (canon 4), the first recorded use of the term. It also ordered that the Bishop of \*Alexandria should have supervision of \*Egypt, \*Libya, and the Pentapolis 'in accordance with ancient custom' (canon 6). \*Eusebius mentions bishops (e.g. Dionysius of \*Corinth) exercising oversight of other churches. The \*letters of \*Cyprian of \*Carthage (d. 258) show him performing many of the functions of a metropolitan, such as convening councils, though in the provinces of \*Africa outside \*Africa Proconsularis the functions of a metropolitan were exercised by the senior bishop by date of consecration.

Disputes sometimes occurred over the metropolitan rights of bishops, such as that between \*Arles and \*Vienne which began in 417. The title was subsequently accorded to bishops of cities other than the provincial metropolis; the Bishop of \*Nicomedia, for instance was Metropolitan of \*Bithynia, but the title was also accorded to the Bishop of Nicaea in the late 4th century and to \*Chalcedon at the Council of \*Chalcedon, which however reserved the prior rights of Nicomedia. The Council of Chalcedon permitted appeal from the decisions of a metropolitan to the \*exarch, the bishop of the principal city of a (civil) \*dioecesis. BKS; OPN Bingham, *Antiquities*, II, 16; vol. 1 (1875), 60–7.

**Metz** (dép. Moselle, France, Roman civitas Mediomatricum, Mettis) A substantial Roman \*city, strategically located beside two navigable rivers at the intersection of two major Roman highways, Metz was fortified sometime after the 3rd-century \*Alaman attacks, and prospered in the 4th century by virtue of its proximity to the imperial capital at \*Trier and the restored \*frontier. Imperial \*textile factories were transferred there from \*Autun and Viviers, and new public buildings erected including an imposing \*basilica, perhaps never completed, and transformed into a church in the \*Merovingian period (now S. Pierre-aux-Nonnains). The city's first securely attested \*bishop, Victor, appears in 346, but a credible late 8th-century list gives him several predecessors.

Metz was sacked by the \*Huns in 451 (and perhaps previously in 406), but although archaeological evidence (or its absence) implies that it was hit hard by these episodes and by the collapse of the imperial system more generally, it was never totally abandoned, and revived significantly under the \*Franks from the mid-6th century onwards, superseding \*Reims as the main urban base of the kings of \*Austrasia. \*Sigibert I married \*Brunhild there in 566, and \*Gregory of \*Tours depicts their son \*Childebert II watching beast-baiting near his \*palace, while \*Venantius Fortunatus praises its walls and describes a royal progress from the city down the Moselle. \*Merovingian dynamism is similarly reflected in its hinterland by the emergence of \*cemeteries with richly furnished \*burials, indicative of competitive display amongst families of the emerging landed \*aristocracy. The city remained significant thereafter, not least because of its lasting connections with the \*Arnulfing dynasty, whose progenitor \*Arnulf was \*Bishop of Metz c.614/15–629/30; his cult was celebrated in one of over 40 churches and \*monasteries that existed in and around the city by the mid-8th century, a reflection of its importance as a focus for royal and aristocratic \*patronage. **Miaphysites** Christians, formerly termed \*Monophysites, who hold the doctrine that the incarnate Christ has a single nature (Gk. *mia physis*), in which the human and divine cohere in a unified existence that allows for the dynamic and integral continuation of both. Adherents reject the Dyophysite (Gk. two natures) emphasis expressed in the Definition adopted at the \*Council of \*Chalcedon (451) and are similarly opposed to the strong distinction of human and divine natures in Christ asserted by the \*Church of the East (\*Nestorians).

Though the term 'Monophysite' occurs in dogmatic discussions of Miaphysitism from the 7th century onwards, it is technically inaccurate, being a heresiological label properly confined to the view in which the union of divine and human in Christ is seen to result either in the emergence of a distinctive 'third' nature or the absorption of one nature into the other (usually the human into the divine), as in the profession of \*Eutyches (d. c.454), whose emphasis on the singularity of Christ's incarnate nature appears to have led him to deny that Christ's body was consubstantial to human flesh.

By contrast, the Miaphysite (or 'henophysite') view developed in the Christology of \*Cyril of \*Alexandria (d. 444). Cyril, in combating the Antiochene doctrine of distinct natures held by Nestorius (d. c.451), used the formula 'one nature (*mia physis*) of God the Word incarnate' to assert the hypostatic union of genuine natures in the Incarnation. Cyril's view triumphed over Nestorius at the Council of \*Ephesus (431), but the Alexandrine emphasis on singleness of nature continued to arouse the opposition of those adhering to the Antiochene focus on distinct natures, exciting widespread dissension in the Eastern part of the Roman Empire.

This dissension resulted in the Council of Chalcedon (451). Rejecting the Monophysitism of Eutyches, the council discussed a preliminary form of the Chalcedonian Definition that held 'one nature *out of two*'—a formula compatible with Miaphysite sensibilities—but settled instead on the formula, 'one person *in two natures*', thereby alienating many of the Alexandrine way of thinking who felt Cyril's Christology had been betrayed through capitulation to Dyophysite language. Among early leaders who rejected the Definition of Chalcedon, and the related \**Tome of \*Leo the Great* of 449, were \*Timothy Aelurus (d. 477) and Peter Mongo (d. 490) in Alexandria, and \*Peter the Fuller

in Antioch (d. 488), each of whom became embroiled in ecclesial battles over the control of influential sees. \*Severus of Antioch (d. 538) was the most influential early Miaphysite theologian, along with \*Philoxenus of Mabbug (d. 523).

In the late 5th and early 6th centuries, East Roman emperors sought political unity by advocating various compromise formulas to appease Miaphysites. The most successful of these formulas was the \**Henoticon* of the Emperor \*Zeno (d. 491). During this period, Miaphysites enjoyed imperial support and held a dominant political position in the Christian East. With the rule of \*Justin I (518), Chalcedonian orthodoxy was re-asserted; yet ecclesial unity remained unattainable. \*Justinian I (527–65) sought to conciliate Miaphysites at the Council of \*Constantinople (553) through the anti-'Nestorian' condemnation of the \*Three Chapters.

Despite the Miaphysite sympathies of the \*Empress \*Theodora and Justinian's own attempts to seek peace, ongoing political tumult produced increasingly oppressive measures of reconciliation during his reign. This resulted in widespread persecution, which forced Miaphysite leaders such as \*John of Tella (d. 538), Theodosius of Alexandria (d. 566), and \*Jacob Burd'oyo (d. 578) to adopt clandestine tactics. They also strengthened Miaphysite churches, by solidifying rival, anti-Chalcedonian hierarchies in key \*cities such as Alexandria and Antioch and by ordaining Miaphysite leaders in many places.

As much a political and ecclesial phenomenon as a theological movement, Miaphysites were driven to the margins of East Roman society, where they continued to thrive within distinct ecclesial organizations amongst non-Greek populations in what are known as the Oriental Orthodox Churches—the \*Syriac Orthodox, the Coptic Orthodox, Armenian Orthodox, and Ethiopian Orthodox. The Georgian Orthodox Church was Miaphysite until the 7th century, when it aligned itself with the Chalcedonians. JWC

**Miaphysites, Armenian** Armenian Christians who were adherents to only the first three Œcumenical

Councils. Armenian Miaphysites considered the Christology promulgated at the \*Council of \*Chalcedon a departure from the Christology of the Council of \*Nicaea reaffirmed at the Councils of \*Constantinople and \*Ephesus (431), and specifically as a negation of the agreement reached at Ephesus that ended the \*Nestorian controversy for they considered that the Chalcedonian Definition of the Godhead and Manhood of Christ simply reaffirmed \*Nestorianism using different terms, namely by substituting 'distinct natures' (*physeis*) for the Nestorian 'distinct entities' (*hypostaseis*). Early evidence pointing to an implicit Armenian rejection of Chalcedon can be found in the second of two official \*letters by Catholicus Babgen I Otmsets'i (in office 490–515), preserved in the \**Book of Letters*. It was addressed to the 'Orthodox' bishops in the \*Persian Empire, from where there were reports of Nestorian celebration of the Christological definition promulgated at Chalcedon.

Before the end of the 6th century it is difficult to speak of an official Armenian break with Chalcedonian Christianity. Armenian clergy and hierarchs accepted the \**Henotikon* at the First Council of \*Dvin in 504, remaining thereby in formal union with the Church of \*Constantinople. The transferral in bulk of anti-Nestorian sentiments to anti-Chalcedonian polemics came for the most part in the wake of the schism between the Armenian and Georgian churches, when the latter embraced Chalcedonian Christology early in the 7th century, although relations had already taken a turn for the worse as a result of adversarial policies initiated by the Emperor \*Maurice I in the 590s. Armenian Miaphysites stated their Christology by drawing upon the pre-Chalcedonian Greek patristic legacy, and delineated their understanding of Orthodoxy in terms of Apostolicity as defined by S. Irenaeus. Greek Chalcedonians pursued their polemics against Armenian Miaphysites not on theological grounds but by concentrating on liturgical differences. There were to be several attempts at reconciliation throughout the medieval period, most notably during the patriarchates of Germanos and Photius in the 8th and 9th centuries. AT

**Michael the Syrian** See MICHAEL THE ELDER.

**midday** At the sixth hour of the day, Romans enjoyed a siesta (Martial, IV, 8, 4). Students used the time to memorize their lessons (\*Augustine, *Confessions*, VI, 9, 14). Litigants were forbidden to call on judges at midday (*CTh* I, 20 of 408). The monastic author \*Evagrius Ponticus equates the 'noonday \*demon' of Psalm 90: 6 (LXX) with *acedia* or *accidie* (*Practica*, 12), 'the most troublesome of all' the thoughts (*Practica*, 28). *Acedia* causes a monk to visit others and avoid his spiritual exercises, to stare listlessly, eagerly await visitors, yawn, drift off to sleep, stare at the walls, and be lazy in \*prayer (Evagrius, *Eight Thoughts*, 6). However, noon is also a frequent time for religious visions, such as the \**Vision of Dorotheos*. TV; OPN

**Middle Platonism** The name given to the period in the history of Platonism which traditionally begins with Antiochus of Ascalon (130 BC–AD 68) and runs through to the immediate predecessors of \*Plotinus (AD 205–70), who is regarded as the founder of \*Neoplatonism. It is a period characterized by wide-ranging philosophical views beginning with the scepticism of the New Academy and Antiochus' reaction against that, through to \*philosophers who held strong dogmatic viewpoints forged from an eclecticism that combined Platonic philosophy, written and unwritten, with various elements from rival philosophical schools. Aristotelian logic,

Stoic ethics, and Pythagorean metaphysics are all utilized by the Middle Platonists to varying degrees.

As a result, this is a diverse group, chronologically, philosophically, and geographically. They flourished from the 1st century BC (if we begin with Antiochus) through to the 2nd century AD. They sometimes held conflicting philosophical viewpoints, for example, on the quantity of first principles, and they were located from \*Athens to \*Alexandria, and parts in between. In spite of this we may label them as a single group in the main due to their common metaphysics, namely the fundamental belief in the transcendence of a supreme principle above all things reached only through intermediaries.

The most important Middle Platonists were Antiochus and Eudorus from the 1st century BC; Plutarch, Atticus, Albinus, Alcinous, Apuleius, and \*Numenius, who all wrote in the 2nd century AD. Their philosophical views survive, for the most part, only in fragments and summaries by later authors. Of those listed only Plutarch's writings are extant in any substantial form, although we also have a text by Alcinous entitled the *Didaskalikos* (*Handbook of Platonism*), which presents a guide to Plato's thought in the 2nd century AD, revised to embrace Aristotelian and Stoic contributions. Although relegated to the derogatory category of 'middle men' these philosophers were highly influential, particularly in the evolution of Neoplatonism, and, in particular, of the Neoplatonic triad of One, Intellect (*Nous*), and Soul, which in turn, through such figures as S. \*Ambrose and S. \*Augustine, provided the philosophical framework for Christian theology. **Midrash** This Hebrew term, meaning 'enquiry', has three academic meanings. 1. The hermeneutics of the Talmudic period (3rd–7th centuries). This approach takes the biblical wording to carry divine implied messages, conveyed by non-esoteric, general linguistic-semiotic mechanisms which require close reading, but

no key to a secret code. It is, however, legitimate to re-contextualize isolated biblical sentences or phrases through specific rabbinic themes or unconnected biblical passages. This uncovers meanings immediately relevant to the reader's own historical-collective situation, including valid norms of behaviour, general truths about the world, and exemplary events. Apparent irrelevancies, inconsistencies, or inaccuracies in the biblical text merely indicate additionally implied themes or meaning (Samely, 1992). Rabbinic sources contain three rudimentary lists of hermeneutic 'rules', but no developed hermeneutic theory. Named \*rabbis are often reported as disagreeing on specific interpretations. At times, oral tradition deriving from the biblical Sinai revelation is claimed as validating interpretations, perhaps in response to early Christianity. The juxtaposition of conflicting interpretations on the level of texts (not within single quoted utterances) is common, so that the same biblical wording is suggested as having more than one valid meaning; occasionally there are also explicit statements to this effect, so that some scholars see rabbinic hermeneutics as parallel to post-modernism (Hartmann and Budick).

2. The formally self-contained quotation-comment unit (or comment-quotation unit), often attributed to a named rabbinic speaker, which dominates substantial parts of rabbinic literature. Often virtually identical quotation-comment units recur in more than one text without any acknowledgement.

3. A branch of rabbinic literature (in main contrast to Mishnah or Talmud), consisting of (a) works of sequential commentary on whole biblical books or parts of them, such as \*Genesis Rabba; these target in particular the books of the Pentateuch and the so-called 'Five Scrolls' (Lamentations, Canticles, Ruth, Esther, and Qohelet); and (b) collections of so-called rabbinic 'homilies' which treat a selected set of verses through a variety of rhetorical structures, as illustrated by the texts juxtaposed in \*Leviticus Rabba (Visotzky) and \*Pesiqta de-Rav Kahana. There are also other works of so-called Midrash, not so easily categorized and usually later (Stemberger). Homilies and whole works of Midrash are anonymous.

**Migration Period** Term used by scholars for the period approximately AD 300–700 to refer to the mass

movement of peoples across western Eurasia into lands dominated by the Roman Empire and its successors.

MD

G. Halsall, *Barbarian Migrations and the Roman West* (2008).

**Migration Period Pessimum (MPP)** Also called the Late Antique Little Ice Age, the Vandal Minimum or Dark Ages Cold Period. A period of lower global temperatures and general climatic instability between approximately AD 400 and 800. European temperatures were between 0.3 degrees Celsius (0.54 degrees Fahrenheit) and 1.5 degrees Celsius (2.7 degrees Fahrenheit) cooler than those prevailing at present. One probable cause of the MPP is reduced solar radiation resulting from increased volcanic activity or solar grand minima. Over much of Europe the MPP witnessed cooler temperatures, seasonal instability, higher spring winds and cooler, wetter weather overall, and glacier advances in the north. As its name suggests, the MPP has been linked to social disruption throughout Europe and the Mediterranean, and it has been suggested that it was a factor in or even the principal cause of Germanic \*Barbarian Migrations into the Mediterranean basin, the Justinianic \*Plague, and the \*Arab Conquests. See also CLIMATE AND CLIMATE CHANGE.

**Mihranids** The ruling dynasty of Caucasian \*Albania from the late 6th to early 8th century AD. The dynasty was founded by Mihran, who settled in the region of Gardman in Uti. The Mihranids were listed among the Seven Great Houses of Iran, whose other line (the Khosroid dynasty) also ruled in \*Iberia. The Mihranids assumed the title Arranshah (i.e. shahs of Arran, the Persian name of Albania). The most notable representative of the dynasty was the Prince \*Juansher (535–81). The family's rule came to an end after the death of Varaz-Trdat II in 822–3. NA

C. Toumanoff, *Studies in Christian Caucasian History* (1963).

**Mihr-Mihroe (Gk. Mermeroes; MP Mihrmah-rui)** (d. 554) Persian general, serving under \*Qobad I and \*Khosrow I. He invaded Roman \*Armenia and attacked \*Satala in 530, then besieged \*Martyropolis in 531 (\*Procopius, *Persian*, I, 15), but was captured at \*Dara by \*John Troglita in the early 540s. Between 548 and his death in 555 he commanded the Caucasus region and protected \*Sasanian interests in \*Armenia and \*Lazica against Roman and northern invaders, before dying of gout at \*Mtskheta (Procopius, *Persian*, II, 29–30; \*Agathias, II, 19–22). **Mihr-Narseh** (early/mid-5th cent.) Famous Sasanian Wuzurg-Framadār (chief minister) in the first half of the 5th century. Initially mentioned under \*Bahram (Wahram) V as a sinner who had been obliged to perform penance, he was then raised to the highest office

under \*Yazdegerd II. He promoted the good things of \*Ohrmazd by planting three \*gardens (one with 12,000 date palms, one with 12,000 cypress trees, one with 12,000 \*olive trees) and founded four villages each with a \*fire temple in the fertile Farrashband Plain in \*Fars and built a \*bridge over a river south of \*Firuzabad (Gor) 'for the good of his soul', as the surviving \*inscription says. He was the leader of the Sasanian forces in the effort to impose \*Zoroastrianism on \*Armenia, resulting eventually in the rebellion of \*Vardan Mamikonean, as related by \*Elishe Vardapet. KR

**Milan (Roman Mediolanum)** \*City in northern \*Italy founded in the early 4th century BC (Livy, V, 34, 9). Milan came under direct Roman rule in 194 BC, and was granted Latin rights in 89 BC and Roman citizenship in 49 BC. Under the early Empire Milan was thus firmly established as one of the leading cities of Cisalpine Gaul, but gained wider imperial and Christian significance from the 3rd century onwards. \*Gallienus (\*Augustus, 253–68) based part of his mobile army at Milan under the general \*Aureolus, and in 268 was murdered while besieging the city after Aureolus' usurpation.

Under the \*Tetrarchy, the city's strategic location prompted \*Maximian (Augustus, 286–305) to make Milan his principal Italian residence and mint. Maximian bestowed upon the city a large \*bath complex, a \*circus, and reinforced walls, and it was probably during this time that Milan became the seat of the provincial \*governor of \*Aemilia et Liguria. In 313 Milan was the scene of the marriage of the \*Emperor \*Licinius to Constantia, sister of Constantine although the \*Letter of Licinius (often miscalled the Edict of Milan) was not in fact issued as an \*edict from Milan. The Milan mint had been founded c.260, but operated only sporadically, issuing precious-metal coinage, especially c.323–402/4, c.452–500, and again under \*Ostrogothic rule.

Milan remained a prominent centre under the Constantinian dynasty, and was the location of a church \*council under \*Constantius II in 355. The city's importance reached its peak in the second half of the 4th century when Milan became the regular Western imperial residence. This period coincided with the episcopate of \*Ambrose (\*Bishop of Milan 374–97), whose prestige greatly enhanced Milan's ecclesiastical standing. The discovery of the \*relics of Ss. \*Gervasius and Protasius inspired the Church at Milan and under Ambrose's \*patronage a series of important Christian \*basilicas transformed the urban topography. During these years \*Augustine came to the city as court \*rhetorician, and in 386 made his commitment to an ascetic

Christian life in a \*garden in Milan (*Confessions*, VIII, 12, 28). \*Ausonius of \*Bordeaux ranked Milan seventh in his hierarchy of cities, just behind \*Trier, for 'at Milan also are all things wonderful, abundant wealth, countless stately \*houses, men able, eloquent, and cheerfully disposed' (*Ordo Urbium Nobilium*, VII). \*Theodosius I (Augustus 379–95) resided in Milan while in the West, despite several famous clashes with Ambrose. Theodosius' ban on all forms of pagan \*sacrifice was issued from Milan in 391 (*CTh* XVI, 10, 10), and it was in Milan in January 395 that the \*emperor died.

Across the next two centuries Milan's prestige steadily declined. The death of Ambrose in 397 inevitably diminished Milanese episcopal authority, and in 402 the Western Emperor \*Honorius moved his residence to \*Ravenna, as it could be defended more easily. Milan features rarely in sources for the first half of the 5th century, and in 452 the city was sacked by \*Attila and the \*Huns. As imperial power in the West decayed, Milan fell in turn to \*Odoacer in 476 and \*Theoderic the \*Ostrogoth in 493. There is some evidence from building \*inscriptions and passing textual references for a limited revival in the early 6th century, but Milan remained overshadowed by the Ostrogothic capital Ravenna and also lost significance in comparison to nearby \*Pavia and \*Verona. Milan was then caught up in the chaos of the \*Byzantine invasion of Italy under \*Justinian I, and in 539 a Gothic army destroyed the city and massacred the male population (\*Procopius, *Gothic*, VI, 21).

The \*Lombard invasion of Italy began in 568, and Milan surrendered without a fight the next year while Honoratus, Bishop of Milan, fled to Byzantine Genoa. Lombard Milan was far smaller than the imperial residence of earlier times, and the Lombard rulers favoured Pavia. The only Lombard king to exalt Milan was \*Agilulf (591–616), who placed particular emphasis on his Roman image and in 604 had his son Adaloald proclaimed co-ruler in the \*circus of Milan in imitation of Byzantine ceremonial (\*Paul the \*Deacon, *History of the Lombards*, IV, 30). Yet the splendours of the Roman past were never entirely forgotten. In c.739 the poetic encomia known as the \**Versus de Mediolano civitate* still celebrated the city's \*forum, \*aqueduct, and \*roads, although it was the Christian heritage of churches, saints, and relics that dominated the poet's vision of Milan. **Milan, buildings of** As the principal residence of \*emperors in the West from the \*Tetrarchy to \*Honorius and the see of such \*bishops as \*Ambrose, Late Antique Milan developed monumental architecture that was both sophisticated and experimental in its forms. \*Ausonius praises the \*city for 'all things wonderful', including its double wall, a \*circus ('her people's joy'), the theatre, its Palatine citadels and mint, and the quarter famous under the title of the Bath of Hercules (*Ordo Urbium*, lines 35–45 = section 7). The baths were the work of the Emperor \*Maximian, but the site of the imperial \*palace has so far eluded identification.

The church buildings of Milan influenced early church building throughout the West. At the episcopal complex within the \*city which may have been built by Ambrose, an octagonal \*baptistry (now S. Giovanni alle Fonti) bore an \*inscription announcing the appropriateness of the \*number symbolism of eight for a hall where there will come to people the true salvation of the Resurrected Christ who breaks open the closed places of death (*ILCV* 1841 = *CIL* V, 617, 2). The cathedral complex included an early \*basilica, whose remains are very obscure, and a new basilica, rebuilt in the later 5th and 6th centuries, which became the main cathedral church, dedicated to S. \*Thecla. Near these was an episcopal residence with oratory, \*garden, and \*bath; it may have included an apsed hall.

Of uncertain date, but dramatic in form, the Church of S. \*Lawrence was built in the late 4th or 5th century as a square hall extended by curving \*exedras on four sides, with two octagonal chapels added to it. The architecture in honour of the saints initiated by Ambrose was to have lasting influence. Ambrose built at least three churches outside the walls: the Basilica Apostolorum (now S. Nazaro), the Basilica Martyrum (now S. Ambrogio), and the Basilica Virginum (now S. Simpliciano). He enshrined \*relics from \*Constantinople and across northern \*Italy in cross-shaped basilicas of considerable size. A shrine to S. Victor, adjacent to the Basilica Martyrum, was rebuilt in the 5th century to include a \*dome over the body of the shrine, depicting the local \*martyr S. Victor holding a Christogram and flanked by a cross. Beneath the golden vault are images of Bishops Ambrose, dead by the time of the renovation, and Maternus, who had translated Victor and other saints to Milan, along with the saints venerated in the main basilica. In this chapel, Ambrose buried his brother next to the relics, and in the main church his own body was buried. CJG

**Milan, See of** The early Christian history of \*Milan, like that of many Western \*cities, is uncertain. A Christian community existed by the 3rd century; \*Bishop Merocles of Milan attended the \*Lateran \*Council of 313 and the Council of \*Arles in 314. Dionysius of Milan was exiled by \*Constantius II after refusing to condemn \*Athanasius of \*Alexandria at the Council of Milan in 355—\*Ambrose was to retrieve his \*relics from Cappadocia (\*Basil, *ep.* 197). Dionysius' replacement was the \*Homoean \*Auxentius, who was followed by \*Ambrose, Milan's greatest bishop (374–97). Ambrose exerted substantial \*influence as \*metropolitan over the Church in the cities of northern \*Italy, in Milan he built new churches, and the bishop's authority was strengthened by close ties with the imperial \*court. The relics of such \*martyrs as S. Victor (at whose shrine Ambrose buried his brother) and Ss. Felix and Nabor were already venerated at Milan even before Ambrose spectacularly added to their number by the discovery of Ss. \*Gervasius and Protasius.

Milan and its bishop declined sharply in significance after Ambrose's death and the removal of the imperial court to \*Ravenna under \*Honorius. Little evidence survives from the 5th century. In 553 Milan was represented at the Second \*Council of \*Constantinople, but the northern Italian churches rejected the council's decrees and broke from Rome in the Istinian Schism. When Milan fell to the \*Lombards in 569, Bishop \*Honoratus abandoned the city and withdrew to Genoa, a \*city still under Byzantine control. DMG

**Mildenhall Treasure** Spectacular ensemble of Roman \*silver tableware, found in 1942 at Mildenhall in Suffolk, and now in the British Museum. Among its 27 pieces are plates and bowls with figural decoration, much of it \*Dionysiac in theme. MH

R. Hobbs, 'Platters in the Mildenhall Treasure', *Britannia* 41 (2010), 324–33.

K. S. Painter, *The Mildenhall Treasure: Roman Silver from East Anglia* (1977).

**milestones** Roadside columns typically 2–3 m (c. 6 feet) tall, naming the reigning \*emperors, and displaying a numeral giving the distance from or to the (often unnamed) ultimate endpoint of the \*road, without

indicating direction. Most Roman milestone texts belong to the period AD 200–350. Over time, reworked milestones account for an increasing proportion of the total; these celebrated less often imperial road building or improvement and more often local loyalty at the advent of new regimes. The last flurry of this activity in the Latin West comes with the usurpation of \*Magnus Maximus and the reinstallation of \*Valentinian II in the late 380s. The latest known Western milestone (*ILS* 806) was erected just outside \*Arles in 435. In the East, where \*Greek had largely superseded \*Latin on milestones, examples after this date are exceedingly rare, the latest being erected by Ioannes \*Consularis of \*Caria under \*Anastasius I. RWBS

*CIL* XVII.

A. E. Cooley, *Cambridge Manual of Latin Epigraphy* (2012), 159–68.

**Miletus** (mod. Milet, Turkey, formerly Palatia/Balat after the 'palatial' ruins of the medieval period) \*Harbour \*city of \*Caria. In Late Antiquity the ancient cityscape of Miletus was preserved inside its extensive mid-3rd-century city walls. The Byzantine city walls may date from the 7th/8th centuries. Numerous churches were built as late as 595/606 and are remarkable for their conservative style. \*Hesychius Illustis repaired the city's \*baths. \*Isidore of Miletus and his nephew, also \*Isidore, were famous architects under \*Justinian I. The *territorium* also prospered in Late Antiquity, with numerous settlements, churches, and marbles. PhN Thonemann, *Maeander Valley*, 303–20.

**Milevis** \*City, c.50 km (c.30 miles) north-west of \*Cirta. \*Optatus was \*bishop in the later 4th century. \*Faustus the \*Manichaean was brought up here, poor and \*pagan. Church \*councils gathered in 402 and 416. Fortifications were built under \*Justinian I (\*Procopius, *Aed.* VI, 7, 8). There was still a bishop in 883. GMS Lepelley, *Cités*, vol. 2, 438–9.

Mesnage, *Afrique chrétienne*, 335–6.

Pringle, *Byzantine Africa*, 219–20.

**miliarensis** Numismatic term for two Late Roman \*silver denominations. Two coins, termed light (c.4.55 g/0.15 ounces) and heavy (c.5.45 g/0.19 ounces) *miliarenses*, were issued from 324 onwards and the coin is first named in 384 (*CTh* VI, 30, 7). From the 5th century both weights appear to have become a ceremonial issue. RRD

*New Pauly: Antiquity*, vol. 8 (2006) s.v. *miliarensis* col. 896 (D. Klose).

**military organization, Germanic** It has been debated whether military affairs among Germanic entities were organized by tribe or if they lay in the hands of high-status individuals or families who could afford to provide weapons for their loyal followers. Past research considered that armed peasants comprised the main body of Germanic \*armies. More recent analysis suggests that in prehistoric self-sufficient societies, hardly 10% of the entire population could be spared for warfare activities.

Current scholarship consequently sees Germanic barbarian warriors as warbands grouped around a lord and his entourage or \**comitatus*. Warriors were recruited and trained to use standardized weaponry, though how exactly this recruitment and training was conducted is still debated, as are the procedures for command and control of armed forces during combat. Finds from sacrificial sites in Germanic areas indicate that groups of armed men included individuals trained for various specialized tasks, including craftsmen for maintaining equipment, medical experts for healing wounds, and those who operated \*ships, chariots, and other vehicles.

Later Germanic kingdoms, such as the Early \*Merovingians, incorporated Late Roman \*logistics, \*administration, and methods of \*recruiting, so had more complex military organization and tactical command. In the past, historians have used written sources to deduce the existence of huge Germanic armies, but these forces will in general have comprised only a few hundred men, and rarely more than one or two thousand combatants.

**military saints** A category of saints who, according to tradition, were \*martyred during the \*persecutions of \*Decius or \*Valerian or the Great Persecution. The chief military saints, those whom H. Delehaye identified as the *état-major*, were Ss. \*George, \*Theodore, Procopius, \*Demetrius, and Mercurius. Although there is an expansive literature dedicated to them, no early accounts survive of the alleged martyrdoms of the major military saints, and much of the textual tradition is of legendary character. In some cases, the legends may be connected to historical figures. The soldier-saint Procopius, for example, has the same name as the first martyr mentioned in \*Eusebius' *Martyrs of Palestine*, although Eusebius does not describe him as a military man (*MartPal* (S&L) 1); only in later tradition is Procopius identified as a military saint.

The popularity of the military saints varied by region and time. Though Ss. George and Theodore in particular enjoyed widespread veneration, the cults associated with other military saints were more localized. Interest in S. Demetrius, for example, is not frequently attested outside \*Thessalonica and its environs, and he increased in popularity only in the Byzantine period. By contrast, archaeological and textual evidence suggests that certain military saints became the subject of cult activity quite early; \*Gregory of \*Nyssa's homily on S. Theodore, for example, attests to the vitality of late 4th-century devotion to the saint (*GNO* 10/1, 59–71), while his brother \*Basil's homily on the \*Forty Martyrs helped to promote the cult of these Christian soldiers. Mercurius: *BHG* 1274–77a; Procopius: *BHG* 1576–82c.

Delehaye, *Saints militaires*.

C. Walter, *The Warrior Saints in Byzantine Art and Tradition* (2003).

**military treatises** Late Roman military manuals survive in both \*Latin and \*Greek. They can be divided into: (1) practical treatises that included borrowings from older works (\**Strategicon*, \*Syrianus); (2) fresh versions of old treatises (Asclepiodotus, Aelian, Arrian, Onasander, Frontinus); (3) compilations of old material (\*Vegetius, \*Urbicius Barbatus, *Tacticon*); (4) works advocating technical innovations meant to solve current problems (\*Anonymous, *De Rebus Bellicis*, Urbicius, *Epitedeuma*). The Greek texts influenced the thinking of later generations of Byzantine military theorists and generals. Greek treatises were traditionally divided into separate treatments of *tactica* (military terminology and tactics), *strategica* (generalship), *naumachica* (naval warfare), and *stratagemata* (stratagems); manuals included some or all of these elements. Latin treatises adopted a similar division of material (e.g. Frontinus wrote separate treatises on tactics and stratagems). The Latin texts survived in the western successor states where especially Vegetius' influence remained strong. IAPS

Syvänne, *Hippotoxotai*.

**militia** Term used for career service under the \*emperor, encompassing not only military service but also the government bureaucracy at \*court and in the \*provinces. Appointment to a *militia* was distinct from appointment to a \**dignitas*. AGS

Jones, *LRE* 377–8.

Kelly, *Ruling the Later Roman Empire*, 20, 134.

**mills and milling** Mills were used in \*olive oil processing and \*mining but most commonly in the milling

of \*grain. Millstones were usually volcanic in origin—the hardness and grit of the material made it ideal for grinding.

Most milling was done domestically with rotary querns, the most common type of flour mill from the British Isles to the \*Persian Empire. The rotary quern consists of two disc-shaped stones, usually 50 cm (20 inches) in diameter, with a central hopper into which grain was fed manually. The operator rotated the device by means of a vertical handle inserted near the edge of the stone.

The more efficient, often animal-driven Pompeian- (or Vitruvian-) type rotary mill was commonly c.0.5–0.9 m high (1.6–3 feet) and consists of an hourglass top stone (*catillus*) rotating on a lower conical stone (*meta*). The Pompeian type was common within the Roman Empire and was used in the Levant until at least the 7th century.

Water-mills became increasingly important from the 1st century AD and by the 6th century were common there and throughout the Persian Empire. Its possession of water-mills was one of the arguments put forward by \*Orcistus to support its petition to \*Constantine I for a grant of \*city status (*MAMA* VII, 305). Water-mills with multiple grinding installations are known from \*Barbegal and \*Caesarea of Palestine. MD

**Milo** Bishop of \*Trier and \*Reims (717/22–762). Member of a powerful \*Austrasian family, who supported \*Charles Martel and the Arnulfings. S. \*Boniface considered Milo and his ilk to be harmful to the Church, and Hincmar (Bishop of Reims 845–82) later criticized him for losing lands belonging to Reims and behaving like a layman while \*bishop. JTP

Ewig, 'Milo et Eiusmodi Similes', *SFG* 2, 189–219.

**Milvian Bridge, Battle of** Battle fought just north of \*Rome on 28 October AD 312 where \*Constantine I finally defeated and killed \*Maxentius so becoming sole ruler of \*Italy and \*Africa as well as \*Britain, \*Gaul, and \*Spain. After two victories in northern Italy Constantine overcame Maxentian forces again at Saxa Rubra on the Via Flaminia. Maxentius cut the Pons Mulvius but then faced Constantine on the right bank of the Tiber, having prepared a pontoon bridge in case he needed to withdraw back to the \*city. In the event, he was forced to do precisely this, but the temporary bridge collapsed, drowning Maxentius and many of his

soldiers (*PanLat* XII (IX), 17; \*Eusebius, *HE* IX, 9; \*Lactantius, *Mort.* 44; \*Zosimus, II, 16). The rout is depicted on the Arch of Constantine and entered early Christian \*art as the \*iconography of Pharaoh's army destroyed at the Crossing of the Red Sea. JCNC

**mimesis** See IMITATION AND ALLUSION, GREEK.

**minaret** (Ar. *manara*, *manar*, or *saʿwmaʿa*) Tower, usually associated with a \*mosque. The earliest mosques had no minarets, and the minaret is said to have been introduced under \*Umayyad rule in the mid-to-late 7th century. The monumental mosques constructed at \*Medina, \*Damascus, and \*San'a under al-\*Walid I (r. 705–15) had four corner towers. The 9th-century \*Abbasid mosques at Samarra are notable for their huge spiral minarets. Although the minaret is often associated with the call to \*prayer (*adhan*), it is clear that the minaret also had other more purely architectural functions as the most visible component of the mosque. AM

J. Bloom, *Minaret: Symbol of Islam* (1989).

**minbar** A raised step or set of steps from which the *khutba* (speech, sermon) is delivered in the \*mosque. Tradition relates that \*Muhammad had such a platform at \*Medina, and its use is described in a number of 7th- and 8th-century mosques. The first datable extant *minbar* is usually said to be the teakwood *minbar* (c.862–3) at \*Kairouan. Analogies between the form of the \*ambo (pulpit and lectern) of Late Antique churches, especially in \*Egypt, and the *minbar* of Islamic mosques have been noted. EL

*EI* 2 vol. 7 (1993) s.v. Minbar, 73–9 (Pedersen and Golmohammadi).

R. Hillenbrand, *Islamic Architecture* (2000).

**Minervina** Wife of \*Constantine I and mother of \*Crispus. She had presumably died by autumn 307, when Constantine married \*Fausta. OPN

*NEDC* 42–3.

Barnes, *Constantine*, 48–9.

D. S. Potter, *Constantine the Emperor* (2013), ch. 9.

**mines and mining** The methods employed during the Principate and in Late Antiquity to mine metal ores range from opencast to underground mining operations. Hydraulic mining techniques such as *hushing* and *ground sluicing* used water to remove either topsoil from hard rock ore deposits or massive overburden from alluvial deposits. Hard rock faces were broken up by fire

setting and by iron picks, gads, or hoes. Water from tunnels and galleries was drained by adits or water-lifting devices, e.g. water-wheels, Archimedean screws, or pumps. Most extracted ore needed to be reduced in size in order to minimize dross during the smelting process (beneficiation); the ore was therefore crushed either by hand or automated trip hammers, and then ground by stone \*mills. The smelting of ores took place on site, with significant effects for the environment.

By the late 3rd century mining in \*Spain and \*Britain had declined. \*Dacia north of the Danube \*frontier was relinquished in 271. It is difficult to assess whether mining operations in the \*Balkans, \*Anatolia, or \*Cyprus made up for this loss in resources.

The Late Roman state controlled mining operations through a Comes Metallorum per \*Illyricum in the East (\**Notitia Dignitatum*, or. 13, 1) and a Comes Auri in the West. Mining districts were run by *procuratores metallorum*, a post filled by city councillors from \*cities within whose territory \*gold was being mined (*CTh* I, 32, 5; *SEG* 6. 166 [4th cent.]). Mining workers were partly provided by convicts condemned *ad metallum* (to the mines); in the Great Persecution Christians were sent to the \*copper mines of \*Phaeno in Palestine (\*Eusebius, *Martyrs of Palestine*, VII, 2; cf. VIII, 1). The free *metallarii* working gold pits were forbidden to leave and required to render a set amount of gold to the state; any additional gold had to be sold to the state for a fixed price (*CTh* X, 19, 3–7, 9, 12, and 15; XI, 1, 23; XI, 20, 6). AMH

**minimi and minimissi** Name given by numismatists to tiny imitations of 3rd–4th-century Roman \*bronze coins, produced and used mainly in \*Britain. These coins circulated alongside and supplemented official Roman coinage and had ceased to be struck by the end of the 4th century. RRD

Grierson and Mays, *Late Roman Coins*.

**ministeriales** A group of minor staff at the imperial \*court. They were not \*eunuchs but were under the overall charge of the \*Castrensium Sacri Palatii (\**Notitia Dignitatum*, or. XVII, 4, occ. XV, 5). Though they performed menial services in the \*palace, their positions nevertheless attracted aristocratic families and a super-numerary waiting-list. AGS

Jones, *LRE* 571.

**Minorca** See BALEARIC ISLANDS.

**minster** The Old English term *mynster* translated Latin *monasterium*; both were used in \*Anglo-Saxon

England to refer to a wide range of ecclesiastical sites with churches. The early 11th-century laws of King Æthelred describe a fourfold ranking of churches from the greatest cathedrals down to humble field-churches; all but the lowest rank were still called minsters at that time (Whitelock et al., *Councils*, 389–90). Minsters frequently enjoyed close links to royal dynasties whose members acted as founders, granted land and other property, and became abbots, abbesses, monks, and nuns. From the 7th century minsters were key instruments in the \*conversion of the Anglo-Saxons because most seem to have provided pastoral care to people in surrounding districts. In time they won control over other functions such as the burial of the \*dead. SCT

J. Blair, *The Church in Anglo-Saxon Society* (2005).

S. [R. I.] Foot, *Monastic Life in Anglo-Saxon England, c. 600–900* (2007).

**mint marks** Elements of coin design recording location of production, usually abbreviation of mint name. Roman and \*Sasanian coins often included detailed information about the mint and sometimes the section of the mint (\**officina*) in which they had been struck, presumably to facilitate quality control and monitor \*forgery. While imperial mint marks reflect high levels of state control, in some Western barbarian coinages, such as early Merovingian \*coinage, mint names suggest dispersed and autonomous local minting. Conversely, the increasing absence of mint marks on \*gold coins from late 8th-century \*Constantinople highlights increased centralization of gold minting in the capital, rendering a mint mark superfluous. **miracles** Late Roman authors distinguished between wonders (Gk. *thauma*, Lat. *miraculum*) and signs (Gk. *semeion*, Lat. *signum*). A wonder was simply a remarkable event; a sign was a wonder which made sense of a larger pattern of events. For \*Hierocles, the anti-Christian polemicist at the time of the Great \*Persecution, the miracles of Christ were passing wonders of no particular significance, the sort of event associated with the occasional appearance on earth of a godlike man, a *theios aner*, like \*Apollonius of \*Tyana. For his Christian opponent \*Lactantius (*Inst.* V, 1–4 and IV, 15) they were uncoded divine intervention, exemplifying the benevolent providence of the Christian God as it really was, as it could be seen directly at work throughout the history of the world, from the Creation into the present work of the Church. Christ's miracles were therefore not interruptions of the laws of nature but keys to understanding the force which created the world out of nothing.

It is in this perspective that \*Augustine presents a series of miracle stories in the final book of the *City of God* (XXII, 8–10; cf. *Sermons*, 320–4). The latter twelve books of this 'large and difficult work' have traced the City of God through the whole of world history from the Creation onwards; the stories of miracles which had occurred in \*Africa are told to show that God had been active in the witness of the \*martyrs and continues to be at work in the Church. In 416, \*relics of S. Stephen, the first Christian martyr, were brought from \*Jerusalem to Africa, and shrines (*memoriae*) containing fragments of the relics were set up in many churches, including Augustine's \*basilica at \*Hippo. Augustine was scrupulous in maintaining records of the miracles which began to occur there; he required the person cured to submit a written report (*libellus*) which was then read aloud in church in front of the writer, before it was placed in the cathedral \*archive.

Such records of miracles became a regular appendage of both martyrs' shrines and accounts of \*saints' lives, from S. \*Menas in \*Egypt and S. \*Thecla in \*Cilicia to S. \*Cuthbert on the isle of \*Lindisfarne. Not all miracle collections were made with the scientific rigour of S. Augustine, nor recounted in the engaging way that \*Bede told such stories. The records, however, encouraged people, particularly those on \*pilgrimage, to expect a miracle when they visited certain places, whether in the \*Holy Land or at the resting-places of martyrs or \*holy men, like those catalogued by \*Gregory of \*Tours in his brief *Lives* of saints.

Most miracles that are recorded are medical in character, especially those associated with Ss. \*Cosmas and Damian, the 'physicians who take no fee'. But just as the everyday \*patronage of individual saints took various forms, so the special benefits which they were able to obtain for their clients took different shapes. S. \*Demetrius was honoured by the \*city of Thessalonica with a substantial \*martyrium in the centre of the city, and \*prayer directed through him sometimes secured cures from disease. But he also miraculously saved the city from the attacking hordes of \*Slavs and \*Avars.

\*Gregory the Great's *Dialogues* recount the remarkable deeds of the holy men who had given strength to \*Italy in troubled times; men like S. \*Benedict (c.480–c.545) had provided islands of powerful calm during the decades of war in the middle of the 6th century which followed the \*Byzantine invasion of Italy. The power and value of their day-to-day ministry was, Gregory says, sometimes dramatically apparent in miraculous events. Gregory, like Lactantius, sees these miracles not as isolated incidents but as elements in a larger pattern. After Gregory has told a story, his \*deacon Peter chimes in, giving it a wider significance by saying how it reminds him of events described in the \*Bible. Like Augustine, Gregory was insistent on accurate

attestation concerning the details of events, but like early Christians in general he was interested not in the way that a miracle had come to happen, but in the significance of the event, not how it had occurred, but why it had occurred. The literal sense needed to be established, but the real interest lay in the inner meaning for the hearer. In the end it was not marvellous phenomena as such that Gregory looked for but the deeper significance of these and indeed of all events. For the Church in Late Antiquity, the central miracle was redemption, and contemporary miracles were seen in relation to the life of conversion of the redeemed.

The *Dialogues* were translated into Greek in the 8th century and into \*Anglo-Saxon in the 9th; the Greek version was so popular that Gregory was known in the Byzantine world as Gregorios ho Dialogos. The pattern of thought which Gregory did so much to form and foment was so firmly set that in the West it was not reconsidered until the 12th and 13th centuries.

**mirrors** In Late Antiquity mirrors were especially associated with women. The typical form was held from behind either by means of a straight handle, often in two opposed fingers, or by means of a more elaborate knotted handle in the form of a reef knot. Such mirrors, generally of \*silver, were often highly decorated with ornament in the form of \*foliage. Many of them were so heavy that they had to be held by a maid, as shown on a 3rd-century funerary relief from Neumagen near \*Trier and on caskets from the \*Esquiline and \*Sevso Treasures (4th–5th centuries). The earliest of the type is a splendid mirror from \*Wroxeter, Shropshire (3rd century), but the form does not change and those from the Latakia Treasure (4th–5th centuries) and the \*Antioch (i.e. \*Kaper Koraon) and \*Lampsacus Treasures (6th–7th cents.) are virtually identical. Venus herself holds such a mirror while braiding her hair on a silver statuette from the \*Kaiseraugst Treasure. MEH

Leader-Newby, *Silver*, 11–60.

**misthos** \*Greek word which could signify both hire and pay (which Greek had some difficulty distinguishing between, just as it could blur the distinction between lessees and labourers). In the documentary sources for Late Antiquity it is commonly used to signify wages, such as those paid to agricultural workers on large \*estates. PS

Banaji, *Agrarian Change in Late Antiquity*.

Sarris, *Economy and Society*.

**Mithraism in Late Antiquity, Roman** By the Severan period, Mithras was widely worshipped in \*Italy, \*Dalmatia, and the Rhine–Danube \*provinces but is poorly attested outside these areas. The only new 'universal' cult to incorporate the geocentric model of the universe, it offered intense small-group religious experiences focused on the heroic deeds of Mithras. The first intellectual to interest himself in the cult was the \*Neoplatonist \*Numenius, who, like later Neoplatonists (Celsus, *apud* Origen, *Contra Celsum*, VI, 22; \*Porphyry, *On the Cave of the Nymphs*, 6 etc.), believed Mithraism to be an Iranian mystery-cult. Numenius is probably the source of Christian interest in reportedly Mithraic rituals (e.g. Justin, *1Apology*, 66, 4; Tertullian, *De Corona*, 15, 3–4). Virtually ignored by apologetic, the cult received some official support in the late 3rd century and the \*Tetrarchy (e.g. *ILS* 659), and continued to flourish until the 390s. At \*Rome, where several 4th-century senators held the senior post of Father (e.g. *CIL* VI, 500; 1675; *ILS* 4267a–e), at least four Mithraic 'caves' continued to be used into the 5th century. RLG

**moderator** Term for a provincial \*governor, frequent in the law codes, because of its general descriptive quality. The expression *moderator provinciae* is first attested under \*Diocletian (*CJust* V, 17, 3, 2). In AD 535/6, Justinian I made Moderator the official title for the governor of \*Helenopontus (*NovJust* 28), \*Arabia (*NovJust* 102), and \*Phoenice Libani (*EdJust* 4). DSI

**modius** \*Latin term for a standard Roman unit for dry measure, equivalent to one peck or nine litres. PS

**Moesiae** \**Dioecesis* mentioned in the \*Verona List. It covered the north central \*Balkans and modern Greece, bordering the Dioecesis \*Pannoniae on the west, the Dioecesis \*Thraciae to the east, the Mediterranean on the south, and the Danube \*frontier to the north. In the Verona List it included eleven \*provinces, namely the Dacias (i.e. \*Dacia Ripensis and Dacia Mediterranea), \*Moesia Superior Margensis, \*Dardania, \*Macedonia, \*Thessalia, Priantina (i.e. \*Achaëa), \*Praevalitana, \*Epirus Nova and Vetus, and \*Crete. Probably before 327 it was split between the Dioecesis \*Daciae in the north and the Dioecesis Macedoniae in the south (as in \**Notitia Dignitatum* ([*or.*] III, 5–19). ABA; OPN

Jones, *LRE* 47, 107, 373.

*NEDC* 202–3 and 207.

*Barrington Atlas*, map 101.

**Moesia Inferior (Secunda)** \*Province on the Danube \*frontier governed by a \*Praeses, upstream from \*Scythia Minor and downstream from \*Dacia Ripensis, with \*Thracia and \*Haemimontus to the south. The \*Verona List and \**Notitia Dignitatum* (*or.* II, 57) place it in the \*Dioecesis Thraciae. The principal \*city was \*Marcianopolis. The \*Visigoths were settled as \**federati* in Moesia after the Battle of \*Adrianople of 378. \*Atilla and the \*Huns raided in the mid-5th century. \*Theoderic and the \*Ostrogoths often resided at Novae on the Danube (near mod. Svishtov, Bulgaria) in the years before they moved west in 488. In 536, \*Justinian I brought Moesia Secunda under the \**Quaestura Exercitus* (*NovJust* 41), but \*Avars and \*Slavs took possession in the early 7th century and in 680–1, the \*Bulgars took control. ABA; OPN

*Barrington Atlas*, map 101.

*NEDC* 222.

**Moesia Superior Margensis (Prima)** \*Balkan \*province on the Danube \*frontier. \*Pannonia Secunda lay upstream and \*Dacia Ripensis downstream. To the south were \*Praevalitana and \*Dardania. The \*Verona List placed it in the \*Dioecesis \*Moesiae. The *Notitia Dignitatum* (*or.* III, 17) places it in the Dioecesis \*Daciae (under the \*Praefectus Praetorio of \*Illyricum), governed by a \*Praeses. The principal city was \*Sirmium. \*Hierocles (657, 1–6) lists five \*cities under the *hegemon* (\*governor) of Moesia, but in the late 6th century, the \*Avars took over, and in c.800, the \*Bulgars conquered it. **Mogorjelo** (near mod. Čapljina, Bosnia-Herzegovina). Early 4th-century fortified \*villa of rectangular plan with three gates and square towers at the corners and gates, near \*Narona of \*Dalmatia. Residential and agricultural buildings surrounded an open courtyard, where a \*basilica and \*baptistry were erected in the 5th century. Late Antique and Carolingian \*pottery has been found. IDS

M. Suić, *Antički Grad na istočnom Jadranu* (2003).

### **Moktsevai Kartlisai (Conversion of Georgia)**

Medieval Georgian historical treatise narrating the conversion of \*Iberia by S. \*Nino and the early Christian history of Iberia. The *Conversion* consists of two parts: *The Life of S. Nino*, a detailed account of the conversion of Iberia and of its royal family by S. Nino, and the *Chronicle*, a brief history of \*Georgia from the 'earliest times' until the 7th century. Initially the two parts were separate works. The *Life of S. Nino* is divided into further books or chapters attributed to different witnesses of Nino's life. Four redactions of the *Conversion* have survived: the Shatberdi codex (10th cent.), the Chelishi codex (13th cent.), and two 'Sinaitic' versions (probably copied from an 8th-cent. manuscript and close to the Chelishi redaction), which also include the *Lives of the \*Thirteen Syrian Fathers*. The Sinaitic collections prove that initially there were several 'Books of Georgia's Conversion' narrating the early history of Christianity in Georgia. Later these narratives spread as separate works; part of these traditions united around the Nino cycle and another part around the Syrian Fathers' cycle. NA

ET (with introd. and comm.) C. B. Lerner, *The Wellspring of Georgian Historiography: The Early Medieval Historical Chronicle, the Conversion of K'art'li and the Life of St. Nino* (2004).

**monastery** Term used by the late 4th century in \*Greek, \*Latin, and \*Coptic for any dwelling place and/or community of monks. \*Syriac preferred *deir* (or *dayr*: 'sheepfold').

### **Physical structures**

The \*Emperor \*Justinian I decreed in 539 (*NovJust* 133, 1) that every monastery should have strong walls, a single entry, a gatekeeper, and an abbot, but it is not clear that these standards became widespread. Not until the 9th-century plan of S. Gall is there evidence of

monasteries being designed in the style of a cloister complex. Archaeologists now recognize the difficulty of identifying monastic ruins: criteria such as surrounding walls, ossuaries, and oratories have been proposed, but it is apparent that monks frequently lived in structures indistinguishable from secular \*villas or apartment buildings. This seems to have been especially true in \*cities and in Western Europe, where no Late Antique monastery has been identified without literary corroboration. This variety and informality reflect the relatively independent, home-grown nature of Late Antique monasticism and its kinship to earlier philosophic or religious experiments.

Nonetheless, excavations and literary sources reveal distinct types of settlement tied to practice and region. The principal areas of anchoritic or semi-anchoritic monasticism were \*Kellia in \*Egypt, the \*Judaean Wilderness in \*Palestine, and the \*Sinai Peninsula. In each of these areas the \*lavra arrangement predominated, meaning a cluster of hermitages joined by a path to a communal chapel or \*garden. In Kellia over 1,500 hermitages of 6th–9th-century date have been found, most of them featuring mud-brick walls, kitchen, two or three cells, and a court. In \*frontier regions like the \*Balkans, \*Mesopotamia, the Sinai Peninsula, and \*Libya, military fortresses and lavrae were often combined, exemplified by the Monastery of Mar \*Gabriel on the \*Tur 'Abdin and Justinian's Monastery of Mount \*Sinai (now S. Catherine's).

Monasteries arranged on the \**coenobium* model tended to be built close to inhabited areas or within abandoned \*villages. Though they emphasized the communal life they usually had a number of anchoritic cells for older monks located outside their walls. Coenobitic monasteries sometimes constituted new villages in themselves: the \*White Monastery at Sohag in Egypt by the late 5th century housed 4,000 male and female monks, including whole \*families, inside its walls. \*Pachomius' coenobitic monasteries in Egypt featured dormitories, refectories, workshops, infirmaries, guest-houses, orchards, and churches. Monasteries following the model associated with \*Basil of \*Caesarea in \*Anatolia, \*Mesopotamia, and \*Palestine had additional facilities such as \*hostels to provide for strangers and the \*poor. For example, the Monastery of Theodosius the Coenobite outside \*Bethlehem, besides having four different churches (for \*liturgies in Greek, Latin, Syriac, and \*Bessan), also had three guest hostels and four \*hospitals—one for monks, another for seculars, another for the poor, and another for the monastic insane.

Perhaps the two best-preserved Late Antique monasteries are at \*Alahan Manastır in \*Isauria (near Geçimli, south-west Anatolia) and the Martyrius monastery north-east of \*Jerusalem (at Ma'ale Adumin). Both

were built on major highways in the late 5th century and show a high level of financial investment. The Alahan monastery had two large churches, a \*baptistry, and a colonnaded terrace, while the Martyrius monastery had a \*bathhouse, guest \*hostel, several chapels, and a two-storeyed refectory equipped with \*marble tables and geometric floor \*mosaics. Donations probably furnished their wealth, as seems likely for most Late Antique monasteries; these came from monastic recruits as well as from the local community, visitors, and distant \*patrons who all had different reasons for giving. Many monasteries were probably founded and endowed by lay people to ensure the perpetual commemoration of their souls. \*Papyri show that in Egypt by the 7th century, monasteries had amassed as much land as churches. Otherwise their economic impact has been hard to assess. Some served as state \*prisons, apparently in return for financial aid.

### Spiritual infrastructures

The purpose of a monastery was not only to shelter its monks but also to provide an environment conducive to their spiritual transformation. This was advanced through ascetic regimens, scriptural study, and liturgical practices, as well as other artifices such as \*wall paintings like those at \*Bawit or the White Monastery in Egypt, which made monks aware that they were living under a perpetual heavenly gaze. Communal duties were deliberately designed to instil humility and obedience. Most monasteries were hierarchies based on degrees of achieved spiritual advancement and humility. According to \*saints' lives, some monasteries managed to re-establish paradise on earth by virtue of their monks' purity, innocence, obedience, and close relation to God and to have an effect on the world beyond their walls through the power of the \*prayers offered within them. Monasteries were ultimately Christian utopias whose spiritual infrastructures were as important as their physical superstructures. DFC

**monasticism** A form of Christian \*asceticism that first appears in literary sources of the early 4th century. It could be practised alone (anchoretic), in loosely organized groups (semi-anchoretic), or in a more structured community (coenobitic). All of these were characterized by celibacy; renunciation of unnecessary possessions; regular times of \*prayer consisting largely of chanted \*Psalms, with reading and devotional practices at other times; \*fasting; manual labour; obedience to a spiritual guide. Coenobitic monasticism featured a special emphasis on surrender of personal property and on service of others, whether within the \*monastery itself or beyond it.

### Typology and terminology

Distinguishing monastic from more generic asceticism is impeded by fluid and imprecise terminology. The distinctive feature of monasticism, as expressed in its canonical literature (e.g. \*Athanasius' *Life of \*Antony*), was separation from secular engagements and activity ('flight from the world', Lat. *fuga mundi*). In \*Egypt, this was symbolized by leaving town or \*village to dwell in the desert. The proximity of desert to settled land in the \*Nile Valley meant that such withdrawal (*anachōrēsis*) nevertheless allowed ready communication with others, both monastic and secular, and there is abundant evidence of monks dwelling in or very near villages. The Jewish writer Philo had already coined the word *monastērion* to describe the dwellings of the Therapeutae, and the word was adopted by Athanasius for Christian use. Egyptian \*papyri from c.325 refer to ascetics as *monachoi* and *apotaktikoi* ('renouncers'), and other texts use *monazōntes* ('those who live alone'), but *monachoi* would eventually become the favoured term in both \*Greek and \*Latin usage. In Egypt the anchoretic form of life associated with S. Antony and his successors was complemented by the coenobitic monasticism of \*Pachomius (d. 347), later exemplified by \*Shenoute (347/8–465/6).

This new expression of asceticism was not immediately or universally embraced. Relations with ecclesiastical authority could sometimes be difficult, as the charismatic authority of the monks competed with the hierarchical authority of the \*bishops and other clergy. \*Basil of \*Caesarea, in his *Apokriseis* (commonly known

as the *Longer and Shorter Rules*) directed to ascetic communities of men and women, avoided monastic vocabulary and scorned the anchoritic life. For \*John Chrysostom in \*Antioch in the 380s, 'monks' lived in the hills around the \*city, while ascetic 'brothers' and \*virgins lived in the city itself. In \*Edessa a few decades later, the Bishop \*Rabbula (d. 436) described a clear distinction between the traditional asceticism of the Sons and Daughters of the \*Covenant (*bnay/bnāt qyāmā*), living in the towns like the clergy, and the monastic *dayrāyē* (lit. 'those living in a flock or fold') who live outside the towns. A different but not incompatible picture emerges from the *Religious History* of \*Theodoret of \*Cyrhus (c.393–c.457), whose monks are mostly hermits or semi-hermits who practise severe physical asceticism, and include \*stylites. In the Latin world, where monasticism became prominent later than in the East, the translation of the *Life of Antony* soon after its appearance in the mid-350s, and travels by key figures to Egypt and other Eastern monastic sites later in the 4th century, meant that the Egyptian model was very influential at an early stage.

### *The dominance of the monastic paradigm*

During the late 4th and 5th centuries, with greater ecclesiastical and imperial regulation of the various orders of Christian life, and with the monasticizing of the episcopate, the earlier forms of Christian asceticism were gradually conformed to the new paradigm. This was reinforced by propagation of the Egyptian monastic ideology of *fuga mundi* through hagiography, monastic travel narratives and treatises, and later the famous 'Sayings' of the monks (\**Apophthegmata*). These writings spread across the Christian world through translation into Latin, \*Syriac, \*Coptic, \*Armenian, \*Georgian, and eventually \*Ge'ez (Ethiopic) and \*Arabic. In \*Mesopotamia even the memory of the earlier indigenous Syriac ascetic and monastic traditions was eclipsed by the legend that monasticism in the region arrived in the 4th century with the Egyptian Mar \*Awgen and his 70 companions. The flourishing asceticism of women, which had typically been practised in a family setting or within communities in the cities and towns, tended now to be subsumed into a monastic paradigm primarily identified with men: many male monastic founders had sisters whose monasteries were associated with those of their siblings.

In the West, the earliest Latin monastic literature, written by \*Jerome and \*Rufinus (the latter also an energetic translator of Greek monastic texts), already showed the influence of the Egyptian traditions. In \*Aquitaine, S. \*Martin of \*Tours (d. 397) created a semi-eremitical form of monasticism, but the trend in the West was towards coenobitic life, as expressed in the rules emanating from the island of \*Lérins from the

early 5th century, and reinforced by the writings of \*John Cassian (d. c.435). Cassian laid the foundation for the classic exposition of Latin coenobitism contained in the *Rule of S. \*Benedict* (c.540). Benedict's *Rule* became a normative instrument for monastic reform only in the late 7th and early 8th centuries in the Frankish empire of Charlemagne and his successors; other monastic rules continued to flourish, especially in areas under Irish influence and in \*Spain. **monasticism, Armenian** The earliest form of monastic life in Armenia was eremitic and peripatetic. The 5th-century *Epic Histories* (\**Buzandaran Patmut'iwnk'*) attributed to P'awstos and \*Koriwn's *Life of Mashtots* constitute the two principal Armenian sources for ascetic practices in the 4th and 5th centuries, and suggest parallels with \*Syriac examples. In addition to hermits, they depict small groups of disciples gathered around a teacher for a period of time before setting out on their own. The ascetics of this period were essential to the spread of Christianity in the region and in the establishment and maintenance of cult centres. These early ascetic groups do not appear to have followed a regulated life nor to have developed a strict hierarchy beyond the acceptance of a spiritual master. Some monastic associations apparently developed around service to a particular saint. Groups of consecrated \*virgins who participated in fasts and vigils are also attested.

Debate remains concerning the emergence of coenobitic monasticism in Armenia, but recent scholarship has supported its introduction in the late 6th or 7th centuries based upon Palestinian models. The *Rule of S. \*Basil*, translated into Armenian in the 6th century,

was probably employed, although the earliest explicit reference to its use appears in conjunction with a late 9th-century monastic foundation.

**monasticism, Georgian** The development of Georgian monasticism in Late Antiquity can be divided into three principal stages. Georgian monasticism originated in the Holy Land, where the presence of Georgian monks and the existence of Georgian \*monasteries is widely attested throughout Late Antiquity. The arrival of \*Peter the Iberian and his companions provided further impetus to Georgian monastic and ascetic activity in the region. As for monastic practice in the territory of \*Georgia itself, the arrival of the \*Thirteen Syrian Fathers in \*Iberia in the early 6th century can be considered the second stage of the development of Georgian monasticism. The Georgian tradition ascribes to the Syrian Fathers the foundation of numerous major monastic centres, such as Davit Gareja, Nekresi, Zedazeni, Shio Mghvime, and others, mostly in eastern and central Georgia. A revival and flourishing of Georgian monasticism is associated with the name of S. Gregory of Khandzta (759–861) and his companions. Gregory left central Iberia in the late 8th century and moved to \*Tao-Klarjeti in the south-west of Georgia. Under his supervision, the large monasteries of Khandzta, Oshki, Ishkhani, Shatberdi, Ubisa, and many others were built. NA G. Peradze, *Die Anfänge des Mönchtums in Georgien* (1927). P. Peeters, 'Histoires monastiques géorgiennes', *AnBol* 36–7 (1917–19), 74–159.

**Moneta Publica** Late Roman mint producing \*bronze and regular \*silver coinage. With the increasing centralization of \*gold minting to the \*Comitatensian Mint from the early 4th century onwards, Moneta Publica appears to have been the term denoting regional mints authorized to produce bronze and silver (*CTh* IX, 21, 7). When the imperial \*court was resident in a city with a Moneta Publica, the Comitatusian Mint might use the resources and personnel of the Moneta Publica.

J. van Heesch, 'Transport of Coins in the Later Roman Empire', *Revue belge de numismatique*, 152 (2006), 51–62.

**monetary system, late Roman** See COINAGE, ROMAN AND POST-ROMAN.

**money** Medium of exchange with collectively recognized units of value. Money in Late Antiquity was generally represented by \*coinage, often issued and endorsed by state authorities, at times supplemented by \*credit systems. It served the economic purpose of facilitating transactions within and between states. The production and regulation of money was a major function of states, and the Roman and \*Persian Empires were the most significant money-issuing governments. Other polities issued currency influenced by these models.

While coinage was issued extensively, the monetary use of such coinage varied significantly over time and space. At one end of a spectrum of Late Antique monetization, the Roman Empire seems to have utilized money in the form of coinage as a mechanism for accounting in state transactions such as \*taxation and payment of military and bureaucratic personnel and also for private transactions, including low-level payments with base metal denominations (see *ADAERATIO*). At the other end of this scale Late Antique Roman coinage in Scandinavia served as a portable store of value and could be used as \*jewellery but did not circulate within a monetary economy.

Money played an important part in representing the state through legends and symbols, such as the name and portrait of rulers and the religious emblems often depicted on coins. Such messages were aimed at both internal and external audiences. \*Aksumite \*gold coinage used elements of Late Roman coin designs but also demonstrated a high level of innovation, and included one of the earliest coin designs to demonstrate a government's movement towards Christianity, with implications for its diplomatic relations with the Roman Empire. In areas of the post-Roman West, the appropriation of the previously Roman privilege of minting gold represented burgeoning government ambition.

\*Diplomacy constituted a significant arena for the use of money in Late Antiquity. Coinage was often paid in \*tribute to foreign powers to facilitate peace or alliance. Roman gold coinage was paid to the Persian Empire, despite the \*Sasanian preference for minting \*silver currency, and also to powers on the borders of the Empire which had no monetary system of their own. Coinage and the associated assertion of a state's ability to regulate a monetary system thus communicated beyond the region in which collective recognition of a unit of exchange enabled it to function economically as money.

**monogram** Monograms as personal emblems occur from the late 4th century AD onwards. Written in \*Greek or \*Latin, they denoted personal names, \*titles, and \*prayers. The earliest type had a foursquare block-like form, but, as of the 6th century, a cruciform type also became popular. They decorated architectural \*sculpture (e.g. the imperial monograms on the column \*capitals of the churches of Ss. \*Sergius and Bacchus and of the \*Holy Wisdom in \*Constantinople), \*coinage, \*jewellery (especially \*rings), precious vessels (e.g. the \*Kumluca Treasure), and \*furniture (e.g. the \*ivory \*chair of \*Maximian, \*Bishop of \*Ravenna) and were particularly common on the personal and official \*seals of Romans. As official marks, they were stamped on \*silverware, \*bricks, and \*amphorae. On coins from \*Theodosius II monograms occurred as the reverse design on \*nummi and *pentanummi*. They became more widespread in the 7th century and appeared as countermarks to change the value or issuer of a coin. From 685 they appear only from Western mints. ER; RRD

**Monophysite** (\*Greek for 'one and only nature') Term used since the 7th century by Christians who disagreed with them, and by scholars until recently, to denote Christians (mostly in \*Egypt and \*Oriens) who rejected the Dyophysite ('two natures') understanding of the Person of Christ articulated at the \*Council of \*Chalcedon of 451. The term \*Miaphysite (Greek for 'single nature'), used by \*Cyril of \*Alexandria, has been preferred in anglophone scholarship since c.1992, as it expresses more clearly that non-Chalcedonian Christians believe that Christ has one nature in which

humanity and divinity are fused and that they reject the doctrine of \*Eutyches, who considered that Christ's manhood was absorbed by his divinity. OPN OED (<sup>3</sup>2014) s.v. Miaphysite.

**monopolies** The exclusive control of production and sale of specific goods by private citizens was officially forbidden under Roman \*law but efforts to legislate against them suggest their presence (*CJust IV*, 59). In 473 and 483 respectively, official proclamation restricted both monopolies obtained by imperial \*rescript or other (false) governmental permission and those formed by collusion among groups of traders and/or private manufacturers.

The state, however, did exercise (or sought to exercise) monopolies over the production and sale of various products, most notably \*salt, \*arms, \*purple \*dye, and \*silk (*CTh X*, 20). The production of salt was controlled primarily by the state, although some private individuals were licensed and taxed for its sale (e.g. *CTh XI*, 20, 3; *XIV*, 5, 1). The manufacture of arms was monopolized by the state for reasons of imperial security, compelling armourers to operate within hereditary \*guild structures (*CTh X*, 22). While the purchase of raw silk had long been restricted to government employees, governmentally mandated maximum prices also created a de facto monopoly for the sale of processed silk, as narrow price margins drove private \*merchants out of business. \*Procopius alleges the granting of many private monopolies by \*Justinian I to his courtiers, demonstrating the blurred moral distinctions between state (licit) and private (illicit) monopoly, but Procopius' defamatory rhetoric is difficult to substantiate as evidence for economic practice (*Anecd.* 26, 19). ## monotheism, henotheism, and polytheism

Roman pagans were sincere polytheists. The natural instinct of civic religion was to address the *praesens divus*, the god who specialized locally in the matter at hand, 'for you, for the city of Iguvium, for this station which has been established', as an old Etruscan rite put it (Iguvine Tablet VIa). What was essential was to maintain the appropriate balance of power between the various divine forces; it was failure to sustain the Pax Deorum which had caused the Trojan War, and could cause more immediate tension among the forces of nature to whose vagaries the agricultural economy of ancient cities was vulnerable. In such a world, the God of the Jews could easily be understood, through *interpretatio Romana*, as yet another 'national god', perhaps some form of Dionysus (e.g. Plutarch, *Moralia*, 671C–672C).

There were those who worshipped a Most High God as part of a pantheon. These \*Hypsistarii are known principally from \*inscriptions of the 1st to 4th centuries AD from the shores of the Black Sea, \*Anatolia, and the Levant, honouring Theos Hypsistos or Zeus Hypsistos; although \*Gregory of \*Nazianzus records that his father was associated with them as a young man. They may be associated with Judaism. It is also possible that the text of an utterance from the \*Oracle of Apollo at \*Claros, inscribed high on the inside of the city wall at Oenoanda in c. AD 200, is also associated with them. It advocates \*prayer towards the east at dawn, and affirms that God is self-generated, untaught, without a mother, impossible to affect, unbounded by a name, many-named, and living in fire, and that messengers (*angeloi*) such as Apollo himself are only small pieces of him (cf. \*Lactantius, *Inst.* I, 7, 1). More generally, the \*Sun was widely regarded as the greatest power in heaven; the wall paintings from the Mithraeum at S. Maria Capua Vetere show Mithras shaking hands with the Sun.

Philosophical speculation had long posited a single god who ultimately held all things together. Stoics had equated him with the cosmos; their attempts to equate him also with the Jupiter of civic religion did not find universal acceptance (e.g. Cicero, *De Natura Deorum*, III). \*Plotinus, founder of \*Neoplatonism, affirmed a single transcendent source of all things, the One (*to Hen*), concerning whom nothing could be predicated; the life of the Neoplatonic sage was intended to be a process of return to the One, achieved by strenuous and rational inner contemplation. 'Sacrifice', said his pupil \*Porphyry (*On Abstinence*, II, 34, 3), 'is fulfilled in passionlessness of the soul and the contemplation of God'.

Christians brought together two sides of life which Romans habitually considered separate, namely religious practice and philosophical contemplation (e.g. Lactantius, *Inst.* IV, 3–4) in a Religion of the Most High God, who was not subject to Fate, was whatever made the world out of nothing, and required that he be the only object of his devotee's worship. They affirmed the existence of other spiritual beings, but \*angels honour God and want no honour for themselves, and veneration of \*demons, spirits in rebellion against God, is an activity which leads to catastrophe (e.g. *Inst.* II, 16). Worship of other entities was therefore not merely otiose, but also dangerous.

**Monotheletes** Upholders of the doctrine that there is one (divine) will in Christ (Monotheletism). It emerged as a refinement of Monoenergism, which proposed one divine-human activity (*theandrikē energeia*) in Christ, while otherwise accepting the decision of the \*Council of \*Chalcedon (451), affirming in Christ one Person in two Natures. Monoenergism emerged in the 620s as a way of reconciling those who accepted Chalcedon and those who rejected it as betraying Christ's unity (\*Monophysites, or \*Miaphysites). The basis for a reconciliation of the Churches in \*Egypt in 633, it met with immediate opposition, notably from \*Sophronius, soon to be \*Patriarch of \*Jerusalem. Monotheletism similarly accepted Chalcedon, but affirmed a single will in Christ, on the grounds that two wills would render Christ's unity inconceivable. The term 'one will' occurred in a letter from Pope \*Honorius I to Patriarch Sergius, and was incorporated in the \**Ecthesis*, composed by Sergius and issued with the authority of the \*Emperor \*Heraclius in 638.

If Monoenergism was a muddle which, so its opponents feared, failed to affirm clearly enough the full humanity of Christ, Monotheletism, in appearing to deny a human will in Christ, was regarded as a barely disguised form of Apollinarianism. It is not clear that there were any Monotheletes in the strict sense; they may have maintained that the human will was utterly quiescent to the divine will in Christ, rather than denying its existence altogether.

Opposition to Monotheletism was led by \*Maximus the Confessor, then resident in North \*Africa. In July 645, there took place a public debate between Maximus and Pyrrhus, Sergius' successor as Patriarch of \*Constantinople, who, in the power struggle after the death of the \*Emperor \*Heraclius, had resigned and fled to North Africa. Pyrrhus, convinced by Maximus' arguments, made his way to \*Rome to be reconciled with the Church (though he later reneged). Maximus later followed him and persuaded Pope \*Martin I to call the \*Lateran Council in 649, at which Monoenergism and Monotheletism were condemned, as well as those hierarchs—Sergius, Pyrrhus, and others—who had promoted these \*heresies (the fact that the original version of the *Acta* is in \*Greek indicates the prominent role played by Maximus and other Greeks in Rome in decisions of the council). Although the council took care not to condemn the emperors involved directly, the synod was regarded by the Emperor \*Constans II as an act of sedition, contradicting his edict, the \**Typos*, issued in 648, that had

forbidden any discussion of the number of wills or activities in Christ. Pope Martin was soon arrested, tried in Constantinople, and condemned for sedition; he died in \*Cherson in 645. Maximus was also condemned, for heresy, and died in exile in \*Lazica in 662.

There were defenders of Monothelism at the Ecumenical Council of \*Constantinople (680–1), which condemned the heresies. An attempt to reintroduce Monothelism was made by the Emperor \*Philippicus Bardanes (711–13), with the apparent acquiescence of (later Patriarch) Germanus and \*Andrew of \*Crete. Groups of Monothelites remained in \*Syria for centuries. AL

F. Winkelmann, *Der monenergetisch-monothetische Streit* (Berliner Byzantinistische Studien 6, 2001).

**monoxyls (monoxyla)** Canoes carved from single tree-trunks. They are usually associated with the \*Slavs who employed them skilfully, for example, at the \*Avar–\*Persian siege of \*Constantinople in 626, described in the \**Chronicon Paschale*, and in several attacks on \*Thessalonica described in the *Miracles of S. \*Demetrius*. ABA

**Mons Claudianus** (mod. Jabal Fatira) Cluster of \*quarries, 130 of them well preserved, in the Eastern Desert of \*Egypt, about 700 m (c.2,300 feet) above sea level, on the more southerly of the two \*roads between Qena (ancient Kaine) on the \*Nile and Abu Sha'ar (ancient identity uncertain), a Late Antique fort on the Red Sea coast. It was the source of grey granodiorite stone for building projects of the imperial period (1st – 3rd centuries), including Trajan's Forum in \*Rome. In the centre of the complex were a fort, \*Temple of Sarapis, \*bathhouse, and an animal-enclosure-cum-granary. The site is the source of thousands of \*ostraca (inscribed potsherds), many of them concerned with \*food supply. JGK

TIR NG-36, 8.

Bagnall and Rathbone, *Egypt*, 285–7 (regional map 278, site plan 286).

O. Claud. = J. Bingen et al., *Mons Claudianus: Ostraca Graeca et Latina*, 4 vols. (1992–2009).

**Mons Porphyrites** (mod. Jabal Abu Dukhkan) Cluster of \*quarries in the Eastern Desert of \*Egypt, connected by a roughly circular branch route to the northern of the two \*roads between Qena (ancient Kaine) on the \*Nile and Abu Sha'ar (ancient identity uncertain), a Late Antique fort on the Red Sea coast.

These quarries were the unique source of 'imperial' \*porphyry, a valuable \*purple stone (for which the site is named) used for buildings in both \*Rome and \*Constantinople, for imperial \*sarcophagi and other \*sculpture. They were exploited from the time of their discovery in AD 18 by C. Cominius Leugas until their abandonment in the 430s. The core settlement included a fort and \*temples of Sarapis and Isis. The quarries lay in the surrounding mountains, as much as 1,500 m (c.5,000 feet) above sea level and were difficult to reach. Evidence, including \*ostraca (inscribed potsherds), suggests a 1st-century foundation, with quarrying ending by the mid-5th century. JGK

TIR NG-36, 6.

Bagnall and Rathbone, *Egypt* 287–8 (regional map 278).

**Monte Barro** Fortified, \*villa-like complex overlooking Lake Como in the Alps of north \*Italy. An aristocratic or possibly royal residence of the \*Ostrogothic period, it was destroyed during the Gothic War following the \*Byzantine invasion of Italy. JJA

G. P. Brogiolo and L. Castelletti, eds., *Archeologia a Monte Barro*, 2 vols. (1991–2001).

**Monte Cassino** Site of a \*monastery in central \*Italy thought to have been founded by S. \*Benedict of Nursia c.525, and traditionally considered the community for which he wrote his *Rule for Monks*. \*Gregory the Great in Book 2 of his *Dialogues* (c.593) describes the move of Benedict and his companions from \*Subiaco to the hilltop above the town of Cassinum (80 miles south of \*Rome), where he destroyed a shrine of Apollo (*Dial.* 2, 8). He also records the destruction of Monte Cassino by the \*Lombards in the late 6th century (*Dial.* 2, 17); according to \*Paul the Deacon's *History of the Lombards* (late 8th cent.), the monks fled to Rome in 577 with the autograph of the *Rule* and returned only in 717/18. The arrival of Carloman, son of \*Charles Martel, as a monk c.750 began an association with the \*Franks that was strengthened after Charlemagne's conquest of Lombardy in 773–4. Monte Cassino was destroyed again in 883 by the Saracens, but was soon rebuilt and has been continuously occupied since. CAS

**Montmaurin** (Haute-Garonne, France) Vast \*villa in the \*province of \*Novempopulana, near the modern \*village of \*Montmaurin, characteristic of the lavish aristocratic rural residences of Late Antique \*Aquitaine. Built in the 1st century AD as a peristyle villa, it was extensively redesigned in the 4th and 5th centuries, when the complex included over 200 rooms, featuring copious \*marble decoration and statuary. A polygonal \*temple was located in the entrance courtyard. The chronology of the later phases is uncertain. ACR; STL *CAGaule* 31/2 (2006), 198–218.

**Moors (Mauri)** In Late Antiquity, a term used primarily to refer to indigenous North African populations living west of \*Egypt. Although the word also denoted the Romanized inhabitants of the Empire's \*Mauretanian \*provinces, it was also deployed rhetorically to evoke stereotypical \*barbarian savagery and perfidiousness. The idea of Moors as non-Roman, rooted in the terror and destruction caused by such raids as those of the \*Quinquegentani (296–7) and \*Firmus (372–4/5), was reinforced in the 5th century, as imperial control of the African hinterland was replaced by \*Berber kingdoms, some of whose warriors allegedly joined in the \*Vandal attack on \*Rome in 455. From 534 onwards, the efforts of Byzantine authorities to re-establish imperial rule in Africa brought them into conflict with several Moorish kings and chieftains, documented in \*Procopius, *Vandalic War*. The African frontier zone was fortified, and in 544 the \*Praefectus Praetorio Africae, \*Solomon, was killed in battle with Moorish insurgents, precipitating an extended campaign under \*John Troglita to crush Moorish resistance, praised in \*Corippus' poem *Johannis* of 549/50. However, imperial officials also sought to win Moorish loyalty, including by evangelizing populations which were still \*pagan. Conflicts continued into the late 6th century, but in the 7th Moorish troops joined \*Heraclius' revolt against \*Phocas and allied with the Empire against the \*Arabs. JPC

**Mopsuestia (Mamistra)** (mod. Yakapınar, formerly Misis, Turkey) \*City in \*Cilicia Secunda, 20 km (12.5 miles) east of Adana, on the \*Antioch road, commanding a \*bridge over the River Pyramus, rebuilt under \*Valerian, \*Constantius II (allegedly: \*John Malalas, XIII, 17), \*Justinian I (\*Procopius, *Aed.* V, 5, 4–7), and \*Arab rule.

A \*bishop attended the \*Council of \*Nicaea (325). In 360 Aetius the \*Anomoean was exiled here. Its most famous bishop was the influential theologian \*Theodore of Mopsuestia (bp. 392–428). A \*bath building is known and a 5th-century \*basilica with \*mosaics depicting Noah and Samson. Written sources attest further churches.

Having suffered Arab attacks from 637 onwards, Mopsuestia was conquered in 703, rebuilt, and made a bridgehead for Arab raiding over the Arab–Byzantine \*frontier (al-\*Baladhuri, *Futūh al-Buldān*, I, 255–60). In 758 the city was colonized with Persians, \*Slavs, and Christian Nabataeans, who in 772 allegedly killed 1,000 Arabs. JJ

**mortality and infant mortality** As in much of the pre-modern world, Late Antiquity was characterized by high infant mortality rates, particularly in the first year of life. Adult life expectancy varied substantially over time, place, and social standing, but can be estimated at 25–35 years on average. Direct data is scarce, and modelling problematic, but there is broad agreement on headline figures, largely unchanged from the earlier Roman Empire. Life expectancy at birth averaged around 25 years, and those who reached the age of 15 could expect to survive about eighteen more years. The difference between these two expectations related in part to an infant mortality rate which is estimated at 25–30%, and an overall \*childhood mortality rate around 50%. That is, about a quarter of any birth cohort died before their first birthday, and about half before their fifteenth. A range of endemic infectious diseases—primarily gastro-intestinal and pulmonary disease, and \*malaria—as well as violent trauma (accidental or intentional) were the main causes of \*death.

Broadly generalized estimates, however, mask wide variation within and between populations, by geographical region and environmental circumstances, as well as by sex and economic status. The most marked differentials were probably those between \*city and

countryside. In the larger cities poor housing, nutrition, and sanitation, overcrowding, and migration all contributed to reduce average life expectancy and increase infant mortality rates. Risks associated with pregnancy and childbirth, combined with unequal access to resources, seem to have produced a female disadvantage of a decade in respect to mean age at death. Wealth might buy a few extra years of life across the board, but its powers against disease were limited. The \*plague, which sporadically spread across the whole Late Antique world between 540 and c.750, and warfare generated further chronological and regional variation in adult mortality rates. REF

**mosaics** An art form in which artisans used small pieces (*tesserae*) of stone, \*glass, and other materials to create geometric and figural images. *Tesserae* typically were applied on top of a preparatory drawing which had been sketched onto a prepared setting bed. While floor mosaics were first made by the Greeks, the Romans greatly expanded their use, applying the medium to walls and ceilings, especially curved spaces such as vaults and \*apses.

For durability, floor mosaics (*opus tessellatum*) were primarily made of stone *tesserae* which were quarried near the site of the final work, while wall mosaics (*opus musivum*) were made mainly of glass, including gold and silver sandwich-glass. Raw glass was produced in large tank furnaces in \*Egypt and the Levant before being shipped to secondary production sites at which elements were added in order to achieve the colours desired. Other materials used included \*brick or terracotta, semi-precious stones, and mother-of-pearl.

Mosaicists were organized into workshops, and occasionally signed their compositions with \*inscriptions. While most workshops were based in \*cities or towns, some may have been itinerant. Craftsman who travelled include those from \*Carthage who made the floor mosaics of the 4th-century \*villa at \*Piazza Armerina in \*Sicily. According to the Tetrarchic \*Prices Edict of 301 (7, 6–7), *musaearii* (most likely wall mosaicists) were paid 60 *denarii* a day in addition to their board, while *tessellarii* (probably floor mosaicists) were paid 50 *denarii*. Multiple craftsmen worked simultaneously on larger mosaics. Apse mosaics in churches were produced by two mosaicists who worked from the centre out, one in each direction.

While motifs were transmitted around the Mediterranean by pattern books and travelling craftsmen, workshops in different regions favoured different iconography and produced work in varied styles. In \*Italy, the wall mosaics of churches in \*Rome, \*Ravenna, and \*Poreč in Croatia were produced with large quantities of coloured and gold-glass tesserae. There were also workshops in the Western Empire, for instance in \*Britain at Dorchester in Dorset (mosaics at \*Hinton S. Mary and \*Frampton) at Cirencester (the \*Woodchester \*villa mosaics), and at Brough-on-Humber in the East Riding of Yorkshire. In \*Spain distinctive schools created polychrome floor mosaics of mythological and \*hunting scenes, e.g. the 4th-century mosaic of Dulcitius hunting in his villa near Tudela. In south-west \*Gaul artisans preferred elaborate \*foliage motifs. There were also mosaicists in Germany near \*Trier. Many of these schools, especially those in \*Aquitaine and Spain, were influenced by African workshops which produced vividly coloured mosaics incorporating flowers and foliage, as well as scenes of \*hunting, marine life, and figures from myth, including Bacchus (\*Dionysus), Venus (Aphrodite), and the Amazons (e.g. the 5th-century mosaics of the House of the Hidden Statues at \*foliage Carthage), and the life of country house \*otium (e.g. the \*Dominus Julius mosaic). Workshops at \*Cuicul (mod. Djemila), \*Hadrumetum (mod. Sousse), and \*Thabarca also created unique Christian funerary pavements which combined \*epitaphs and images of the deceased.

In the \*foliage Balkans, mosaicists in \*Thessalonica, possibly sent from \*Constantinople, produced the 5th-century \*foliage dome mosaics of the Rotunda of \*foliage Galerius (later the Church of S. \*George), as well as the wall and \*foliage apse mosaics of the churches of S. \*Demetrius and the Latomus \*Monastery (Hosios \*David). Workshops in \*Greece and \*Cyprus made the pavements of both villas and churches, indicating that there was no functional division between Christian and secular domestic production. The Cypriot workshops also created the apse mosaics of the Virgin and Christ in the churches of the Panagia Kanakariá at \*Lykathromi (500–50) and the Panagia Angeloktistos at \*Kiti (late 6th or 7th century). Apart from these two churches, the only mosaics to survive from the Late Antique East are those of the 6th-century Katholikon of the Monastery of St Catherine at Mount \*Sinai.

Workshops from \*Constantinople produced the mosaic ceiling decoration of the Church of the \*Holy Wisdom, the now-lost 6th-century mosaics of \*Justinian and \*Theodora triumphing over the \*Vandals and \*Goths in the vault of the Chalke Gate of the Great Palace, described by \*Procopius (*Aed.* I, 10, 16–18), as well as the 6th-century (?) floor mosaics of the \*Palace which depict \*animals and a staged hunt (*venatio*).

Elsewhere in Asia Minor, churches and \*houses were adorned with mosaics, including the Terrace Houses at \*Ephesus which feature floor mosaics and a vault mosaic dated to c.400. The apse mosaic commissioned by \*Anastasius I for the church at the Monastery of Mar \*Gabriel on the \*Tur 'Abdin on the Persian \*frontier depicts foliage but no figures. In \*Palestine, \*Syria, and Transjordan, the strength of the Hellenistic tradition of framed 'pictures on the floor' (*emblemata*) persisted in domestic decoration, including in the houses at \*Daphne, a wealthy suburb of \*Antioch in Syria, and at \*Apamea, where workshops favoured mythological and \*allegorical images. In the late 4th and 5th centuries, mosaicists in this area developed the \*carpet mosaic style, creating unified pavements decorated with geometric, floral, animal, and \*inhabited scroll designs. Carpet pavements were popular in the churches of the region into the 8th century at sites under \*Umayyad control, including those in the Church of S. Stephen at Umm al-Rasas in Jordan, produced by artists from nearby \*Madaba. Umayyad rulers employed mosaicists to decorate their \*desert palaces with elaborate geometric pavements and their \*mosques with scenes of \*Earthly Paradise, including those in the Dome of the Rock in \*Jerusalem and the Great Mosque in \*Damascus, possibly produced by Byzantine artisans. **Moses of Abydos** (c.470–before 550) Born at Abydos in Upper \*Egypt, then still a \*pagan stronghold,

Moses founded a \*monastery along the lines of that of \*Shenoute, and had several confrontations with pagan \*temples and the \*demons who lived there. He met \*Severus, \*Patriarch of \*Antioch, when, from 518 onwards, Severus was \*exiled in \*Egypt. In 540 Moses indirectly warned \*Justinian I that \*Blemmyes were making attacks in Middle Egypt. **mosque** (Ar. *masjid*) Place of Islamic \*prayer. The first securely datable mosques that are substantially extant are the congregational mosque at \*Wasit (c.703) and the Great Mosque of \*Damascus (c.706). The mosque at Wasit was excavated in the mid-20th century; the Great Mosque of Damascus remains intact, albeit much modified in restorations. Both are 'congregational', or *jami'* mosques—the main places of assembly where the ruler or his representative would appear before his followers at Friday prayer and other occasions. Wasit, built by the \*Umayyad governor al-\*Hajjaj, has an orthogonal hypostyle plan, with a covered prayer-hall at the south-west \*qibla wall that faces towards \*Mecca. At Damascus, the existing *temenos* and Church of S. John were adapted on the orders of the Umayyad \*Caliph al-\*Walid I (r. 705–15), with the southern *qibla* wall again forming a covered sanctuary. A much wider, domed, central aisle in the prayer-hall, as well as a \*mosaic-decorated monumental \*façade for the prayer-hall, and corner towers were distinctive features. Some of these elements are also found at other mosques developed during al-Walid I's reign, notably at \*San'a, \*Fustat, and \*Medina.

The basic form of an orthogonal walled enclosure oriented towards \*Mecca and in part (or occasionally wholly) covered by a hypostyle roof became immediately ubiquitous in the first centuries of \*Islam, albeit with many local variations. The \*mihrab, a niche in the interior of the *qibla* wall, had also become a ubiquitous feature by the beginning of the 8th century. Congregational mosques also usually had a \*minbar, or 'pulpit', and in some cases a \*maqsura—an enclosed space where the imam was more secure. The \*minaret and the \*dome began to become associated with the mosque

during this early period. The open courtyard provided a space for worshippers to cleanse themselves ritually before entering the mosque to pray, and had spaces for them to leave their footwear and other accoutrements behind. Auxiliary buildings provided spaces for teaching and for almsgiving and care of the needy, and meeting rooms for religious and community leaders.

The mosque became the centre of religious and social life for the \*village, town, or \*city quarter it served. Congregational mosques of the 8th century were also associated with the residence of the governor or the caliph. The residence was usually located just outside the *qibla* wall, with private access for the ruler to the prayer-hall—a formation that is sometimes referred to in the secondary literature as the 'mosque-palace complex'.

Smaller, private, or local mosques are sometimes harder to date. However, the \*Umayyad *qusur*, or so-called 'desert \*palaces', include a number of much smaller 8th-century mosques. These are still pillared spaces, oriented towards Mecca. Very rudimentary mosques such as the hypaethral (roofless) mosques in the \*Negev are particularly hard to date accurately, but some may be very early. There is good evidence in the literary and material sources for some sharing of prayer space with conquered peoples in the first decades of Islam.

There is a secondary literature on the origins of the mosque, much of which refers back to the courtyard established by the Prophet \*Muhammad after his arrival at \*Medina in 622, adjacent to which were residences for himself and his wives. In much of the secondary literature, this space is referred to as the 'house of the Prophet'. However, there is some evidence that sacred spaces for prayer were already referred to as mosques (Ar. *masajid*, sing. *masjid*) and that a number of spaces for prayer had been established by Muhammad and his followers before he settled in Medina in 622. Thus, the form of the mosque as it developed in the Umayyad and early \*Abbasid periods probably had its roots in the varying types of sacred space used for prayer in the pre-Islamic \*Arabian Peninsula, which were adapted by Muhammad and his followers and then their successors in the conquered territories.
